In summary and in reply to your two requests, the planned inactivation of the United States Naval Hospital, Corona, has been carefully reviewed and studied; and it has been determined that this hospital must be closed if we are to meet budgetary and personnel reductions. In reply to your second request, plans are being completed to meet needed hospital facilities in the area through greater utilization of the U. S. S. *Haven* as a temporary measure. The Navy has not receded from its stand for the requirement of a United States naval hospital at Long Beach and the requirement for a new hospital in this area will be reintroduced into a long-range construction program at such time as the Navy will be reasonably assured that such a program will be approved by reviewing authorities.

Your great interest and understanding in the Navy's problems in this area are appreciated and it is with an earnest hope that the foregoing information will be of assistance to you.

I will be happy to provide any additional information you may require.

Sincerely yours,

B. E. BRADLEY,
Read Admiral, MC, USN,
Acting Surgeon General.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 9, 1957.

Re proposed Corona Naval Hospital closing.

Hon. THOMAS S. GATES,
Secretary of the Navy,
Washington, D. C.

DEAR MR. SECRETARY: You are familiar with the above-captioned proposal announced by Senator DOUGLAS during a speech on July 1, and amplified by your July 2 press release. Subsequently, estimates have been furnished to the effect that several hundred thousand dollars annually would be saved by the move, which money the Navy deems vitally needed to help support its minimum basic overseas missions now in danger of being constricted by rising costs and decreasing appropriations to a point below that essential for the public defense.

If this cost-appropriations squeeze is so severe as to dictate this move for the purpose stated, then there is a patriotic obligation for citizens affected to accept it without complaint.

My first request is that the planned deactivation of the hospital be reviewed carefully by you to determine with certainty if conditions of such severity do, in fact, exist.

My second request, in the event you are certain deactivation is dictated by such necessity, concerns alleviating the hardships that will ensue. It is necessary to relate background information in order to state it.

Early in World War II a 1,600-bed naval hospital was constructed at Long Beach, Calif., to provide for the wartime needs of the service. These needs persisted in the postwar period and the hospital continued in operation until 1949. In that year the then Defense Secretary, during an energetic but apparently planless economy drive, swung a meat ax around the Defense Establishment. One of the places hit was the Long Beach Naval Hospital. It was closed and promptly transferred to the Veterans' Administration.

During the hospital's operation by the Navy a very large number of retired naval personnel located in the Los Angeles-Long Beach metropolitan area because of the availability of the hospital. At the same time, other substantial numbers of dependents of naval and Marine Corps officer and enlisted personnel, both shorebased and shipbased, located in the area because of the availability of the hospital.

Its 1949 closing worked a very real hardship not only on these satellite naval groups, but upon active duty personnel as well. Several deaths occurred while afflicted persons were on the highway making the long trip to Camp Pendleton Hospital or the San Diego Naval Hospital. Numerous babies were born in automobiles on the way to these hospitals.

Of course, it can be said that insofar as dependents and retired personnel are concerned, their access to naval medical treatment is not a matter of right, but only of privilege on a space-available basis. As a practical matter, however, whenever it has not been deem a right, serious morale and other problems have followed, which eventually forced a return to the matter of right concept for the best interests of the service.

The wisdom of taking steps to obviate such problems before, rather than after, they occur is evident.

At the inception of the Korean war, the problem was to some extent relieved in the locality under consideration by the reopen-

ing of Corona Naval Hospital. I say "somewhat" because Corona is only somewhat less remote from the homes of these people entitled to medical attention than Pendleton and San Diego; and also because both Corona's reopening and subsequent operations have been costly and otherwise ill located. There has never been a moment since the Long Beach Naval Hospital was closed in 1949 that the needs of the service for a naval hospital in the Long Beach area has not been strikingly apparent. Recognizing this, Congress in 1950 authorized construction of a new naval hospital in the area. However, the Navy Department has lacked aggressiveness in requesting appropriations for its construction.

My own opinion as to the reason for this is that Bureau of Medicine and Surgery planners persistently have had in mind a grandiose plan for a super medical center at San Diego dedicated as much to medical research as medical treatment. In implementation of that plan they have recommended requests for funds to enlarge San Diego rather than build at Long Beach. These ambitions for San Diego have caused a neglect of both the advantages of dispersal and the growing humane need for hospital facilities in the Los Angeles-Long Beach area.

The last-mentioned need, of course, has grown because the requirements of national defense, which do not appear in the foreseeable future to be abating, have concentrated many naval and Marine Corps activities in the Los Angeles-Long Beach area. At the present time the Naval Vessel Register indicates 14.15 percent of the United States Fleet (30 percent of the Pacific Fleet) operates in and out of the Long Beach Harbor area. Estimated hospital needs of the area are for 25,000 naval and Marine Corps active duty and retired personnel and dependents. Corona is the only naval hospital facility even reasonably accessible to these people.

Recognizing the utter inadequacy of medical facilities in this area, naval authorities have maintained the U. S. S. *Haven* in a noncommissioned but active status at the Long Beach Naval Shipyard which, together with the Los Angeles Naval Base Dispensary, provides a much overcrowded outpatient service.

Although the *Haven* has a capacity of 744 beds, it now is staffed with only sufficient personnel to serve 150-bed patients. These have been limited to active-duty personnel except in rare emergencies because the whole makeup of the ship would make it unsuitable for treating dependents, according to her officer in charge.

Nonetheless, if the effects of closing Corona are to be eased before they reach intolerable proportions, I believe that steps must be taken to provide beds for active-duty and retired personnel dependents aboard the *Haven* until such time as a more aggressive approach to the matter of implementing the authorization for constructing a hospital shoreside has succeeded.

My second request, therefore, in the event you decide to go through with plans to close Corona, is to provide the basically needed hospital facilities in the Los Angeles-Long Beach area: (1) Temporarily through use of the *Haven;* and (2) permanently by veering the Navy Department's appropriations requests toward construction of the naval hospital now authorized for this area.

Your early reaction to my two requests is most earnestly desired as the Department's publicized intentions with respect to Corona have caused much distress in the Los Angeles-Long Beach area.

Very truly yours,

CRAIG HOSMER,
Member of Congress, 18th District, California.

Unapproved Items in "Pork Barrel" Bill Create Possibility of Presidential Veto

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. BROOMFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article written by William F. Pyper which appeared in the Flint, Mich., Journal of July 2, 1957.

The article follows:

UNAPPROVED ITEMS IN "PORK BARREL" BILL CREATE POSSIBILITY OF PRESIDENTIAL VETO

(By William F. Pyper)

WASHINGTON.—Although the $1,600,000,000 public works authorization bill has been cut deeply by the House Committee on Public Works, it still stands a good chance for another veto by President Eisenhower.

This is a minority viewpoint as the committee winds up work on the so-called pork-barrel legislation covering rivers and harbors, and flood control.

But the minority opinion seems sound when it is pointed out that the majority on the committee has loaded the bill with projects which lack approval of either or both the chief of engineers and the Bureau of the Budget. It was for this reason that President Eisenhower vetoed a similar measure last summer, just ahead of his bid for reelection.

Republicans on the committee, who have opposed the unapproved project amendments, have sponsored a series of cuts which they estimate will total nearly $500 million by the time the bill is completed. They have advocated whittling the Federal share down on most items to 50 percent, asking State and local contributions to make up the rest.

Representative WILLIAM S. BROOMFIELD, Michigan Republican, newest member of the committee, has fought the practice of using proxies in voting in the additions proposed by the Democrats. Having received praise from senior Republicans for his work on the committee, he also won some kind of recognition when the Democratic chairman, Representative CHARLES A. BUCKLEY, of New York City, sent word to have a $500,000 Long Island Sound project dropped from the bill.

The item had been added as a favor to the chairman as the committee began consideration of the bill. Representative BROOMFIELD opposed it vigorously, since it lacked approval from the Army engineers and the Budget Bureau. He insisted on a rollcall, and the project was voted in with proxies of four Democrats being used. This week, however, the committee dropped the item on request of Chairman BUCKLEY.

Republican opposition to unapproved projects has knocked out at least one Michigan project, calling for improvement of the harbor at Port Austin. No change in the amount of funds authorized was involved, but studies had indicated superiority of revising breakwater lengths and dredging area. The revised plan lacked approval of engineers, so the committee dropped it. Representative ROBERT J. MCINTOSH, Michigan Republican, will seek such approval before final conference committee action on the bill. The item already has passed the Senate.

But big Michigan projects are involved. They include the $16,085,000 flood control and wildlife refuge program in the Saginaw River Valley, a $9,825,000 flood control program on the Grand River, and a $5,358,000 flood control project on the Kalamazoo River at Kalamazoo. These fell by the wayside last year when the President vetoed the public works bill, although they weren't specifically without authority.

Visiting Turk Farmers Welcomed by Ochitree County, Tex.

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. ROGERS of Texas. Mr. Speaker, under the unanimous consent of my colleagues, I insert in the Appendix of the CONGRESSIONAL RECORD an excerpt from the column of my good friend Harold Hudson, editor of the Ochitree County Herald, Perryton, Tex., which appeared in the July 18 issue of that paper.

The weekend of July 11–13 found 15 members of the Turkish Ministry of Agriculture visiting in Ochitree County. The citizens of Ochitree County extended to their guests from Turkey the traditional hospitality of the Texas Panhandle. The official greeting of the Panhandle was extended at an old-fashioned chuckwagon barbecue. During their stay the Turks visited several farms in the county to witness the harvesting of hay and wheat.

The fine comments of Mr. Hudson which I am inserting pertain to the most important aspect of the occasion, goodwill and friendship. Visits by our foreign friends to our great country present the opportunity for honest and sincere demonstrations of our democratic way of life. There is no better way to bring about the understanding and friendship that we seek in the struggle for world peace.

The article follows:

We made part of the trip with the Turks last week and enjoyed it, especially listening to the pint-sized interpreter, Charley Iran, talk. At least everyone calls him Charley, although I doubt if that is his name. He just joined the party in Perryton on Thursday, and will stay with them until September, then go back to Turkey. Charley speaks a good brand of English and has been studying in this country for several years.

It appears that the group of Turk farmers and agriculturists received their warmest welcome right here in Ochitree County. They were impressed with the barbecue, with the presents given them, and with the friendly reception they received all along the way. We will bet that these 15 men, all of them in important positions in the Department of Agriculture of Turkey, will go home with a better understanding of America and Americans than they could ever have received from all of the experts our State Department could send abroad.

These Turks were unfamiliar with a lot of our machinery, and looked upon the giant

Equity elevator with awe, but they weren't fooled when it came to wheat. They recognized at once that this lightweight, bleached-out wheat crop wasn't good stuff. After all, Turkey is a wheat country, and if you will remember, this country got into the wheat business with Turkey Red wheat seed, still the basis for most of our better varieties.

When the Turks got to Perryton they had been rushed around quite a bit, and some of them were getting tired. The tour and the meal here was planned to give them a chance to see things without the feeling of being rushed.

We didn't know until last week that the average Turk doesn't use soap and water for bathing—uses olive oil to clean his skin. This must present somewhat of a problem on these hot, dry, and dusty days.

Anyway, this was one of the best gestures of international good will that Perryton has ever produced, except perhaps the Lions Club sending Cecil Regier to Iran 2 years ago. Entertaining these Turks cost a little bit of money, but it was well spent.

Move Along on Diversion

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I should like to have included in the Appendix of the RECORD an editorial from the Peoria Journal-Star of July 18, entitled "Move Along on Diversion":

The State Department announced in Washington yesterday that it had completed discussions with Canada concerning an increase in the amount of water being diverted from Lake Michigan.

The State Department did not disclose what the result of its talks with Canada had been, but that really isn't very important. There actually is no reason why Canada should have been consulted at all because the matter of water from Lake Michigan is entirely a concern of the United States and some Canadian newspapers have gone so far as to say so.

The Eisenhower administration has been reluctant to do anything to offend Canada and the lack of consultation with our neighbor to the north was the principal reason President Eisenhower vetoed the diversion legislation passed 2 years ago.

The negotiations with Canada now have been held and, regardless of what opinion she expressed, there no longer is any reason to hold back on the legislation which will permit a realistic diversion.

Objections of the Illinois River valley to the increase in diversion are pretty well satisfied by the inclusion in the bill of Representative ROBERT MICHEL'S amendment setting 8,000 cubic feet per second as the flow to be maintained at Pekin. Senator DOUGLAS, the chief proponent of the bill in the Senate, told the Journal Star that the Michel amendment was agreeable to him.

As the Senator pointed out, Lake Michigan is wholly within the territorial boundaries of the United States, utilization of water from the Great Lakes for sanitary purposes is authorized in the treaty of 1909, and Canada herself took action some years back to change the flow from the Great Lakes without consulting the United States. All of these points support the contention that Canada's consent is not necessary to any diversion from the lake now.

Principal threat to Senate consideration of the lake diversion bill is the civil-rights filibuster in which the Senate now is engaged. It would be regrettable if as important a matter as diversion were blocked because of that and it is to be hoped that a way will be found to get the diversion bill called before the Senate adjourns.

Can the Present Farm Program Go On?

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. CUNNINGHAM of Iowa. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an editorial by the editor and publisher of the Indianola Record-Herald, Indianola, Iowa:

CAN THE PRESENT FARM PROGRAM GO ON?

(By Don L. Berry)

At the risk of reprinting something a great many of our readers have already digested, we reprint herewith a part of Dan Murphy's column in the Farm Bureau Spokesman for June 22. We fear that a good many did not take the time to read it in the midst of corn plowing and alfalfa haying when it appeared.

Perhaps we consider it important because it agrees so completely with what the Record-Herald has been preaching for 15 years, that any farm program, to stand up and be permanently helpful, must be one that can be sold to the rest of the body politic as fair and equitable as between farm producers and consumers. One-sixth or one-eighth of the population cannot permanently maintain a program in their own favor to which the other five-sixths or seven-eights do not agree. We may get by with it for a time by skillful lobbying and temporary concentration of voting power. But we cannot keep it up for very long.

Life magazine and Dan Murphy have brought this out admirably. If you did not read Dan's column when it appeared, read it now:

"Life magazine recently took a critical look at the effects of the Federal farm program on cotton. The headline of the editorial sums up Life's analysis thus: 'Our Government's farm madness pays a successful industry to wreck itself.'

"Your first reaction may be mostly irritation. But, regardless of your past thinking on the values of these programs, you should review the situation. Because pertinent questions were raised—and agriculture must either answer them satisfactorily, or face the loss of public support for the programs.

"Life termed cotton successful for these reasons: Since 1930, producers have increased average yields from 157 to 409 pounds; have cut per-bale man-hours from 260 to 108; have learned to produce as much cotton on 17.5 million acres as were produced on 43 million acres in 1930. The industry has kept up, via machinery, seed improvements, fertilizers, insect controls.

"These are the reasons the Federal program for cotton is called madness: The program has not helped the small farmer it was supposed to help (but a single British-owned corporate firm last year got a cotton-support check for $1.4 million); it is not needed by the larger producer who is getting most of the help; it is costing taxpayers fairly large sums ($1.7 billion in total, $600 million the past 2 years); and finally, the artificial price has strangled both domestic and foreign sales, while use of synthetic fabrics has increased 1,000 percent.

"Do we have good answers to the obvious questions? Can we justify paying the big producer while the marginal man is still in the same old trouble? Is it economically sound to price-fix a farm product out of its own markets while substitutes rush in? Is any program a good one which merely switches a production problem from cotton to corn, via diverted acres?

"I know it's been political suicide for anyone to even question the price-support and control plan. Suggestions to modify the machinery in any way get a man cussed out. AFBF President Shuman was practically read out of agriculture last winter for asking farmers to completely review the program, its success and its shortcoming.

"Now outsiders are asking questions * * * analyzing results * * * digging out the inconsistencies. We're forced, by virtue of our minority numbers, to justify the thing, or face losing it."

It seems to the Record-Herald that the soil bank program is one that can be sold to the public on the ground that it is equally as sensible and forehanded to store fertility as it is to store uranium, steel, battleships, airplanes, and ammunition for possible attack. But the soil bank must be greatly simplified to be practical and it should be administered by a sympathetic Secretary of Agriculture.

A Carlisle farmer has offered to Congress a simple soil bank plan, too simple to provide all the jobs Washington office holders want.

We take the liberty of quoting a letter from Hon. Clifford R. Hope, recently retired (by his own choice after 30 years' service) Kansas Congressman, who held the confidence of American farmers to a degree exceeded by no other Congressman in national history, Mr. Hope said:

"The Goodhue plan is probably too simple to make much of an appeal in Washington. It is certainly basically sound and comes a whole lot nearer fitting in with the original concept of the soil bank than what we have now. The fact is the original soil bank idea is only a very small part of the present program. As you know, the original soil bank legislation, as introduced in Congress, contemplated purely the conservation idea that you mentioned in your recent editorial."

Here are some things to think about from the standpoint of solid economics and national defense, rather than vote getting, and Federal handouts.

Resignation of Selective Service Board Member Due to Supreme Court Ruling in Girard Case

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. BEAMER. Mr. Speaker, some of decisions of the Supreme Court of the United States have created confusion and concern, not only among Members of the Congress but, also, with all citizens in all walks of life. Representative of this concern is a brief news article from the July 19 issue of the Peru (Ind.) Republican—Miami County's oldest, largest, and most widely read newspaper, now in its 100th year.

Under unanimous consent, I include this article in the Appendix of the CONGRESSIONAL RECORD:

George D. Arnold, chairman of the Miami County Selection Service Board, Thursday announced his resignation. He had served on the board 10 years.

His action is explained in the following letter which was forwarded to Col. Wayne E. Rhodes, State Director, and Gen. Lewis B. Hershey in Washington, D. C.:

"For practically 10 years I have served in local board No. 54, Peru, without compensation, and, during that time I have always felt it was a patriotic duty that any citizen would be proud to participate in and also felt that when a registrant was inducted into the Armed Forces that he was assured of the protection of our Government to the fullest extent.

"It was with much regret that I have learned that this does not seem to be the case as one of our boys has been turned over to a foreign power for prosecution.

"This boy was an American citizen, the highest honor that anyone could hope for, and when it became the duty of a local board member to induct such men and our Government fails to give them the support and protection an American citizen should expect and have, my conscience will not permit me to be a party to the induction of such a citizen."

Mr. Arnold is president of the Dewey-Shepard Boiler Co., Inc., and recently was appointed to the Peru City Council, to fill a vacancy.

Scholarship Winners of St. Peter's College, Jersey City, N. J.

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. SIEMINSKI. Mr. Speaker, St. Peter's College in Jersey City, N. J., has long been recognized as one of the outstanding colleges in the United States. Her student body has immeasurably contributed toward the betterment of our social, cultural, and educational welfare. Her sons have gone into politics, medicine, the legal profession, and various other fields. They have distinguished themselves in all walks of life. We are indeed proud of these men.

I would like to list below the names of the St. Peter's boys of the graduating class of June 1957 that have won scholarships:

Crowley, Cornelius, centennial law scholarship, Seton Hall.

Grady, Donald J., John Ben Snow scholarship, law, New York University.

Greene, Joseph, teaching assistant, State University of Pennsylvania.

Hession, John, Fulbright scholarship, French literature, University of Montpellier, France.

Josenhans, Paul J., scholarship, law, Georgetown University.

Kiernan, Bernard M., graduate fellowship, St. Louis University; graduate fellowship, Notre Dame; research assistant, Massachusetts Institute of Technology; National Science Foundation, honorable mention.

Murray, Lawrence, fellowship, physics, University of Maryland; teaching assistant, physics, University of Delaware; assistant, physics, Boston College.

Parella, Robert, scholarship, law, New York University.

Petrella, James J., centennial law scholarship, Seton Hall.

Poli, Oscar A., scholarship, economics, University of Illinois; assistant, economics, Boston College.

Sexton, William, assistant, mathematics, St. John's University.

Tobin, Ronald W., Fulbright scholarship, French literature, University of Toulouse; Woodrow Wilson fellowship, modern language, Princetown University.

Wiecke, Albert O., assistant, English literature, Johns Hopkins University.

Frank H. Smith Dies—Editor of The Clarion

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Friday, June 21, 1957

Mr. CRETELLA. Mr. Speaker, the thousands of readers of the New Haven Register and residents of the area were greatly saddened by the death of Frank H. Smith on Saturday.

The beloved Mr. Smith was the author of a column in the Register called the Elm City Clarion. The Clarion made brisk and delightful reading, covering many points from information on stray cats to the best fishing areas. It was, no doubt, one of the greatest attractions in the New Haven Register.

I include at this point excerpts from an article in the Register of Sunday, July 21, on the death of Mr. Smith:

WELL-KNOWN NEWSPAPERMAN, A VETERAN MEMBER OF REGISTER EDITORIAL STAFF, SUCCUMBS TO LONG ILLNESS AT 76

Frank Hovey Smith, editor of the Elm City Clarion column in the Register and one of the best known newspapermen in the New Haven area, died Saturday afternoon in his home at 106 Martin Street, West Haven. He would have been 77 years old in December.

* * * * *

JOINED REGISTER AT 16

Mr. Smith's notable newspaper career began on the New Haven Register in 1896 when, as a boy of 16, he took a job in the circulation department. Since then he had filled, at one time or another, every executive position in the Register's editorial department, after first qualifying as one of the city's ablest reporters and writers.

He had been sports editor, Sunday editor, editorial writer, city editor, and managing editor.

During his years as a reporter he covered every beat on the newspaper, including sports, police, courts, politics, business, and waterfront news.

For a large part of that time he had a status known then as star reporter, a title given to the man first in line for difficult assignments or top-rank feature stories.

The Elm City Clarion column, he recalled, was established more than 50 years ago by Clarence Smedley Thompson, then the Register's managing editor, who put it together as a small daily feature from paragraphs contributed by members of the staff.

Later Mr. Smith took over the column in collaboration with H. I. Phillips, who subsequently left the Register to work in New York. Through the years, Mr. Smith's keen mind and sympathies, and his remarkable knowledge of men and events, made the Clarion perhaps the most distinguished local column of its kind in existence.

* * * * *

Mr. Smith was a reporter, writer, and editor in the classic tradition. A man of action who loved the outdoors and the atmosphere of hearty sociability, he was uncompromisingly serious about his work, driven by an obsession for accurate, complete, and arresting reporting.

The files of his Elm City Clarion down the years make a unique record of a long era. Humorous, packed with news and occasionally a little caustic on man's inhumanity or transgressions, the Clarion creates a tapestry of community commentary almost unparalleled anywhere.

The universal appeal of his column was a reflection of his own almost limitless range of interests.

While the Clarion was enjoyed for its many short and newsy items, Mr. Smith also wrote with keen authority on major topics—famous happenings of yesteryear, careers of notable figures, newsworthy developments in business and industry. Occasionally he anticipated the news with a well-founded forecast of an important coming event.

PAINSTAKING IN RESEARCH

Despite the condensation demanded by the confines of his column, many of his stories represented long and painstaking research before they could satisfy his insistence on all the facts accurately presented.

He took his education from men and books but found that men were a more profitable study. His natural sociability combined, fortunately, with an intense professional curiosity to make many valuable friendships.

* * * * *

Although the Clarion was the institution most closely identified with him personally, it was, until the last few years, an extra labor he performed in addition to a full day's work as reporter or editor.

In his time he interviewed scores of celebrities of the theater, sports, and public life.

He accumulated a long list of personal friendships among the great and the near great, although completely unimpressed by celebrities as such.

The recipient of countless honors and tributes from groups and organizations, he took particular pride in the fact that he, a non-Catholic, was the first person selected by Father McKeon Division, Ancient Order of Hibernians, to receive the division's annual distinguished friendship award. It was presented to him on St. Patrick's Day, 1950.

* * * * *

VERSATILITY WAS LEGENDARY

Mr. Smith's versatility was legendary, and to many people unbelievable. He knew ships, yachts, and boats, navigation problems and marine technicalities with the familiarity of a master mariner.

* * * * *

On an instant's notice he could respond with remarkably accurate reports on such various trivia as the concessions at Savin Rock, the horse-betting situation in New Haven, or the election prospects of a political candidate. He generally had a close knowledge of latest developments in sports, banking, real estate, the stock market, and the New Haven business scene.

At the same time he could qualify as an expert on the current state of farms and flower gardens, migration of waterfowl, un-

common happenings in the night skies, pedigrees among the cat aristocracy, visitations by rare birds—all this together with a good working knowledge of world affairs.

HAD TRAVELED WIDELY

Strangers were often astonished in conversations with Frank about far places, to have some unfortunate inaccuracy corrected mildly and in slightly professorial style. He had traveled widely and his photographic memory could bring up voluminous detail.

• • • • •

For many years, before an auto injury and later illness reduced the scope of his physical activity, he hunted waterfowl and game birds along the Atlantic seaboard from Connecticut to Florida. He could not only inventory the game resources of those areas but could report shrewdly and with colorful comment on the human scene and the economic conditions he observed there.

AN EXPERT MARKSMAN

He formerly owned a valuable collection of hunting guns which he disposed of when the strenuous life lost its appeal for him. An indication of his prowess as a marksman was his standing for many years as the third highest scorer of the New Haven Gun Club, whose members did their trapshooting on grounds on Dixwell Avenue near Pershing Street.

• • • • •

Often plagued with ailments of the flesh, he tried to beat them off with such handy weapons as violent outbursts of oratory, searing comments on the state of the world, or a disparaging dissertation on the quality of the steak served him at dinner somewhere.

At his best, which was most of the time, he was a prized companion, a storyteller without peer—wit or comic as the situation demanded—ripe with strange humors, always ready with a capsule vaudeville act to delight an audience of his own choosing, and incurably fond of his favorite target of banter, the human race.

In his column he told of the unusual doings of personages and plain persons, ventured curbstone comment on the stock market, the weather, bus drivers, beefstakes, carnivals, and clambakes. Now and then he served a sharp notice on officialdom that some failure in public service had better be corrected.

He found homes for abandoned kittens, rounded up wayward dogs, and faithfully recorded reports from birdwatchers on feathered migrants arriving in the vicinity.

When he believed an appeal to be meritorious he had no difficulty in finding a piano, a radio, or a television set for a boys' club, orphanage, or hospital, and in general he performed the function of official good neighbor to the whole community.

Thanks to his tireless devotion to the aims of readability and solid entertainment, the Clarion became an institution with its own character and personality. It was discussed wherever people gathered, and thousands of readers said they turned first to the Clarion and after that to the front page.

His career as a newspaperman went back beyond the beginnings of the century. His colleagues on the Register and the Journal-Courier are agreed that New Haven will be a poorer place without him.

Microscopic Issue

EXTENSION OF REMARKS

OF

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. CUNNINGHAM of Nebraska. Mr. Speaker, a lot of talk has been heard relative to newsmen being permitted to enter Red China.

On this issue I recommend as good reading the following editorial which appeared recently in the Omaha World-Herald. It sums up my views in this debate very well:

MICROSCOPIC ISSUE

If any of our readers have been waiting for us to join in the campaign to force the State Department to permit American newspapermen to travel in Red China, we are sorry to say we must disappoint them.

Of all issues now before the American public, this, we think, is the most microscopic.

We have read and reread the Bill of Rights, and find nothing in it which guarantees to newspapermen or microwave commentators the right to travel in hostile territory.

From the practical point of view, American reporters could learn just about as much about Chinese affairs by visiting San Francisco's Chinatown as by journeying to Peiping or Shanghai. For once inside China, they would be able to go only where the Red bureaucrats wanted them to go, and see only what the regime wanted them to see.

For some years American journalists have been allowed to penetrate the European section of the Iron Curtain, and so far as we can recall they have come up with little if any news worth mentioning. Pravda and Radio Moscow are still the most important sources—and virtually the only sources—of information about the Soviets.

Undeniably the opening up of Red China to American journalists would provide interesting trips for a few writers and commentators. It would give the Red bosses a chance to present some of their propaganda to the American people. But so far as the American people are concerned, we can foresee no beneficial results. Newspapermen who have been trumpeting this cause would spend their time better, we think, by digging into the mountains of news which remain unexplored in every American county seat and capital. Especially Washington.

Pro Football's Draft Law Is Sound

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. TEAGUE of Texas. Mr. Speaker, in view of the fact that the House Judiciary Committee will initiate its investigation into the National Football League's player draft rule tomorrow, I should like to call to the attention of the Members of this body the following article which appeared in the Washington Daily News for Tuesday, July 23:

PRO FOOTBALL'S DRAFT LAW IS SOUND

(By Ev Gardner)

It will be extremely interesting to see what the House committee investigating professional sports does with the National Football League's player draft rule when hearings open on the Hill tomorrow.

No rule in modern sports has been the victim of so many inaccurate statements; so many phony tears.

It's said this rule, which allows teams to draft the top college stars, restricts players to one team, removes their bargaining rights. There's no denying the fact that it restricts them to one club.

But remove their bargaining rights? Since the draft has been in operation, salaries of rookie players in professional football have gone only in one direction, up.

In fact most rookies today are paid out of proportion in regard to the salaries of established veterans. Restrict them, yes; cost them money, no.

And the restriction is balanced by the fact that the draft rule is the only rule major professional sports ever have had that protects the fans, the people who foot the bill.

And the draft rule had produced a league in which any team can win, unlike baseball which has been dominated for 30 years by one city, New York, and primarily by one team, the Yankees. Without a draft rule the Yankees have been able to corner the market.

Even such a respected baseball man as Hank Greenberg only today came out and said that baseball's only hope of making the American League an eight-team championship race and not a perennial Yankee parade was a form of football player draft.

The NFL's football draft works so well for the player, no player has ever been heard to publicly object to it, teams and fans, Congress would leave well enough alone. The American public likes its pro football the way it is today.

The football player selection system to which Mr. Gardner alludes is embodied in the following resolution adopted by the National Football League in May 1935. In addition to Mr. Gardner's observations on the soundness of the football players selection system, I should like to point out that so far as bargaining is concerned there is unrestricted bidding between the clubs in the National Football League and the clubs in the Canadian Football League for the top college players in the United States.

RULE RELATIVE TO THE SELECTION OF PLAYERS, NATIONAL FOOTBALL LEAGUE

The following resolution was passed at a special meeting of the National Football League held on May 19, 1935, at Pittsburgh, Pa.:

"Motion by Mr. Bell, seconded by Mr. Marshall, that the following rule relative to the selection of players entering the National League for the first time become operative beginning with the season of 1936:

"1. At the annual meeting in February, and each succeeding year thereafter, a list of first year eligible players be presented by each club, and their names placed upon a board in the meeting room for selection by the various clubs. The priority of selection by each club shall follow the reverse order of the championship standing of the clubs at the close of the preceding season; for instance, the club which finished last in either division, to be determined by percentage rating, shall have first choice, the club which finished next to last, second choice, and this inverse order shall be followed until each club has had one selection or has declined to select a player, after which the selection shall continue as indicated above until all players whose names appear on the board have been selected or rejected.

"2. Any first year player who is not so chosen, or whose name does not appear on the list referred to above, is eligible to sign with any club in the league.

"3. If for any valid reason it would be impossible for a player to play in the city by which he has been selected, or the player can show reasonable cause why he should be permitted to play in a city other than that designated for him, then through such arrangements as can be made by sale or trade with another club, he shall be permitted to play in the city he prefers, if the president of the league approves his reasons as valid. (The fact that a job is to be secured for a player in any city as an added incentive to sign shall not be considered

sufficient reason for his transfer from the club by which he was originally selected.)

"4. In the event of a controversy between a selected player and a club, the matter shall be referred to the president, and his decision shall be accepted by all parties as final.

"5. In the event a player is selected by a club and fails to sign a contract or report, he shall be placed upon the reserve list of the club by which he was selected.

"Carried unanimously."

Is the Russian Atomic Energy Program Dragging Its Feet?

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. VAN ZANDT. Mr. Speaker, since there is so much concern about Russia's progress in the field of atomic-electric power, the following article which appeared in the July 1957 issue of the Atomic Industrial Forum Memo should be of interest:

SLIPPAGE IN THE U. S. S. R.?

In early 1956 the Soviet Union announced to the world the electrifying news that it planned to install 2 to 2.5 million kilowatts, presumably electrical, of nuclear power capacity under the 5-year plan ending in 1960—a program which presumably would bring world leadership to Russia by 1960 in the sense of sheer volume of nuclear power. Until last month the only authoritative details on the Russian 5-year program has been provided in a speech delivered in England in April 1956 by I. V. Kurchatov, a leading member of the U. S. S. R. Academy of Sciences (see Memo for May 1956, p. 19). Kurchatov said that Russia planned to build 5 nuclear power stations by 1960, including 2 stations which "will be equipped with water-moderated and cooled thermal and epithermal 200,000-kilowatt reactors and 70,000-kilowatt turbines," and another station "equipped with graphite-moderated and water-cooled reactors of the type used at the first atomic powerplant of the U. S. S. R. Academy of Sciences," with each reactor "feeding turbines of 200,000 kilowatt total capacity." A third type of station would use a heterogeneous heavy water-moderated and gas-cooled reactor, "feeding turbines of 200,000 kilowatt total capacity."

Early estimates: Kurchatov said the power stations would "be put into operation beginning with the end of 1958; some of them will start operation in 1959 and in 1960." He left ambiguous such matters as how many reactors would be placed in each station, and whether he was referring in each case to thermal or electrical kilowatts.

Kurchatov also said that Russia would build by 1960 "several pilot plants each with an individual capacity of 50,000 to 70,000 kilowatts." He said these would include a boiling-water reactor, a "homogeneous heavy water-moderated thermal-breeder reactor with the U–233–Th–232 cycle," a sodium graphite reactor and a sodium-cooled fast breeder.

Since the Kurchatov speech, Russia has been notably silent about its rate of progress in fulfilling the ambitious nuclear power goals of its 5-year program—to the point where a curious world was beginning to wonder whether the silence might mean that the program had slipped badly off schedule.

Last month, in response to a detailed questionnaire submitted to it and to all other leading atomic nations by the United Nations, Russia brought up to date what it is willing to say about the state of its nuclear power program. Although many points in the report are still ambiguous, it appears to confirm the Western suspicion that all is not on schedule with 1956–1960 atomic power program.

The program: The current program was outlined by Russia as follows:

PWR's: "Two of the stations to be built under the Ministry of Electric Power Stations' plan will have water-moderated and water-cooled reactors. A two-circuit system has been adopted. The water in the primary circuit, at 100 atm. pressure, is heated in the reactor from 250° to 275° C. and passes into the stream generator where it transfers the heat derived from the reactor to the water and stream in the secondary circuit. * * * The turbo-generators (3 of 70,000 kw each) will be driven by saturated steam at 30 atm. pressure from one reactor." Thus each of these reactor is apparently expected to generate 210,000 kw of electricity.

The PWR stations will each have a total capacity of 1,520 thermal mw, 420 gross electrical mw and 390 net electrical mw (indicating apparently that there will be two reactors per station). The expected burn-up is 3,500 megawatt-days per ton, and the fuel charge will be 40 tons. (It is not clear whether this means 40 tons per reactor or per two-reactor station.)

Russia said that an average uranium enrichment of "about 1 percent" will be used in its PWR's, and that they are expected to produce enough plutonium "to supply the reactor with all the enriched material required for the next charge: thus it is possible that uranium–235 will be needed only for the initial charges."

Water-graphite: "A third power station is to be equipped with reactors similar to that used in the first atomic power station of the Academy of Sciences of the U. S. S. R., which is in operation. These will be graphite moderated, and the heat transfer mediums will be water and steam circulating through channels in the reactors. Some of these channels will be used for superheating the steam in the primary circuit to approximately 540° C. The heat taken from the reactor by the steam will be used in the steam generator to produce and superheat secondary steam, which will then be fed into the turbines. High-parameter secondary steam—90 atm and 500° C.—is expected to be produced; modern turbines designed for such parameters, with a power of 100,000 kilowatts each, will be used at this station."

The pressurized water-graphite reactor station will have a total capacity of 1,150 thermal mw, 400 gross electrical mw and 375 net electrical mw. There is no indication of how many reactors there will be per station. The calculated burn-up is 2,500 mw-days per ton, with a fuel enrichment of 1.2 percent. The fuel load is given as 185 tons, again without indication of whether this means per reactor or per station.

Both the PWR's and the water-graphite reactor stations are calculated to run 7,500 hours per year at full capacity. No location was indicated for any of the stations.

Prototypes: Russia went on to say: "In addition to the large-scale power stations, it is planned to construct four relatively small powerplants with reactors, of between 5 and 70 mw capacity, requiring thorough experimental study before they can be recommended for use in large power stations." The four reactors are the same types mentioned earlier by Kurchatov—BWR, SGR, homogeneous and fast breeder. No mention is made of the heavy water, gas cooled reactor power station referred to by Kurchatov.

Totals: The figures given by the Russians for their planned nuclear power capacity add up to 1.24 million gross ekw in three power stations, plus somewhere between 25,000 and 285,000 ekw in prototype capacity including the 5,000 ekw water-graphite prototype which has been running since 1954. The maximum capacity under this program thus comes out at about 1.5 million ekw—a figure substantially less than the 2 to 2.5 million ekw scheduled under the original 5-year plan.

The Russian report does not give dates either for the start of construction or for estimated completion of the nuclear power stations.

On the subject of status, the report did say that Russia is conducting "research on the nuclear phenomena likely to occur" in the PWR's and in the experimental prototypes, using its RPT testing reactor. It is also conducting tests relating to the stress which will be imposed on PWR pressure vessels. The 5,000 electric kilowatts prototype water-graphite reactor of the Academy of Sciences is being used for "preliminary experimental research work" on water-graphite reactors. (Russia said that this reactor "has been functioning since July 27, 1954, and throughout that time nothing has ever gone wrong with a single fuel element.")

"Lack of experience": In a revealing statement, Russia said it does not plan to use nuclear energy for residential heating at an early stage "in view of the possible danger of radioactive discharges, and of the complete lack of experience in the operation of nuclear powerplants." In another statement related to status, the report said: "There are a number of possible technical improvements which might well effect the economic profitability of power produced in nuclear stations. In the planned stations research work will be concentrated mainly on increasing the period of service of the fuel elements. According to preliminary estimates it will take about 3 years of operation to accumulate the necessary experience; thus we shall be able to take the improvements in question into account in the construction of the next series of installations (1961–65)."

Relatedly, the Soviet newspaper Tass reportedly announced last month that Russia has begun construction of the first of its major nuclear power stations, to have a capacity of 420,000 electric kilowatts from two reactors, each of which would use three 70,000 kilowatt turbines. (This would appear to indicate that the station will be the first of the two PWR stations.) The report said that the station is scheduled for completion by 1960. No location was given.

A Good Return for Taxes

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. CUNNINGHAM of Iowa. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an editorial by the editor and publisher of the Indianola Record-Herald, Indianola, Iowa:

A GOOD RETURN FOR TAXES

The Kaiser thought the United States would not fight. He started World War I. Japan thought we were not ready to fight. She started World War II. Russia knows that we will fight and she knows we are

ready. She has not started world war III—not yet. Let's keep her well informed that we are ready. It is cheaper to keep our soldiers well supplied with weapons and well trained than it is to have them fighting. We probably get more for our taxes for defense than for any other taxes we pay.

Industrial Area Redevelopment

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 1, 1957

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I should like to say that it is a matter of deep satisfaction to me, to the other members of the congressional delegation from the Greater Detroit area and, I am sure, to many other Members, to know that the chairman of the Banking and Currency Committee, Mr. SPENCE, of Kentucky, has given assurance that the bills which many of us have introduced to provide for area redevelopment, both in industrial centers and in rural sections, will be the subject of committee hearings early in the 2d session of the 85th Congress, beginning January 1958.

Likewise, we are greatly heartened by the interest and support which the Speaker has given this important matter which vitally affects millions of American facilities, thousands of American businesses and virtually every State in the Nation.

Recently it was my privilege to take part in a conference with the chairman of the Banking and Currency Committee and the Speaker at which a delegation representing more than 310,000 auto workers and their families in the Detroit area described that area's industrial blights, the obsolete multistory factories and outmoded facilities, and the need for Federal assistance in the way of loans and grants to clear away industrial slums and housing slums so that modern plants may be built in the Detroit area which has the world's greatest skilled labor supply in the automotive field. This delegation was composed of George Merelli and Ken Morris, codirectors, UAW region 1, Detroit—East Side—Mich., and Edward Cote and Joseph McCusker, codirectors, UAW Region 1A, Detroit—West Side—Mich.

This delegation reported that the UAW in Detroit area has committed substantial funds as "seed money" to be put into a common effort to develop practical plans for the modernization and redevelopment of the blighted areas of my native city. At this point in my remarks I ask unanimous consent to insert a brief summary of the area redevelopment bill which I have introduced as H. R. 7462 and which has been introduced by Congresswoman MARTHA GRIFFITHS as H. R. 5471, by Congressman MACHROWICZ as H. R. 5205, by Congressman LESINSKI as H. R. 5268, by Congressman DINGELL as H. R. 5302, and Congressman DIGGS as H. R. 7800. Senator MCNAMARA, of Michigan, also has introduced an area redevelopment bill, S. 964:

SUMMARY OF AREA REDEVELOPMENT BILL

1. Purpose: To assist communities, industries, enterprises, and individuals in areas needing redevelopment to expand their productive activity to alleviate excessive and prolonged unemployment and underemployment by providing new employment opportunities and developing and expanding existing facilities and resources without reducing employment in other areas.

2. Organization:

(a) Creates an Area Redevelopment Administration with an Administrator appointed by the President, subject to Senate confirmation.

(b) Creates a national Advisory Committee to assist Administrator.

3. Redevelopment areas defined:

(a) Industrial redevelopment areas are defined as "Those within the United States in which Administrator determines that there has existed substantial and persistent unemployment for an extended period of time."

(b) Rural redevelopment areas are defined as "those rural areas within the United States in which he determines that there exist the largest number and percentage of low income farm families, and a condition of substantial and persistent unemployment or underemployment."

(c) Administrator may designate several counties or municipalities or a part of a county or municipality as a "redevelopment area."

4. Local committees: Once a redevelopment area is determined, local redevelopment committee shall be appointed by Administrator consisting of at least 7 residents of area, representing management, labor, commercial, industrial development, and agricultural groups. Committee shall submit plans and cost estimates for:

(a) Development of resources, processing and marketing facilities of area;

(b) Construction, rehabilitation, and alteration of industrial plants or commercial facilities of area;

(c) Purchase of machinery or equipment for use in area to attract new industry and stimulate economic activity.

5. Loans:

(a) On application approved by a local committee, Administrator may make loans to assist in financing (1) purchase or development of land for industrial usage; (2) construction, rehabilitation, or alteration of industrial plants or other manufacturing, commercial, or processing facilities; and (3) purchase of machinery or equipment for use in area, if he finds borrower will not transfer business operations to such plant so as to effect a significant reduction of employment in any other area within the United States.

(b) One hundred million dollars authorized for making industrial redevelopment loans, on revolving fund basis. One hundred million dollars appropriated for rural redevelopment loans, with limitation of $6 million to any one State, on revolving-fund basis.

6. Assistance to public facilities:

(a) Loan for public facilities: Upon application of any State or political subdivision thereof, Indian tribe, private or public redevelopment organization, Administrator is authorized to make loans to assist in financing purchase or development of land for public-facility usage, and construction, rehabilitation, alteration, expansion, or improvement of public facilities in redevelopment areas.

(b) Grants for public facilities: Administrator may conduct studies of needs and probable costs in redevelopment areas for needed land acquisition for public-facility usage, and for construction, rehabilitation, alteration, expansion, or improvement of useful public facilities. May receive proposals from States, Indian tribes, organizations, etc., showing plans, costs, and contributions to be made to proposal, and Administrator may make grants where he finds appropriations authorized not to exceed $50 million for making grants.

7. Financial assistance under Housing Act:

(a) Housing and Home Finance Administrator is authorized to use slum clearance and urban renewal projects in redevelopment areas for industrial and commercial rebuilding without regard to requirements of existing law that project area be predominantly for residential uses. This is, however, subject to the limitation that not more than 10 percent of the funds authorized under existing law for loans or capital grants for slum clearance and urban renewal shall be available to provide financial assistance under this section.

(b) Housing and Home Finance Administrator is authorized also to make urban planning grants for planning in redevelopment areas.

8. Vocational training: Secretary of Labor shall—

(a) Determine vocational training or retraining needs of unemployed individuals in redevelopment areas and cooperate with Secretary of Health, Education, and Welfare, and State and local agencies engaged in vocational training to assure that all facilities are available to such unemployed persons.

(b) Determine additional facilities needed to meet vocational training or retraining needs. Secretary of Labor shall then so advise Secretary of Health, Education, and Welfare who shall furnish assistance, including finances, to State agencies to meet needs. If State agencies are unable to meet vocational training and retraining needs, Secretary of Health, Education, and Welfare may contract for such services with public or private institutions. Secretary of Labor shall provide any necessary technical assistance for setting up apprenticeship, journeymen, and other job training needed in locality.

9. Retraining subsistence payments: Secretary of Labor shall—

(a) Enter into agreements with redevelopment area States whereby the States, as agents of the Federal Government, make weekly retraining payments to unemployed individuals not entitled to unemployment compensation (exhaustions or not insured) and certified by Secretary of Labor to be taking training.

(b) Make retraining payments to such individuals for not more than 13 weeks in amounts equal to average unemployment compensation payments payable in State making payments.

Representative James Bowler

EXTENSION OF REMARKS
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 18, 1957

Mr. GRAY. Mr. Speaker, all of us mourn the passing of our dear friend and colleague, the Honorable JAMES BOWLER of Chicago. There is an empty space in the Illinois delegation that will

be difficult to fill. JIM BOWLER had an outstanding record of public service.

I would like to include in the RECORD an editorial by the Chicago American of July 20, 1957, that outlines some of the great work performed by our departed friend.

REPRESENTATIVE JAMES BOWLER

Representative JAMES BOWLER, who died Thursday at the age of 82, had been a Congressman since 1953 and before that had served as a member of the Chicago city council longer than any other man in history. He became an alderman in 1906.

As Mayor Daley says, "He played a major part in the progress and development of the city" in the course of his long service in the council.

Among the great civic achievements in which he had a leading part was the building of the Congress Street Expressway. He was in front of the long fight to overcome the countless obstacles to the project, and in the end his advocacy had a decisive part in persuading the council to approve the plan.

He was an effective leader also in the development of the West Side Medical Center.

In Congress Representative BOWLER worked energetically for the development of O'Hare Field and for increased lake diversion.

Transferring to the new field of national politics in the closing years of his life, he served the people of Chicago there with intelligence and vigor until illness put an end to his service. He will be remembered as a man who helped make Chicago history.

A Citizen Looks at the Civil-Rights Bill

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I submit the following letter written to the editor, published on the front page of the Fayette, Miss., Chronicle, under date of July 11, 1957:

LETTER TO THE EDITOR

EDITOR, THE FAYETTE CHRONICLE:

The civil-rights bill, which would give the Federal Government police power over our public schools, has been driven through the House by the Republican administration heavily supported by northern Democrats. Now it is in the Senate pushed along by the same elements. Twenty-two southern Senators are fighting it with loyalty and great ability but only a filibuster can defeat this bill and that defeat might not be permanent. The threat of a momentous change is now so great that we should be adjusting our minds to it. Jefferson is more vulnerable than other counties. The hour is late.

The legislature has made it possible for us, as a last resort, to give up our public-school system—an event so unfortunate that we shrink from contemplating it.

However, the choice would not be between coeducation of the races and no schools, it would be between coeducation of the races and private schools, for such schools would certainly be organized at once to fill the vacuum. Taxes could be greatly reduced. The present buildings could be leased, and present teachers could be employed, by corporations or individuals. Private benevolence would arrange tuition for children (if any) whose parents are too poor to pay anything. Let the following facts be remembered:

For about 75 years our State had no public school system. There were many private schools, some of them excellent. Mothers did much teaching at home. This writer has known a mother who taught her own children to read and afterwards taught separately two little colored girls, the daughters of her cook. We have many Catholic citizens who pay tuition to their parochial schools although they are paying the ad valorem tax to support public schools. The private school of the late Doctor Grafton at Union Church was justly famous for the training it gave its students, and on the other side of the county there was a 1-room log schoolhouse where fundamental teaching was given to a number of fine citizens, including 2 very useful ministers of the gospel and a lieutenant general of the United States Army.

If the civil-rights bill should be passed and enforced, all would not be lost. The saddest and most appaling feature of the present conflict is the vindictive effort of a powerful majority to deprive us of self-government and substitute government from Washington in a matter that is of little interest to that majority but as important to us as the breath of life.

Yours respectfully,

A CITIZEN OF JEFFERSON COUNTY.

New-Type Red Rule Under Test in Poland

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the CONGRESSIONAL RECORD a newspaper clipping from the Washington, D. C., Evening Star of July 19, 1957. I think that article sets forth very thoroughly the problem faced by the Polish people.

They are caught between the millstones of Communist government on one hand and danger of a holocaust of the type that killed and injured so many thousands of Hungarians. The Poles are taking a realistic course and will ultimately triumph over Russian domination. I hope all will read this article.

The article follows:

NEW-TYPE RED RULE UNDER TEST IN POLAND

(By Richard Fryklund)

WARSAW, POLAND.—The Communist regime here is entering the make-or-break phase of its experiment in a new kind of government.

In the next few months the regime must demonstrate that it has really invented, in the words of one party leader, "a kind of socialism people can like." And to make it tougher, the new brand of government must also be a kind of socialism the Polish and Russian Communist Parties can like.

It is no sure thing that the Polish experiment will succeed.

This is, of course, a Communist government, committed to the idea of a dictatorship of the proletariat—the dictatorship operated on behalf of the workers by the Communist Party. The government also is committed to Marxist-Leninist socialism, and it considers advocacy of capitalism to be a subversive act.

But at the same time—and this is what makes this Communist government worthy of new interest in the Western World—the present regime is determined to build socialism in an atmosphere of individual freedom and apparently is determined also to live in genuine harmony with all of the world.

The experiment is only 9 months old, and rough times lie ahead. In the past 9 months, Poland has passed the stage of exhilaration brought on by the unexpected success of October's gamble for national and individual freedom, and is entering a period of slow, hard grind. The people are used to their new freedom. Now they want to see if the Communist Party can do a good job of running a country over the long haul.

The party insists it can please the Polish people, satisfy the Soviet Union and prove that Marxism works.

Party leaders say they will succeed through a program combining Communist Party dictatorship, individual freedom, rapid economic progress and doctrinaire socialism.

Poland is full of people, however, who believe that this program is one of "contradictions." They believe something in that program eventually will have to give way: Either party rule or individual freedom; either socialism or economic progress.

The people say they will fight rather than give up their freedom or their expectations for economic gain. The party and the Kremlin say flatly that party rule and socialism will not be sacrificed.

Western observers, therefore, who wish the Polish people will find themselves in the slightly paradoxical spot of rooting for success of the Communist program.

What are the forces working for and against success of the Polish experiment? First, those against:

1. The overwhelming majority of the Polish people are not Communists. Most are anti-Communist. The party is at best only tolerated.

2. Poles hate the Soviet Union, yet a successful Polish Government today must be linked with Russia.

3. Most Poles are not Socialists, and they have little enthusiasm for building socialism.

4. The Polish economic system is Socialist, but there is no indication that doctrinaire socialism will be able to solve Poland's economic problems.

5. The people are determined to keep their freedom, including the freedom not to cooperate when they don't want to.

6. Poles want fast improvement in their standard of living, but even under the most happy economic and political circumstances progress will be painfully slow.

7. Poland lacks leaders. The Germans and Russians for 15 years systematically "liquidated" Poles who showed ability for moral or intellectual leadership. There is a general contempt for government or any authority in Poland today.

In other words, to sum up the difficulties the Polish Communist Party faces, the regime is trying to put over an unpopular political system and a perhaps unworkable economic system, both efforts handicapped by the determination on the part of the regime to maintain national independence and personal freedom.

FAVORABLE FORCES

There are of course important forces working for the party:

1. Poles believe they will be slaughtered like Hungarians if they don't keep a Soviet-approved Communist government.

2. The Catholic Church—the only widely supported force in Poland—accepts the present Communist regime as the only alternative to revolution and a return to the old terror system.

3. The new Communist regime is showing signs of flexibility which may in fact carry it to a workable economic and political system, even though in theory the party remains true-Red Communist.

4. Poles are tired of stress, of instability, of bloodshed. They don't want to fight the Communists again.

5. The Polish people are not without hope; they believe the Soviet Union and the whole Communist bloc is changing for the better. Poles believe the world eventually will be a safe place for a fully democratic Poland, so there is no need for desperation today.

6. Many countries in the West and in the Soviet camp want to see the Polish experiment succeed and will continue to give important ideological and financial aid.

And so, the Communist Party has working in its favor the widespread conviction that Poland has no other place to go, plus the hope among Poles that things will continue to get better.

WHAT LIES AHEAD

Then what is the future of the new Polish regime?

This is a favorite question of outsiders in Poland, but the Poles themselves seem to avoid working out the answer. One Pole put it to me this way:

"We don't make detailed plans about the future here. We have learned during the German ocupation and then the Stalinist days that it is useless to look ahead. We get what we can out of today.

"Of course, we hope things will get better, and we hope we don't lose our freedom. But it doesn't seem very important to wonder what kind of government we will have a few years from now."

Visitors who like to worry about the future on behalf of the Poles generally conclude that the party, itself, has no real long-range plans—just plenty of ideas wrapped up in the strange artificial language of communism, and not even the party officials can agree on what the ideas will mean in practice.

The people, on the other hand, may be against communism, but they don't seem to know just what they would like.

SOME KEYS TO THE FUTURE

Actually, the future for Poland seems to rest on several unanswered questions:

How long will the people remain patient under an unpopular government and a limping economic system?

If the party must some day either reapply terror to maintain its rule or sacrifice communism in order to maintain freedom, which will the party choose?

Will the Soviet Union permit the Polish people to lose patience? Or will the Kremlin permit the Polish Communist Party to water down classic Communist doctrine.

Poles both in and out of the party believe the recent changes in Moscow—the ouster of "conservative" Communist officials—widens the scope of choice in Poland.

From the Polish point of view, the essence of the Kremlin change is that Russia now affirms the right of all Communist states to have their own independent brands of communism. The Polish party sees it as a green light to unlimited flexibility within the framework of the Marx-Lenin-Engles textbooks. And those textbooks can be made to say almost anything one would like to hear.

Flexibility would not extend, of course, to the admission of opposition parties capable of ousting the Communists from power.

BEST OF WHAT IS NECESSARY

The people would like freedom of choice to be extended much further. The Polish Communist regime of Party Secretary Gomulka is tolerated only because today the Poles must have a Communist government, and his is the best they know of. If the Poles had their choice, it is quite probable they would throw out the Communist government tomorrow and substitute for it—well, they don't seem to know just what.

But the desires of party and people combined with political and economic realities in Poland seem to be leading Poland in one general direction: Addition of more and more capitalistic features to the Polish economy and growth of increasingly vocal opposition groups preaching political liberalization within and without the party.

No one, of course, expects to see Western-style political and economic freedom in Poland as long as communism remains the way of life in Russia. But at the same time no one—even Communist Party officials—say a reversal of the present liberal trend is possible.

No one knows whether Poland eventually can produce a kind of socialism people can like. But already Poland has produced something new under the sun, and the country already is vastly better off because of it.

Subsequent articles in this series will take up the question of what's new in Polish economics, foreign policy and civil liberties and attempt, above all, to show what it is like to be a Pole living today in this new kind of Communist state.

Increased Pay for Postal Workers: Same Consideration Should Be Given for All Government Workers

SPEECH

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 22, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 2474) to increase the rates of basic compensation of officers and employees in the field service of the Post Office Department.

Mr. WOLVERTON. Mr. Chairman, the bill now before us will, if adopted, raise the salary of postal workers $546 per annum across the board for all of them in their several grades. They are entitled to this recognition. It will bring the salaries of these faithful workers in line with the increases that have come to industrial workers in the last few years.

We are all grateful for the fact that we have today in this country the highest national income of any time in our history. Certainly, our postal workers and all other Government employees are entitled to share in this prosperity. If they were workers in industry, or any commercial pursuit, or any form of activity they would receive salary increases incident to the increased national prosperity.

Furthermore, we are all aware of the increased cost of living that has come as part of our increased prosperity. Our workers both in and out of Government are entitled to have such fact reflected in their rate of wages and the salaries they receive.

Too often there has been a lag in bringing our Government workers wage increases to meet the increased cost of living. This has in many instances made it necessary for such workers to look for additional employment or for their wives to take on employment duties to meet the necessities of the family. This should not be so in America. Our national economy can and should recognize the needs of Government workers. They are entitled to an increase and I give my support to this bill that raises the salaries of postal workers; and I will be equally pleased to give my support to raise the wages of all Government workers to the point that is necessary and proper under existing conditions.

A Strange Position

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. ABBITT. Mr. Speaker, in the current debate on the civil-rights bill in the other body much has been said about the possibility that troops might be used to enforce the provisions of the bill. As has been pointed out on this floor by me and by others, there is much more to this so-called civil-rights bill than meets the eye. It is encouraging, to say the least, that others are now agreeing with us.

However, while there is a great deal of sentiment for assuring the South that troops would not be used, there still is a determination on the part of the administration to keep part III of the bill intact. This is, of course, saying one thing and doing another.

This fact is brought out forcefully by the Lynchburg News, of Lynchburg, Va., in an editorial this morning. I wish to insert the editorial at this point in the RECORD as an indication of the sentiment of our people on this question:

A STRANGE POSITION

The civil-rights bill as passed by the House of Representatives and which its advocates are now trying to get through the Senate without change gives power to the President to call out troops to enforce laws and court decrees in the whole vague field of civil rights. It gives the Attorney General power to create situations in which a President might find it necessary or desirable to call out troops or otherwise exercise the extreme of Federal power.

President Eisenhower says that he can conceive of no situation which would lead him to take such action. He can't imagine himself doing anything of the sort.

Then he rejects striking out the section which gives the President the power to do so. He doesn't want the power, he wouldn't use it if he had it given him. Yet he favors the grant of that power.

President Eisenhower may be taken at his word about his intentions or lack of intentions. There's no reason to doubt his sincerity when he says he can imagine no circumstances under which he would use Federal troops. But Mr. Eisenhower will be President for only 2 years after this bill, if it is passed, becomes effective. Mr. Brownell will be Attorney General for no longer period. After that may come a President and Attorney General who have no such horror of using the powers granted under the provisions of the bill. He might be a Nixon or a Knowland or even a Humphrey, a Harriman or a Douglas, none of whom share Eisenhower's compunctions.

To take such chances would be criminal. The Senators opposed to passage of this bill without sweeping amendments will be justi-

fied in using whatever legitimate means are at hand to defeat it and should do so. We have no doubt they will. If President Eisenhower's legislative program is completely stymied let him blame himself and his trusting faith in his Attorney General.

Nor is the situation changed much by the offer of a so-called compromise amendment to the part giving power to the President the incumbent doesn't want and won't use. This proposal is that the reconstruction force laws passed by Thad Stevens' Congress be repealed. That is no compromise at all. It is just something that should in all decency be done even if there were no civil-rights legislation pending. By all means repeal this hate-inspired and oppressive legislation but spare us talk of concessions to the fears of the South and of many in other sections of the country. It would be a concession to nothing but a decent regard for human rights and the Constitution the Union's founders framed to support them.

Emma Lazarus

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial printed in the East Side News on the 108th anniversary of the birth of Emma Lazarus, the beloved American poetess who is probably best remembered as the author of the inspiring sonnett which is engraved upon the Statue of Liberty in New York Harbor:

EMMA LAZARUS, 1849–87
(By Harry H. Schlacht)
"THE NEW COLOSSUS

"Not like the brazen giant of Greek fame,
With conquering limbs astride from land to land;
Here at our sea-washed, sunset gates shall stand
A mighty woman with a torch whose flame
Is the imprisoned lightning, and her name
Mother of Exiles. From her beacon hand
Glows worldwide welcome; her mild eyes command
The air-bridged harbor that twin cities frame.
'Keep, ancient lands, your storied pomp!' cries she
With silent lips. 'Give me your tired, your poor
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore.
Send these, the homeless, tempest-tost to me,
I lift my lamp beside the golden door'."

Monday we commemorate the 108th anniversary of the birth of Emma Lazarus, the beloved American poetess. Children of liberty will clasp her hand in loving memory.

Emma Lazarus is the author of the inspiring sonnet, The New Colossus. Her message to the world, all the world may read. It is engraved on the Statue of Liberty. It is standing in the gateway of democracy.

The noble soul and human heart of Emma Lazarus are symbolized in the Goddess of Liberty. It was given to a child of oppressed generations, to understand the true meaning of this liberty-loving nation; to pen the immortal lines with such prophetic pathos; to express the spirit of democracy with such eloquence: to welcome the persecuted of the Old World, to the glorious promise of the New World.

And through the years we can hear the echo of Miss Liberty's voice speaking to these pilgrims to our blessed land. As you breathe the free air of our shore, homeless wanderer, reaching home, become one with us in freedom's cause, take the riches of our liberties and repay the gift of becoming one with us—an American.

The Goddess of Liberty and Emma Lazarus have become synonymous. No poet of any nation has ever received such worldwide distinction. The Lady With the Torch was presented by the people of France to the American people to commemorate the first centennial of American independence.

Emma Lazarus was born on July 22, 1849, in New York City. She was the daughter of an old Jewish family. The story of her literary evolution is the story of the fulfillment of the evolution of a soul. Many women of every race, many men of every race, have evinced literary ability.

But it is rarely given to man or woman to so combine the powerful poetic expression with the clear insight and courage, with the conviction and devotion, as it was in Emma Lazarus. Her poems had power. Her poems had fire.

Since Miriam sang of deliverance and the triumph of the Red Sea, the Jewish race has had no braver singer. Her songs of divine unity repeated on the lips of her own people, in all zones and continents, have been heard round the civilized world.

Her poem, The Crowing of the Red Cock, written when the Russian sky was red with blazing hatred, is a powerful lyric worthy of the Maccabean age. Her poem Banner of the Jew, has the ring of Israel's war trumpet. It sounded the clarion call to all Jews to unite for human rights, for new achievements and for new glories as in the days of the Maccabees.

She was one of the pioneers of Zionism. She was one of the outstanding advocates of a Jewish homeland. It was in that cause that her character had its fullest flowering.

It is heartening to see that the same poetess who was the first to give expression for the national renaissance of her people has become the symbol of humanity and democracy. She died on November 19, 1887. She was in her 38th year.

On that tragic day no better appreciation of Emma Lazarus was expressed than that of the famous American poet, John Greenleaf Whittier, who wrote: "Her people will mourn the death of this woman. But they will not be alone. At her grave the tears of the daughters of Jerusalem will mingle with those of the Christians."

As long as liberty shall live in the human heart—as long as the Statue of Liberty shall remain our symbol of freedom—the name of that symbol as the champion of liberty.

O, take Miss Liberty, O, take thy radiance 'round, when dimmed, revive; when lost, return; till not a shrine through earth be, on which thy glories shall not burn.

More Egg Prices—Depressing, Aren't They?

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mrs. KNUTSON. Mr. Speaker, I regularly pay in the market anywhere from 4 to 5 cents apiece for eggs. But my constituent, a farmer, Mr. Ray Korinek, of Campbell, Minn., says eggs have been less than 2 pennies apiece for a good long time. Under leave to extend my remarks, I insert in the RECORD Mr. Korinek's letter and some of his egg and poultry receipts:

CAMPBELL, MINN., *July 19, 1957.*
Hon. COYA KNUTSON,
House Office Building,
Washington, D. C.

DEAR CONGRESSWOMAN KNUTSON: You will find enclosed statements of eggs sold, also statements of what the laying hen (Leghorn) herself is bringing here at the local markets at the present time.

These can be for your keeping as I have copies of same for my records.

Sincerely,
RAY KORINEK.

P. S.: Eggs have been less than a penny apiece for a good long time.

June 18: Eggs, 21 cents per dozen.
June 27: Eggs, 21–18–18–15.
July 11: Eggs, 25–19–19–15.
July 11: Hens, 8 cents per pound; cockerels, 7 cents per pound.
July 16: Eggs, 22 cents per dozen.
July 16: Hens, 8 cents per pound.

Archibald M. Main, Sr., Honorary Chairman of the Board of the Bath Iron Works

EXTENSION OF REMARKS
OF
HON. FRANK M. COFFIN
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. COFFIN. Mr. Speaker, Mr. John R. Newell, president of the Bath Iron Works Corp., in Bath, Maine, recently delivered an address in that city honoring Mr. Archibald M. Main, Sr., honorary chairman of the board of the Bath Iron Works. Thirty years ago, Mr. Main, together with Mr. Newell's father, who is now deceased, pooled their wealth of experience, talent, and business acumen to bring this company back to its honored place as one of the great shipyards in the country. The Bath Iron Works, under their guidance, emerged from the shipbuilding slump following World War I and the throes of the great depression, to become once again famous for its contributions to our naval fleets.

Under leave to extend my remarks, I am inserting excerpts from Mr. Newell's address which is a tribute to a distinguished and resourceful citizen of our State, and provides an interesting sketch of the history of this shipyard located in the city where America's first ship was built in 1607:

MR. NEWELL'S TRIBUTE TO MR. MAIN

When the old Bath Iron Works, Ltd., closed its doors in receivership back in 1925, there were few people in Bath who thought the Shipbuilding City—where America's first ship had been built in 1607—where, since that time and up to 1925, some 4,000 oceangoing vessels had been built—would ever build another ship. * * *

DARK DAYS

There was no subsidy to offset the differential between foreign operated ships at

sweatshop wages and the high wage standards and costs facing our American steamship operators. * * *

Business was good in all other industries; the war to end wars was over and we could, so it seemed, let our merchant navy—and our shipyards—go to rot. And go to rot many of them went. * * *

FLAME REKINDLED

And so it was that the city of Bath, dependent on ships and shipbuilding for over 300 years, came upon very hard times when its principal industry ran on the rocks in 1925. * * * But before the embers of her fame and skill as a shipbuilding center completely died, two men got their heads together and resolved to rekindle the slumbering Bath Iron Works and to try to revive it with not much more than a hope and a prayer and less money than it would take, today, to buy a first-class engine lathe.

NEWELL AND MAIN

One of these men was my father. The other we honor today—Archibald MacNicol Main. * * * Every Saturday they worried whether there'd be enough in the bank to meet the payroll. Every time they bought major materials it had to be on a basis of "we'll pay just as soon as we can—which may not be when you want it—but you'll get paid." * * *

Gradually, as the years went by, they built up a fair balance sheet and things looked better—then came the depression. A half-million-dollar yacht left on their hands; no new yachts to build; practically nothing until the Coast Guard came along with seven patrol boats—which they were determined to get and got at an extremely low price—but it kept the wheels turning until better times slowly came back.

BACK TO NAVY SHIPS

Finally they got the iron works back into Navy shipbuilding and with the rising awareness of our woefully weak military position, the business of building up our fleet put the old mare back in the running again. The pre-war days, the hectic pace of World War II, the let-down after the war, and the rising activity of the last 10 years are pretty well known to most of you here and do not need to be related now.

What kind of men did it take to perform this industrial miracle? * * *

STARTED AT 14

Born in Greenock, Scotland, April 24, 1870, Archie Main was apprenticed at 14 as a shipwright and draftsman in Clyde shipyards. He studied naval architecture and marine engineering at the Royal Technical College, from which he graduated in 1895. His early shipyard experience was in several British and Scottish yards on all types of vessels, including sailing and steam yachts.

He came to this country in 1900 as naval architect for the Eastern Shipbuilding Co., at Groton, Conn.

TWO BIG EVENTS

It was while in Groton that two big events happened to Archie Main. He met and married Jane Avery, his devoted and lovely mate in 1903, who bore him five children, all of whom are well-known and dearly loved by the people of Bath.

The second great event was the construction for James J. Hill, president of Great Northern Railway, of the largest steamships built in America up to that time—the famous *Minnesota* and *Dakota*—over 30,000 tons displacement. No bigger ship was built in the United States of America until the steamship *America* was completed in 1939. * * *

BUILDS MANY SHIPS

From Groton Archie Main went to Wilmington, Del., where he was associated with the Harlan and Hollingsworth plant of the Bethlehem Steel Co. In 1917, as vice president of the Merrill Stevens shipyard at Jacksonville, Fla., he supervised the construction of a new shipyard for that company. From Jacksonville Mr. Main returned to Groton as general manager of the Groton Iron Works. After World War I that yard closed and Mr. Main became consulting naval architect for Pusey and Jones Co. of Wilmington, Del., and with W. G. Cox had a consulting naval architects' and marine engineers' office in Philadelphia. He did a great many fine, large yachts during this period.

COMES TO BATH

In 1927, when the Bath Iron Works was reopened again, Mr. Main was one of the original partners. He was made vice president and naval architect of the new Bath Iron Works Corp.

Coming to Bath was Archie Main's third experience in taking over a drawing room in which there were no drawings and no data for reference. All drawings, tracings, blueprints, and design data of the old Bath Iron Works, Ltd., had been sold and removed when the plant was dismantled in 1925. * * *

Soon after the new company got going, Mr. Main was made vice president and general manager. Then, early in World War II, he was made executive vice president of the Bath Iron Works, and during 1940 and 1941 was vice president of the Todd-Bath Iron Works Shipbuilding Corp. and later the South Portland Shipbuilding Corp., building Liberty ships for England and for our own Government. From 1954 to 1956 he was chairman of the board of directors of the Bath Iron Works Corp., and is now honorary chairman of the board.

CIVIC ACTIVITIES

Aside from raising a large, fine family and bringing literally hundreds of ships of all types into the world, Archie Main has ever found time for worthwhile activities outside his immediate family and business. He has been a very active member of the Society of Naval Architects and Marine Engineers and a member of the Institute of Naval Architects in Great Britain.

He is a director of the Bath Trust Co., past president of the Maine Port Authority, a member of the Bath Recreation Commission, president of the Bath Memorial Hospital, and president since 1938 of the Bath Y. M. C. A. He is a member of the Propeller Club of the United States, the Engineers Club of New York, the Thames Club of New London, a Lion and now a Rotarian.

A FRIENDLY MAN

But it is not for all these great accomplishments that we know Archie Main best. He is best known in his adopted community for his friendly, kindly manner, his bubbling enthusiasm and never-failing good humor; for his generosity to people and to causes, for his humility and his wise advice freely given with complete selflessness. He is a great oak of strength in the city of Bath and we pay honor to him today because he is a symbol of the things we all hope to be and do ourselves. We salute you, Archie Main, and wish you continued good health.

The Kislak Story

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. SIEMINSKI. Mr. Speaker, during the month of June, a wonderful American celebrated his 70th birthday; namely, Julius I. Kislak, of Jersey City, N. J. Julius is known and loved throughout Jersey City, Hudson County, the State of New Jersey and the metropolitan area. He has a dynamic personality and has brought all of this vigor into the real estate business. Today, the Kislak firm enjoys an enviable reputation; it is the largest real-estate organization in our State.

I have known Julius for what he has done for the less fortunate and for the underdog. I have known him for what he has done for the veterans, the widows, the orphans, and the various religious communities. God blessed us with Julius Kislak. May he and his wonderful family enjoy the most bountiful fruits of accomplishment, happiness, and contentment.

I enclose a copy of an article which appeared in the Jewish Standard, Friday, June 21, 1957, telling "The Kislak Story," in order that we may fully know of the work and activities of this friend to mankind.

The article follows:

THE KISLAK STORY—J. I. KISLAK MARKS 70TH BIRTHDAY; HEADS STATE'S LARGEST REALTY FIRM

This month, a very remarkable man celebrated his 70th birthday.

At threescore and 10, when many of his contemporaries have retired from active work, Julius I. Kislak heads New Jersey's largest real-estate organization. He's on the job every day, all day. His indomitable spirit continues to shape company policy. He is closeted with his executives and salesmen, guiding, counseling, and instructing. Very often he is right out on the firing line helping to close one of the fabulous transactions for which his firm has become famous.

FEEDS ON OBSTACLES

Julius Kislak's rise to prominence has been distinguished by his keen perceptive powers as well as his fighting will. He has been acknowledged as one of the best negotiators on any type of deal, whether it's for a small dwelling, a tremendous industrial plant or for a half interest in a large daily newspaper. His drive and determination appear to feed on obstacles. This is the rare type of man who seems to draw from problems themselves the power to overcome them.

Proud of his record as a builder of successful men, he has conducted a lifelong campaign to eliminate from our language the words, "I can't" and "I assume." He contends that anything can be accomplished. He wants facts, not assumptions. The very hint of a negative approach makes him fighting mad.

CAME TO UNITED STATES AT SIX

If Julius Kislak is full of fight, perhaps it is because he has had to fight his way up every rung of the ladder against tremendous odds. He was only 6 years old when his parents migrated from Russia and settled in Hoboken. Though these strange shores and the new language may have confused the future real-estate genius, it is a safe bet he was not frightened.

His father, Abraham, a traditionally bearded patriarch, served as the temporary rabbi of Congregation Moses Montefiore at 82 Grand Street, in Hoboken, until the trustees were able to bring Rabbi Hirschenstein here from Palestine. The Kislak family was host to the new rabbi until he could bring his family over to join him. Rabbi Hirschenstein later became Chief Rabbi of Hudson County and his daughter married the prominent Rabbi de Sola Pool, of New York.

Oldtimers and their children still recount tales of the early days in Hoboken. Mr. Kislak's mother, Tilla, is gratefully remembered as one who delighted in sharing their meager portion with those who were less fortunate, with never a thought of their race or religion.

STARTED IN 1906

In 1906, long before the days of license commissions, realtor organizations, and the like, the enterprising young Kislak, who had tried his hand at various jobs, took a fling at real-estate brokerage, operating from his home at 408 Clinton Street. Within 3 years he had progressed to the use of desk room in the Jersey Journal offices at 57 Newark Street, which he shared with the late Haddon Ivins. By 1922, by dint of hard work and fair dealing, he had carved a solid niche for himself in the realty field and opened the first Kislak Building in the former Steneck Trust Co. building at Newark and River Streets, Hoboken.

His organization's present home office building on Journal Square was opened in 1937. Since then, Mr. Kislak's firm has continued to make tremendous forward strides, taking over an entire floor in the adjoining Jersey Journal building; opening a 6,000-square-foot office for their Kislak Mortgage Corp. at 2900 Hudson Boulevard; a branch office for the investment department in the Raymond-Commerce Building in Newark; and a Bergen-Passaic branch office at 179 Main Street, Hackensack. A Miami, Fla., branch office was added about 3 years ago.

For Julius Kislak, the development of his company and the steering of its destinies has been a lifelong romance—an unending source of satisfaction and inspiration, as well as a medium for community service.

COMMUNAL LEADER

Despite the considerable pressure of this highly competitive profession, he has found the time and the energy to help others. As chairman of the United Jewish Appeal, he set a new record for contributions in Jersey City. He is a director of the Hebrew Home for Orphans and Aged, the Jewish Community Center, American Technion Society, and Red Feather campaign.

He has also served as chairman of the disaster preparedness committee of the Red Cross and of the real-estate committee of the Salvation Army, State chairman of the Joint Defense Appeal, and as a member of the national committee of 300 for the centennial celebration of American Jewry, and State treasurer of the governor's committee for the refugee relief program.

Mr. Kislak is a past president of the Jersey City real-estate board; a former State director of the New Jersey Association of Real-Estate Boards; a charter member of the Society of Industrial Realtors, and a life member of Farragut Lodge, F. & A. M.

HAS 11 GRANDCHILDREN

With his wife, the former Sophia Segal, of Fall River, Mass., Mr. Kislak resides at 50 Glenwood Avenue and at 54 Roosevelt Avenue, Deal. They have 2 sons, 2 daughters, and 11 grandchildren.

Mr. Kislak interrupted his business career to serve as a sergeant in the United States Army in World War I. Following in his footsteps, his elder son, Jay, was a Navy pilot in World War II and the younger son, David, fought with the United States Army in Korea. Daughter, Sima, is married to Martin Jelin and resides in South Orange. Younger daughter, Naomi, is married to Arthur Fisher and they live in Englewood.

Revising the VA Rating Schedule

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks, I include a letter from Mr. T. K. Stapleton, service officer, Department of Mississippi, Veterans of Foreign Wars, together with a column Mr. Stapleton wrote and which appeared in the July issue of the V. F. W. newspaper, the Mississippi Overseas Veteran.

The letter and column follow:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Jackson, Miss., July 18, 1957.

Hon. JOHN BELL WILLIAMS,
Washington, D. C.

DEAR CONGRESSMAN WILLIAMS: I am enclosing the "Service Officers' Column" from the July issue of the Mississippi Overseas Veterans, official paper of the Department of Mississippi, Veterans of Foreign Wars.

It seems that after the Congress has refused to give consideration to the report of the Bradley Commission the Veterans' Administration is trying to put its recommendations into effect by revising the new looseleaf rating schedule.

I understand that the Veterans' Administration proposes to reduce all gunshot injuries to muscle groups by 10 percent in each category.

There is a lot of talk about lack of civil rights. I know of no group that has less civil rights than the wounded combat veterans, whose compensation can be reduced or discontinued by executive fiat.

With best wishes,

Respectfully,

T. K. STAPLETON,
Department Service Officer.

SERVICE OFFICER'S COLUMN
(By T. K. Stapleton)

From all indications, the Veterans' Administration is planning to put into operation many of the recommendations of the Bradley Commission, although they have been discredited (in a manner of speaking) by the Congress itself. In other words, the Veterans' Administration is taking rounders on its beneficiaries, and may put the Bradley Commission recommendations in effect by means of changes in the rating schedule.

Strange to say, these revisions of the schedule will hit most savagely at the combat veterans. The ratings for gunshot wounds will probably be reduced more drastically than others.

The Veterans' Administration knows (or should know) how difficult it is for a wounded or otherwise combat-disabled veteran to get a job under modern conditions, but it is blithely going ahead to take away much of the little compensation he is now receiving.

The VA is relying to a large extent on the opinions of medical specialists—without obtaining other data as to employment opportunities for the disabled. The medical specialists either don't know, or won't make any effort to find out, how hard it is for a man with a disability to obtain a job where the prospective employer is covered by workmen's compensation insurance.

While the Government is exerting every effort to get money to send overseas to take care of every nation other than this one, one of its agencies is busy trying to find ways to reduce the pittances paid to those who have made it possible for Uncle Sam to play Santa Claus to those who a few years ago were doing their best to kill off our young men.

If the Government, after World War II and the Korean conflict, had endeavored to find a way to help men enter businesses of their own, or make their own jobs, the pressure would not be so great on the wounded and disabled veterans. But the Government insisted on setting up the so-called GI bill for training and schooling purposes, instead of giving men the alternative of accepting the benefits in cash in the form of a bonus. Thus they were in most cases constrained to enter the ranks of the employed rather than of the employers or owners.

Then, too, in many cases the VA gave such short courses in manual trades that the man was actually not capable of getting and holding a job in that occupation after he was rehabilitated. For instance, a man might be given 18 months' training as a machinist and would not know how to set up a lathe to cut threads or how to cut gears on a milling machine, and yet the VA would not give him further training. You can imagine his chances to get and hold a job. At the same time he may theoretically have been eligible for 4 years' training.

We suggest that our members write to their Congressmen and Senators and ask them to watch this trend, before it is too late.

We are reproducing a letter written to the editor of the State Times by your service officer and published by that newspaper:

STATE TIMES:

I see by the papers that President Eisenhower is desirous of transferring the cost of providing certain services for the people from the Federal Government to the various States. He offers the prospect of a reduction in Federal taxation, and offers his suggestion as a means of "restoring States rights"—according to the papers.

If the Federal Government would adequately care for those who are its legitimate charges, maybe the States would not require so much money for welfare work.

When a combat veteran of World War II or Korea fails to have his disabilities recorded in service or at time of discharge, he may never get the compensation to which he is entitled, and yet the same disabilities which make him morally entitled to compensation may prevent him from working and caring for his family. Or they may prevent him from getting a job where the prospective employer is covered by workmen's compensation insurance.

So this man's misfortune is directly traceable to the indifference or hostility of medical officers in the armed services—a part of the Federal Government.

Or the man may not be adequately compensated for the disabilities for which he has established service connection. He, too, is a candidate for aid from State funds—funds which may be derived in part from Federal sources.

Before putting the loan of welfare work entirely on the States, President Eisenhower should conduct a survey to determine whether the Federal Government is generously providing for those who are its legitimate charges, so they will have no excuse

for asking any part of the funds that should be used for the benefit of the general public.

Otherwise, the men I have mentioned will have to seek aid from the local agencies to supplement the meager amounts that Uncle Sam provides some of them.

T. K. STAPLETON.

Knoxville, Iowa Druggist Known for His Poems

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. CUNNINGHAM of Iowa. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include an article which appeared in the Des Moines Tribune of Tuesday, July 9, 1957, with reference to Ernest O. Osborn, a druggist in Knoxville, Iowa:

DRUGGIST KNOWN FOR HIS POEMS

(By Herb Owens)

KNOXVILLE, IOWA.—Touches of Will Rogers and Edgar Guest are discernible in Ernest O. Osborn, 77, veteran druggist who is serving Knoxville a 57th year.

The poems of Osborn, which started a half century ago when he advertised specials in verse on a blackboard in the store window, have been recorded in proceedings of the Iowa House and Senate, as well as in the CONGRESSIONAL RECORD.

For more than 40 years, Osborn's advertisements in a weekly newspaper have included a poem. His first volume of poetry was published in 1913 called Osborn's Pen Points. Another volume was published in 1928.

"I was working in a Knoxville drugstore before the birth of the late Gov. William S. Beardsey, who became a druggist—and my friend. He once read one of my poems, called Highway Prayer, on a radio program. Yet the Governor himself died in a highway accident."

The final verse of Highway Prayer reads: "I ask no guarantee of life; for death there's no defense. But, God, sit near and help me drive with just plain commonsense."

WROTE WORDS FOR FLAG SONG

Osborn wrote words for the Iowa Flag Song, with music by Esther May Clark, of Oskaloosa. The song was adopted as official by the legislature in 1949.

As late as 1955, Osborn appeared before the Iowa Senate to read four poems. His poems published in the CONGRESSIONAL RECORD, in 1913 and again in 1956, when read to the United States House of Representatives by Congressman PAUL CUNNINGHAM, of Iowa.

The final verse of another recent Osborn poem reads: "Born dumb and dumb we shall remain until our Master's voice makes peace and love and fellowship the universal choice."

Born on a farm in Dallas County, Osborn attended school in the Bear Creek rural school, a Quaker settlement. At 14 he drove mules, hauling a covered wagon, as his family moved to Lake Charles, La.

REAL ESTATE OWNER, TOO

At 18, Osborn enrolled in a college of pharmacy at Valparaiso, Ind., graduating in 1899. He worked a few weeks as a drug clerk in Des Moines before an appendectomy "retired" him. He came to Knoxville in 1901 to clerk in a drugstore, which he bought in 1904.

A member of the Masonic lodge and the Iowa Pharmaceutical Association, Osborn has been successful in pharmacy and in some real-estate ventures. He now owns nine store "fronts"—business spaces—in Knoxville.

The key to Osborn's happy, successful years has been a rough-cut sense of humor—a life of wit and little jokes by which he has endeared himself to his customers.

For years he kept a heavy volume handy—a book he handed to inquirers about his latest writing.

"Best thing I ever wrote," he'd say.

It was blank.

Oregon's New Department of Development

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. ULLMAN. Mr. Speaker, the July 12, 1957 edition of the Oregon Journal contained an article by the Governor of the State of Oregon, the Honorable Robert D. Holmes. In this article Governor Holmes, who has long been a firm supporter of the sound development of our natural resources, discussed the recently created Oregon Department of Development.

I certainly share with Governor Holmes his enthusiasm over the new State agency. A State such as Oregon, which is endowed with rich natural resources as well as an intelligent hard-working citizenry, provides fertile ground for a program of development which such a department can formulate.

I believe this article by Governor Holmes will be of interest to my colleagues and I include it in the Appendix of the RECORD under unanimous consent:

NEW DEPARTMENT OF DEVELOPMENT SHOULD TURN TIDE

(By Robert D. Holmes, Governor of Oregon)

As long as men are willing to use the brains, the inventive capacity, the courage and the hope with which they were endowed, they will create miracles of social and economic good from their natural resources.

Oregon is particularly blessed with natural resources: A bounteous water supply for the development of cheap electric power; undeveloped industrial sites close to rail, to highway, river, and ocean transportation, farms and ranches already in operation, plus arid acreages that can be made to bloom when irrigation is provided; great stands of timber, the full uses of which will be realized only when we enjoy all the skills presently available to make lumber byproducts into needed materials and goods; minerals under the ground.

Our basic problem is to use what we have—the brains, the initiative, the ambition and vision of our own people, working with our natural materials.

Economic stability is basic to social stability. Oregon's economic stability has been shaken, and the facts say that we have lagged behind other States in sharing the general business and industrial prosperity of the country.

Things will become different only if we build positively, and build with a statewide vision.

In every part of Oregon there are men and women who know and understand the problems of their communities; who can feel the soft spots in the economy and have ideas for making them tough once more; who can see either limited or big opportunities for creating new businesses and establishing new industries.

But these people have never had a device for making their needs and their ideas known.

The department of development of Oregon, made a State agency by passage of house bill 445 by the 1957 legislative assembly, will be such a device, such a resource and such a system of statewide communication.

Of itself and by itself it can perform no miracles. Of and by itself it cannot make sudden and dramatic changes in the economic life of the State.

But professionally staffed and well organized, and supported by an advisory committee of able, experienced, and imaginative businessmen and local industrialists, it will become the repository of all the facts pertinent to economic development and the chief source of information for new venture capital both inside the State and throughout the Nation.

The first step, of course, will be for us to accumulate all the facts about Oregon.

The people will be invited to tell the stories of their communities through a series of grassroots regional meetings now being scheduled. At these meetings every community leader constructively concerned with the economic development of his area will be urged to talk, to ask questions, and to make suggestions.

You often hear it said that taxes drive business from Oregon. Actually, surveys show that venture capital seeking locations for new investment or expanding existing facilities considers seven factors more important than taxes. We think that this will be a stimulant to arouse Oregon residents out of a slough of pessimism into an atmosphere of optimism.

One of the immediately helpful factors in these first days of creating a development department has been the support of most of our newspapers. The Journal, for example, on its own initiative has done a first rate job of drawing a picture of our present situation and of making a reporter's analysis of the problems we face and possible solutions we may use.

AMVETS 10th Anniversary

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. TEAGUE of Texas. Mr. Speaker, as chairman of the Veterans' Affairs Committee of the House of Representatives, it gives me a great deal of pleasure to call to the attention of the House that today marks the 10th anniversary of the congressional charter granted to AMVETS.

I was still a freshman Member of this body 10 years ago when this charter was granted, but over the past 10 years, I have enjoyed a close relationship with the national commanders and legislative representatives of this veteran organization, a relationship which I feel has

been most profitable to me. Under leave to extend my remarks in the RECORD, I should like to include the editorial and the overall AMVET legislative program for the past 10 years which appeared in their 10th anniversary brochure. After reading these articles, I am sure that benefits I derived from my association with this young group of veterans will be most obvious:

WHERE ARE WE HEADED?

AMVETS note another anniversary this month. It was just 10 years ago on July 23, 1947, that we became the 10th veterans' organization to be chartered by Congress.

The fact that AMVETS had in 3 years from its founding, achieved enough stature to be recognized by the Congress of the United States, is a tribute to the hard work of the dedicated group of early veteran pioneers.

In July of 1947, we were on our way.

In July of 1957, the question is, Where are we going?

AMVETS, as a national organization recognized and respected among legislature leaders, has reached a crossroads. Since the year this organization was born amid the turmoil of World War II, we have become somewhat indifferent to the crossroads we have encountered.

It is uncomfortably true that for the past 5 years, our membership has remained virtually static. The gains in new memberships have been offset somewhat by renewal losses.

Like the two men looking into a half pail of water—one who says the bucket is half full, while the other says it is half empty—we can look at our membership.

From the negative viewpoint it can be said that AMVETS has stopped growing and did so almost before it was out of swaddling clothes.

From the positive approach, it can be argued that today's members represent an intelligent hard core, a loyal dedicated group, carrying on the work of AMVETS without being hamstrung by undependable fringe membership.

A decade ago, when we received our Federal charter, there were great hopes and plans for the future of AMVETS. We were the only group of World War II veterans to receive such recognition. We had a potential membership of 20 million. We looked at World War I veterans groups, and were sure that we would far outshine them.

We were fired with enthusiasm. We worked hard to spread the name of AMVETS the length and breadth of the Nation. We received recognition that some thought we didn't deserve. We told America that we were the voice of the men and women of World War II, and they listened for a while.

Something went wrong, though. World War II veterans did not flock to our rolls.

Why?

The answer boils down to this: the stereotype veteran of the Nation's other wars failed to emerge from the boiling cauldron that was World War II. He didn't emerge simply because a generous Nation provided returning men and women with veterans benefits, jobs, and a rapidly expanding economy. The returning veteran for the most part wanted to forget the war and get down to the business of peace. The veteran was no longer a freak in American society.

However, many of us did join veterans groups. We joined AMVETS because we found we could preserve the friendships and experiences brought on by war.

Today, World War II has almost become ancient history. The war stories which once formed a common bond between us are outdated, tarnished and worn thin. We find our own ideas, goals, and ambitions fulfilled or replaced with new ones.

Unless the membership momentum starts to roll again, AMVETS, the organization which brought us together to perpetuate these ties, could become as outdated as our war stories.

We are truly at a crossroads. Down one road lies obscurity for the organization which perpetuates the product of gimmeism. Down the other road, lies the realistic appeal to the millions of men and women of World War II and Korea, who have not joined any veterans organization because there has been no appeal to them in mature terms, mature thinking, and mature programs.

The day of sterotype grab-bag veteran is over. For the first time since the turn of the century, Congress has turned a deaf ear to the other veterans organizations which made an appeal for a multimillion-dollar handout. Significantly, not one of the Congressmen who voted against this legislation was defeated—but rather supporters of the proposal were bounced from under the Capitol dome. All AMVETS can be proud this legislation was vigorously opposed by their organization.

We cannot sell membership on the basis of veterandom only. We sell the veteran program on a positive and realistic approach on what is right for America.

We must revitalize ourselves internally as well as externally. This can't be done by a few, but must be done by the many. Ideas are needed but action in carrying them out is imperative.

Here is how you begin. Assign yourself this simple task.

Recruit one—just one—new member for AMVETS per year. Interest that member in the realistic programs so that he stays with the organization. If each AMVET will join the one-a-year club we will double our membership next year, triple it in 2 years.

It is up to you. Only you can decide whether we will celebrate our 20th anniversary with a loud bang or soft pop.

AMVETS LEGISLATIVE PROGRAM: YOUTH WITH WISDOM SETS US APART

Ten years ago this month, AMVETS became the 10th veterans' organization to be granted a Federal charter.

Even in those early days the legislative program of the young organization reflected a maturity and wisdom far beyond its years. Recognizing the need for preparedness, AMVETS sought legislation to maintain a strong and well-organized Reserve force. A nonpartisan foreign policy of firmness, and fairness toward all nations and conquered territory was advocated.

In 1949, AMVETS became the first major veterans organization to recognize that the Federal Government had a responsibility in providing education for the children of veterans who died in service or as the result of injury incurred in service during World War II. Legislation accomplishing this worthy purpose was finally enacted last year with the approval of the War Orphans' Educational Assistance Act. AMVETS played a leading role in the enactment of this measure into law.

Viewed in retrospect, certain AMVET legislative objectives in the pioneer days appear to have forecast things to come. As early as 1948, AMVETS were seeking a strong civil defense program with equal participation by Federal and State governments. In 1951, subcabinet rank equal to the Secretaries of the Army, Navy, and Air Force was advocated for the head of the Civil Defense Agency.

Legislation providing Federal aid to education was first sought in 1950. As far back as 1949, AMVETS were calling for regional alliances among nations in the Middle East and Pacific Ocean areas. Worldwide disarmament with necessary guaranties of international inspection was first called for in 1949 and then temporarily shelved as tensions mounted in Korea.

Regional alliances among nations with common interests are continually being made. Federal aid to education may soon be a reality. Disarmament is rapidly becoming the issue of the day.

As AMVETS grew, its prestige in official Washington grew as well. The Veterans' Readjustment Assistance Act of 1952, popularly known as the Korean GI bill, marked the successful attainment of AMVETS principal legislative goal during the 82d Congress. Because of his active participation in the hearings and conferences on this important bill, AMVETS national legislative director was officially commended by the sponsor of the bill and the Chairman of the Veterans' Affairs Committee.

In 1953, AMVETS became increasingly aware of an interest in the veterans benefit program and its costs by nonveteran economy groups. At the same time, the organization leaders recognized that there were weak links in the benefit chain. Antiveteran groups and economy advocates pointed to these weak links as proof of the need for wholesale slashes in veteran benefits.

Believing that veterans themselves are better qualified to point out luxuries and abuses in their own program, AMVETS made a thorough analysis of the entire structure of veterans' benefits. The result was a nine-point recommendation to the Congress, the White House, and the Veterans' Administration, designed to reduce the Veterans Administration appropriation by approximately $50 million annually without lessening essential services to veterans. This unprecedented action by a major veterans' organization was hailed in Congress as clean and courageous.

AMVETS can take pride in the knowledge that their legislative program over the past 10 years has reflected a new philosophy among organized veterans—a philosophy that recognizes the fact that veterans have a vital stake in the economy of this Nation, as taxpayers as well as veterans. Every legislative action points vividly to the fact that AMVETS have never been reluctant to oppose those so-called veteran benefits that were not in the best interests of veterans. By the same token, we have defended vigorously the hard core of legitimate veterans' benefits.

AMVETS' philosophy in action was best demonstrated in 1956 when the organization championed legislation to increase the rates of compensation for service-connected disability. At the same time, a costly unwarranted expansion of pensions for veterans having no service-connected disability was actively opposed.

AMVETS' position on this controversial issue was again commended. One prominent Member of Congress said, "Commander Pesata has made it abundantly clear that AMVETS place principle above expediency by his steady insistence that compensation increases should have priority over pensions."

Still another distinguished Congressman said, "I am grateful to the AMVETS for having fought for increased compensation for those with service-connected disabilities."

Ten years ago, the Committee on the Judiciary in the House of Representatives placed a trust in the then new organization known as AMVETS. The chairman of the House Committee on Veterans' Affairs, OLIN E. TEAGUE of Texas, in addressing a national convention of AMVETS said, "Your entire leadership has clearly established AMVETS as an independent-thinking organization with the courage of its conviction—as one that does not follow the leadership of others when it would be much more comfortable to do so. Your determination to stand for things in which you believe show you are not an also ran, but a power to be considered in veterans' affairs. I congratulate you on this splendid record. In the past year, AMVETS has increased in stature and I have no doubt your reputation will be further enhanced in the years that lie ahead."

Remarks of Walter S. Hallanan at 88th Birthday Celebration of M. L. Benedum, Bridgeport, W. Va., July 16, 1957

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. BYRD. Mr. Speaker, under previous leave to extend my remarks, I wish to include an address delivered by the Honorable Walter S. Hallanan upon the occasion of the 88th birthday celebration of Mr. M. L. Benedum. Mr. Hallanan's address was made on July 16, 1957, at Bridgeport, W. Va. I am proud to bring to the attention of my colleagues the statement paying tribute to an outstanding West Virginian. The address follows:

We are happy to be here on this delightful occasion to pay our affectionate tribute to one who has made his eventful life count so much for the good of so many.

Here in the sacred precincts of this beautiful church it is a genuine pleasure to bespeak the feeling of respect, devotion and affection that is enshrined in our hearts for one whose life has been so truly unselfish—whose daily thoughts run so strongly to those ideals of human relationship which give first consideration to the welfare and contentment of others.

As he has advanced in years to the sunset side of life, Mr. Benedum's vision has never dimmed in his devotion to those human problems which have characterized his whole life in his contact with his fellowman.

Many men who have achieved great eminence in our national life think of success in terms of dollars. We are glad today to honor an outstafiding American leader who believes that the obligations of a successful career go far beyond that—in his conception it means the prudent use of those dollars in a way that will contribute to the happiness and contentment of people.

I am grateful that a kind fate brought me the great privilege of close association with Mr. Benedum for the greater number of years of my life. It has been an interesting and exciting and dynamic experience. In a thousand ways we, who have been privileged to enjoy this close association with him, recognize the bigness of his heart, the tolerance of his mind and the close bond he has always sought to maintain with those thousands who work on the Benedum team in his vast empire of enterprises.

Mr. Benedum has made a valued contribution to the understanding of the significance of individual freedom in the development of our country and the enrichment of life in America. Freemen—men free to dream, to think, to invent, to explore, to take risks, and to progress—made this country, materially and spiritually, the envy of the world today. He is an illustrious example of the success of that kind of individual freedom. He recognizes that today that order of society is under assault and that America faces a crisis in preserving those fundamental freedoms which have made possible the fruits of success which we visualize on this occasion.

Mr. Benedum was a commoner at birth, he is still a commoner, success never went to his head or changed his fundamental character of being a kindly, friendly, devoted man, devoted in his daily life to the abiding interest he feels in doing good for others.

The many benefactions which Mr. Benedum has so generously bestowed upon this and other communities do not, my friends, represent just so much mortar and brick and cement. In a real and larger significance, they symbolize the will and the desire of a great humanitarian to use his means for the common good. They represent the unselfish devotion and aims of a man who has a heart filled with gratitude for the opportunity that was given to him by the God-fearing training he here enjoyed as a youth, to start at the bottom of the ladder and come to the top. That he has done with the greatest humility.

Here today as we see the beautiful cemetery on the hill, this magnificent church edifice where we are gathered and the wonderful civic center to be dedicated today, we find the practical manifestations of a grateful heart and mind to the community which gave him the opportunity to go forth with an unconquering will and determination to achieve success. That he has done, his name has been a challenging influence, not only in our own land, but in the four corners of the world where the name of the great wildcatter has been blessed.

I am proud to be one of Mr. Benedum's associates. To me, it is a badge of honor which I shall always cherish. What I say of myself personally, is also written indelibly in the hearts of hundreds of others who have had the opportunity to know him for what he really is—a kindly and dependable friend and adviser and a patient and tolerant Christian gentleman.

Mr. Benedum, as you observe your 88th birthday anniversary here today, surrounded by your relatives and friends and admirers from every area of life, may I, on behalf of all who are gathered here, express to you our real joy that we are permitted to share with you the happiness of this very happy birthday anniversary, and to wish for you many more beautiful horizons along the sands of time.

We join earnestly on this occasion in soliciting God's richest benedictions upon you.

Equal Pay for Equal Work

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mrs. GREEN of Oregon. Mr. Speaker, the Business and Professional Women's Club has presented us this month with an overall picture of the views on legislation providing equal pay for equal work for women workers which are held by the Governors of 14 States having State equal-pay legislation on their lawbooks. Their testimony in favor of such legislation is a double-edged argument for Federal action in this field. As State legislation has yielded benefits to the worker and the economy, so will Federal law. And Federal law is needed to affect the majority of our workers—about 68 percent of them—engaged in interstate commerce or the production of goods for interstate commerce.

Many of those who have consistently opposed Federal equal-pay legislation in every Congress since 1945 have contended that what "little" remedy remained to be made would be effected by voluntary action. How false their assumptions have been is made clear by the recent Bureau of the Census report that the average income of women in the United States has increased by only 24 percent since the Second World War, while that for men has increased by 85 percent. And the average income of women was, in 1955, only one-third as great as the average income of men. In view of the widely recognized contribution made by women in the working world, is this fair or reasonable or economically sound? I submit that it is not, and that Federal action must be taken without further delay.

Under unanimous consent, I include this article from the National Business Woman of July 1957, entitled "The Governors View Equal Pay," in the RECORD.

THE GOVERNORS VIEW EQUAL PAY—THE HEADS OF 14 STATES HAVING THE LAW IN OPERATION TESTIFY IN FAVOR OF EQUAL PAY

Sixteen States and Alaska have enacted equal pay laws. Michigan and Montana were first in 1919. Arkansas, Colorado, and Oregon enacted legislation in 1955. Equal pay legislation was introduced this past year but at our press time had not been enacted, in: Florida, Indiana, Iowa, Minnesota, Ohio, Utah, and Wisconsin. There is no Federal equal pay law, although bills have been introduced in a number of sessions of Congress.

ARKANSAS, LAW ENACTED IN 1955

Gov. Orval E. Faubus says:

"There is no question today about the contribution which women are making in business and the professions. Their ability to rise to the heights in any field of their choice is limited only by their individual talents and ambitions. The members of your organization fill many important roles in our national life as producers, consumers and taxpayers. Likewise, business and professional women have measured up to the responsibility of citizenship and concern with public affairs.

"The Arkansas Federation of Business and Professional Women's Clubs, as an affiliate of the National Federation of Business and Professional Women's Clubs, Inc., is likewise contributing much toward the improvement and progress of business, industry, and civic needs in our community."

CALIFORNIA, LAW ENACTED IN 1949

Gov. Goodwin J. Knight says:

"In our expanding modern economy, the vital role of women in business, industry and Government of our Nation has become increasingly apparent. Through such organizations as the National Federation of Business and Professional Women, they are enthusiastically active in the commercial, cultural and civic advancement of their communities, States and country."

COLORADO, LAW ENACTED IN 1953

Gov. Steve McNichols says:

"Colorado has always pioneered in the field of equal rights for women. We were among the first of the States to enact woman suffrage legislation and we are proud that we now have laws giving women the right to equal pay for equal work.

"During the last 25 years our hisory in the United States has been greatly influenced by the constantly increasing participation of women in business, professional, political, and civic affairs. This influence has been constructive and beneficial, and in my opinion was long overdue."

ILLINOIS, LAW ENACTED IN 1943

Gov. William G. Stratton says:

"Like your organization, we here in Illinois have been deeply interested in all matters that affect the working women of our State. Illinois has enacted legislation giving women equal pay, and protected their rights in all phases of their work.

"Our State has recognized women's role in our stores, offices, and factories. Not only have they helped to meet shortages of skilled employees in various fields, but their influ-

ence is also felt in local and State political forums."

MAINE, LAW ENACTED IN 1949

Gov. Edmund S. Muskie says:

"Women have proven their ability in economic, social, and political affairs. In our State, they have contributed materially to the economic stability and social advancement as they have nationally.

"In our legislature, eight women in the house—led by the senior member, Lucia Cormier, and Senator Hazel Lord—have made a great contribution to the betterment of our State.

"Our State creates no bars or handicaps to women's advancement. We were one of the first States to admit women to the practice of law and medicine and to jury duty.

"Where I cite the leadership shown by women in the legislative field, they are also contributing in the administrative, judicial, and business fields. Of our total nonagricultural work force of approximately 270,000, women constitute 27.5 percent of the total. It is not an overstatement to say that if all women took a vacation or retired from the work force tomorrow, the wheels of industry and commerce would stop."

MASSACHUSETTS, LAW ENACTED IN 1945

Gov. Foster Furcolo says: "Massachusetts is proud of its equal-pay legislation enacted in 1945 during the administration of our late Gov. Maurice J. Tobin who later became United States Secretary of Labor. Our business and professional women are outstanding citizens who hold many responsible positions."

MICHIGAN, LAW ENACTED IN 1949

Gov. G. Menner Williams says: "Each year the number of career women becomes greater, and the task of reaching the higher levels of success somewhat easier. We in Michigan are proud of the fact that we are one of the States with equal-pay legislation, and we join with your group in hoping that ability alone will soon be the measure of selection and of payment for services in the business and professional fields as in all areas of gainful employment."

MONTANA, LAW ENACTED IN 1919

Gov. J. Hugo Aronson says: "The influence of women has always been great, but never has it been as great as today. I speak both as Governor of Montana, a State which has enacted legislation providing for equal pay for women, and as one who has experienced and seen the work of women in industry, government, and elsewhere in the Nation."

NEW HAMPSHIRE, LAW ENACTED IN 1947

Gov. Lane Dwinell says: "New Hampshire owes much to its womenfolk, throughout more than three centuries of history. We were among the first to recognize by legislation the just rights of women to equal economic opportunity, and we long ago learned to appreciate the role of dedicated women in our government at all levels. Because our State is heavily industrialized and dependent on production for profit, we deeply respect the thousands of wives and mothers who work in our factories and offices, as well as our schools and hospitals, to create better standards of family living."

NEW JERSEY, LAW ENACTED IN 1952

Gov. Robert B. Meyner says: "The emergence of the workingwoman has been one of the swift and silent social and economic revolutions of our times. One does not have to be very old to recall that yesterday's young woman preparing the notice of her wedding for the press usually struck off a letter of resignation at the same sitting. And consider the vast change in the number of occupations and professions now freely open to women, who not long ago were expected to confine themselves to the secretarial, the tutorial, or the menial callings.

"There is no question but that the new dimensions of American productivity trace in good part to the increasing employment of women."

NEW YORK, LAW ENACTED IN 1944

Gov. Averell Harriman says:

"I highly commend your continuing fight to obtain equal pay legislation. New York is proud of being one of the first six States to write into law the principle of equal pay for equal work. The rest of the Nation will eventually be persuaded to accept the simple justice of that principle by women like you and the effective campaigns conducted by your fine organization.

"In New York State, we have more than 2 million working women, and I know how greatly they contribute to building a sound and expanding economy."

PENNSYLVANIA, LAW ENACTED IN 1947

Gov. George M. Leader says:

"The equality of women has never been a problem nor a cause for dispute in Pennsylvania.

"From our pioneer days, the women of Pennsylvania have had a place as partners, whether it was in the affairs of the home or in the affairs of State. Above and beyond that, Pennsylvania was among the first of the States to ratify the voting franchise for women.

"As technology increased and the demand increased for the business skills that women could bring to business, industry and government, Pennsylvania again was among the leaders. As a demonstration of our confidence and belief in the equal competence of women, Pennsylvania has enacted equal pay legislation."

RHODE ISLAND, LAW ENACTED IN 1946

Gov. Dennis J. Roberts says:

"Two World Wars and the determined forward march of women in the business and professional fields have set a record for their present position as exceedingly important factors in the complex machinery of our economic status.

"Women bring a glowing idealism to the political forum. They are instinctive champions of the home, of peace, order, security, and good will among men and nations. Theirs is an impressive record. Many have served their country with distinction as ambassadors, scientists, economists, as Congresswomen and administrators."

WASHINGTON, LAW ENACTED IN 1943

Gov. Albert D. Rosellini says:

"In 1890 the opportunity for women of the State of Washington to engage in any business, profession, vocation, or calling, followed and pursued by men, was made possible by legislative action. In 1943 the State legislature further provided that women shall obtain 'equal pay for equal work.'

"Women have accepted and successfully met the challenge afforded by the passage of these two laws. During World War II, women were employed in many occupations and industries which were vital to our wartime economy and to our survival—including the armed services.

"Their contributions did not cease, however, at the end of the war. The 1950 national census figures show that women comprise 27 percent of the total employed work force of the State of Washington as compared to the 21 percent in 1940, with an increase of 19,000 women workers in professional, managerial, technical, and proprietary fields and in the trades and crafts."

Foremen Warm Up to Union

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the CONGRESSIONAL RECORD a copy of an article from Business Week dated May 4, 1957.

The article details how foremen are warming up to the idea of union representation and the very important and valuable rights which go with it.

The article follows:

FOREMEN WARM UP TO UNION

In the tug of war for the loyalty of the foreman, management may be losing ground. Caught in the middle, the foreman on the one hand has to carry out management's policies in which he often has no voice, while at the same time he has to hold the cooperation of the production union. To a certain extent both groups reject him, since—by their books—he is neither fish nor fowl.

A survey just released by Opinion Research Corp. points up the dissatisfaction of foremen with their ambiguous status. And a Business Week survey leads to the conclusion that industry still hasn't developed the most effective techniques for making supervisors management men.

Drop in morale: In a broad survey covering over 500 companies—large and small—in 59 industries, ORC pollsters talked to 911 foremen and supervisors. Their findings sound a clear warning to employers. The survey, the first since 1954, shows a definite drop in foreman morale. For example:

Only 63 percent of the foremen interviewed think that management-foremen relations in their companies are very good—compared with 73 percent in 1950 and 70 percent in 1954.

Only 65 percent identify themselves with management, compared with 69 in 1950.

For employers, probably the most ominous finding is that 34 percent of the foremen polled believe it's all right to have a foreman's union—the highest ratio ORC has spotted since the immediate postwar period. Only 4 percent of those interviewed belong to a foreman's union but another 9 percent would like to.

Heavy going: The threat of unionized foremen has been looming on management's horizon since 1941, when the Foreman's Association of America started at Ford Motor Co. FAA spread into other Detroit auto plans, and John L. Lewis' United Mine Workers drove hard for supervisors in coal mines.

The Wagner Act was not specific about foremen. At first, the National Labor Relations Board ruled that they were guaranteed the rights provided by the act. Then, after a series of NLRB reversals and re-reversals, the United States Supreme Court in 1947 upheld the Board's contention that foremen were covered by the Wagner Act.

But the reprieve for the foremen's unions came too late. Only a few months later, the Taft-Hartley Act was passed, guaranteeing to employees the right to bargain collectively, but excluding supervisors from its definition of "employees." This means that foremen can form unions, but employers don't have to deal with them.

Management's strength: ORC's survey shows that in the matter of foreman loyalty management's strength lies mostly in the oldtimers, particularly those who have had systematic training to prepare them for their supervisory roles. Of the low-seniority supervisors polled, only about 45 percent believe that they are part of management, while 58 percent do not agree that foremen should stay out of unions. The conclusion is that foremen are most susceptible to unionization during their first years on the job.

The survey findings also spotlight the fact that new foremen are often ill-equipped to handle their jobs, and that only one-third of the foremen appointed within the last 2 years have had any real training for their new jobs.

Remedy: When a company wants to offset these factors, it usually sets up some form of special training program. But that raises all sorts of questions. How much does it cost to turn an hourly rated worker into a functioning supervisor? How much time should a supervisory training program take? Should it be flexible or should the routine be fairly set?

Business Week reporters sampled the training programs of a dozen companies and found that they vary from long, formalized training courses to short, casual preparation sessions. Despite the range, training experts in the companies interviewed agree on one thing: The day is gone forever when you can tap a worker on the shoulder at quitting time Friday, and say, "By the way, Fred, better wear a shirt and tie to work Monday. You're going to take over department 37B."

As Dr. Philip Ash, of Inland Steel Co.'s industrial relations section, puts it, "You can't take a skilled worker, give him supervisory responsibilities and expect he'll wind up right side up without further training or guidance. Those are things you learn, and are not born with."

Foremen's woes: One reason is that manufacturing processes in many industries have become increasingly complex, and the intricacies of the foreman's job have grown apace. Unions, too, which have caused management concern about personnel relations and employee communications have complicated the picture. Today's foreman not only has to be familiar with the mechanical operation of his department, he must also serve as an extension of the company's personnel office, hearing grievances, settling disputes, and handling a myriad of personal problems as well.

A group of human relations researchers at Yale have pointed up some of the problems that dog the foreman. In the Foreman on the Assembly Line, Harvard University Press, the researchers list the detail in a typical day in the life of a foreman on an automobile body assembly line. After figuratively following the fellow around for a day, you conclude that he should be at least three separate people: One to keep his line running smoothly by jumping in to help out when needed; one to deal with other departments and keep supplies flowing; and one to handle personnel details such as paying the men, setting up vacation schedules, replacing absentees.

In a spot: The foremen's union is keenly aware of the problems of the front-line supervisor. Carl Brown, executive director of the Foremen's Association of America, emphasizes the insecurity that comes from the foreman's ambiguous position. "They're in the same spot today that the production worker was in 20 years ago. They lose seniority rights when they become a supervisor in many cases, can be fired pointblank, and then are on the street or have to start again as hourly-rated without seniority."

Then, too, there are two forces working at cross-purposes on the foreman. As Industrial Psychologist Ross Stagner, of the University of Illinois, shows in his book The Psychology of Industrial Conflict (John Wiley & Sons), the foreman—the marginal man—is pulled backward through identification with the group from which he has come (the workers), and pulled ahead by a desire to become accepted by the group he has joined (management).

Cost factor: It's generally agreed that careful preparation and training can go a long way toward offsetting the foreman's early qualms about separating himself from his old union—and its benefits—and allying himself with a group that in many cases he has regarded with some degree of hostility.

The question is: Are current programs doing the job, and are they justifying their cost? Tentatively, the answer is yes. But training directors are constantly rejiggering, never quite satisfied with results.

So far as training costs go, most companies refuse even to estimate the figure. Many say they don't want to know the cost. "If we did, it might take some of the steam out of our program," says a west coast management service director. Only a few of the companies interviewed ventured a guess. Inland Steel thinks its training program ranges from $2,500 to $4,000 per foreman—probably closer to $2,500. Aluminum Company of America spent about $36,000 to send 16 foremen to a 13-week refresher course.

The key: Most of the companies agree, however, that—regardless of its cost—the real key to any successful supervisory training program is the proper selection of trainees. Of the companies interviewed, all said it does no good to indoctrinate and groom a man if he is unsuited temperamentally, mentally, or in other ways.

Generally, a company tries to bypass such mistakes by a careful prescreening of likely candidates. Most methods of selection break down into two main types: (1) Continuous sifting of likely candidates, and (2) special sorting to fill specific openings. Some companies combine both types in their programs.

Usually, foremen are asked to keep an eye open for likely supervisory material. When a man's name comes to the attention of management, he's called in, told he looks like managerial timber, and asked to take aptitude, personality, and other tests. After that, there's a series of conferences with personnel people, higher supervisors, production brass, and others. The final choice usually rests with the line organization—departmental superintendents, plant managers, and the like.

Typical programs: Once candidates for foremanship have been chosen, their training program begins. Here are four different methods used by the companies Business Week interviewed:

Presupervisory training: Under this method—used among others by Inland Steel, Kaiser Aluminum & Chemical Corp., and General Motors—workers get a full-course training in what to expect when they become foremen. Then they are placed in a status somewhere between foreman and worker. At GM and Kaiser, they're placed on salary and put in a "foremen pool" from which they move around to fill in temporary vacancies. Inland's "spell turn" moves foremen from vacancy to vacancy during their instruction.

Supervisory training with almost full time spent in instruction: Typical is Alcoa's program, where workers attend classes and conferences, as well as on-the-job work, 8 hours a day, 5 days a week, for 2 months.

Combination on-the-job training with outside instruction: This is how Boeing Airplane Co. tackles the problem. Candidates taking Boeing's presupervisory training course get 36 weeks of instruction—3 hours a week in class, 2 hours homework—on their own time. After a worker graduates into a foreman, he gets 14 to 15 days of special instruction over a 4-month period.

Informal training with no fixed-time period. Kearney & Trecker Corporation of Milwaukee uses this procedure. Potential foremen are rotated from department to department, not according to any particular schedule and for no fixed length of time.

A number of companies use combinations of these plans. Goodyear Rubber Co., for example, uses a whole year, splitting the time between job rotation and classroom instruction.

How long? Estimates vary on how long it takes to make a worker into a smoothly functioning foreman. A spokesman for a large southern textile mill says, "You can bring a man along for 1, 2, or 3 years, and during that time his thinking is adjusted prior to actually becoming a supervisor. Once he gets the job—depending on the individual—it takes 6 to 12 months to complete the adjustment." W. A. Borrie, of Kaiser Aluminum, likes to think his company can make a satisfactory first-line foreman in a year. Kearney & Trecker, on the other hand, doubts that it's possible inside of 6 years.

In general, these training programs seem to be doing a job of lining up foremen with management, though many experts feel that the one best way of training foremen hasn't yet been devised.

NLRB Lends Ear to "Orphan" Disputes—Labor Relations Board May Step in if Congress Doesn't Give States More Jurisdiction in Interstate Cases

Small employers and their workers, who now have no place to go with disputes over unfair labor practices and bargaining agency elections, may get some help from the National Labor Relations Board.

Boyd Leedom, NLRB Chairman, said this week that their problem is the biggest now confronting the board. If Congress doesn't do something about it—by ceding more jurisdiction over labor disputes to the States—the Board intends to do what it can to alleviate the problem.

For many years, NLRB operated without precise standards for taking jurisdiction over cases; it handed down ad hoc decisions on how much impact upon interstate commerce must be proved before the Board could—or would—exercise its statutory jurisdiction.

Yardstick: In 1950 NLRB set up its first de minimis standards for determining whether the board would take jurisdiction over cases. These were revised in 1954, reducing the areas in which the Board would function.

Under these rules, NLRB will not take jurisdiction in a case involving a manufacturing plant unless it receives across State lines commodities with an annual value of $500,000, if shipped directly, or $1 million otherwise. Shipments out of the State must total $50,000 directly, $100,000 if handled indirectly. Retail stores that have no out-of-State sales or shipments must buy at least $1 million worth of goods across State lines before NLRB will act.

No man's land: The United States Supreme Court recently ruled that State courts and State laws cannot take over in labor-management disputes when NLRB refuses to act under its regulations in such cases covered by the Taft-Hartley Act (BW-Mar. 30, 1957, p. 161). Since then, courts in Illinois, Pennsylvania, and California have ruled against State jurisdiction over cases over which NLRB has but declines to take jurisdiction.

Admittedly, this leaves small employers and their workers in a sort of "no-man's land" in labor disputes, Leedom said after a conference with regional staff people.

"In the wake of the Supreme Court's decisions * * * I suppose that the board's role will now be more difficult than ever," Leedom said. Small businessmen complain that they aren't protected from the "organiza-

tional tactics of unions"; unions allege "improper conduct on the part of employers" who do not come under the board's de minimis regulations.

AFL-CIO's legislative department held a conference of attorneys of all international unions in Washington this week to draft recommendations. Meanwhile, labor boards of New York, Wisconsin, Connecticut, Michigan, Pennsylvania, and Puerto Rico last week agreed on a joint petition to Congress to broaden the States' now-limited jurisdiction over labor disputes.

Hazleton, Pa., Boy Scouts Win National Honors at Jamboree Held at Valley Forge, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story and an editorial from the Hazleton Plain Speaker of July 20, 1957, as well as an editorial from the Wilkes-Barre Times-Leader Evening News of July 19, 1957, calling attention to and commenting on the national honors won by the Shawnee Patrol of the Anthracite Council of Boy Scouts, Hazleton, Pa.:

[From the Hazleton (Pa.) Plain Speaker of July 20, 1957]

Twenty-four jubilant Boy Scouts of the Anthracite Council and three of their leaders returned to Hazleton yesterday afternoon after a 10-day encampment in the Fourth National Boy Scout Jamboree at Valley Forge.

The boys came home with national honors for winning the logrolling and woodchopping events in competition with more than 52,000 Scouts from all over the Nation and abroad, the first time that local Scouts have won national recognition during a jamboree.

Members of the triumphant Shawnee Patrol, which took part in the national competition, all explorer Scouts, are: John Koch, post 15, Hazelton; Howard Wolfe, post 63, Drums; Clyde Fetterman, post 207, Sugarloaf; Michael Panco, post 12, Hazleton; Richard Zanolini, post 63, Drums, and Edward Sharp, air squadron 163, Drums. Two other Scouts, members of the Pittsburgh's Allegheny Council, were on the team. They were Robert Croyle and Michael Weatherspoon, who were enlisted in the local patrol to make up a full complement of eight boys.

DR. SCHUCK MAKES AWARDS

Each of the boys received championship area and national medals, awarded by Chief Scout Executive Dr. Arthur Schuck at Thursday afternoon ceremonies.

The boys disembarked at Church and Maple Streets near the Boy Scout office at the Delsroth Community Center at 2:45 p. m. yesterday, an hour and 45 minutes later than their scheduled arrival time. Their planned departure by bus from Valley Forge at 10 a. m. was delayed until 11:30 a. m. at the motor pool. A lunch stop was made en route.

SCOUTS ARRIVE SINGING

A busload of singing, happy Scouts was greeted by a large contingent of family members, friends, and Scouters. The boys emerged looking tanned, fit, and smiling. Heading the group were local field director Jarus Keller and Scoutmasters Bart Schumacher, Jr., and Dominic Cusatis.

MAN'S WORK

The leaders lauded the boys for their victory over Scouts from States such as Washington and Oregon, where lumbering is an active occupation, and said it was amazing to see area boys do man's work with such amazing skill and speed.

The Scouts agreed that it was tough going against a mess of big boys. They attributed their triumph to teamwork and team spirit.

In the woodchopping contest they had to chop through logs about 12 inches in diameter with the least number of strokes. They won with 96 strokes against about 180 from their closest rivals.

Two-man relays using bucksaws had to cut through 12-inch logs. Speed and a straight cut were primary requirements.

Using long-handled picks familiar to lumbermen, the contestants were required to maneuver a 16-foot log some 12 or 14 inches in diameter down a grade between sets of pegs, pivot the log and return up the hill without breaking any pegs. There was also a hand-rolling log event of a similar nature—all tests of strength, skill, and speed. Rolling on land rather than water made the job doubly difficult.

WIN 8 OF 24 MEDALS

The local Scouts accounted for 8 of the scant 24 national medals awarded in the special events competition. The remaining 16 medals went for pioneering and personal fitness winners. This year marked the first time that these contests have been held at the national jamboree.

[From the Hazleton Plain Speaker of July 20, 1957]

SCOUTS BRING HONORS HOME

Hats off to the Boy Scouts of the Anthracite Council.

Their victory in the national woodchopping and logrolling competition at Valley Forge projects brought the Hazelton area into the news once again. Their feat in conquering all comers in what has rightfully been termed man's work has been made known all over the Nation through the medium of the news services.

The Scouts and their leaders have proven that our youth takes no back seat in Hazleton's march of progress. Can-do, the centennial celebration and other community projects have brought us national acclaim. Now we may point with pride to the accomplishment of our Boy Scouts. In terms of the future, theirs may well be the greatest achievement.

When the Scouts went to Valley Forge, their going created scarcely a ripple. Overnight, they have become national heroes. Their victory is a victory for Scouting and the community at large. The Scouting movement in this area will be bigger and better as a result of the job our boys did at Valley Forge.

Hail to the Shawnee Patrol and all the Scouts and Scout leaders of the Anthracite Council. The teamwork and team spirit that brought victory also produced the team that made it possible.

[From the Wilkes-Barre (Pa.) Times Leader Evening News of July 19, 1957]

SCOUT HONORS

Our neighbor, Hazleton, seems to be continuously in the limelight these days. Last week, it was the observance of the city's centennial. This week, the Shawnee Patrol of Boy Scouts focused attention on the lower county city by winning top honors at the Valley Forge jamboree in the national logrolling and woodchopping events, no mean achievement in view of the stiff competition. This is a boost for Scouting in Luzerne County. It is a pleasure to salute the contingent on the accomplishment.

Dulles Hits Hard on Red China

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George Todt in the North Hollywood (Calif.) Valley Times of July 6, 1957:

DULLES HITS HARD ON RED CHINA

(Hamlet, act III, scene 1)

"To be, or not to be, that is the question:
Whether 'tis nobler in the mind to suffer
The slings and arrows of outrageous fortune;
Or to take arms against a sea of troubles,
And by opposing end them?"

—*Shakespeare.*

"Nothing could be more dangerous," said Secretary of State Dulles, speaking of the Red China situation, "than for the United States to operate on the theory that if hostile and evil forces do not quickly or readily change, then it is we who must change to meet them."

Just who was the Secretary talking to here?

In another part of his major foreign policy address, Dulles also said:

"Our policies are readily adjustable to meet the requirements of changing conditions. But there are occasions when others, and not we, should provide the change."

Was Mr. Dulles providing a subtle warning at this point to somebody else in addition to the Red bandit leadership of Peiping? I think that he was. And—hold onto your hats—it may have been our No. 1 allies, the British. Does the shoe fit? Dare he do this?

Impossible, you say? Not at all. For despite any appearances to the contrary, Foster Dulles knows how to be a realist when the occasion demands it. His long years of experience in the diplomatic field have taught him to understand readily the handwriting on the wall. He knows how to gage the temper of the people. In short, Mr. Dulles can read the signs of the times along with the best of them. What does he observe on the world stage today?

If he possesses the wisdom which his years should have taught him—and I am assuming that he does—then it must now be apparent to the Secretary that our grand alliance with the British is rapidly nearing a highly critical and controversial period in the history of the two great English-speaking Nations. We are swiftly approaching a stage where a showdown will become necessary. It is no longer a question of pinpricks and petty psychological disputes which separates us. Instead, there is a huge gulf of ideological differences yawning between us and the British today—and it is now becoming a matter of principles versus expediency.

This is what I believe Mr. Dulles has perceived at this point, certainly with reference to the odious and obnoxious matter of recognition of the murderous Red Chinese regime, and he has made his position clear to the world: He rejected every argument for major change in American policies of nonrecognition, cultural isolation, and trade embargo.

Frankly, the Secretary has never taken a more popular stand with the public than this one—and he is being roundly applauded from one end of the Nation to the other for it, we may be sure. Here is a cult of murderers who openly boast of liquidating 800,000 human beings to consolidate their posi-

lion in the last decade—we know the figure is actually closer to 20 million pitiful victims instead—and they have the brass to demand admittance to the United Nations, which we are led to believe is a respectable body. Now how can any self-respecting body representing world opinion desire to have this beastly, bloodstained brotherhood of atheistic Red Communists sitting in its midst? Worse, how can any so-called friends of the U. N. seek to place it in such a reprehensible position?

In his first major speech about Red China in 3 years, Mr. Dulles has placed himself, President Eisenhower, and the Nation firmly on the side of morality over expediency in this trying matter. For this we can all be grateful, including those who wish the U. N. well over the long haul. Frankly, the only basis the American people will accept the world organization is on a moral basis alone. It isn't worth while for us to continue to play in a league where there are double standards of morality—where those we associate with refuse to abide by the lawful rules of the game. What rules have the Red Chinese leaders ever abided by except the law of the jungle? Remember the 50,000 dead American servicemen in Korea? Many were shot on orders from Peiping in the back of the head with their hands tied behind their backs with wire.

Mr. Dulles says correctly that our recognition of Red China would discourage the freedom fighters inside that ill-starred nation, would cause millions of Chinese who now live in non-Communist nations to give up the ghost, would crush our honorable allies on Formosa to whom we are honor-bound to stand firm, and would destroy the will to resist communism in the balance of the non-Communist nations of Asia. This would mean ultimate and certain disaster.

But our British friends are not concerned with these legitimate preoccupations of Mr. Dulles and the United States. Their sole interest seems to be trade with the brutal Reds. And for this they appear quite willing to set us adrift from our alliance with them, if necessary. Are they bluffing? Is Mr. Dulles calling their hand? Do the American people back up his morality here?

I believe that they do and will, increasingly so, in the future. For our people have not supported the global anti-Communist crusade to the tune of hundreds of billions of dollars' worth of free gifts and expensive armaments for the free world—merely to see it all go down the drain as the British leave their post in a selfish play for trade with our mutual enemy.

This column has long advocated our leaders talking straight and strong to our allies and requiring them to play ball within our alliance. It appears that Mr. Dulles has done so at this time. I think the word for him should be—Bravo.

Address by Petras Dauzvardis, Consul of Lithuania, at Observance of Anniversary of New York-Kaunas Flight of Darius and Girenas, July 21, 1957, Marquette Park, Chicago

---

EXTENSION OF REMARKS

OF

HON. EMMET F. BYRNE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. BYRNE of Illinois. Mr. Speaker, it was my pleasure to attend a memorial service Sunday in Chicago commemorating the historic and tragic flight of Capt. Stephen Darius and Lt. Stanley Girenas. I would like permission to insert the remarks of the Lithuanian Consul, Petras Dauzvardis, who addressed the gathering. His address was splendid as well as timely. As Mr. Dauzvardis portrayed Lithuania's recent history, my thoughts were about America and the need that we must adequately take care of by vigilant attention to safeguarding our freedom.

I was most appreciative of the opportunity to say a few words of greetings to the Americans of Lithuanian extraction who were gathered on Sunday to commemorate Darius and Girenas.

The address follows:

ADDRESS BY PETRAS DAUZVARDIS, CONSUL OF LITHUANIA, AT OBSERVANCE OF ANNIVERSARY OF NEW YORK-KAUNAS FLIGHT OF DARIUS AND GIRENAS, JULY 21, 1957, MARQUETTE PARK, CHICAGO

Capt. Stephen Darius and Lt. Stanley Girenas are symbols of the close friendship of the United States and Lithuania. Born in Lithuania, they came here as youngsters, studied, and were volunteers in the United States Army, then fighting for the freedom of all nations. Lithuania regained her freedom and became an independent state as a result of the war and the determination of the Lithuanian nation. Darius returned to Lithuania to help her rebuild.

After Darius' return to this country he projected the idea of a nonstop flight to Lithuania to strengthen American-Lithuanian ties. Girenas joined him in carrying out the plan. They accomplished their mission, even though they did not reach Lithuania alive. Their heroic sacrifice was highly esteemed by both countries. Eloquent testimony of this is this imposing monument in Marquette park, this and other patriotic observances, and the sincere and ardent expressions by people of both nations.

These expressions touch upon America and Lithuania as well as on Darius and Girenas. The flight and death of Darius and Girenas occurred in the month of July. This month is replete with significant historical events: America's Declaration of Independence, the legal recognition of the State of Lithuania, and the Soviet treachery against Lithuania and the community of nations.

The Soviet Russian-Lithuanian Peace Treaty, by which Lithuania was recognized as a sovereign and independent state, was signed on July 12, 1920. On July 28, 1922, 35 years ago, America recognized Lithuania as a full-fledged state. The Lithuanian Legation at Washington and the consulates at New York and Chicago were opened after this recognition and continue their functions to this day.

The American Legation and consulate in Lithuania, however, no longer function. They were closed by the imperialistic Soviet occupant of Lithuania, who seized Lithuania in June 1940, deposed the lawful Lithuanian Government and substituted its illegal puppet agency, which still rules Lithuania and annihilates its people, although the Stalin-Molotov regime has been dammed and condemned by the present Soviet bosses for its many iniquities.

Lithuania, as I said, was seized by the Soviets in June of 1940. On July 14 and 15, 1940, the occupants, in violation of the Hague Convention, enacted the tragicomedy of elections—actually the appointment—of a so-called peoples parliament. By order of Stalin-Molotov this body (illegal by international as well as Lithuanian law, and even by the doctrine of the father of Russia's Communists, Lenin), on July 21, exactly 17 years ago, voted to sovietize Lithuania and incorporate it into the Soviet Union.

All free Lithuanian representatives and freedom-loving Lithuanian people denounced this illegal act by the Soviets. Lithuanian Minister in Washington, P. Zadeikis lodged his protest with the Department of State on July 22, and the Department of State published its condemnation on July 23, 1940.

So the month of July is a month of triumph and of tragedy for Lithuania. Triumph, because in that month Lithuania was recognized de jure by America and Russia, and because America continues to recognize her as an existing state—and is making every effort to free her. Tragedy, because Russia violated her pledge and throttled Lithuania's independence—enslaved her people and is mercilessly torturing and exploiting them.

However, just as every tragedy teaches a lesson, so Lithuania's tragedy teaches a lesson to the nation and to the world. The nation steels itself for the struggle for freedom; the people become more freedom conscious and feel that like all other cherished possessions, freedom must be guarded and defended, otherwise it can be lost.

The tragedy of Lithuania teaches the world that the leaders of the United States are honorable men, while the rulers of the Soviet Union are hypocrites. America does what it says, while the Soviet Union says one thing—but does another.

Here is an example of Soviet fraud: After the Soviet Union imposed mutual-aid pacts upon the Baltic States, citing the treatites of peace and nonaggression, and inserting an article about the noninterference of one state in the affairs of another, Commissar of Foreign Affairs V. Molotov declared (on October 31, 1939) to the Supreme Soviet and the world:

"These pacts are based on mutual respect for the political, social, and economic structure of the contracting parties, and are designed to strengthen the basis for peaceful neighborly cooperation between our peoples. We stand for the scrupulous observance of pacts on a basis of complete reciprocity and we declare that all nonsense about sovietizing the Baltic countries is only to the interest of our common enemies and of all anti-Soviet provocateurs."

Less than a year after the signing of the pacts and the solemn declarations, the Soviet Union seized and Sovietized Lithuania and the other Baltic States—in flagrant violation of agreements and pledges. This is clearly a crime against international law and morality.

The present rulers of the Kremlin accuse Stalin and Molotov of all kinds of crimes—Khrushchev and Bulganin also swear allegiance to Lenin, but break their word and violate even Lenin's doctrine.

If Stalin and Molotov offended peace, friendship, and coexistence—and they did this by seizing Lithuania and other countries—then Khrushchev, Bulganin, and Zhukov must right these wrongs, by restoring freedom and independence to Lithuania and the other enslaved states.

Khrushchev, Bulganin, and their cohorts say that the Lithuanians, Latvians, and Estonians joined the Soviet Union freely, that their parliaments voted this move. This is a bald-faced lie, the alibi of culprits. They do not mention the illegality of these parliaments, or their lack of any right to convert independent states into colonies of a foreign power. They also refrain from mentioning the doctrine of their father Lenin, which plainly states:

"Any incorporation of a small or weak nation into a large or strong state without the definite, clear, and voluntary desire to that effect of that nation * * *" and especially "* * * if this nation is not accorded the right to decide the problem of the form of its political existence by a free vote—implying the complete withdrawal of the

troops of the incorporating or strong nation—then the incorporation is an annexation, i. e., an arbitrary appropriation of a foreign country, an act of violence."

The Lithuanian nation had no say regarding the incorporation of Lithuania. The country was arbitrarily and violently annexed to the Soviet Union, with the Soviet army and Molotov's deputy Dekanozov present and operating in Lithuania.

All evidence shows that Lithuania was occupied by force, illegally incorporated into the Soviet Union, and is illegally restrained by the Soviets.

The Lithuanian nation wants to be free and act freely, and to have its own independent state, in which it could govern itself.

The Lithuanian nation demands that the occupants get out of Lithuania and restore sovereign rights and self-government to her, as set forth in the Lithuanian-Soviet Peace Treaty, the Atlantic Charter, and the Charter and Declaration of the United Nations.

The Prayer Pilgrimage Was an Object Lesson for United States and World

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the New York Age of June 15, 1957]

THE PRAYER PILGRIMAGE WAS AN OBJECT LESSON FOR UNITED STATES AND WORLD

(By John Young III)

So many questions and criticisms have followed in the wake of the Prayer Pilgrimage for Freedom that an inside, but independent, evaluation seems both necessary and desirable. Having served as director of public relations for the event (a post I no longer hold), I feel that such an evaluation will serve both the public interest and the leaders of the pilgrimage.

First of all, since all 3 cochairmen signed the call for the April 5 meeting which planned and executed the final event on May 17 at the Lincoln Memorial in Washington, D. C., all 3 must share equally the grand credit for the great achievement and whatever blame may come from small and negligible errors of omission.

Since the April 5 meeting became the initiating body and force, it is pertinent to note (1) that leaders in labor forces attended that meeting because they were urged personally to do so by Cochairman A. Philip Randolph, a member of the executive council and vice president of the AFL–CIO; (2) that NAACP officials and connected civic leaders attended the meeting because they were urged to do so by Cochairman Roy Wilkins; and, finally, that religious leaders attended because of the great prestige of Rev. Martin Luther King, Jr., and at his urging.

The logical deduction to be drawn is that without any one of these three streams of Negro life, the pilgrimage would have been a dismal failure, instead of the great success that it was. Here is why.

SHOWS STRENGTH

When put to the test, the great respect for A. Philip Randolph in the very highest labor circles came through with stunning results. For instance, from New York City we carried a delegation—our largest—of some 7,000 persons of all races to Washington. Approximately 5,000 of these persons were recruited through unions, with the Randolph approval a green light for participation and the around-the-clock work of such labor officials as Cleveland Robinson and Joe Overton, the guiding impetus.

Moreover, it was Mr. Randolph who personally signed for funds with which to reserve the first special train. Again, it was he who secured large cash donations from unions. It is easy to see, from the inside, that without the help of labor and Mr. Randolph, he would have failed.

NAACP ROLE

The NAACP played a vital part in the pilgrimage by providing the necessary base of operations in cities and States across the country. This is extremely important in any national program.

Large delegations from Detroit, Chicago, Boston, Richmond, Norfolk,, California, and Cleveland were due to the direct leadership of NAACP branches. They were led and recruited by, respectively, Arthur L. Johnson, Willoughby Abner, Edward L. Cooper, Dr. J. M. Tinsley, Rev. J. H. Westbrook, Rev. Maurice A. Dawkins, and Herman M. Sweatt. All of North Carolina came under NAACP leadership, in addition to other scattered sections.

Moreover, a very large part of the funds were advanced by the NAACP. Again, it is clear that without the NAACP the pilgrimage would have failed.

Some mention has been made of the refusal of NAACP branches to drop their membership campaigns completely and work on the pilgrimage. There is no doubt but that some branches could have done more to aid the pilgrimage. At the same time, however, it must be remembered that membership is the lifeblood of the NAACP and the direct responsibility of the branches.

Even the April 5 meeting occurred long after many branches had set up promotions and meetings for membership. In practically all instances the May 17 pilgrimage came in the midst of membership campaigns that could not be canceled. Under these circumstances, in my opinion, the NAACP branches did a creditable job in the pilgrimage.

THE SYMBOL

Rev. Martin Luther King, Jr.'s, contribution to the pilgrimage was of equal and vital importance. It was he who provided the dramatic symbol of moral and spiritual dignity around which all rallied. His Montgomery Improvement Association not only contributed a large sum to the funds, but had the assignment of rallying the whole South.

Large delegations from Alabama, Louisiana, Tennessee, Texas, Georgia, Florida, and South Carolina, all attest to the fine leadership of Reverend King.

Reverend King is a hero to me—a fellow Morehouse College alumnus—and to a great mass of people who admire and respect him, but it would be a serious mistake, in my opinion, to claim that he, alone, could have made the pilgrimage a succes; or, that he has emerged as the one leader of 16 million Negro people.

For such a claim, I believe, could do considerable damage to his future and the fine unity demonstrated so ably in the pilgrimage. Moreover, Reverend King's future depends on the help and cooperation of many leaders, most of whom want to help him, but are not willing to surrender their seniority to him at this early point in his career.

WORK IN PHILLY

Some mention has been made concerning those ministers in high places who did little or nothing to aid the pilgrimage. There were some, of course, but in my opinion, those ministers who did participate far outweighed and outnumbered those who failed to do so.

For instance, one of the real achievements of the pilgrimage took place at Philadelphia, where Rev. Leon A. Sullivan and the ministers of the city delivered the second largest delegation, consisting of 5,000 persons of all races and creeds.

The contribution made to the pilgrimage by Congressman ADAM CLAYTON POWELL, Jr., was a great one. Although he was late receiving an assignment by pilgrimage officials, he immediately contributed the full facilities of his church and congressional office and gave his associate minister, Rev. David N. Licorish to head the church mobilization division. Moreover, he read into the CONGRESSIONAL RECORD, the 3 co-chairmen's call and distributed it to 150,000 persons.

Was the pilgrimage a success? Should the crowd have been larger? What did we accomplish at the Lincoln Memorial? In my opinion, these are the answers.

SHOW UNITY

As I understand it, the prayer pilgrimage was a psychological move to demonstrate unity of purpose in informing the people of the United States and the world, that the Negro people—all of them were wholly dissatisfied with (1) the slow progress of civil-rights legislation in this Congress; (2) attacks on the NAACP in the South; (3) bombings of Negro churches and the homes of ministers in the South and, finally, that in not meeting these issues, both political parties had failed to meet the moral challenge of the times, and thus had created the necessity of a demonstration to arouse the conscience of the Nation.

Did we demonstrate a unity of purpose? I don't believe that there is any doubt but that we did. For in uniting, for the first time in our histroy, the great forces of religion, labor and social action, we accomplished a near miracle of cooperation, one that might well serve as a frontal action for the future.

To me, the prayer pilgrimage represented, in one bold, decisive, united move, the first time we acted like first-class citizens who deserved what they were asking. Whether we aroused the conscience of the Nation and our political parties remains to be seen.

SELF-RESPECT

In my opinion, the Prayer Pilgrimage for Freedom is one of the real achievements of the Negro people in this century. It was a demonstration of the vision, stability and maturity of Negro leadership that was vitally necessary at this time, as a striking contrast to that of the irresponsible leadership of the White Citizens Councils and the Ku Klux Klan and their sympathizers in the Congress, State legislatures in the South and in the land.

What did we accomplish at the Lincoln Memorial? The answer is simple—self respect. If, at the same time, we did not gain the respect of the people of the United States for our position, the fault is theirs, not ours. Under God, we sought to arouse them to this end.

[From the New York Age of June 22, 1957]

THE PRAYER PILGRIMAGE: AN EVALUATION

(By John Young III)

(This is the second in a series of articles by the official who served as director of public relations for the Prayer Pilgrimage For Freedom. Mr. Young is a former Washington correspondent and winner of the Willkie award in journalism.)

There has been much argument pro and con based on the number of people attending the Prayer Pilgrimage For Freedom in Washington, D. C., on last May 17.

The issue has been whether the 25,000 who attended the pilgrimage, constitute a success, or, whether the aggregate fell short of the intended goal. Some have suggested that from

50,000 to 100,000 should have been in attendance, that persons in places of high authority would look with askance at any attendance below these.

Personally, I believe that 5,000 persons of the same qualitative caliber would have been equally as demonstrative of unity of purpose. For the 25,000 who attended the pilgrimage were, for the most part, leaders on every level, with hundreds of thousands of followers behind them in their participation. It would be a tragic mistake if the people of the United States did not evaluate the attendance at the pilgrimage for its qualitative worth.

REPRESENTED BIG GROUPS

In the California delegation, for instance, every single person in a group of 150, represented one or more organized bodies of thousands; participation of the Elks (supporters of Ike in the last election) represented another 500,000 people; participation of Bishop H. L. Greene, meant the unqualified support of all the AME churches in the country; a bus from Tennessee contained 40 ministers whose congregations runs into thousands. And so it was all down the line—leaders on every level and from every faith and political persuasion, comprising delegations.

The fact, that the crowd at the pilgrimage was not larger, is a compliment to the leaders of the event, rather than cause for question and criticism. Here's why:

First, we had only 3 weeks of pitch activity—from April 20 to May 17—to promote the pilgrimage; second, no passionate appeal intended to incite the emotions was made; third, a three-pronged leadership created a lag in policy clearances; fourth, there was a lack of funds in a budget which was far too small for the time we had in which to operate; and, fifth, the fact that the occasion fell on a working day.

SOLEMN IN PRAYER

Too, the early policy decision not to invite political leaders to participate, further limited support from this area and explains why such leaders were not active. Rightfully, the pilgrimage leaders held the occasion to be solemn in prayer, and outside politics.

Cochairmen A. Philip Randolph, Roy Wilkins, and Rev. Martin Luther King, Jr., were entirely correct, in my opinion, in making these early policy decisions which limited attendance, but added, immeasurably, to the prestige and dignity of the occasion.

MOMENT OF DECISION

From the very beginning, these leaders decided that a strict obedience to the time factors of the third anniversary of the Supreme Court decision on school desegregation would be observed, above all else. This meant that the pilgrimage would be held at the precise moment the decision was handed down—noon, May 17. The date fell on Friday this year.

The exact-hour-and-date-of factor imposed a serious handicap on a large attendance. In New York, for instance, this meant that pilgrims not only would have to take a day off, but would have to leave the city at 5 a. m., in order to arrive in Washington at noon.

It is obvious that had the pilgrimage leaders desired a large crowd, above all else, they would have changed the event to Saturday or later in the day on Friday. Rightfully, they chose to honor the exact moment of the Supreme Court decision and thus emphasize the solemnity of the occasion, rather than compromise this high principle with hopes of a show of strength in a massed crowd.

THE NEGRO PRESS

The pilgrimage brought into sharp focus the importance and value of the Negro press to the cause of freedom for the Negro people.

Excepting the progress story of Rev. Milton Perry's walk from Jersey City to the Lincoln Memorial, the daily press was loath to print any advance stories that would contribute to the attendance. Especially was this true in Washington, where almost a complete blackout existed. A major press conference and briefing we held in Washington on the Wednesday, prior to the pilgrimage, wound up in the back of the newspaper near the want ads in the so-called liberal Washington Post; other Washington dailies didn't bother to print anything at all, although they had reporters covering the conference.

Yet, 3 hours after the occasion, all Washington dailies printed 5- and 6-column pictures on their front pages with a story alongside.

On the other hand, the Negro press went all out—despite political ties—in the advance coverage, and was a great factor in the pilgrimage success.. As a public relations person, I was brought face to face with the reality that whatever the Negro intends to achieve with movements which directly challenge the white majority, he must achieve through the Negro press and without the help of the daily newspapers, however liberal they claim to be and no matter how loudly their editorial columns preach liberty and freedom.

WASHINGTON ATTENDANCE

So much has been said on the negative side concerning the lack of participation on the part of Washingtonians, that I feel it necessary to make some positive observations. First, I attended one meeting in Washington where over 100 ministers and civic leaders were actively working on the pilgrimage. In addition, some 25 churches there opened their doors to receive out-of-town delegations, many such churches providing free meals. Also, a group of 100 private cab owners donated their cars and provided free taxi service to those who wanted to attend the pilgrimage.

Why didn't Washingtonians appear in great numbers? One reason, I believe, is that the churches were so concentrated on receiving out-of-town pilgrims that they were psychologically turned from the task of getting their own congregations to attend the pilgrimage. A grave apathy exists in Washington and is due, I believe, to the fact that they are a voteless people, not given to the usual civic and political urges brought on by the existence of election machinery. Too, some of them suffer deep fears over losing their government jobs.

The pilgrimage never had enough funds put to use in Washington to overcome these shortcomings.

In retrospect, 25,000 people of all races and creeds—on a 3-week appeal—spent well over a million dollars to go to the nation's Capital and hold a 3-hour ceremony of prayer for the freedom of the Negro people. They came from 32 States and represented every level of liberal and enlightened leadership. They came at the call of three Negro leaders, who felt that the conscience of the Nation needed arousing at a time when the Ku Klux Klan and the White Citizens Councils were challenging the very freedoms upon which our country was founded.

It is a highly irrelevant and specious argument which attempts to belittle the event and the power behind it, by placing a yardstick on the number of people who attended. The Prayer Pilgrimage proved that the Negro people—all of them—want their freedoms now. Any other deduction could prove very dangerous to the future of the United States, both here and abroad.

(Next week. What did the White House think of the pilgrimage? What was the underlying strategy of the pilgrimage? What is the next step?)

[From the New York Age of June 29, 1957]

THE PRAYER PILGRIMAGE: AN EVALUATION

(By John Young III)

(This is the third in a series of articles by the official who served as director of public relations for the Prayer Pilgrimage for Freedom. Mr. Young is a former Washington correspondent and winner of the Wilkie award in journalism.)

The White House was acutely aware of the Prayer Pilgrimage for Freedom, however phlegmatic its interest may have appeared on the surface. This I discovered when I visited there 2 days before the event.

(Here, it is relevant to note that I was not delegated by pilgrimage officials to visit the White House. My visit was an unofficial and personal courtesy call, growing out of past political endeavors.)

The high official I talked with there for more than an hour showed great anxiety, if not fear, over possible untoward actions that might occur in connection with the pilgrimage. (It was obvious, from the conversation, that the pilgrimage had been widely and seriously discussed in the White House.)

The first anxiety expressed by the official was that Communist groups would picket the White House on the day of the pilgrimage, and that it would be difficult to separate such an action—because of the pictures that would appear in newspapers—from the general story of the pilgrimage.

(Although it was not discussed, there is no doubt in my mind but that this particular anxiety reflcted fears that such publicity would be highly damaging to United States prestige throughout the world, and especially in Africa and Asia.)

POLICY AND PROCEDURES

I told the official of the policy and procedures which Cochairmen A. Philip Randolph, Roy Wilkins, and Rev. Martin Luther King, Jr., previously had outlined for the press. They were:

1. That pilgrimage leaders had disclaimed any support by Communists and had pointed out, in the meantime, that there was nothing the leaders could do to prevent them from attending a public assembly;

2. That, as a protective measure, pilgrimage policy prevented the carrying of signs by anyone connected with the event (Reverend King's own delegation had been turned down in its request for permission to display banners. * * * Also, even a participating union's request to be allowed to walk in a body from the railroad station to the Lincoln Memorial had been refused).

PICKETING PLANNED

At this point, the official revealed that he had been reliably informed that such a picketing actually was planned.

I suggested that there was a probability that pilgrimage leaders would further clarify this issue in a press conference we had scheduled for Reverend King on the following day, Thursday, May 16. (The next day Reverend King read a statement prior to his press conference. In addition to repeating the leaders' policy previously announced on this issue, he added: "* * * we plan no picketing or any such demonstrations. Any group carrying on such activities is doing so without our approval and against our wishes.")

The second anxiety on the part of the White House official was that out of the thousands of pilgrims entering Washington from over the country, there would be some who would resort to disorder, and possibly mayhem; that the authority of the pilgrimage leaders would not be strong enough to completely eliminate such action in a body of thousands, many of whom were attending on their own.

RESPECT FOR LEADERS

I, of course, held no such fears and told him so. I informed him that the Negro people had great respect for both their leadership and their religion; that, therefore, given the correct premise, his fears were based in non sequitur reasoning.

FEAR

Make no mistake about it. Fear ran like a nagging thread through the hearts of every white person in Washington on the day of the prayer pilgrimage. Negro leadership, therefore, was on trial as never before in the Negro people's long struggle for freedom in the United States.

I left the conference at the White House with the official's parting words of challenge echoing clear and crisp:

"If Negro leadership," he believed, "can bring thousands into Washington on this occasion, hold a cermony and have them depart as planned without incident or disorder, it will be an achievement in responsibility and maturity which cannot help but bring the respect of the Nation and the desired results."

MISSION ACCOMPLISHED

Well, we accomplished our mission as we planned it. We wrote an editorial along side the Lincoln Memorial, tall enough for the whole world to see. We're on record. We've given the people of the United States a mandate. The Pilgrimage was our first step—a shifting of the burden of proof to the shoulders of the white majority of our country.

What follows after this first step? There is an old adage or custom in the courts that before you sue for the collection of a debt, the court requires that you first write a letter asking that the monies be paid voluntarily. A period of grace then ensues. If no action of payment is forthcoming, the aggrieved party then sues.

SUE FOR RIGHTS

In the Prayer Pilgrimage we have written our letter. We now are in a period of grace. When and if, it becomes apparent that no action is forthcoming as a result of our letter, we then will have no alternative but to sue for our rights.

That such a suit has been considered is a part of the record. When asked at a press conference during the Pilgrimage what followup was planned, Reverend King said that some step was in order, but indicated that the form of such a step had not been decided.

On the other hand, Congressman ADAM CLAYTON POWELL, Jr., recommended in his speech at the Pilgrimage that a third force of all faiths be launched. It would be a program of direct action even to the extreme of work stoppage. It would not be a third party, yet, it would be political but nonpartisan.

In retrospect, dynamic Negro leadership demonstrated—in a poignant portrayal—its vision, wisdom, responsibility, maturity, and savoir faire in carrying out the prayer pilgrimage.

Those who ask what was accomplished by the pilgrimage should be satisfied that this, alone, was worth the cost in money, time, and energy in its behalf.

The fact that we proved that for safety's sake, it no longer is necessary that a white person head a civil rights activity that is delicate and fraught with possible disaster, should come as a bonus to our protracted thinking on the values of the pilgrimage.

Historians of the future well might write in the annals of our times, that on May 17, 1957, at the Lincoln Memorial in Washington, D. C., the Negro people in the United States finally came of age.

(Next week. The third force. What is it? How does it work? Will politicians and leaders find Reverend King's program feasible in and for the North?)

[From the New York Age of July 6, 1957]

THE PRAYER PILGRIMAGE: AN EVALUATION

(By John Young III)

(This is the fourth in a series of articles by the official who served as director of public relations for the Prayer Pilgrimage for Freedom. Mr. Young is a former Washington correspondent and winner of the Willkie Award in journalism.)

THE THIRD FORCE

Out of the inevitable redundancy of the speeches at the Prayer Pilgrimage for Freedom, Congressman ADAM CLAYTON POWELL'S statement shines as a rare jewel of distinction.

For, whether they agree with him or not, practically all observers have said that he was the only speaker to offer a positive plan of action as a panacea to our ills.

"What we need," he said, "is a third force of all faiths."

While he did not go into details, he did project the idea that such a force would include direct action in the form of economic boycotts and even work stoppage, all within the framework of a program of passive resistance.

RELIGIOUS ORGANIZATION

It can be seen, at first examination, that he was proposing an organization of religious nature, where the church would be the dominating factor, with political leaders forsaking their parties under the obedience of their religious leaders, when called upon to do so under extraordinary circumstances.

By describing the "third force" as being political but nonpartisan, Congressman POWELL evidently reasoned from a major premise which held that neither of the two major parties appeared willing or able to mount the needed full offensive in the field of civil rights; that efforts to affect such a combination or coalition of liberal forces between members of the two parties either had failed, or, had appeared unlikely. Such reasoning deems a third party unwise and impractical.

COMBINATION OF FORCES

There can be little doubt but that the great progressive surge among all churches, at this time, made such a combination of forces seem irrevocably feasible and desirable.

How would such a "third force" be organized? Presumably, the heads of the various faiths (on a call signed by several), would meet and agree on a plan of action to extend the boundaries of freedom to the greatest possible horizons, immediately. In graduated steps, there would have to be an agreement to pursue this goal to the extreme of work stoppage, should the coalition mean business.

(Here, it must be said that this writer is interpreting what appears to be the logical deductions in Congressman POWELL'S proposal. It is quite possible that he may be in disagreement with any or all of the conclusions drawn by the writer. However, the basic premises herein are based upon brief conversation with him; his recent illness having precluded the possibility of any thorough interview).

Once having set up such an "executive council" of religious leaders of all faiths, it would appear logical that political leaders then would be invited to join a "laymen's auxiliary," or appendage, set up in juxtaposition to the council, but, actually, under the jurisdiction of the religious organization.

With this combination of nonpartisan religious and political leaders established at the very top, the organization then would barrel out to include every city and State under the banner of the "third force." It is assumed that the "executive council" representative of each faith would be responsible for recruiting political leaders belonging to his faith. The representative would be held accountable, but not necessarily responsible for the actions of his political leaders.

How would the "third force" work? Perhaps the recent imbroglio over the city council bill to end discrimination in private housing in New York City can be used as an example of application.

It is a matter of record that the real estate board circulated literature against the bill when it was at the stage of passage. This effort on their part brought a mere 3,000 letters to city hall and stymied the bill, forcing lukewarm council members to back down and pigeonhole the bill.

It is conceivable that had the third force been organized it would have been in position to take immediate action, once the pattern of the opposition had been established. On the basis of its theory, the third force would have swung into action with the following weapons:

1. A letter approving the bill, written by every minister in New York City, to the mayor at city hall.

2. A sermon in the pulpit of every church in the city, asking members to fill out prepared cards to be mailed to the mayor.

3. A delegation from each faith to visit all councilmen of that faith and pledge them to hold firm for the bill, or lose the religious support.

4. A citywide mass meeting of protest, called by the ministers of all faiths in New York City.

It is easy to see that such a prompt and united action, led by a third force of all faiths, would have brought 100,000 letters to city hall in answer to the measly 3,000 arraigned against the bill by the real estate board.

It seems to be an elementary deduction that the bill would have been rescued and discrimination in all housing ended in New York City.

What about a boycott by the third force in this same situation? One speaker in a small and rather disorganized meeting, held recently, proposed a boycott of businesses belonging to an organization whose executive council publicly and unanimously opposed the bill. Presumably, an organized and prepared third force would have swung into action to lead such a boycott.

ACTIVISTS

Parentetiacly, the third force idea possibly finds its moorings in a newer interpretation of the philosophy of activism. Members of the third force would become activists in the newest possible sense of the word.

These newborn activities would believe that dignity and freedom can come only from positive action—through religion—on the basis of reason and principle, from a basic sense of justice, not from banal rationalization at this crisis point in the progress of our democracy. They would believe that the only ultimate necessity is the necessity of being free.

This, then, I believe, is a logical, though unofficial interpretation of the third force as proposed by Congressman POWELL in his speech at the Lincoln Memorial.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Need and Purpose of Integrated Federal Water Program for Texas

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 24, 1957

Mr. JOHNSON of Texas. Mr. President, recently I have asked the Chief of the Corps of Army Engineers and the Commissioner of the Bureau of Reclamation to coordinate the efforts of their agencies, down to the field level, in establishing and carrying out an adequate water-development program for Texas.

In a memorandum addressed jointly to the heads of the two agencies, I set forth briefly the need for such a program and what it should accomplish. I ask unanimous consent that the memorandum be printed in the Appendix of the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM TO MAJ. GEN. E. C. ITSCHNER, CHIEF, CORPS OF ENGINEERS, AND WILBUR A. DEXHEIMER, COMMISSIONER, BUREAU OF RECLAMATION, FROM LYNDON B. JOHNSON, UNITED STATES SENATOR—SUBJECT, INTEGRATED FEDERAL WATER PROGRAM IN TEXAS

Texas must have a predefined, realistic Federal water program that embraces both flood control and water supply requirements. This program must be so designed that (a) Texas will receive maximum benefits from its water and (b) The Federal Government will get maximum return on its water investment in Texas.

Texas has suffered disastrously from 7 to 10 years of drought; total cost estimated at $2.7 billion. Texas has suffered periodically, and specifically this year, from floods; cost this year estimated at $106 million.

The future annual loss to Texas will be measured in billions of dollars unless a firm water supply is provided for industry, cities, and agriculture. Water supply is the controlling key in the future of Texas. Unless effective action is taken immediately, Texas will literally run out of water in 10 or 15 years. The water problem is the only limiting factor on the continued growth and economic expansion of Texas.

Texas is 25 years behind other Western States in dealing effectively with its water problem.

In view of these facts, I consider it of the utmost importance that the Corps of Engineers and the Bureau of Reclamation collaborate closely down to the lowest field level in establishing and carrying out a program that will insure adequate supplies of water in Texas and that will reduce to the minimum loss of life and property from floods.

The State Government of Texas will be requested to coordinate its efforts with those of the Corps of Engineers and the Bureau of Reclamation.

I urgently request that the Corps of Engineers and the Bureau of Reclamation, working together, devise and submit to me, not later than April 30, 1958, a "mockup" of a Texas statewide water program where Federal funds are involved with an initial division of responsibilities as between your two agencies. This is to be a coordinated Corps-Reclamation program, particularly where water supply is involved in an integrated, inter-basin activity. Since water supply for all needs is the key, the controlling element in a realistic Texas water program, other facets such as hydro power, flood control, etc., will necessarily be integrated into the basic water supply decisions.

It is assumed that directives will go to the corps and Bureau, field level offices requiring:

1. Immediate collaboration on the programs of the two agencies.

2. Reappraisal of proposed reservoirs of each agency in accordance with the realities of water supply requirements as now established.

3. Submission of future reservoirs for authorization on a basis of complete field level agreement as to space allocations prior to the interagency comment process.

I want to receive from the corps and the Bureau proposals on a basin-account system for water sales from Federal reservoirs concerned with the interbasin water plans to support irrigation. In this connection I request that the two agencies initiate discussions to the end of establishing in Texas a uniform policy for disposal of conservation space in Federal reservoirs to the appropriate State agency.

The Bureau of Reclamation has been ordered to formulate a statewide water supply plan. This investigation is now about two-thirds finished and the final report is due in approximately 30 months.

The Bureau has defined water needs by areas for (a) agriculture and (b) municipal and industrial use. It is now known what key dams will be required and on what streams in order to meet water requirements of an integrated, statewide water supply plan. About nine corps dams now authorized, will have to be increased in size to meet water supply requirements of the statewide plan. The Bureau of Reclamation will propose 12 or 14 new dams, primarily for water supply.

The probable total cost over a period of 25 to 30 years of the Federal water supply program in Texas, including Bureau and corps projects, will approximate $1,300,000,000. It is on this program that I request from the corps and the Bureau a mockup by April 30, 1958.

Your comments on the above are invited.

Irrigation in Texas

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 24, 1957

Mr. JOHNSON of Texas. Mr. President, the smalltown newspapers of Texas are truly community newspapers in the sense that they are close to local problems and local progress. We are fortunate in having over 500 of these newspapers in my State.

Outstanding among them is the Benavides Facts, published by J. L. C. Beaman and edited by Wallace H. Smith. These two gentlemen believe strongly that a newspaper should have an editorial policy and an editorial page. On that page, there recently appeared a thoughtful and informative editorial discussion of the role that irrigation plays in Texas agriculture.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IRRIGATION IN TEXAS

Irrigation plays a much bigger part in Lone Star agriculture than most Texans realize.

Nearly a half billion acres of Texas land are now irrigated. About one-fifth of the cropland harvested in the State is irrigated land.

Although many centuries old, the practice of irrigation is relatively new in the State. There were no definite reports on the amount of irrigated Texas acreage until 1940, when less than 895,000 acres were irrigated.

But with the advent of larger, more mechanized methods in recent years, irrigation systems have spread to all corners of the State.

Irrigation has fit well into the ever-changing agricultural picture. It has been the answer to problems of drought, low yields and cost-price squeeze. And there probably isn't a farmer in Texas today who hasn't given some thought to irrigation.

This is no wishful thinking on the farmer's part—to want "rain" at the right time in the right amount. Many farmers in the heavier rainfall sections of Texas are setting up irrigation systems for small tracts and increasing yields up to 200 percent.

Although 95 percent of the irrigated farms are located in just 78 counties, the scientific principles of irrigation are rapidly being applied in all areas of the State.

During the past year, numerous irrigation clinics and demonstrations have been held under auspices of county agents, soil conservation districts and irrigation engineers, and manufacturers.

One Hundred and Tenth Anniversary of Arrival of Mormon Pioneers in the Valley of the Great Salt Lake

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Wednesday, July 24, 1957

Mr. CHURCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared in commemoration of the 110th anniversary of the arrival of the Mormon pioneers in the Valley of the Great Salt Lake.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR CHURCH

Today any of the people of my State join those of our good neighbor to the south, Utah, as well as hundreds of thousands of Latter-day Saints throughout the world in commemorating the arrival of the Mormon pioneers into the Valley of the Great Salt Lake. One hundred and ten years ago this afternoon, Brigham Young and the rest of his train arrived in that barren valley bordering the American Dead Sea. Earlier President Young had uttered unforgettable words as he looked from the top of the Wasatch Mountains onto the valley, "this is the place."

This was the place for the pioneers who traversed a thousand miles of the Great Plains and the Rockies to establish their refuge from the unjustifiable persecution they had found to the east. But, despite their courageous and wearying trek, the persecution was still to continue. Exactly one century ago this afternoon, President Young and the residents of the valley were celebrating the 10th anniversary of Pioneer Day in the mountains above Salt Lake at Brighton when news came that the largest peacetime Army ever assembled in this country was being sent to further punish them. This time, however, for all practical purposes, they emerged victorious, victorious without taking the life of a single member of Johnston's army.

But the Saints had more important things to do than fight wars. When Brigham Young said that "This is the place," he did not only mean the valley of the Great Salt Lake, but the entire great basin and intermountain area. President Young sent his followers to all parts of this region, establishing for himself a reputation as the greatest colonizer in this country's history, a history illustrious with the names of such men. The Latter-day Saints established the first settlement in my own State of Idaho, Fort Lemhi, in 1855, as well as the first permanent settlement at Franklin in 1860, where they founded the first school. The Saints went on to colonize the whole eastern part of Idaho, making it verdant with irrigated crops.

The Mormons were the first people to make significant use of irrigation on this continent. They turned that valley of sagebrush that President Young first looked over into one of the most beautiful cities in America today, Salt Lake City, and they made "the desert blossom like the rose" wherever they settled. The Lombardy poplars you will see if you travel through many parts of the West are not native to the region, but were most likely planted and watered to maturity by members of the Church of Jesus Christ of Latter-day Saints. The Western States have followed their example in irrigation, but it is unlikely that any group without the unity of the Mormon Church could have brought to productivity many of the places of beauty that can be seen in the West today.

The epic of the Mormons is a noble and dramatic one, one which members of all faiths in my State honor and respect. The Latter-day Saints have achieved a position where "All is well" for them with other peoples. They are completely accepted as they so completely accept those from outside their faith. My State is one of harmony, and on this day we pause to pay tribute to the people that settled much of our great West, the Mormon pioneers.

Freedom of Debate in the Senate

EXTENSION OF REMARKS
OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 24, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the testimony of Hon. Ernest W. Goodrich, of Surry, Va., representing the Defenders of State Sovereignty and Individual Liberties, before the special subcommittee of the Senate Committee on Rules and Administration considering proposed changes in Senate rule XXII.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT OF ERNEST W. GOODRICH, REPRESENTING THE DEFENDERS OF STATE SOVEREIGNTY AND INDIVIDUAL LIBERTIES, BEFORE THE COMMITTEE OF THE SENATE ON RULES AND ADMINISTRATION AT THE HEARINGS ON PROPOSED CHANGES IN SENATE RULE XXII

Mr. Chairman and members of the subcommittee, my name is Ernest W. Goodrich, of Surry, Va. I am appearing for the Defenders of State Sovereignty and Individual Liberties upon an invitation from the Honorable HERMAN E. TALMADGE. I have been a member of the bar in Virginia since 1935 and am admitted to practice before the Supreme Court of Appeals of Virginia and the Supreme Court of the United States. From 1935 through 1939 I was associated with the United States Department of Labor, in Washington. Since 1940, I have been attorney for the Commonwealth for the county of Surry, in Virginia, except for 4 years spent in the United States Navy during World War II doing labor relations work for the Bureau of Yards and Docks here in Washington.

At the outset, I should like to make crystal clear the fact that the Defenders of State Sovereignty and Individual Liberties is not a rabble-rousing, hate-engendering organization, as some segments of the press have inferred. Over a large area of Virginia the finest people are members and active workers in this organization. While the organization came into being following the Supreme Court's decisions in the segregation cases, it has from its inception concerned itself, as its name implies, with matters other than segregation and integration. We are dedicated to the preservation of our republican form of government, wherein the several sovereign States retain all functions of government not specifically delegated to the Federal Government. It is because of this dedication that we oppose the present resolutions pending before this group which are the subject of these hearings. From our view, the present attempt to change the rules of the Senate to make it possible for less than two-thirds of the Senators to cut off debate is but another manifestation of the determination of certain elements in our society further to throttle and ultimately destroy our State governments.

While I am not familiar in detail with the resolutions which are the subject matter of this hearing, it is my understanding that the purpose of the resolutions is to change the cloture rule, making it possible to cut off debate in the Senate with less than a vote of two-thirds of the Senators, and it is to this general idea of making it easier to apply cloture that I shall address my remarks.

While it is considered old fashioned and out of keeping with the modern philosophy of government to refer back to our Founding Fathers, it seems to me that a great many people in Washington need to review the genesis of our Government. I think that we need to study again the formation of these United States of America. Subsequent to the Declaration of Independence, and prior to the adoption of the Federal Constitution, I do not believe that anyone would argue that the State governments were not completely sovereign in every sense of the word, answerable only to the people of the States in which always reposes final sovereignty. The architects of the Constitution—and I might say that my State contributed its full share—were zealous to retain within the several States every element of sovereignty consistent with a workable Federal system. As you gentlemen well know, the great issue before the framers of the Constitution was how to preserve this balance of power. Had Alexander Hamilton had his way, the States would have been destroyed, and I believe firmly that we would not have survived as a nation. The great strength of our Government is the division of power between the Federal and State governments and, within the Federal Government, between the executive, legislative, and judicial branches. The present philosophy which permeates the Supreme Court, the executive department, as well as the legislative branches, harkens back to the philosophy of Alexander Hamilton.

Realizing the necessity of safeguarding the powers of the individual States, our Founding Fathers very wisely provided that in this august body, the United States Senate, each State, regardless of its size, territorially or populationwise, should have equal representation. Thus, the Senator from Delaware has as much voice in the deliberations of this body as does the Senator from New York. I have not studied the history of the cloture rule, but certain it is, that no rule of the Senate affords greater protection to the several States of this Nation than does this rule. While much of the encroachment on the sovereignty of the several States has come about as a result of the grasping for power by the executive departments of the Federal Government, and by judicial legislation by the Supreme Court, it is sad but true, that the elected representatives of the people in the Congress of the United States have also constantly, through legislation, extended the powers of the Federal Government. While the United States Senate has played its part in this unfortunate movement, it has, at the same time, served as a bulwark against wholesale extension of Federal control.

Except in isolated cases of filibusters agatinst legislation of minor significance, I believe that the record will show that the recurrent attempts to apply cloture have come when there was before the Senate legislation affecting the basic fabric of our Government. Certain it is, the current interest in changing the rule is because of the insistent demand of minority groups that the so-called civil-rights legislation be enacted. It is somewhat ironical that the minority groups interested in the civil-rights legislation are willing to sacrifice one of their greatest protections, that of unlimited debate in the Senate, in order to insure passage of legislation that, when the final history is written, will be termed the most

destructive of civil rights ever enacted by the Congress.

There is perhaps no one who has followed to any textent the proceedings of the United States Senate who has not had, at one time or another, a feeling of disgust at the waste of time as a result of filibustering. The difficulty, however, is in deciding which filibuster is a waste of time and which serves a useful purpose. It is my firm conviction, that in those cases where a filibuster has no merit, 64 United States Senators will be man enough to stand up and be counted for cloture.

In order to legally change the Federal-State relationship, two-thirds of both Houses of the Congress, and three-fourths of the State legislatures must approve such change by amendment. Opposition to legislative attempts to change the Federal-State relationship should not be silenced by less than two-thirds of the Senate. During the past 25 years repeated efforts have been made in the Congress of the United States, in effect, to amend the Constitution through the passage of legislation aimed at the further weakening of the sovereignty of the individual States. It is essential, it seems to me, that we preserve the right of unlimited debate in this body to help, in some degree, stem this tide.

One of the great dangers in this country today is that militant vocal minority groups are able to exert great pressure on the Congress and secure the enactment of legislation not favored by the great majority of the people in the country and so often inimical to the best interest of the country as a whole. No one today is so naive as to believe that minority groups do not exert an influence far beyond their numerical strength. Were it not for the right of unlimited debate, the dangers inherent in legislation so often sought by minority groups would never be brought home to the great bulk of the American people. During the hearings before the House committee on the civil-rights legislation the chairman indicated very early that further hearings were not necessary, because everything had been said on the subject. In the course of my testimony before that committee I tried to point out that the hearings should be continued until the American people were awakened to the dangers in such legislation. Even though the same arguments may be used over and over, unlimited debate serves a useful purpose in bringing to the attention of the American people the evils inherent in legislation which seeks to destroy the sovereignty of the several States. If the civil-rights legislation is debated enough in the Senate, the American people will finally wake up and demand its rejection by an overwhelming majority. If the legislation is right, then there should certainly be 64 United States Senators who are willing to stand up and be counted for cloture. However, to permit a bare majority of the Senators to shut off the debate will prevent, in this case and perhaps many cases in the future, the American people from ever understanding the full impact of the proposed legislation, now and in the future, on their freedom and liberty.

While at the present time the great reformers are bent upon bringing about the millenium, they will, surely as the sun shines again, be faced another day with a majority bent upon destroying their freedom and liberty. Failure of the Congress to enact legislation, however, noble its purpose might be, can never be as bad as the enactment of oppressive legislation. The most the filibuster can do is to prevent the enactment of legislation. It may prevent the enactment of some good legislation, but if it serves to prevent the enactment of any bad legislation, then the right of unlimited debate will have served a useful purpose.

Twenty-three years ago when I was a student at William and Mary College in Virginia, the Honorable Josiah Bailey visited our campus and spoke at a convocation. Conversing with him at a luncheon on that occasion, I asked him if the filibuster should not be completely eliminated. I shall never forget his reply to that question. He said that the United States Senate is the only place where a man may talk as long as he wants about anything that he wants and that this right should be preserved as a citadel against oppression.

I say to you gentlemen, that when the Senators from 17 States believe that legislation before this body is inimical to the best interest of this country, strongly enough to conduct a filibuster against such legislation, then it should not be enacted into law. If less than the Senators from 32 States are convinced that the legislation deserves to pass, it should fail. The failure of many pieces of good legislation to pass at a given time will not result in as much evil as the passage of one piece of bad legislation.

We hope that this committee will recommend that no change be made in the present Senate rule XXII, and, that in this body at least, men who are convinced of the soundness of their position may speak unshackled as to time.

The Jamestown Festival

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 24, 1957

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Festival Visit Rewarding Experience," published in the Staunton, (Va.), News Leader of Tuesday, July 23, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FESTIVAL VISIT REWARDING EXPERIENCE

Virginia's Jamestown 350th anniversary celebration is drawing thousands of visitors from all over the Nation. Mingling with many of them at the festival last week, one was impressed with their obviously favorable impressions and their keen interest in the historical nature of the celebration. Throughout, it stresses in drama, in reproductions, in exhibits, statuary, etc., Virginia's leading role in the Nation's founding and the ideals of freedom as conceived in the first permanent English settlement on this continent and written, largely by Virginians, into the basic laws of the country.

The festival plan was imaginatively conceived and has been effectively carried out. One heard expressions of disappointment that it is on the mainland, upstream from the site of the Jamestown settlement, and that it is necessary to make a special trip to the latter rather than seeing it as an integral part of the festival, but this was due to the fact that Jamestown is a national shrine and the island on which the first settlers established their homes does not lend itself to use as an exposition grounds.

Jamestown is an inspiring place to visit, but so is the exposition which celebrates its founding. The original island fort and village has been recreated with accuracy and realism. Entering the stockade, one can easily imagine he has stepped back to 1607, or a little later, into the midst of those hardy adventurers who set sail from England to start life anew in the wilderness of an unknown continent. The mud huts with thatched roofs, the first crude church, shops and storerooms, are all there, with costumed personnel to demonstrate the early arts by which the settlers sought to maintain life and to relate their difficulties, trials, and dangers, 3,000 miles from the old country and encircled by Indians who for the most part were hostile and killed many of the Englishmen.

Visitors to the festival swarming aboard the *Susan Constant*, the *Godspeed*, and the *Discovery* (the latter being absent at an area celebration just now) almost unanimously express amazement that these tiny, frail-looking craft survived the stormy Atlantic and that the first settlers, packed in like sardines, ever reached America's shores. Accurate production of these little ships was one of the fine achievements incident to the celebration, and they should not be missed when one goes to the festival.

Close by the reproduction of Jamestown are the concourse and Old and New World exposition buildings, in which one learns the story of the explorations of North America, the founding of Virginia and other colonies, and of the long fight for freedom and self-government, from Magna Carta down through the Declaration of Independence and the Constitution of the United States. It has been told in huge illuminated texts, in maps, and pictures, in groups of wax figures of the persons engaged in the long struggle, in narrations by guides, and through various other media. These exhibits have been done with magnificent artistry, and no one who sees them can fail to be impressed not only with the terrible struggle which the early settlers endured and the labor pains of the young Republic's borning, but the courage and sacrifice it took to win the individual liberties and self-government which are so much taken for granted today.

En route to the festival grounds are the amphitheaters in which the two Paul Green outdoor dramas, The Common Glory and The Founders, are presented. The former has been radically revised, and not from the best. In its original version it was a gripping portrayal of the founding of Virginia and the Nation which conveyed deep understanding and appreciation of the struggle and the ideas of the Founding Fathers. The new version includes too much gaudy costuming, too much interpretative and allegorical dancing, too much of Thomas Jefferson and too little of Patrick Henry, whose flaming oratory and leadership are given little attention. The impact of the original symphonic drama has been lost, and the effort to make the play more colorful and entertaining is no compensation. The Founders is a sound story of the Jamestown settlement, but is too long and its cast needs more experience and tighter direction.

The festival has many other features, and either alone or combined with Williamsburg restoration tour, is thoroughly rewarding and a fine achievement of which the Virginia 350th Anniversary Commission and its large staff, and the people of Virginia, can well be proud.

Civil Rights Force Bill Brazenly Antisectional

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 24, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Cincinnati, Ohio, Enquirer which was reprinted in the State,

of Columbia, S. C., on July 17, 1957. It is entitled "Civil Rights Force Bill Brazenly Antisectional."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CIVIL RIGHTS FORCE BILL BRAZENLY ANTISECTIONAL

There are two fundamental objections to the so-called civil-rights bill which should engage the thoughtful attention of all Americans, north and south, who cherish our traditional liberties and constitutional processes.

It is brazenly a measure aimed at one section. It places in the hands of the judiciary its unrestricted power of enforcement, denying trial by jury to those falling afoul of it.

Considering the current demeanor of the United States courts, with the Supreme Court careening on a Jacobin course, it scarcely seems prudent to vest enforcement of the rights of the citizens with the judges unless those citizens are involved in the Communist conspiracy.

But there are even more specific dangers lurking within the bill itself, dangers to which Senator RICHARD B. RUSSELL, Democrat, of Georgia, appropriately called attention. The language of the bill, which President Eisenhower conceded he had not studied, makes it a force bill of the sort that produced a reaction in the States of the late confederacy in reconstruction days from whose consequences we have not yet recovered.

Thus, while section 4, dealing with the right to vote, contains no reference to item 1993, title 42 of the United States Code, section 3 is directly related to it. Section 3 is available for use in compelling desegregation in schools and public places of resort.

What does item 1993 of title 42 convey? It conveys to the President the authority to use the Federal armed forces and the State militias to aid in the execution of judicial process. That, badly stated, means that the civil-rights bill would empower this and succeeding Presidents to enforce the Supreme Court's desegregation enactments by sending the Army into the States.

As Senator RUSSELL cautioned the Senate, the Government may as well begin building concentration camps to detain citizens resisting the Army if the bill is enacted into law and attempts are made to enforce it by military means.

The Supreme Court substituted one coercive doctrine for another in the school cases. Do the American people wish that doctrine crowded upon citizens at the point of the bayonet? Senator RUSSELL's elucidation of this point served at least one useful purpose. It induced Mr. Eisenhower to a study of the bill which he had previously endorsed with the full weight of the administration.

Secrecy Gimmick in Rights Bill

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 24, 1957

Mr. SPARKMAN. Mr. President, in today's Washington Daily News there appears an interesting article written by Mr. Lyle C. Wilson, entitled "Surprise—There's a Secrecy Gimmick in Rights Bill." I believe the article will make interesting reading for everyone, particularly for members of the press. I therefore ask that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SURPRISE—THERE'S A SECRECY GIMMICK IN RIGHTS BILL

(By Lyle C. Wilson)

It may come as a surprise to the newspaper editors of the United States, but here are the facts: They or their reporters could be fined or imprisoned for an all-out reporting job on the Civil Rights Commission to be established by the administration bill now pending in the Senate.

It is a fact that the proposed legislation has some built-in secrecy provisions to be invoked by Commission whim. It also is a fact that the bill would provide a fine of not more than $1,000 or imprisonment for not more than a year on individuals who either leaked or used certain Commission material marked "Secret."

The Eisenhower administration cannot be charged with responsibility for this secrecy gimmick which would permit any or all evidence or testimony in a Commission hearing to be withheld from the public. This bureaucratic rosebush was planted in the bill by Chairman EMANUEL CELLER, House Judiciary Committee.

The explanation given the United Press was that these and other procedural provisions were written into the bill after it reached the House to make the whole thing "less unpalatable to the South." Southerners had protested that, as received from the Justice Department, the proposed legislation confided to the Commission authority both too vague and too broad.

In repairing that mistake, if any, the Judiciary Committee men authorized the Commission to proceed at will in secret. On what grounds this was done is not evident. It scarcely could be, however, on grounds of national security, which is the defense of most bureaucrats here in Washington when they want to keep from the public the manner in which they are transacting the public's business.

Paragraph E of the bill's title I, which sets up the Commission, provides that:

"If the Commission determines that evidence or testimony at any hearing may tend to defame, degrade, or incriminate any person, it shall receive such evidence or testimony in executive session."

Executive session means secret session from which reporters and all other representatives of the public are excluded. Paragraph G is the enforcer, as follows:

"No evidence or testimony taken in executive session may be released or used in public sessions without the consent of the Commission. Whoever releases or uses in public without the consent of the Commission evidence or testimony taken in executive session shall be fined not more than $1,000, or imprisonment for not more than 1 year."

The Commission, thus set up with authority to conduct its business in secrecy, will have trouble enough without settling itself in the middle of the controversy now roaring in the United States about bureaucratic abuses of the secrecy privilege.

The Commission on Civil Rights will be operating every minute of every day in an area of angry controversy. Its duties are such as these:

To investigate allegations that certain citizens are being deprived of their right to vote.

To appraise the laws and policies of the Federal Government with respect to equal protection of the (civil rights) laws under the Constitution.

Whatever the Commission may say or do, one side or the other in the civil rights controversy is likely to complain. The temptation of the Commission to conceal what it may of its controversial hearings will be almost impossible to resist.

The secrecy provision probably will prove to be a time bomb set in the Commission's innards.

The Identity of the Unknown Soldier

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, July 24, 1957

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article entitled "The Identity of the Unknown Soldier," by Prof. Bernard Joseph Rubenstein, of the Brooklyn Law School, Brooklyn, N. Y.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE IDENTITY OF THE UNKNOWN SOLDIER

(By Bernard Joseph Rubenstein)

World War I's trench warfare—a gigantic siege operation, practically a page out of the Dark Ages—was literally strangling the Prussian warlords' only hope for victory by a short war. In this attrition on the western front stretching from the North Sea to Switzerland there was unglamorous but most costly nibbling and hacking by both sides at elaborate entrenchments.

Snaking through the deepening mud of November 1918, a quagmire immobilizing much of the attacking, were firing trenches, hundreds upon hundreds of miles of them. These were not the puny shallow fox-holes of later wars. These were 6-foot-deep cuts in the very soul of our beautiful mother earth, with revetments (facings) within the trenches to help the soil where it would not stand by itself, and with firing steps, so that soldiers could stand upon the steps and fire over parapets. These firing trenches, first line, second line, etc., were horizontal to the enemy and octagonal, so-called: just picture a horizontal line, a diagonal line, a horizontal line, etc. The communication trenches to the rear, with no firing steps, of course, were vertical to the enemy, and were wavy. The octagonal and wavy designs had a purpose: to provide protection against enfilade fire and to limit the otherwise disastrous results of bursting shells.

Between antagonistic firing trenches, so-called no man's land, had contraptions that would have delighted the devil himself: barbed-wire emplacements, sometimes single-apron and double-apron, interspersed with ditches with posts in the ground, as artificial antitank obstacles. The putrescence of the dying and the dead was mixed with the wildest assortment of abandoned, damaged, or destroyed property.

Unknown to these trenchmen who were brutalized by war and who had sicknesses that are still not known to the medical men, the leading Prussian strategist, Gen. Erich von Ludendorff, in panic on September 29, 1918, urged his civilian leaders to sue for peace. President Wilson received the plea on October 4. The enemy received our counterproposals and agreed to them on October 20. On November 5 the rest of our Allies agreed. On November 7 there was a false but wildly celebrated rumor of armistice. On November 11, at 5 a. m., in the train of Marshall Ferdinand Foch in Compiegne Forest, near Paris, the armistice was

signed, to be effective at 11 a. m. Diplomatically, things moved fast indeed, but mighty slowly for those in the trenches.

In November 1918 large dugouts were going out of style, because it was too difficult for the men in them to get out of them in time in case of an attack. However, those that were left had lights and sleeping and living quarters. It was less than a minute before the 11th hour of the 11th day of the 11th month of 1918 that a Prussian meinenwerfer made a lucky hit on a shallow part of the ground over a dugout crowded with munitions and 31 men. Their cramped condition had made the 40 and 8 torture voitures Grand Central Stations in comparison. All 31 were killed, plus over a hundred more in surrounding dugouts and trenches. Only bits were found of their bodies. All were buried in individual graves in the unmarked graves of their particular country's army dead, identified by the bits of uniform.

Among the 31 was an American Negro, a poet of great sensitivity, a man who never griped about his plight, and who ever remarked that progress was ever being made to help his race in our great country; an Italian soldier, an operatic singer from La Scala, who lived on Via Roma in Naples; a French soldier from Oran, Algeria, a dancer of some prominence; a Scot from Sauchiehall Street in Glasgow, a composer who had great works yet to give to the world; a Belgian artist from the old school.

Many people believe that France's Unknown Soldier under the Arch of Triumph, Belgium's at the base of the Colonnade of the Congress in Brussels, Italy's before its statue of Victor Emanuel in Rome, Britain's in Westminster Abbey are a dancer, an artist, an opera singer, and a composer, respectively.

Our own Unknown Soldier, picked from four hero dead by a soldier chosen by Gen. John Pershing, most Americans hope, both northerners and southerners, is that Negro poet. All through our history most of us figuratively rooted ourselves hoarse for Crispus Attackus, a Negro who gave his life resisting tyranny in the Boston Massacre, and thus being among the first killed in the Revolution; for Shaw's brave regiment of Negroes from Massachusetts who fought so valiantly in the Civil War; for the Booker T. Washingtons, the Hulan Jacks, Joe Louises, Bill Robinsons, Ralph Bunches, Jackie Robinsons, George Washington Carvers, Althea Gibsons, Jesse Owenses, Marian Andersons, Dizzy Gillespies, Ertha Kitts, Sammy Davises, and so forth.

Inscribed in the memorial rectangular block of marble on the tomb in Arlington, Va., is:

"Here rests in honored glory an American soldier known but to God."

The Atomic Energy Commission

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 24, 1957

Mr. HUMPHREY. Mr. President, the distinguished dean of the Institute of Technology, Athelstan Spilhaus, recently delivered an important speech to the American Society of Newspaper Editors. His remarks were entitled "Shall We Revamp the Atomic Energy Commission?" and his comments are worthy of widespread attention.

I ask unanimous consent that excerpts from his speech which appeared in the Minneapolis Star of July 20, 1957, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHALL WE REVAMP THE ATOMIC ENERGY COMMISSION?

(By Athelstan Spilhaus, dean of the Institute of Technology, University of Minnesota, in a speech to the American Society of Newspaper Editors)

After the fullest recognition of the magnificent if frightening accomplishments during its existence I believe the Atomic Energy Commission has outgrown its usefulness. I believe that it is time to separate out into the normal elements of the pattern of our society the manyfold functions of the Commission.

We have proven and tested patterns in American society and in our democratic form of government. Some of these patterns are the normal agencies of government (both State and Federal), our great universities, and our imaginative and competitive system of private enterprise.

In the very best ordered society or organization it is sometimes necessary to set up a special group or agency (temporarily if possible) to meet a new challenge. Such was the case in the Atomic Energy Commission.

The Atomic Energy Commission was established because the first applications of atomic energy emerged in secrecy for wartime purposes. It was necessary at that time to have a special group to guide these applications during the transition period into permanent channels.

We must therefore accept the idea that the Commission was to effect a transition.

One measure of such a (transitional) Commission's success is how smoothly, rapidly, and efficiently it eliminates the need for itself. And this it should do by seeking ways to pass on its work to appropriate, competent, permanent organizations so that they may be able to take over.

The Atomic Energy Commission has failed in this respect in that during 10 years it has not substantially reduced the activities under its direct or indirect control. It has not pursued vigorously enough the aim of getting itself out of business.

On the contrary it has become a monopoly in the area of nuclear energy which is broadening its scope to embrace all aspects of high-energy physics and their potential applications.

In doing so the Commission dominates in its too little understood and too loosely defined field of atomic energy, research education, private exploitation to develop useful outcomes, and even usurps controls in atomic energy which should become logical extensions of the separable functions of numerous long-established departments of our Government.

It is time that university research in modern physics be freed of any of the controls that accompany Commission support. University people have been unusually productive historically if given the means and left alone.

Our private initiative and competitive system of industry has traditionally been the tremendously successful place where ideas are turned into things for better living.

It is time that much more information be made openly and quickly available on a wider scale to permit industry to bring its collective strength to bear on the development of peaceful application of atomic science.

There are, of course, certain functions and controls which properly should rest with the Government. Such things as the development of nuclear weapons, insuring the secrecy of such developments, and safeguarding the Nation from hazards to health and well being that may result from them.

Even these that are proper tasks of Government are not best carried out under one closely held group. It is time that they were split up and that appropriate permanent division in Government be charged with their execution.

I have said that I believe that if the numerous functions with which the Commission is now charged were separated out in normal elements of our society and Government, some other serious problems would be in the seriousness of their impact. Take as an example the recent nationwide discussion on fall-out and radiation effects.

Here again, the trouble comes I think from the Atomic Energy Commission's having too many functions under one head. It is most difficult for those who make and test bombs to be as well the arbiters of the health hazards that these produce and in addition to have to pass final judgment and enforce controls.

The United States Public Health Service watches over health hazards to the Nation except atomic energy.

The Department of Defense is charged with all weapons development—except nuclear weapons.

The Federal Power Commission is concerned with all aspects of power—except nuclear power.

The Department of Commerce both stimulates and controls commercial development—except atomic applications.

And so on through the other departments of Government.

In each case, the normal extension of the functions of these permanent departments to include its proper concern with atomic energy is inhibited by the overriding mandate with which the Commission is charged.

It can be freely admitted that certain Government agencies may not be able, at the present time, to discharge these duties as well as the AEC.

But the way to correct this is to strengthen them to enable them to take over the extension of their normal responsibilities, not to weaken them by perpetuating a special agency to do part of their job.

It is our Government's stated policy to stimulate industry's role in the development of atomic-energy application yet there are still major stumbling blocks in getting the necessary fresh information initially to the potential contribution. It is the old question of how the industry starts even if it has competent people and an interest in the field.

Fresh information is necessary to get the idea that establishes the need to know that opens the door to fresh information. And so the tiger chases its tail around the tree.

If the responsibility of the development of nuclear weapons and nuclear power were separated in a clear-cut fashion then surely at least some of the secrecy attached to bombs would not flow over and obscure the power area. A freer flow of fresher information should certainly result in stimulating a greater contribution from industry.

Separation of other parts of the atomic-energy program and delegation to other deportments would have a similarly desirable effect of reducing the need for secrecy in a number of areas.

Another part of the effect of overcentralization and control is the control that I have mentioned that he Commission is gaining in research and education. And this is not only in a limited area of nuclear energy but inevitably tends to move into other fields in the forefront of modern physics and the technology related to it.

These controls come unwittingly perhaps. They accompany the much needed assistance that universities are receiving from the AEC to purchase the expensive machines needed for much of modern (especially high energy)

physics and to assist in the development of educational patterns in nuclear sciences and technology.

Here again the separation of AEC functions and putting them where they belong would help to insure that the danger of a single control that tends to freeze patterns of education and fix research aims would be avoided.

The Atomic Energy Commission is the only agency of Government which can subsidize the expensive facilities for high energy research. This has tended to result in an unhealthy concentration of such facilities in national laboratories and some other laboratories under more indirect AEC control.

Inevitably this causes a gravitation of the most competent physicists from widely scattered universities where the students are to the concentration points where the facilities are.

This is an undesirable trend, for if it goes on, students will be forced to migrate to these establishments, there will be a gradual usurping of the function of the universities and ultimately the Commission might have to grant degrees.

I have only touched on a few items and yet in every one of the cases I have mentioned, it must be admitted that the commission has made at least a gesture of delegation to other groups.

The National Academy of Sciences has brought out a report on radiological hazards.

The universities have been assisted and brought in to the national laboratories in various ways.

Industry, at least certain segments, have worked extensively for the AEC. And there are others.

The important thing is that here already is the experience which could be used to segment AEC's overmany functions—we have already a blueprint for the delegation of functions so that AEC could get out of much of its business smoothly without interruption of the work if it can be allowed to relinquish control.

So that in summary, and with the utmost admiration for the extraordinary substantive accomplishments of the men who have worked for AEC I would like to suggest:

That our Congress moves positively to apportion out the operational and fiscal control of the AEC functions to the several appropriate permanent agencies of the Government.

That the high level of performance in urgent development which AEC has set need not be impaired by this action.

And that, if this is done, the tremendous impact of nuclear energy on our whole society would not be subject to the inevitable hazards that accompany overcentralized control—overcentralized control which otherwise may have adverse effects on education, freedom, free, flexible, and varied patterns, economy based on fair imaginative competition and government based on an informed public.

Jury Trial Is Still the Best System

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 24, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding editorial from the July 22, 1957, issue of the Greenville, S. C., News entitled "Jury Trial Is Still the Best System." This editorial discusses the outcome of the Hoffa case which was tried here in the District of Columbia. It was written prior to the verdict which was returned by an all white southern jury in the Clinton, Tenn., case.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JURY TRIAL IS STILL THE BEST SYSTEM

One of the primary objects of the proposed civil rights bill is to move Federal civil rights cases from the criminal side of the court, where juries must judge the facts, to the equity side where judges may convict and punish without a jury trial persons accused of violating injunctions forbidding them to tamper with the rights of others.

Proponents of the bills justify their position by the charge that, out of prejudice, Southern juries will not convict officials or plain citizens accused of civil rights violations.

They point to the failure of a Mississippi jury to convict on purely circumstantial evidence two white men charged with murder in the death of a Chicago Negro youth and to the refusal of a South Carolina grand jury to indict five men charged with a nocturnal flogging.

They are awaiting the verdict of the Federal jury in Knoxville, which soon will decide the fate of 11 or so persons accused of violating a sweeping Federal injunction having to do with integrating the public schools of Clinton, Tenn.

We do not believe in going behind the verdict of a jury. But since these people have chosen to do so in other cases, they might well consider the action of the jury which on last Friday acquitted Teamsters Union official James R. Hoffa of charges of conspiring and bribing to plant a spy within the Senate subcommittee investigating union rackets.

Robert Kennedy, chief counsel of the subcommittee which originated the case, remarked beforehand that he would "jump off the Capitol dome" if Hoffa were acquitted. The Government prosecutor thought Hoffa had been caught with the goods on him and expressed surprise at the verdict.

The jury was drawn not from the often questioned South, but from the District of Columbia, the National Capital. It consisted of 8 Negroes and 4 Whites. Joe Louis, Negro ex-heavyweight boxing champion, sat in a conspicuous place in the courtroom for a day and a half and told newsmen he was there to see what was happening to my good friend, Mr. Hoffa.

The jury considered the facts and reached a verdict. Unless evidence is produced to show that it was tampered with, that ends the case and it's good enough for us. No man should be forced by his government to stand trial, and risk loss of life, freedom, or property, except before a jury.

But if, as the proponents of civil-rights legislation imply, there is something wrong with the jury system, something should be done about it, and the District of Columbia is a good place to start.

Private Investment Abroad

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, July 24, 1957

Mr. JAVITS. Mr. President, private investment of capital overseas, which is a critical element of American foreign policy, is growing more and more critical all the time as the need for such capital abroad increases and as our efforts in behalf of the economic development of the underdevelopment areas gain momentum.

I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the New York Times today entitled "Private Capital Flows Globally." The article shows some very encouraging improvements with respect to United States private capital investment abroad, as well as with respect to private investment abroad by the United Kingdom and the West German Republic. The West German Republic is now coming increasingly into this field in a very substantial way.

I commend this item for the interested study of the Members of the Senate, and I urge that we give our attention to this subject, in an effort to further increase and make more effective, in terms of our foreign policy, the flow of overseas private investment.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRIVATE CAPITAL FLOWS GLOBALLY—U. N. FINDS THAT UNITED STATES, GREAT BRITAIN, AND BONN RAISED FOREIGN INVESTMENTS IN 1956

UNITED NATIONS, N. Y., July 23.—Outflow of of global private capital for investment abroad in 1956 set a record for the postwar period, Secretary General Dag Hammarskjold declared today.

The total was substantially above that of preceding years, he said, due mainly to large increases of capital exports by the United States. Britain and West Germany contributed substantially to the trend.

The Secretary General's review prepared for consideration by the Economic and Social Council now in session at Geneva, said that the tide of new investment funds from the United States more than doubled in 1956 as compared with 1955.

A "reasonable assumption" was that undistributed profits of foreign subsidiaries were at least as large as in 1955. On that basis, it was believed, the outflow of long-term capital from the United States rose from $1,800 million in 1955 to more than $3 billion in 1956.

"The expansion was so sustained that a rise took place in virtually all regions," the Secretary General said, "and both direct and portfolio investment increased sharply."

The term "direct investments," a footnote explained, refers to those controlled by non-resident interests.

OIL INDUSTRY AIDED

To a large extent, Mr. Hammarskjold said, the petroleum industry benefited most from the increase, and a large part consisted of purchase of new concessions. Canada and Latin America absorbed major portions of the flow, although there was a perceptible advance also in United States investment in Western Europe, partly attributable to "a few sizable transactions."

Replies by the United States Government to a 1956 United Nations questionnaire on employment and balance of payments, it was said, noted that although interest rates were increased in 1956, the price of capital funds still remained below that prevailing in most other countries. The outflow of private capital is likely to continue high in 1957, the report indicated, if only to complete direct investments already initiated.

For Latin-American foreign capital, including reinvested earnings from foreign subsidiaries, played an unusually large part in the region's capital formation, the report said. The inflow, predominantly of foreign origin, increased by 50 percent and represented 9 percent of total investment, including public funds.

Excluding the undistributed profits of subsidiaries, the review showed, the outflow of new United States funds to Latin America rose from $141 million to $521 million between 1955 and 1956. Principal recipients were Brazil, Mexico, Peru, and Venezuela.

The Venezuelan Government has sold new petroleum concessions for $400 million, of which nearly $250 million was received during the last year. New foreign investment in productive facilities of the petroleum industry also was noted.

LATIN AMERICA HELPED

Brazil's substantial increases in receipts of private long-term capital were in the main absorbed by the metalurgical and chemical industries catering to the growing domestic market, but capital flowed as well into the mining of iron ore and manganese.

Mexico's growing foreign private investment continued upward, focused particularly on manufacturing and chemical industries. In Peru, as in Chile, the inflow was directed largely to expansion of the copper industry.

New capital also entered Argentina at an increased rate in 1956, it wais said. Since 1955, government policies relating to private foreign capital have undergone extensive examination and revision.

The present policy of the Argentine Government is to restrict petroleum development to state enterprises, but the secretary general's summation noted reports of greatly increased interest in foreign investment in manufacturing in Argentina in 1956. Projects under study include enterprises to produce adhesive tapes, plastics, soft drinks, tractors, pharmaceutical products, paper and pulp, and automatic vehicles.

Most regulations on incoming capital adopted or modified during 1956 related to particular branches of national economy, the report said. Awarding of concessions was noteworthy, it added, in countries that have enacted new and liberalized legislation in recent years. These include Bolivia, Costa Rica, Guatemala, Israel, Peru, and Turkey.

Highway Building in Missouri

EXTENSION OF REMARKS
OF
HON. STUART SYMINGTON
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Wednesday, July 24, 1957

Mr. SYMINGTON. Mr. President, because of the great national interest in the Interstate Highway program, authorized by the last Congress, I ask unanimous consent to have printed in the Appendix of the RECORD, a letter from Mr. Rex M. Whitton, chief engineer, Missouri State Highway Commission, reporting on Missouri's participation in the program during this past year.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MISSOURI STATE HIGHWAY COMMISSION,
Jefferson City, Mo., June 8, 1957.

Hon. STUART SYMINGTON,
United States Senator, Senate Office Building, Washington, D. C.

DEAR SENATOR SYMINGTON: We believe you will be interested in a report on the progress Missouri has made on the Interstate System in the first year under the provisions of the Federal Aid Highway Act of 1956, the passage of which you were so instrumental in bringing about.

Missouri's apportionment for the Interstate System during the first year was $27,086,494. We have $38,500,000 under agreement and authorization from the Bureau of Public Roads for an additional $7 million. The total apportionment to Missouri for the second year (1958 fiscal) is $46,047,041.

The above figures do not include one interstate project of 9.4 miles in Greene County from Springfield east, on which we received bids June 27. The low bid on this project was $2,948,529.24. We purposely left this project out of the first year's figures because it will not be awarded until later this month which will put it into the second year's activities.

We are particularly pleased with the way the expanded Federal program fits into the regular operations of the Missouri Department. It allows us to step up activities in both the metropolitan and the out-State areas. We have laid more stress in the last year on the metropolitan areas on the Interstate work because that is where the greatest need exists.

Early in the program our expenditures for right-of-way will be greater than in later years of the period. This is especially true in the metropolitan areas where we are getting right-of-way considerably in advance of construction to cope with the rapid expansion in the metropolitan areas. It is more economical than to have to do it after these areas have been further improved.

We realize that this is only a general answer as to the status of the Interstate System and if you desire specific information on the overall program, we shall be pleased to supply it.

As a result of the increased interstate funds we are able to free more State funds for other much-needed State projects. The increased Federal funds during the first 3 years of the program for the primary, secondary and urban systems are a definite stimulus to the overall program.

We are aware of the concern of many as to whether or not the several States can cope with the increased engineering work required to keep pace with the expanded program. Likewise, there is question in the minds of some as to the adequacy of contractors, materials producers, equipment manufacturers, etc., to meet the requirements of the program. Missouri's experience to date in these respects has been quite encouraging and tends to dispel apprehension as to capacity to meet the demand.

Progress thus far under the new program is quite satisfactory and we believe the State will continue to show similar results as the program moves forward.

We are ever mindful of your interest in Missouri's highway welfare and sincerely grateful for your assistance in making the expanded program a reality.

Very truly yours,

REX M. WHITTON,
Chief Engineer.

Mr. SYMINGTON. Mr. President, we, in Missouri are particularly proud of our highway department and the fine record it has made. Missouri has the lowest gas tax of any State in the Union. It was the first State in the Union to cooperate in the new Federal highway program, with 3 of the first 4 projects approved in the entire United States being located in Missouri.

Because of Missouri's highway building record, I believe there will be great interest in a speech made by our former Governor, Lloyd C. Stark, at the mortgage-burning celebration dinner commemorating the final payment on Missouri's $135 million in State highway bonds, on June 12, 1957, in Jefferson City, Mo.

Governor Stark has long been a leader in the good-roads movement in Missouri, was particularly active in the State's $75 million bond issue in 1928. Therefore, he speaks with authority in giving the history of our State road program. I recommend his talk to Members of this body, and to all those interested in State and national highway programs.

Mr. President, I ask unanimous consent that excerpts from Governor Stark's speech be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM SPEECH BY FORMER GOV. LLOYD C. STARK AT THE MORTGAGE-BURNING CELEBRATION DINNER COMMEMORATING THE REPAYMENT OF MISSOURI'S $135 MILLION STATE HIGHWAY BONDS, JUNE 12, 1957, HOTEL GOVERNOR, JEFFERSON CITY, MO.

There is an old-fashioned saying in the commercial world that "the way to make time fly is to sign a 90-day note"—I ought to know, I have signed a few in my own time—and Missouri has made time fly in the last 28½ years by the signing of $75 million of State highway bonds, many of which I personally signed as Governor. We are now paying off the last of those bonds here today and are celebrating the event in a sort of mortgage-burning ceremony.

Of course, the $75 million bond issue, voted in 1928, was the second State highway bond issue and it was voted to "finish the job." The original bond issue, voted in 1920, was for $60 million and the slogan in that campaign was: "Lift Missouri out of the mud."

Most of you here shared in the $75 million bond campaign in 1928 and it is good to see all your faces back here at the time when we can go back to the bank and pay off. Actually, Missouri's signing that note for 28½ years has certainly made time fly.

There's another old-fashioned saying in the commercial world, which is: "Never incur an obligation without at the same time making definite plans for paying it off." Well, this ceremony certainly illustrates the idea that Missouri is just old fashioned enough in its ways to adhere to those early-day virtues that have built our State to such a proud place of distinction and integrity.

We not only made the time fly in the last generation by signing a good-sized note for good roads, but we also laid careful and sound plans for meeting our obligation and there never has been, in the entire history of Missouri's road program, the slightest question about the soundness of her highway bonds. The obligation has been met to the letter, and on time every time.

Truly, it may be said that this marks a milestone of progress in the history of Missouri and I think it is most fitting that we are privileged to be here today to help celebrate this significant affair.

I want to express my deep appreciation for the enthusiasm with which our present Governor, the Honorable James T. Blair, has entered into this ceremony and I also want to thank all of my fellow former Governors, Caulfield, Donnell, Donnelly and Smith, as well as members of the highway commissions down through the years, for their participation in this historic event.

Actually, this is a most unique and unusual occasion in the history of finance—finance either associated with government or transportation in any of its forms. We

are all familiar with the general idea that government debts traditionally are not paid off—they just keep getting bigger and bigger.

We also know that in the history of financing of such transportation systems as railroads, steamships and the like, practically the only way debts have been paid off is to put the outfit through the wringer of Federal receivership, but here is an instance where a great commonwealth, the State of Missouri, is wiping the slate clean of what at one time we reckoned as a big bond issue, $135,000,000.

Now, the next questin that usually occurs is: "What did we do with the money?" "What did we get for our money?" "Was it worth it?"

To this audience, I hardly need to explain that road bonds made the backbone of our financing plans for our marvelous highway system of today. I guess it's even getting a little difficult for most of us to remember back to the days when we had to "lift Missouri out of the mud."

Although Missouri has the lowest State gasoline tax (3 cents) in the Nation, her splendid concrete and bituminous ribbons attract so many vehicles that, with careful expenditure, we are able to finish the job on a pay-as-you-go basis.

Let's not forget the foresight and courage of our early day road leaders, who showed us how to get these roads built quickly on borrowed money. And here may I pay a tribute to the foresight of the people of the State of Missouri for accepting their leadership in voting these highway bonds.

These bonds have paid off from every standpoint.

* * * * *

Back in 1921 when we first bonded the State for highways with the $60,000,000 bond issue, Missouri had only a pitifully few miles of all-weather roads, largely the result of unusual local road building organizations in their widely scattered localities. When it rained, travel was hopeless.

* * * * *

Missouri was first to plan and build a system of farm-to-market roads as part of the State highway system. The orginal centennial road system has been completed rs to original standards, plus many improvements and relocations. Raised standards have been built into the system, along with a veritable maze of feeder roads, through the farm-to-market system.

You ask if we got our money's worth. It is one of the biggest values ever produced in the history of the expenditure of public money. No politics, no graft, and every penny of gas-tax money spent on Missouri highways.

Actually, as of January 1 this year, Missouri had more than $776,000,000 investment in highway construction cost alone, in its State highway system, and approximately $250,000,000 invested in maintaining that State highway system, a total of $1,026,000,000.

It is axiomatic in highway circles that a highway system is only as good as its maintenance, so we are fully justified in describing the Missouri overall highway system today as being a billion-dollar-highway system, a thing that got its original start from the $135,000,000 State highway bonds voted by the people of this State.

Now, in making a report of this kind, perhaps I should indulge for just a moment in a few significant figures, as to what we actually have in this system. I have the report from the highway department itself that, as of January 1 this year, the highway commission had a total of 29,353 miles of roads under State maintenance.

The inventory I have just given you includes completion of about half the 10-year modernization program set up in 1951 when the legislature increased our gasoline tax from 2 cents to 3 cents a gallon and increased bus and truck licenses and fees by a small amount.

The estimate at that time called for an average annual program of $55,750,000. In the first 4 years, from 1952 to 1956, the commission expended or obligated more than $240 million of highway funds toward improvements on almost 14,000 miles of State highway.

So we see that by now this 10 year modernization program was well on its way, when, emerging from the national picture, the new Federal-aid program for interstate and defense highways was enacted into law by Congress, June 29, 1956.

Missouri was the first State in the Union to take advantage of this new Federal highway program and 3 out of the first 4 projects approved in the entire Nation were located in Missouri.

At this time, may I pay high tribute to the men who have been personally responsible for our highway achievements.

The governors who have named the highway commissioners.

The high type citizens who have served on the State highway commission.

The engineers and staff who have directed the actual work.

The ranks of department employees.

All have been dedicated men and women to whom we, as citizens, owe a great debt for an outstanding job, honestly and efficiently done.

And we should not overlook the contribution that our great civic organizations have made to our highway program—in planning, financing, and mustering public support for specific proposals that have put the Missouri highway plan in the Nation's forefront.

The net result sems to be that we, here in Missouri, are going forward with road development at a pace accelerated as never before. Actually, the new Federal program is serving as a gigantic supplement to Missouri's State highway program.

Already, during the first year of the new Federal program, effects of the expanded aid can be seen. During the fiscal year which ends on the 30th of this month—June—the commission will spend approximately $100 million on the State's highways.

This compares to $72 million spent during the fiscal year 1956. And allocations from the Federal program will gradually increase for the next 2 years.

It would seem that if we had a problem 40 years ago, when we were struggling to "lift Missouri out of the mud," we have equally as tough a problem today in "lifting Missouri out of its traffic congestion."

I doubt if there are any of us in this room who would want to say when we have finished the presently designated highway programs, both Federal and State, that we have reached the end of our road development.

Actually, we are on the threshold of a new day in highway building and we must be as foresighted in our attitude toward the problems of the future as our old highway boosters were 40 years ago, when we started up "out of the mud." Not only must we be foresighted in our planning for the future, but we must also be cautious and careful lest we permit special interest groups to impose their dangerous and undesirable influence upon our highway program.

I think that this occasion points up the fact that it is not too soon for our State officials to recognise the obligation of careful planning for our future highway development, and I would like to say that not only the expert technical assistance of the highway department itself should be directed into these channels, but also the cooperative counsel and help of leading Missouri organizations, composed of our citizens who use and pay for these highways, should be recruited and enrolled for the job. Their help can be invaluable in designing the wise course of our future.

Our problems of the immediate and long range future are many and varied. They challenge the best brains that we possess.

At this time, I can only point out to you a few of the most serious problems that the citizens, public officials, legislators, and highway engineers must face up to.

Increased mileage is one of the problems. How much mileage should be included in a State highway system and to what extent should the mileage included in this State system be developed to handle traffic of the future? Most of the 2-lane roads built in the 1930's have shown their inadequacy to handle present traffic loads and divided-lane roads are rapidly appearing on the main thoroughfares of the State.

Most of the gravel roads in the supplementary or farm-to-market system have been converted to all-weather blacktop roads in the last several years. It takes wise planning to anticipate our future needs in both mileage and types of surfacing.

Controlled access highways pose another important question. If we don't want to see these new, modern highways degenerate into narrow roadside commercial developments, stifling traffic and creating death traps and further congestion—controlled access is our only answer. Fortunately, we have an adequate controlled access law in Missouri now, and it is up to us to prevent any encroachment by anyone.

Brand new technological developments are also in the future picture. Already, turbine motors for highway vehicles are being tested. Questions as to their effect on the roads and other vehicles must be determined.

It is possible also that before the 13-year Federal road program is completed, we will have atomic fuel for highway vehicles. Where would such fuels leave our present gasoline tax revenue? A whole new concept for motor fuel taxes may possibly be needed in view of such future developments. We should anticipate and be ready for them.

The Federal aid law itself raises questions which require careful study for planning Missouri's highway future.

By law, it calls for a cost study to determine the basis for apportionment to the States beginning with the fiscal year 1959. The amount of Federal aid Missouri receives will certainly affect our future highway plans.

The question of reimbursement to States for portions of the Interstate Highway System already built by the States, either toll roads or free roads, is being studied. These two studies are important to us because they will affect the amount of Federal aid available to Missouri.

Another study being conducted under the Federal legislation is concerned with the maximum dimensions and weights of commercial vehicles. The Missouri Legislature has recently passed a bill increasing the weight and length of commercial vehicles on Missouri highways. We are not here tonight to discuss the merits and demerits of this legislation, but it must be apparent to everyone that maximum weight limits must be established and maintained or our whole highway system will be jeopardized.

When roads are subjected to weight loads which exceed the specifications to which they were built, it can only lead to rapid destruction of these roads.

I would like to give an example which illustrates the effect on the life of highways of vehicles of different weights. The Red Feather Expressway in St. Louis was completed almost 20 years ago. This expressway, which prohibits heavy trucks and buses, carries the greatest traffic count of any road in the State. Yet, this road has never had to be resurfaced. It points up the fact that the millions of light vehicles which have used this road for 20 years have not de-

stroyed it, while most other roads have been rebuilt or resurfaced or both.

Another study called for in the Federal aid act of 1956 is the determination of the tax obligation of various classes of users of the highways, such as passenger cars, light trucks, ordinary farm-to-market type trucks and heavy over-the-road commercial trucks.

Let me make it clear that I am in no way trying to imply that trucks do not have a place in our economic system or that any effort should be made to remove them from our highways. There is, however, a serious question as to the establishment of dimensions and weights of these vehicles and to the establishment of equitable taxes to be paid by the heavy trucks for their destruction of our highways.

It certainly is not fair for any group, such as passenger car owners, to pay more for their use of the highways than they are receiving in benefits. The passenger car and the ordinary farm-to-market and other light truck owners are already paying a major share of highway costs. For example, the $200 tax increase voted on heavy trucks recently would bring Missouri only enough money to build about 3 miles of present type four-lane highways.

The impact of heavy trucks upon our highways present three problems that everyday are growing in importance and magnitude. Incremental cost studies in many States all raise serious doubt that these heavier commercial trucks pay their fair share of the cost of (1) destroying present highways; (2) maintaining present truck routes; and (3) the tremendous cost of new pavement built to standards to carry the increased loads of these larger, heavier commercial trucks.

A determination should be made to see if the heavy trucks, which amount to approximately 1 percent of the motor vehicle registration, are paying their fair share of highway costs commensurate with highway destruction and the burden they place on the cost of new construction of highways to carry their heavier loads.

When the Federal study now underway has been completed, these questions should all be resolved. Then, our legislature should take necessary action to write these findings into our State law. Each class of vehicle should shoulder its full tax obligation without favor to any special group.

As to today, no one doubts that the passenger car owners, ordinary and farm-to-market truck owners are paying for most of the destruction and construction caused by the heavy commercial trucks, but we must remember that the highways must be able to support our national defense efforts and be ready for any emergencis. We are a nation on wheels, wheels that have built a better, more prosperous life for all of us. These same wheels, when provided with adequate roads and highways, will build an even better future and provide us with a web of defense highways unmatched by any other nation.

Smokescreen Cracks—The Civil-Rights Bill

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 24, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial from the July 13, 1957, issue of the State, of Columbia, S. C. It is written on the subject of the so-called civil rights bill, and is entitled "Smokescreen Cracks."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SMOKESCREEN CRACKS

Some of the steam seems to have gone out of the drive to push an unadulterated version of the deliberately misnamed civil-rights bill since President Eisenhower frankly admitted that he did not fully understand certain parts of the measure.

The President, apparently relying on the briefings given him by Attorney General Brownell, believed his administration was fighting for passage of a mild bill which would only guarantee Negroes the right to vote.

Following a penetrating analysis of the bill on the Senate floor by Georgia's able Senator RICHARD RUSSELL—in which the Georgian clearly documented his charge that the vicious bill was cunningly devised to empower the Attorney General of the United States to call in Federal troops to force integration of the schools—President Eisenhower said he was going to ask Brownell about some words he, the President, didn't exactly understand.

Ike also said he would be glad to discuss the matter with such a person as Senator RUSSELL. Senator RUSSELL has since talked at length with the President.

There is now talk by some Republicans close to the administration of moving to amend the bill so that it will apply only to voting rights—the only right specifically mentioned by Eisenhower as something he thought should be safeguarded.

Part of the President's trouble in this matter—and a few others—is that he has listened to his Attorney General too often. In this particular case, it seems the wily Attorney General almost maneuvered his boss into a position of no return before Senator RUSSELL finally broke through Mr. Brownell's concentrated smokescreen.

Southern Senators and Representatives, plus some courageous Republicans from New York and Midwestern States, have, for many months, been explaining why parts of the bill are repugnant to the spirit of the Constitution, how the so-called civil-rights bill would place dictatorial powers in the hands of the Attorney General—at present the same Herbert Brownell the President has been relying on for advice.

Mr. Brownell has never been adverse to acquiring power, either as Governor Dewey's associate (hatchetman) in New York or as Attorney General of the United States. His whole political outlook has been colored by the New York approach to politics. There, every minority group must be appeased, or offered most, by the candidate who wishes to be successful. Because of one minority, New York politicos have found it pays to stage deliberate hate South campaigns. It seems to become an obsession with most of them.

The President has repeatedly said he was the President of all Americans, not the President of any particular party or group. From this the South has to date assumed that Eisenhower would have as much interest in the millions of southerners as in the minorities in the big cities.

Many southerners did not believe the President would knowingly push a piece of vicious legislation which would seek to punish one section of the country. The softening of the Republican position on the matter now indicates the President probably would not have pushed for passage of the more reprehensible portions of the bill had he listened to someone other than Brownell.

But the administration should not have pushed the bill if everyone in the administration did not know precisely what the bill will do if it becomes law—if all did not know how much broader and more sweeping powers are bestowed upon a nonelective official than the power to protect voting rights.

The bill was aired by cynical political opportunism, and nurtured on sectional vengeance behind a smokescreen of falsehoods. Such a child will only create more of the same.

When Senator Russell succeeded in blowing away part of the smokescreen raised by the Brownell-Douglas axis, naked Federal power, the power of despotism, stood revealed.

It is hoped the President looked well, and decides the civil rights bill as now written is not only immoderate, but unnecessary and dangerous.

Read It and Weep

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 24, 1957

Mr. SIEMINSKI. Mr. Speaker, where our money goes, everybody knows.

It goes to run the three branches of our Government.

Each Cabinet official takes a chunk of it to run his department.

A few other outlets handle the rest.

This is an attempt to personalize our budget, to show who handles the money and how he stacks up with his colleagues.

Too bad the post office does not issue each year a series of stamps, one for each Cabinet official showing how much of a chunk he takes out of the budget. So that when you got your mail you could see Charlie Wilson with 53.5 percent credited to him, George Humphrey with 11.1 percent, Ezra Benson, 7 percent; and you would be surprised to see how little the rest take.

The stamps would be issued at the same time the President reads his budget message to Congress. The people would immediately know that the President and his Cabinet meant what they said. Then Congress could go to work on the budget and appropriate the money needed.

Had the Cabinet stamps been issued last January, in addition to the 53.5 percent shown in halo form over Charlie Wilson's head, and 11.1 percent over George Humphrey's head, and 7 percent over Ezra Benson's, we would have for Mr. Folsom 4.2 percent, Mr. Dulles 0.3 percent, Mr. Brownell 0.3 percent, Mr. Mitchell 0.6 percent, Mr. Seaton 1 percent, Mr. Summerfield 0.1 percent, and Mr. Weeks 1.3 percent.

Just how the stamps would dramatize three other items is not known. But they would show 20.4 percent for independent offices and miscellaneous items, 0.1 percent for legislative, and 0.1 percent for judiciary branches.

The budget could become so personalized and so easy to understand that soon people would realize that the 11.1 percent of the Treasury chunk contains interest on the national debt. Some people think that the interest they get on their bonds comes from money earned by Uncle Sam, money that Uncle Sam

gets from profitable investments and not from taxes people pay each year. They would realize that if they are not buying bonds, they are certainly paying taxes to cover interest due on other people's bonds and maybe more would get on the bandwagon.

The budget could become so personalized and so easy to understand with the issuance of Cabinet stamps, that soon people would realize that about a penny out of every tax dollar taken in by Uncle Sam goes to cover the post-office deficit.

The budget could become so personalized and so easy to understand with issuance of Cabinet stamps that soon every housewife and every schoolchild would be able to rattle off where the other 99 cents of every tax dollar Uncle Sam takes in goes and why.

As a step in that direction, Mr. Speaker, I am citing below a budget chart. In its form, I think it is new, simple, and easy to understand. It is conspicuous by its absence of words, phase lines, and programs.

In a flash, it can tell us, if at all, who is rocking the boat; too much to the left or too much to the right?

I hope it helps. Perhaps there are artists like Herblock and Berryman, of the Washington press, who can drive Uncle Sam's budget home on a more personal basis come next January. It follows:

Distribution of 1958 budget estimates by branch and Cabinet office

Branch and department	Expenditures		Obligational authority	
	Millions of dollars	Percent	Millions of dollars	Percent
Legislative	122	0.2	93	0.1
Judiciary	44	.1	45	.1
Executive:				
Agriculture	5,330	7.4	5,158	7.0
Commerce	772	1.1	944	1.3
Defense	38,700	53.9	39,203	53.5
Health, Education, and Welfare	2,831	3.9	3,071	4.2
Interior	704	1.0	718	1.0
Justice	226	.3	235	.3
Labor	418	.6	438	.6
Post Office	58	.1	67	.1
State	230	.3	230	.3
Treasury	8,132	11.3	8,154	11.1
Independent Offices and miscellaneous items	14,240	19.8	14,983	20.4
Total	71,807	100.0	73,341	100.0

Why Not

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 24, 1957

Mr. MOORE. Mr. Speaker, when the House on Tuesday appreciably cut the foreign-aid bill, it was a victory for the American taxpayers, and my only regret in connection with this legislation is that drain on our economy could not be completely eliminated. The mail which I have received from my constituents and the replies compiled from a recent questionnaire sent to residents in my District, firmly convinces me that the American people are in favor of abolishing most of the foreign-aid program.

One of the leading daily newspapers in the First Congressional District of West Virginia, the Wheeling Intelligencer, in an editorial on July 22, 1957, has very pointedly asked the question, "If economy is in order at home, who not in foreign aid?"

The editorial follows:

WHY NOT?

In cutting nearly $728 million from the foreign-aid bill and rejecting the principle of long term commitment, the House of Representatives, this newspaper believes, came much closer to reflecting public sentiment than did the Senate. The upper branch cut but $375 million from the administration's $3,800 million request, and approved the development loan plan.

Instead of the $900 million the President wanted for support of the defense program of our allies this year, the House voted only $600 million, compared with $800 million approved by the Senate. It limited the economic development loan program to 1 year instead of 3, and put a $500 million ceiling on it. The President wanted $500 million for the first year and $750 million for each of the succeeding years. The Senate agreed.

We have just learned that while the Government wound up the last fiscal year with a balance, it was lower than expected—$1,645,000,000—and dispels the hope of an early tax cut. We know too, that the Defense Department has ordered the release of 100,000 men now under arms, and the President has directed all domestic agencies to hold spending to last year's level wherever possible.

If economy is in order at home, why not in foreign aid? If we are to tighten up our own official belts, why not impose some economies on the governments of other peoples we are helping support?

The Supreme Court and the Girard Case

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 24, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial from the July 15, 1957, issue of the Aiken, S. C., Standard and Review. It is entitled "Protective Responsibility."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROTECTIVE RESPONSIBILITY

The Supreme Court of the United States, in another of its far-reaching decisions tending to make the Constitution a mere scrap of paper, has upheld the administration in its desire of appeasement and made a sacrificial lamb of William S. Girard, a soldier of this Nation on duty in a foreign country.

William S. Girard will be a martyr to the cause of American soldiers forever. He will remind all Americans that though they bleed and die to protect this Nation, this Nation will not protect them.

Japan has saved face by the Supreme Court decision, without a dissenting vote, to turn the young American over to a court in a conquered country for trial; but America has lost face, has been put to shame before the highest court of all—public opinion.

The Congress of the United States must now step in, exert its rights under the Constitution, to enact legislation to protect the servicemen of this Nation as they, under orders from a government who values political appeasement far more than the rights of its native sons, are sent to the far-flung countries of the world after having been abruptly snatched away from the pursuit of a career in the primest years of life under the edict of a draft, which should be scrapped in time of peace and all under the most mistaken guise of all—"military obligation."

Across this Nation there are countless thousands of ex-servicemen who fought to the death with an army of a nation which without provocation attacked this Nation in a sneak blow, killing thousands of young Americans, attempting to conquer and rule this Nation. By dint of untold fortitude the American people as a whole rallied and after years of suffering, death and determined aggressiveness saved this Nation from being under the iron hand of an aggressor.

If the shoe had been on the other foot—what then? Would Japan have saved face of America? Would Japan have poured billions of dollars to raise up a conquered foe? Would Japan have had mercy for an American civilian? Their tactics proved they would have not.

America needs to look toward America more today and to protect and defend its citizens rather than being a rich uncle to every nation in the world, while at home citizens slave to pay high taxes to send abroad, suffer from administration boondoggling in foreign affairs, and are deprived of rights of citizenship under the Constitution because of political expediency and Federal desire to rule as a central government regardless of States rights or individual freedom.

America needs to awake and take drastic action before the final blow falls; too soon will come the straw to break the camel's back; and decay from within, not aggression from without, will destroy the Nation.

Jet Age Study Pends in Congress

EXTENSION OF REMARKS
OF
HON. ROBERT J. McINTOSH
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 24, 1957

Mr. McINTOSH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Don Irwin

in the New York Herald Tribune for July 21.

This article indicated the critical problem immediately facing our Nation in jet-age air transportation and the steps being taken to bring about modernization of our air-traffic-control system.

The article follows:

JET AGE STUDY PENDS IN CONGRESS—BILL AWAITING ACTION BY THE HOUSE; OVERALL AIR AGENCY IS PROPOSED

(By Don Irwin)

WASHINGTON.—An important first step toward long-deferred modernization of the Nation's airways to meet the inexorable split-second demands of the jet age is now quietly in the making in Congress.

It takes the form of a bill authorizing creation of a temporary Federal agency to be called the Airways Modernization Board.

As the bill reads, the Board's most imposing aspect is its assignment to "develop, modify, test and evaluate systems, procedures, facilities and devices to meet the needs for safe and efficient navigation and traffic control of all civil and military aviation, except for those needs of military agencies which are peculiar to air warfare."

The job requires a substantial excursion into unexplored fields, involving development of new equipment and procedures to meet problems of safety, speed, and traffic volume which, while already very real, are still developing in acuteness and magnitude.

But the Board's 3-year assignment is only the first phase in a substantially more ambitious program developed by Edward P. Curtis, President Eisenhower's special assistant for aviation facilities planning.

UNIFICATION THE AIM

He has proposed the new Board as the trail-blazing predecessor to a unified Federal Aviation Agency in which would be merged the functions of the Civil Aeronautics Board, the Civil Aeronautics Administration, and nonemergency aspects of military air traffic control.

Generally, the new Agency would take over all present Federal aviation functions, and undertake wholesale reforms in traffic handling to keep jet-age aviation as safe and efficient as it is swift.

Chances look good for the first step toward fulfillment of the detailed report submitted last May by Mr. Curtis. An administration bill creating the Airways Modernization Board has passed the Senate, and has been ordered reported by the House Committee on Interstate and Foreign Commerce. Barring a legislative accident, House approval appears routine.

The relatively modest $7 million first-year price tag placed on the Airways Modernization Board certainly didn't harm its chances in this economy-minded Congress. But its smooth progress has received more effective assistance from the genuine concern about urgent new problems in aviation safety that has been developing on Capitol Hill.

Some credit for the broadened congressional awareness of the need for early action goes to one of the bill's House sponsors, a 36-year-old, first-term Congressman, Representative HARRY G. HASKELL, Republican, of Delaware.

Partly because an average of 1,500 flights cross daily over his small State, Representative HASKELL has made it a personal project to find out all that's available about the problems of air-traffic control, and to pass the data on to his colleagues in a series of floor speeches.

The most thought-provoking aspect of the Haskell message is that near-collisions involving aircraft of all types were being reported to the Civil Aeronautics Board at the rate of nearly 4 a day during the first 3 months of 1957—and the trend is up, not down.

FEW TECHNIQUE CHANGES

The problem is a byproduct of aviation's progress. Planes go faster than they ever have before, and are increasing in number daily. Air-traffic control equipment and techniques haven't changed much in 20 years except for the addition of radar on the most-traveled routes.

There is ample evidence that human controllers just can't keep up with the traffic.

All these conditions have been the best of arguments for action to create the Airways Modernization Board. One of the Agency's top-priority assignments is to foster the development of new electronic devices which are essential if there is to be effective—and safe—regulation of present-day air traffic.

Radical action becomes the more necessary in view of sober forecasts that the number of aircraft operating under ground traffic control will increase 10 times over by 1975.

Most Members of Congress, like the Nation at large, didn't give much thought to modernization of air-traffic control during the years when the problem was building up. They pared most CAA appropriation requests for new equipment during the postwar decade.

USEFUL AMMUNITION

There are indications now that the Curtis report has given useful ammunition to those Members who, like Senator A. S. MIKE MONRONEY, Democrat, of Oklahoma, have warned for years that air traffic would eventually swamp control systems and airports alike, unless serious thought was given to the hard, expensive job of modernization, expansion, and reorganization.

Senator MONRONEY's only criticism of the new program is that the Airways Modernization Board bill fails to go far enough fast enough to catch up with the problem. He feels that prompt action should be taken to create the unified Agency proposed in the Curtis report.

Mr. CURTIS has told Congress that detail work must still be done to convert the proposal into a workable legislative draft. An administration bill will probably be offered after Congress reconvenes in January.

The "Right" To Vote

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 24, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial from the July 18, 1957, issue of the Ridge Citizen of Johnston, S. C. It is entitled "The 'Right' To Vote."

This outstanding weekly newspaper is edited and published by Mr. J. L. Aull, one of South Carolina's most distinguished newspapermen.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE "RIGHT" TO VOTE

Much of the discussion of the force bill now being debated in the Senate has to do with the alleged "right to vote" which is said to be denied to Negroes in the South.

We enclose the phrase "right to vote" in quotations, because there is no such thing, actually. Nowhere in the Constitution is such a right mentioned except in a negative way in the 14th amendment which says it may not be denied because of race, color, or previous condition of servitude. The ballot is a privilege conferred by the State, and there are as many different qualifications for voters as there are States.

The real intent of the administration's force bill is to be found in its section III, as was pointed out by Senator RUSSELL. This section is designed to force the intermingling of the races in our schools, even though there is no desire on the part of either race for this to happen. And obscure cross references in the bill which provide for its enforcement refer to the old force bills of the reconstruction era which empower the President to use the land and naval forces of the United States as means of enforcement.

But back to the privilege of voting. Far from extending that privilege, we think it ought to be restricted further. We think rigid qualifications should be adopted which would be designed to improve the quality of the electorate rather than increase the quantity, and that these qualifications should be strictly enforced without regard to color.

The election law of 1950 was a needed reform of improvement in the mechanics of voting in this State. The next legislature should give some thought to extending this reform further to the improvement in the quality of the voters.

Address By Hon. Gordon H. Scherer Before the Westchester County American Legion

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 24, 1957

Mr. DOOLEY. Mr. Speaker, the Honorable GORDON H. SCHERER, of Ohio, was the recipient of the sixth annual Americanism award of the Westchester County American Legion, at a ceremony at Mamaroneck, N. Y., on July 12.

Because the ceremony was significant and meaningful, I request, Mr. Speaker, that I be permitted to extend my remarks in the RECORD and include the speech of the Honorable GORDON H. SCHERER.

The award was presented by James B. White, chairman of the county Americanism committee, who praised Congressman SCHERER for his militant defense of American ideals.

In accepting the award before a throng including many distinguished notables, among whom were a number of Westchester village and county officials, Mr. SCHERER stated that—

Unless recent decisions of the United States Supreme Court hampering attempts of investigators to uncover the Communist conspiracy to overthrow this country by force can be nullified, there will be a resurgence of Communist activity in the United States that will not only make your hair curl but your stomach turn.

It was my pleasure to join with Mayor Joseph Dalfonso of Mamaroneck in ex-

tending to Congressman SCHERER a warm welcome on behalf of the village and the community. In welcoming Congressman SCHERER, Mayor Dalfonso told the crowd of more than 250 persons that Mamaroneck was proud of its own Legion post and was happy that the convention had come to the friendly village. He praised the work of the Legionnaires in deterring un-American activities.

Among the guests introduced were Rabbi Benjamin Schultz, executive director of the American Jewish Legion Against Communism; Gardner Osborn of the Federal Hall Memorial Association, and past president of the American Coalition of Patriotic Societies; Joseph C. Keeley, editor of the American Legion magazine; Archie Roosevelt, son of the late President Theodore Roosevelt, and president of the Alliance Corp.; Alfred Kohlberg, head of the China Lobby; George Mead, past president of the New York department, commander, and rehabilitation chairman; and Norman Marks, vice commander of the department of Italy.

The address follows:

ADDRESS BY HON. GORDON H. SCHERER, OF OHIO

Chairman White, County Commander McKay, distinguished officers of the American Legion, Father Flynn, Rabbi Schultz, Mayor Delfanso, Mr. Archibald Roosevelt, Mr. Gardner Osborn, Mr. Alfred Kohlberg, and my colleague, EDWIN DOOLEY, who is so admirably representing the people of New York in the Congress of the United States, a generation ago an award such as you are giving me tonight would have been applauded by most people. Today the honor you confer upon me brings wide and varied reactions. They range from approbation by America's fast-waning patriotic societies to contempt and hatred by the Communist conspirators within our American community.

The ill will of the latter, our sworn enemies and would-be destroyers, we accept without question. They are the challenge we must face in our time. They are the Marne, the Anzio beachhead, and the Iwo Jima of today, tomorrow, and God only knows when after that.

And then there is that fast-growing, cynical segment of the populace which scorns and scoffs at an Americanism award. To them patriotism represents immaturity, narrowness, and old-fashioned sentimentalism. To them reverence for the flag is an emotional display for those who relish parades and silly rituals. To them Americanism is not even secondary to one-worldism. To them the American heritage and basic constitutional rights should be chipped away and even surrendered when political expediency—a Girard case—demands.

We then come to that group of so-called loyal citizens to whom the world "Americanism" is distasteful although they will not admit it. They are the extreme left-wing, who for one reason or another have lost faith in the American system. They love socialism and have even flirted with Marx and Lenin. These are the boys who through the years, wittingly and unwittingly, have given their names, money, and prestige to the innumerable Communist-front organizations in this country. They are the boys who are the foolish and naive puppets of the Communist agents within. They are the boys who, more vigorously than all others, have fought and attempted to discredit the Americanism Commission of the American Legion and the investigating committees of the Congress. Why?

The answer is simple. The Commission and the committees are the forces which have turned back the cover and shown how these gentlemen were foolishly and carelessly sleeping in the same beds with the agents of the Kremlin. They did not like the exposé and ever since have been attempting to discredit those who put the spotlight on the naked truth of Communist-front subversion within the United States.

So it is evident that not all applaud an Americanism award. However, I am deeply grateful and in all humility I thank God that I am on the American Legion's side in this fight.

Yes, it was the American Legion—which on the battlefields of the world had repelled aggression from without—which first saw the threat from within. It was the Legion and a few kindred spirits which first recognized that the United States and the free world were faced with a new method and weapon of warfare. Legionnaires who had fought the enemy with gun and bayonet soon learned that there was a new, subtle, and more deadly weapon created for our destruction—a weapon more effective than the hydrogen bomb, namely, the internal subversion of our country and the free world.

The Legion early recognized the subtle, diabolical strategy of boring from within, not only in the various agencies of Government but into every activity and institution of American life, for the purpose of weakening those institutions so that, when the time came to move in, the task would be so much easier of accomplishment.

The Legion saw how one country after another of the free world was taken behind the Iron Curtain by this new weapon, this new method of warfare—the internal subversion of these countries.

Legionnaires saw what was happening in America. They saw how agency after agency of the Federal Government was infiltrated by Communist conspirators. They knew that one agent within was more dangerous to our safety and security than 10,000 enemy troops poised on the other side of the Iron Curtain.

They knew that the Communist Party was not a political party as we know political parties in the United States—that we were not dealing with an economic or political philosophy. They knew then, as was pointed out years later by E. H. Cookridge in his book, that we were dealing with the sordid story of theft of atomic and NATO secrets, or arson, sabotage, poisoning, assassination, and abduction, plotted in Moscow and carried out all over the world.

Members of the Legion knew how to deal with enemy troops; they had demonstrated that ability on the battlefields of Europe. They were, however, a little uncertain how to deal with the Communist agents who worked underground in the agencies of government, in the school and in the shop.

They pondered the statement of George Dimitrov, one of the top world Communists, who said:

"As Soviet power grows, there will be a greater aversion to Communist parties everywhere. So we must practice the techniques of withdrawal. Never appear in the foreground: Let our friends do the work.

"We must always remember that one sympathizer is generally worth more than a dozen militant Communists. A university professor, who without being a party member lends himself to the interests of the Soviet Union, is worth more than a hundred men with party cards. A writer of reputation, or a retired general, is worth more than 500 poor devils who don't know any better than to get themselves beaten up by the police.

"Every man has his value, his merit. The writer who, without being a party member, defends the Soviet Union, the union leader who is outside our ranks but defends Soviet international policy, is worth more than a thousand party members."

The Legion realized it needed help in its fight because Americans in high places would not listen to its warning.

The Legion was accused of seeing ghosts, of witch hunting. It realized it was necessary to expose these agents of the Kremlin and their activities to the cold light of common day so that all America might understand this new and subtle weapon of modern warfare, so that all America might see that the same thing was happening to it as had happened in other parts of the world.

It was the American Legion which went to its Government for help.

It was the American Legion which played a leading role in the creation of the Un-American Activities Committee of the Congress of the United States. The American Legion has walked shoulder to shoulder with this committee for more than a decade.

The Federal Bureau of Investigation had patiently and carefully put its finger upon the traitors within, yet it could not expose or prosecute. It could not pass legislation needed to deal with this sinister conspiracy.

It was the investigating committees of the Congress which finally brought to light the penetration of this fifth column. Law after law was recommended by the Un-American Activities Committee and adopted by the Congress so that we could deal more effectively with this threat from within.

With one fell swoop in the last few weeks the Supreme Court of the United States has seriously weakened, if not destroyed, most of the weapons that have been available to deal effectively with the Communist conspiracy.

Our committee was commencing hearings in San Francisco 3 weeks ago last Monday when the Supreme Court handed down the Watkins decision and the one freeing the convicted California Communists. On that day—Red Monday—a former chairman of the Communist Party in California rejoicingly exclaimed that it was "the greatest victory the Communist Party in America has ever received." She said:

"It will mark a rejuvenation of the party in America. We have lost some members in the last few years, but now we are on our way."

The committee saw and felt that rejuvenation at the San Francisco hearings. During the last few years, the Communist hangers-on at such hearings had diminished. Enthusiasm had been dampened. The witnesses exhibited less confidence in the rightness of the Communist cause.

All this was changed in San Francisco. The Communists filled the large hearing room and overflowed into the corridors. Their snide and vituperative remarks to committee members as they passed through the halls and on the elevators were again in evidence. The witnesses and the lawyers were jubilant as well as arrogant. The delaying tactics, the evasiveness, and the long Communist propaganda speeches returned.

As we grappled during the hearings with the strangling directives of the Court, we came to the conclusion that Justice Tom Clark, in his dissenting opinion, was right when he said that the investigating committees and the Federal Bureau of Investigation "may as well close up shop" and go home. Yes, it was a great day for the Kremlin but an ominous one for the people of the United States.

I predict that, unless these decisions can be nullified by action of the Congress, there will be a resurgence—a rejuvenation—of Communist activity in the United States that will not only make your hair curl but your stomach turn.

Lenin, Stalin, and other top Communists have always predicted that the United States would be destroyed from within, as have

been most of the countries that have been taken behind the Iron Curtain since 1933. Their predictions have a far better chance of becoming a reality as a result of these decisions.

Perhaps I can illustrate by example how one of these decisions, namely, the one in the Watkins case, affects the committee's fight against subversion. Following the public hearings in California, the committee on Saturday held an executive session for the purpose of obtaining evidence in the commencement of an investigation into a new and unexplored field of Communist subversive activity in the United States.

The hearings were held in executive session because it was imperative that for the time being at least the objectives of our investigation be kept highly secret and that no notice be given to the Communists as to the fact that the committee had even any knowledge of these particular operations.

It was apparent that if they had such knowledge, the whole investigation might fail completely. As an example, some witnesses and documents would conveniently disappear; witnesses would be alerted and their testimony changed or slanted. Of course, if Communist agents were aware of the fact that we had knowledge of the activity, it might be discontinued or go underground.

Now let's see what happened. When the witness appeared, his lawyer, armed with the decision in the Watkins case, demanded, before he would let his client even answer as to his occupation, that we outline in detail the nature and object of our investigation and then explain fully how each question we asked his client was pertinent to the subject and object of the investigation.

Obviously, we had no alternative except to dismiss the witness and forego the investigation. Certainly it was better to do this than to tell the Kremlin what we knew.

The tragedy of the Watkins decision is that the conclusion reached by the Court is based on a false premise. The Court assumes that the Un-American Activities Committee is investigating communism as an economic and political philosophy and that the Communist Party in the United States is a political party as we know political parties in this country. On the basis of this false assumption, the Court comes to an apparently logical but novel conclusion.

However, every school boy should know by this time that the Communist Party is not a political party but a conspiratorial apparatus—a fifth-column arm of the Soviet Union with whom we are at war even though it may not be a shooting war. In fact, the Congress of the United States has by law so stated.

Perhaps the Court has never read the secret oath an individual takes when he joins the Russian conspiracy—the Communist Party. This oath reads:

"I pledge myself to rally the masses to defend the Soviet Union, a land of victorious socialism. I pledge myself at all times to remain a vigilant and firm defender of the Leninist line of the party, the only line that insures the triumph of Soviet power in the United States."

Much has been said and written recently about the influence which the law clerks of the Supreme Court have on its opinions.

But there has been little or no discussion of the activities of certain professors and the part they may have played in these recent unorthodox decisions. It is no longer a secret that there is a considerable amount of ill will, bordering in some cases on hatred, by these professors for congressional investigating committees. They have determined in one way or another to destroy these committees ever since some of their clique were subpenaed to tell about their Communist and Communist-front activities.

As examples, on March 1, 1956, Lawrence Raymond La Valle, a professor at Dickinson College, Carlisle, Pa., who had been identified under oath as a Communist, was called before the Un-American Activities Committee. He did not deny his Communist activity. He refused to answer all pertinent questions on the ground that to do so might tend to incriminate him. The board of trustees of the college, after an investigation, removed him. Within a few days the American Association of University Professors severely censured the college for its action.

Two years before Prof. Byron Darling was discharged after a hearing by the president of Ohio State University, following his appearance before our committee where he had been identified as an active Communist while he was doing research work on a project for the Government of the United States. The same American Association of University Professors censured Ohio State for its action. There are other instances in which the association acted similarly.

These professors have been indoctrinating students not only with their pet philosophies but also with their animosity against the investigating committees.

A short time ago I spoke to a group at a university. Before the meeting I overheard two students discussing the fact that their professor, who had a violent antagonism toward congressional investigating committees, had insisted that they attend so that they might heckle me. In fact, he had supplied them with questions which he felt certain would stump the "witch hunter."

Some of these young indoctrinated law students, with no practical experience in the practice of law and the realities of life, wind up as clerks in the Supreme Court.

I have read in some of the recent shocking Supreme Court decisions almost the exact words, phrases, and arguments that have been used by some of these professors in their attacks against the committees.

The Justices and the clerks have been hesitant to explain to the press what part these law clerks play in the preparation and writing of decisions. It would be interesting to know and to be able to trace the source of some of the language and conclusions found in recent opinions. There are some telltale paragraphs which might indicate that they come from minds which have lived in ivory towers, far removed from the realities of the trial of causes in the courtroom or the functioning of investigating committees of the Congress.

There is another phase of this whole discussion that has not been given too much attention. It must be remembered that this long series of decisions, freeing common criminals and Communist conspirators, have been reversals of the so-called lower Federal courts by the Supreme Court. It is significant to note that these varied cases arose from different parts of the country. Different Federal district judges and members of the United States Circuit Court of Appeals tried and reviewed each of these cases.

The same lawyers appeared; the same briefs were filed; the same arguments were heard attacking the constitutionality of laws passed by the Congress and the procedures of its investigating committees. These Federal courts and some State courts have sustained these convictions, have sustained the constitutionality and validity of the laws involved and the procedures of the congressional investigating committees.

It is generally recognized that most of the lower court judges, both at the State and Federal level, are career men, have more experience and are better versed in the law than the members of the Supreme Court and their law clerks. Can these Federal and State judges always be wrong in these particular matters?

From what I say, I would not want you to believe that the dilemma in which we find ourselves in this whole field which I am discussing today has been caused 100 percent by the Supreme Court. The Congress and the executive branch both today and in the past, share some of the responsibility.

Let's look for a moment at just one phase of the Girard case. Here Congress shares part of the responsibility for not passing the Bricker amendment; the Executive in yielding to expediency; the Supreme Court for avoiding the real constitutional issue involved.

Let's take this brief look at the result. Within the last few weeks we find that an alien Communist in this country, dedicated to its overthrow by force and violence if necessary, is not guilty under the Smith Act until and unless he takes actual steps in urging some specific act or deed toward the overthrow of the Government by violence. He is now free to thumb his nose at congressional committees when asked to name his fellow conspirators and tell about their activities in the conspiracy.

The Federal Bureau of Investigation and congressional investigating committees are strangled, handcuffed, and hogtied by new and undreamed-of restrictions so that they cannot deal effectively with a member of Russia's fifth column or a common rapist.

By contrast, last week the Supreme Court placed the stamp of approval on the policy of this Government and the law which permits an American boy who is drafted into the Army and compelled to serve in a foreign country, to be tried by the courts of that country. He has no choice as to whether that service will be performed in the country of a friendly ally or in one which was bombing him at Pearl Harbor or sniping at him on Corregidor or Iwo Jima.

This American boy, away from the restraints of home, in a community where there is always animosity against occupying troops, if he transgresses the law, can be and has been tried against his will by the people of a foreign country.

His trial not only starts in a biased, prejudiced, and often hysterical atmosphere, but he is also deprived of the basic constitutional rights of every American—rights which his country gives to an alien Communist conspirator and a common rapist. He may be tried without a jury—without the presumption of innocence—without the right that his accuser be required to prove his guilt beyond a reasonable doubt—without the right of habeas corpus, without the right to face his accuser, without the right to cross-examine the witnesses against him, as provided by American procedures.

Then, if this American boy is found guilty, he is often compelled to serve a sentence in a foreign jail, where the accommodations and standard of treatment are far below those in this country. In many instances, for the same offense in this country, he would be placed on probation.

Gentlemen, the Constitution and the flag no longer follow the American soldier.

But the strange thing about all of this is that the leftwing liberals in this country—who shed oceans of crocodile tears over some Communist being asked embarrassing questions by an investigating committee—have applauded or have been strangely silent about the loss of these basic constitutional rights by the guardians of our liberty and security—the American boy.

The investigating committees of the Congress, the American Legion, the Daughters and Sons of the American Revolution, the Minute Women, and other patriotic organizations during the years have had some dark days in their fight against the internal subversion of the United States. We have been bitterly attacked and maligned. We might as well admit that we and the American

people have suffered in the past few months some rather disastrous defeats.

There are times when the situation becomes so frustrating and seemingly hopeless that one is ready to give up. It is not the Communists who discourage us. It is their apologists in this country, so-called respectable and influential citizens who are constantly vilifying the anti-Communists, who dishearten one. These are the people who are trying to convince the great mass of apathetic Americans that, if there ever was a danger, it is past—that we who are in this fight are beating a dead horse for publicity and personal aggrandizement—that Americanism commissions and investigating committees should be abolished and buried in ignominy. This cabal is making some headway with help from high places, as high as the Supreme Court of the United States.

As Al Smith, a great Governor of your State, once said: "Let's look at the record."

J. Edgar Hoover, perhaps the greatest authority on international subversion, in his Independence Day warning to the American people just last week said.:

"Public apathy is the sure way to national suicide—to death of individual freedom. It allowed the Communists to penetrate and make satellites of once free countries, and it is presently enabling them to honeycomb and weaken the structures of the remaining countries, and there is today a terrifying apathy on the part of Americans toward the deadliest danger which this country has ever faced. Some of that apathy is deliberately induced.

"The Communist Party in the United States is not out of business; it is not dead; it is not even dormant. It is, however, well on its way to achieving its current objective, which is to make you believe that it is shattered, ineffective, and dying. When it has fully achieved this first objective, it will then proceed inflexibly toward its final goal.

"Let no one for a moment forget that the Communist Party, United States of America, is part and parcel of an international conspiracy whose goal is conquest of the world. The Communist conspiracy will not halt its march automatically; it must be halted. Those who try to minimize its danger are either uninformed or they have a deadly ax to grind."

Within the last year the Attorney General of the United States, in his report to the President, said:

"Communists and their agents will remain a serious threat to our internal security so long as Communist dictatorships threaten the peace of the world. It is only by continuing to expose their tactics and activities that we shall prevent the resurgence of this international conspiracy in the United States."

That is in part what the investigating committees of the Congress are doing. That is what the Americanism Commission of the Legion, the Firing Line, and the American Legion magazine are doing.

In spite of these and many more warnings by men who are in a position to know, many segments of our people, including the Supreme Court, are falling into line and making a reality of the Communist Party's present objective.

People are told that the investigating committees are beating dead horses; that they are exposing and smearing persons who merely joined the Communist Party many years ago as an intellectual excursion into Marxism.

This is not so.

As an example, let's look at a recent revelation of the committee, to determine the truth or falsity of these charges.

Last year the committee began an investigation of the illegal use of passports by American Communists and fellow travelers. A great hue and cry went up from the left-wing against the committee. It was charged with censorship and violating civil rights—the right of Americans to travel freely abroad.

The clamor, however, died down. The critics became strangely silent and turned their attack in another direction when the hearings revealed that passports were being obtained by fraud and perjury. Passports thus obtained were being used by Communists to go behind the Iron Curtain and attack the United States at phony peace meetings and other gatherings.

Let me give you just one example out of hundreds to show what was happening.

Louis Wheaton, a college-trained man, in his application for a passport, stated under oath that he wanted to go to France and Switzerland to further his education. Instead he went to Peiping, China. He made a series of radio talks over the Communist radio. They were monitored by our State Department. In his first speech, he said:

"It is necessary to end war now being conducted with such horror and savagery. What has been done in the name of the United States against the peoples of Korea and China is an unspeakable shame before history and humanity.

"I have seen the evidence that we are using bacteriological warfare and jellied gasoline to burn defenseless women, children, and the aged. I say the evidence is damning."

A few days later, in another vicious attack against the United States, Wheaton charged American boys with ruthless and inhuman behavior. He said that in one village in Korea, he saw more than 300 children put into a warehouse, their mothers into another building: That gasoline was poured around the warehouse and set afire; that American boys then machinegunned the mothers as they rushed to save their children in the burning building.

Is there any doubt that Louis Wheaton was giving aid and comfort to the enemy in a time of war?

Yes; as I have said, there were those who claimed the committee was wrongfully interfering with Americans and their right to travel freely abroad when it was attempting to obtain evidence to warrant recommending legislation to plug up loopholes and strengthen the laws relating to passports.

An incident which brought world-wide attention in the last 2 weeks demonstrates the necessity for such legislation.

Russian-born George Zlatovski and his wife were indicted for espionage and spying. Two years ago these two people made application for a passport. The court said that the State Department must either give them a passport or disclose why it was being refused.

It is obvious from what has now happened that the security of the United States would have been jeopardized if the State Department had revealed that these people and others were being investigated for espionage. Therefore, under a court ruling which invades the prerogatives of the executive branch, the State Department was compelled to issue them a passport. As a result, we have had persons now indicted for espionage traveling freely abroad for 2 years on a United States passport. Now we must try to get them back to face prosecution.

No, the Communist threat is not something that is dead, something of the past, not something that is present in every other place in the globe but strangely absent in the United States.

The Soviet leaders over the years have themselves laid down the challenge and blueprinted their program, which even the left-wing cabal should be able to read.

Dimitri Z. Manuilsky, who was an instructor in the Lenin School of Political Warfare in Moscow, said as early as 1931:

"War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years." (Thirty years will be up in 1961.)

"To win we shall need the element of surprise. The bourgeoisie will have to be put to sleep, so we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard of concessions. The capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fist."

If the skeptical think that this is simply the mouthing of one of the Russian conspirators and that, as has been so often stated, the Communist Party of the United States has no such objective, I call attention to the statement of William Z. Foster, chairman of the Communist Party in the United States. Foster said:

"When a Communist heads the Government of the United States—and that day will come just as surely as the sun rises—the Government will not be a capitalistic government but a Soviet government, and behind this government will stand the Red Army to enforce the dictatorship of the proletariat."

My friends, is there any question but that we are engaged at this very moment in a war—in a struggle to the death with the Soviet Union?

Americanism commissions of the American Legion all over the country are in the forefront of the battle with this new, deadly, and sinister weapon of modern warfare. May God give us strength, courage, and wisdom to carry on to the end that we may combat the autocracy of both the classes and the masses, and safeguard and transmit to posterity the principles of justice, freedom, and democracy.

Food for Civilian Survival in Event of War

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 24, 1957

Mr. COOLEY. Mr. Speaker, we are confronted today by the startling fact that this Nation is utterly without a plan to meet the emergency food needs of its civilian population, in event of a nuclear war.

This frightening situation is brought forcefully to the attention of the American people in a report just released by the Consumers Study Subcommittee of the House Committee on Agriculture.

The report sets forth the further fact that we have no plan in being to meet the emergency food needs of our allies, should war break upon us.

Mr. Speaker, this subcommittee, headed by Representative VICTOR L. ANFUSO, of New York, has rendered the Nation an immeasurable service in focussing attention on what it so fittingly describes as "perhaps the weakest link in the chain of defense planning." This bipartisan group issued its report by a unanimous vote, without thought of politics but in consideration of the safety of our Nation.

With the unanimous consent of the House, I shall insert the report in the Appendix of the RECORD, so that the text may be readily available not only to the

membership of the Congress but will be circulated throughout the Nation.

The Consumers Study Subcommittee's report on food for civilian survival in event of war follows:

FOOD FOR CIVILIAN SURVIVAL IN EVENT OF WAR

In the event of nuclear war the United States is utterly without a plan to immediately feed its civilian population, including its Territories and possessions. Moreover, there is no design in being for immediate availability of food for our allies.

This constitutes perhaps the weakest link in the chain of defense planning, within America's boundaries, and in concert with other nations of the free world.

The subcommittee is aware of the many important civil-defense studies and programs which are in process or have been completed. It recognizes that at the Federal level very good work has been done in developing civilian-defense programs, and these have been carried out in cooperation with the State and Federal agencies. These programs have included emergency feeding of people evacuated from military installations and urban communities. Valuable experiences also were gained in the national alerts in 1956 and in 1957. Yet the subcommittee is forced to conclude that if war should strike tomorrow the United States would find itself without an adequate emergency food-reserve program.

The Federal Civil Defense Act, known as Public Law 920, was enacted by the Congress in 1950. It was designed to protect life and property in the United States from attack. It was foreseen that the attack could be "in any manner by sabotage or by the use of bombs, shellfire, or atomic, radiological, chemical, bacteriological, or biological means, or other weapons or processes" (sec. 3). The act is to be administered by an administrator known as the Federal Civil Defense Administrator with power to delegate responsibility for preparing national plans and programs and to delegate any of these responsibilities to the several departments and agencies of the Federal Government. There is nothing in Public Law 920 designed to sustain or protect the civilian population in any foreign country where the United States now has, or in the future will be required to have, military forces.

The Consumers Study Subcommittee was created on March 14, 1957, by Representative HAROLD D. COOLEY, chairman of the House Committee on Agriculture. One of its functions is to study and investigate the stockpiling of food for national emergencies.

REPORTS AND VIEWS ON STOCKPILING PRESENTED

On June 12 and 13, 1957, the subcommittee held hearings on food stockpiling. Witnesses appeared from the Department of Defense, Department of State, Department of the Interior, Department of Agriculture, the Office of Defense Mobilization, the National Grange, and the National Farmers Union. A representative of the Office of Civil Defense also attended these hearings.

The subcommittee finds that 7 years after the enactment of Public Law 920 there is not in being a comprehensive or otherwise adequate overall food program aimed at maintaining sufficient emergency food supplies for the civilian population in the United States, its Territories and possessions. Of deep concern to the subcommittee, also, is the fact that there is no plan in being to protect civilian populations in foreign territories which are part of the defense orbit of allied military operations.

The Department of Defense reported to the subcommittee that it maintains only minimum stocks of food for the Armed Forces. Large additional quantities of food would be required for the military in the event of an attack. The Department of Defense depends upon the Department of Agriculture for assurance that the needed food supplies will be available when and where needed. Yet no plan for strategically located civilian food stocks has been developed.

The Department of Interior reported that United States Territories and possessions import from 20 to 90 percent of their food supplies from the mainland. Interruptions in ocean shipping would cut off normal food imports. For example, 2 of our most strategic areas, Guam and Alaska, import 90 and 80 percent, respectively, of their food supplies. Another and perhaps even more serious example is Hawaii, where the people are dependent on food imports from the United States mainland. In the event of war enemy submarines or other type of warships could isolate the islands and force the people thereon to capitulate for lack of food. Yet no plans have been developed for emergency feeding in our Territories and possessions.

The Department of State reported that our foreign policy embraces assistance to friendly countries who wish to build up reserves or strategic stockpiles of food. In some cases a part of the purchases of surplus foods under title I of Public Law 480 have been used to build more adequate food reserves, notably in India and Poland. Yet no plans have been formulated for United States cooperation with other countries in building strategic food reserves to buttress our NATO and other military alliances.

The Department of Agriculture presented to the subcommittee a detailed statement embracing explanations of what it has done in the way of formulating an overall program of food preparedness. The Department concluded its statement as follows:

"The need for stockpiling must be critically examined, and it must be clear that there is a justifiable need, and that there is no satisfactory and less costly alternative for the safety of our people, before undertaking this difficult and expensive task."

FARMERS WANT CITY POPULATIONS PROTECTED

The subcommittee was impressed by the position of the National Grange, a major farm organization, on the stockpiling of food near major centers of population. The Grange presented a statement saying in part:

"The National Grange is particularly pleased that this subcommittee is holding hearings on food stockpiling for defense. It is a subject of tremendous importance. The welfare of millions of Americans is involved and perhaps even the survival of our country in time of war.

"The National Grange favors the establishment of food reserves at strategic locations throughout the country. We consider such reserves as a matter of fundamental prudence and a basic part of national preparedness.

"As well as we have been able to learn, there is no emergency food plan in existence today. If there is one, it's a well-kept secret. * * *

"If Baltimore (as an example) were hit by an enemy missile or bomb today, several hundred thousand people from Washington—along with survivors of the Baltimore attack—would be roaming the hills and valleys of Virginia west of here by tonight or tomorrow. The Virginia counties west of here are not prepared to feed and take care of several hundred thousand refugees from Washington and Baltimore. The food isn't there. Without food and without a plan, there would be extreme disorder, to say the least."

Conditions would even be more chaotic in cities like New York, Boston, Pittsburgh, Los Angeles, San Francisco, and the rural areas surrounding them.)

"There could be wheat in Minnesota, corn in Illinois, and beef in Nebraska, but it might as well be a million miles away unless there is an orderly and practical plan for getting it to the hills of Virginia in time to be used. * * *

"If there ever is an attack—or even the imminent possibility of an attack—it will be the farm countryside that will bear the burden of feeding and caring for the millions of our fellow Americans who come out from the cities to stay with us during the emergency. The farmlands would become the support areas—the place where a great many Americans would catch their breath and organize for the next step in fighting back. We hope against hope that all this may never happen, but if it ever does, we think food stockpiles will be vital—and cheap at any price."

FINDINGS

The survival and safety of the civilian population are the basic responsibility of Government in times of enemy attack. This is not to say the States, private organizations, and individuals can abdicate their responsibilities.

In this respect it must be noted that in any major war the first enemy blow may be expected to fall upon concentrated civilian populations, to cripple industrial potential and in the expectation of destroying a people's will to resist.

Food is the one indispensable element in survival and morale. Its presence would be likely to lessen fear and prevent panic and terror in an evacuating population of a city.

The subcommittee finds (1) that such plans as have been devised under the Federal Civil Defense Act of 1950 are by no means sufficient in the event of an attack to take care of our American civilian population within the continental limits of the United States, its Territories, and possessions; (2) that there is absolutely no plan in being to sustain or protect civilian populations of foreign countries having allied military operations or bases; and (3) that there is too much delegation of responsibility under Public Law 920.

Insufficient urgency has been attached to the planning of emergency food supplies.

We recommend that the Government move swiftly to formulate plans and gather facts to assure that emergency stocks of food commodities will be available at accessible locations as reserves against possible disaster.

We have heard testimony regarding the vital importance of adequate food supplies in strategic locations in case of military operations. We consider an adequate emergency food program both within the United States and in friendly countries a vital part of our program of national and international defense. We consider the cost of such a program as much a part of the general cost of defense as the payments made for aircraft, bombs, missiles, ships, and tanks.

This subcommittee recognizes that an emergency food program involves a number of problems, such as rotation of stocks, not encountered in other defense supply programs. None of the peculiar problems are insurmountable, however, if the technical staffs of the executive agencies are given instructions to develop remedies.

We believe there should be a relocation of food-storage facilities throughout the country so that each major city will have strategic reserves in the accessible rural areas. We believe that these facilities can be planned, constructed, and operated in such a way that the food stocks can be rotated into normal trade channels and that the facilities can contribute to our ever-growing civilian needs for additional food storage.

We recommend that consideration be given to the utilization of existing underground facilities in the large metropolitan areas and the development of such new facilities which, while serving a peacetime purpose, can be used to stockpile essential

food, water, and other necessities as a part of our national-defense program.

We are convinced that the departments of Government mentioned in this report recognize the necessity for an overall food program attuned to possibilities of war or other national emergency and that each department wishes to cooperate in the solution of this problem. However, we believe that this matter of strategic food stockpiling is too important and too complex to be handled entirely by any single department of Government, and that the authority created under Public Law 920 is insufficient to provide for all of the emergencies contemplated by this report.

CONCLUSION

The subcommittee finally recommends in the light of the above findings that the President give this important problem his immediate attention, that he create a new coordinating board or council from personnel of existing agencies of Government, and that he delegate to it the specific authority and responsibility of devising plans for national and international food programs designed (1) to protect the civilian populations in the event of attack, and (2) that this subcommittee be kept informed of the planning of said board or council in order to propose such legislation as may be necessary to make the work of said board or council more effective.

Mundt Speaks His Mind on Civil Rights

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 24, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the July 23, 1957, issue of the Washington Post and Times Herald. It is entitled "These Days—MUNDT Speaks His Mind on Civil Rights." It was written by Mr. George E. Sokolsky, one of America's most distinguished writers, who has always stood for the preservation of the principles of constitutional government.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THESE DAYS

(By George E. Sokolsky)

MUNDT SPEAKS HIS MIND ON CIVIL RIGHTS

KARL MUNDT, who may be remembered as the star of the televised Army-McCarthy hearings, is a direct sort of person who somehow has avoided taking on the double-talking characteristics of so many public men. In discussing the civil-rights bill, now distracting the Nation, he said on the floor of the Senate:

"I live in an area of the land where there are no political potentialities to cultivate on this issue, and no political actualities to consider."

While to many this will only appear as an introductory statement to a long speech and the introduction of an amendment which may ultimately be accepted, to me it is explanatory of what is really wrong with our Congress. It is the explanation of the general fears of Senators and Representatives who say what they do not mean and submit to pressures which they should be able to withstand.

Senator Robert A. Taft was not nominated for the Presidency, although all representative Republicans felt that he should have been, not because he was disliked or disrespected but because it was believed that he could not be elected, "political potentialities to cultivate," as Senator MUNDT puts it. Senator Joe McCarthy was destroyed politically and psychologically for the same reason—his political potentiality was no longer of value to the leaders of his party. The Senate Subcommittee on Internal Security is now slowly being slaughtered because the Democratic leadership fears that its "political potentiality" is dangerous to them.

Senator MUNDT has coined an interesting phrase which explains why the present Congress displays so little courage in the face of the Supreme Court's unconstitutional assertion of legislative power—an assertion made on several occasions by the Court and always knocked down by Congress. James Burnham has an important and informative article on this subject in the National Review for July 20 which might be read to advantage.

The issue that Senator MUNDT raises is the right to a jury trial which is denied those disobeying the civil rights bill. Obviously a provision in any bill denying trial by jury is unconstitutional. But what is the Constitution among politicians? Again Senator MUNDT comes up with a descriptive phrase, political actualities, which explains why so few politicians are ever philosophers, in the sense that they like to think out their problems.

In a way, it is amusing to see the dilemma of those who call themselves liberals. They want to guarantee by act of Congress civil rights to the Negro, making the Department of Justice a police agency to enforce the law; yet they would deny to the officials of a State, trial by jury if they evaded the law or violated it, fearing that no jury in the South would convict such an official.

Therefore to win the 1960 election, they would risk losing one of our most sacred traditions, benefits and rights, namely, trial by jury.

Senator MUNDT calls attention to this danger:

"* * * Opponents of the jury-trial amendment somberly claim that its addition would emasculate the civil-rights bill, that southern jurors might be reluctant to convict. This argument is as old as it is shortsighted. It is the same justification that was given for the establishment of the star chamber, for the ruthless acts of Parliament depriving colonists of jury trial, for the opposition to jury trial for workers involved in labor disputes. Historically viewed, it stands as the favorite argument of the absolutist, an indispensable tenet of tyranny or mobocracy."

That of course, is the essence of the problem. The politicians are in a hurry to pass a bill that affects directly perhaps 15 million citizens and indirectly many more. The northern branches of both parties are competing for these votes.

Random Thoughts on France, Frenchmen, and Algeria

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 24, 1957

Mr. CELLER. Mr. Speaker, recently, the French National Assembly made history, highly important history, when it approved 2 treaties with the avowed purpose of merging the economies of 6 European nations into an economic whole and also into an atomic power bloc. These nations comprise 175 million people. The action of France puts into effect treaties previously approved by Italy, Belgium, Netherlands, West Germany, and Luxembourg. These treaties laid down the legal foundation for, first, European Economic Community, and, second, European Atomic Energy Community.

The first, for short, is called Euromarket and the second Euratom. These communities will function under a supranational executive, as well as parliamentary and judicial systems. To these three branches, executive, legislative, and judicial, the component nations surrender some of their national sovereignty. It is hoped that these unions are only a beginning; that they will inevitably lead to a final European federation and that eventually also Great Britain will join the plan.

In both these projects, the six nations mentioned, under the aegis of the North Atlantic Alliance and under the protection of their own defense forces, in effect, deliver a massive defeat to Soviet Russia. Khrushchev and his gang have done all and sundry to prevent the formation of these communities. There were threats, coercions, blandishments, and inducements—all used to prevent any European unification. To the great credit of France and the other nations, the efforts of Russia were successfully resisted. Each of these nations will partake of the strength of each other and will help restore the old European continent as a major war power. Under Euromarket, France and her five neighbors create a single market in the nature of a customs union where all custom barriers will be gradually leveled off, save against those nations outside the union. The plan will give a new impetus in turn to the British plan for a Free Trade Zone associated with Euromarket, and including most of the other free European nations.

We in the United States welcomed the action of the French National Assembly and the approval of these momentous treaties. We do well to lend every aid and comfort to France and those other countries in this undertaking.

I have been in France many times. Sometimes I wonder whether the French appreciate fully the glories and beauties of their own country. I believe it was George Bernard Shaw who paraphrased one of his own bon mots. He said, "France is a wonderful country. Why waste it on the French?" Many thousands of Americans appreciate France and flock to it every spring and summer. It is indeed the favorite mecca of American tourists. I love everything in France, except its bad plumbing.

Criticism is free in the United States and it is equally free in France, and the Americans and the French frequently carp at each other but no two countries or no two peoples have had such a long record of mutual friendship. America has never made war on France and France is the only major power in the world that has never made a war—hot or cold—on the United States. We have

fought against the British, the Spanish, the Italians, the Germans, the Japanese, the Chinese. Our present cold war with Russia has burgeoned with more animosities and hatreds than any hot war we fought, but France has been the ally of the United States and her friend ever since we were a Nation and declared our independence.

There is a famous document in the Archives in Washington; it is a letter sent by Gen. George Washington to his military envoy in Paris on April 9, 1791, which reads as follows:

> We are at this hour suspended in the balance * * * our troops are fast approaching nakedness. Our hospitals are without medicines and our sick without nutrition. In a word, we are at the end of our tether and now or never, our deliverance must come.

That deliverance did come. It came from France when our fortunes indeed were at low ebb.

It is well to remind some of the detractors of France of that Washington letter. I would remind a certain gentleman of a famous legislative body of our long hallowed friendship for and with France. He probably did not know of that letter when he made a recent speech which has subjected him to condign criticism—a speech which added fuel to a raging fire. He suggested that the United States use its good offices to solve the Algerian problem. That was a rash statement. It betokened most serious criticism of French policies. We are all entitled and may be under duty sometime to criticize the policies of the American administration on the Algerian issue, but when we consider the ill wind and distrust and jealously that have been created in France by previous pronouncements of our officials and nonofficials on this subject, intervention of this character at this time is a very risky business. The gentleman in question rather oversimplified the whole issue. He disregarded the many complications inherent therein. He has indeed made a bad situation worse. The idea that he created—that the United States should intervene on behalf of Algerian nationalists—has already stiffened thier resistance against the French and has given rise to considerable outbreaks of brutality. The gentleman forgot that much of the trouble stemmed from the aid and comfort given nationalists by the Egyptian megalomaniac, Nasser. The latter has constantly fulminated against the French over his Cairo radio. He has been constantly sending arms and ammunition received from Soviet Russia into the rebel nationalist territory.

It was refreshing to note that Secretary Dulles promptly and properly demurred to the suggestion of intervention. Our ally, France, is deserving in her hour of need of our help—not our acute criticism and condemnation and inane suggestion of interference.

I have been to Algeria. I am somewhat acquainted with the situation. France, far from being guilty of imperialism, as charged, has steadily sought to raise the standards of the people of Algeria through the years. I have seen great evidence of economic, cultural, and spiritual progress. The gentleman in question gave no credit to France for all this. It may be true that France might have done more.

Algeria has been in French hands for almost 200 years. It is a legal part of Metropolitan France, just as Alaska is a part of the United States. Most of its inhabitants are citizens of France. To show her anti-imperialism, France only recently gave independence to Tunisia and Morocco and helped convert her mandates over Lebanon and Syria into independent countries.

France is on her way toward making peace with Algeria. Delicate diplomacy rather than intemperate attack is essential. I can testify that the people of Algeria at this time, particularly those in the south, are not ready for independence, eager as they are to move forward and undoubtedly working hard to reach such readiness. France plans to spend vast sums of money for the future education and advancement of Algerians. She is well-nigh impoverishing herself for this purpose. France has built many schools and hospitals and will build more. She has done much to remove the tin-can shanties and hovels found in the crowded Casbah of Algiers.

The city of Algiers has a population of about 600,000, half of whom are Europeans. The municipality is led by a liberal, forward-looking mayor, Jacques Chevalier, who has made heroic efforts for slum clearance and good housing developments.

Americans are prone to judge other countries by American standards. This is a fatal mistake. Gen. Leon-Augustin Guillaume, an able soldier who spent much of his career in north Africa, said of Morocco and Moroccans:

> You Americans always confuse the nationalists here with your own American forefathers, seeing them as fighters for independence against a colonial tyrant. You are quite wrong. The Moroccans are not this historic equivalents of the American colonists. If you must seek historical parallels, then the truth is that the Moroccans are the Indians, the indigenous people. Your American colonists never had to cope with native nationalism because they drove the Indians off the land, killed most of them, and cooped up the survivors on reservations. We French, however, did not drive our "Indians" off the land. Instead, we showed them how to care for it with modern farming methods. We explored the subsoil and found great mineral treasure. We did not steal those treasures from them by offering them glass beads in exchange. We nationalized the phosphate fields of Morocco for the Moroccan state so that all the profits would go to the Moroccan people and you Americans call us colonial exploiters. Really, my friend, it is most exasperating.

I believe Guillaume was eminently right. In his statement I would substitute Algeria and Algerians for Morocco and Moroccans.

It is all very well for Americans to talk glibly on independence. Independence does not necessarily mean democracy. It is, indeed, highly questionable whether Algeria should at this time receive self-government. Such a gift may actually be dangerous, if not fatal. As Thomas F. Brady said, in a recent New York Times magazine article:

> To want to fly with one's own wings implies serious preparation, trained men, stability, and political equilibrium—all things that cannot be acquired in a day or a year.

Unfortunately, at this date violence in Algeria shows no abatement. The national liberation front seems as strong as ever. The European element, numbering 1,200,000, opposes any real concessions to the Moslems. The Moslems outnumber them 7 to 1. Many of the Berbers and Arabs want peace, but they are so cowed by the ruthless pressure of nationalist rebels that they dare not openly stand by France. We find in Algeria a bleak picture. American Members of the House and Senate should be very careful in their remarks, lest they exacerbate the serious situation. Certainly, it is ridiculous to urge cavalierly that the French grant immediate independence and ignore the labyrinth of difficulties inherent in the area. Meanwhile, the Arab-Asian bloc in the United Nations is driving for a United Nations General Assembly debate—a debate which will only fan the embers of discontent and conflict.

Whenever I get into mixed American company and I speak of France, many questions arise to the lips of my listeners. These are some of the questions: Will the French fight? Is France a reliable ally? Why do they have 2-hour lunches? Why do not the French pay their taxes? Are the French anti-American? And so forth.

Will the French fight? I will say they will, when properly provoked. Will the French fight? They have been doing nothing else for a century, indeed, for the past thousand years. The French have made manifest their courage in fighting many times in history. Reflect but a moment. See the bloody battle of Verdun. Verdun is a badge of courage that any nation would willingly wear with great pride. For almost a year the disciplined Germans and the undisciplined French were locked in a deadly embrace, but it was the so-called tough Germans who gave way, and the French triumphed.

Sometimes we hear it said that the French will not fight a crusade against Russia or against communism. Those who query forget that the Communists were thrown out of the French Government and purged from the army and the police away back in 1947, 10 years ago, and have not been able to come back into the army or the police or the Government ever since. The French resisted all Communist endeavors to keep her out of the Atlantic Pact and to keep the Atlantic Alliance headquarters out of France.

All this is to the credit of the democratic French and they were able to challenge successfully, not only the Communists outside but inside of France. There are many nominal Communists in France. Remember, at times 1 out of every 4 French citizens vote Communist. The question might be asked, "Why do so many Frenchmen vote Communist?" The preponderant number of French Communist voters are not Communists. There are about 4 million who are malcontents, fed up with the failures and broken promises of some of the weak governments, and some of the administrations of France have been weak.

These voters are tired of being gouged by profiteering speculators. They are weary of hot, cold, and colonial wars. They say, "Where else can I register my protest? How else can I frighten the Government into cleaning up whatever mess there may be?" They also add, "If I thought there was any chance the Communists would come into power in France, I would never vote for them."

If the Communists ever try a coup d'état as they did in Prague, these so-called French Communists would go out on the barricades to stop them.

Remember, General Eisenhower did not choose Paris for his headquarters or France as a key area for NATO because he liked French wines or French hotels or the Champs-Elysees. Indeed, France strategically is a keystone of any European coalition. General Gruenther has put it this way:

> France is essential to the Atlantic Alliance. We need and want German troops, but not as a substitute to the French. No defense of Europe is possible without the participation of France.

And the French do pay their taxes. Remember, the French national tax burden is as heavy as that of the United States, but unfortunately is not as equitably shared or as directly assessed as our taxes. Tax evasion is practiced by the peasants and shopkeepers. They are difficult to control. But most Frenchmen pay taxes, very heavy taxes.

They also eat 2-hour lunches, but they do not take morning coffee breaks and afternoon teatime recesses, like the Americans and the British. Also, they work later. They work until 7 or 8 o'clock. New York offices are empty at 5.

Are the French anti-American? Some are, but most are not. They criticize us, we criticize them. But when we need them, they are on our side.

One cannot praise France too much for its artistic creations. More than a half-million foreign students have enrolled at the Sorbonne, more than at any other university in the world. From every corner of Europe and Asia have come students, writers, painters, architects, engineers, to study in Paris.

Here is an interesting bit of information: John Howard Payne wrote Home Sweet Home, one of the most homespun of American songs—in Paris. James Farrell wrote of that American boy, Studs Lonegan—in Paris. James Fenimore Cooper wrote of The Prairie of America while sitting in the sidewalk cafes in Paris. James Joyce, Gertrude Stein, Ernest Hemingway, John Dos Passos, John Steinbeck—all have made the pilgrimage to Paris and partaken of her inspirations and written glowingly.

What would doctors do without the stethoscope? It was designed by Dr. Laennec in 1890. The stethoscope is a French instrument. The blind of the world can read, thanks to the ingenuity of a Frenchman named Louis Braille, who was also blind. When you next drink a glass of pasteurized milk, you might well give a toast to the great French biologist, Louis Pasteur. A measure of electrical current has been immortalized by the name of a French physicist, André-Marie Ampère. Louis-Jacques Daguerre gave us the French photographic invention, the daguerrotype. Neon lights are the invention of the Frenchman, Georges Claude. The adding machine, the balloon, the gyroscope, the screw propeller, smokeless powder, the machinegun, rayon, the thermometer—all were French inventions. Pierre and Marie Curie discovered radium. Marie Curie was the first person, and the only woman in history, to win the Nobel prize twice.

Despite its political vicissitudes, France is the only major power on the continent of Europe that has remained loyal to democratic traditions. In the past 50 years, Russia has gone Communist; Italy, Fascist; Germany, Nazi; Spain, Phalangist. France alone of the important continental powers never succumbed to any of these "isms" that seize Europe. She stood alongside democratic Britain and democratic America.

In evaluating France, we Americans must see the picture whole. We cannot lose sight of the forest for the trees. We cannot pick out a little incident here and another incident there that might not be to our liking and judge her exclusively by those limited factors. France was a great country; France is a great country, and will remain such.

Clinton Trial and the Rights Bill

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 24, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Clinton Trial and the Rights Bill," written by David Lawrence, and published in the Washington Star of July 24, 1957.

This article bears most importantly on the bill which has been pending in the Senate, and I hope every Member of this body will read it carefully.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Star of July 24, 1957]

CLINTON TRIAL AND THE RIGHTS BILL—PENDING LEGISLATION'S BAN ON JURY TRIALS IN SIMILAR INJUNCTION CASES CITED

(By David Lawrence)

On the surface it looks as if a southern jury of white persons did convict seven white persons for failing to obey a Federal court injunction against interference with integration in a public school at Clinton, Tenn. This is being hailed in Congress as a vindication of the right of trial by jury. But actually the case isn't as simple as it appears.

For the defendants at Clinton were really not entitled by law to a trial by jury and got that privilege only after a lot of pressure from public opinion throughout the country.

The truth is the Department of Justice did its utmost to prevent a trial by jury and used precisely the same tactics as are now proposed in the pending civil-rights legislation. It sought to change the docket in the case from one filed by private individuals to one in which the United States would be a party. Under existing law, of course, any contempt case in which the United States Government is a party automatically takes away the right to trial by jury. To resort to the device of a change from private persons to the United States as a party is like changing the rules in the middle of any game.

The judge in the case was on the spot. The Department of Justice was on the spot, too. Public criticism was mounting. The judge finally devised his own solution. He decided not to grant the request of the Department of Justice to change the docketing in the case. This removed the barrier against jury trial, and the case was tried in the names of the parties who originally filed it and a jury was then impaneled.

Some interesting comments came from the judge during preliminary arguments. In the May 2 proceedings, Mr. Dobbs, an attorney for one of the defendants, was arguing before the judge that the injunction was too broad and that it enjoined everyone from everything.

"Well, of course," replied Judge Taylor, "you are entitled to your interpretation, and I am not saying that you are wrong in any respect. You are entitled to your views about it, but I want to say to you that in that injuction it was not the intention of the court to enjoin everybody and everything; it was the intention of the court to enjoin the persons that were named from interfering, hindering, or impeding the carrying out of this order which was granted, I believe, on January 4, 1956. * * *

"If the language used was construed that way by you, Mr. Dobbs, and by others, then it was an unfortunate choice of language by the court. In other words, when these matters are presented, the court is required to act. That was the language of the court. The court didn't have the time to spend a month, like you do on a brief, putting every sentence and exactly every word just where it ought to be."

Yet, out of the original 17 persons arrested and named as defendants in this case, 6 were released before trial and 4 more after the jury acquitted them. Here were 10 law-abiding citizens hastily hauled before a judge for allegedly disobeying an injuction. They were not indicted by any grand jury. Their reputations were besmirched. They were led from their homes, handcuffed, and thrown into jail—all for allegedly violating a court injunction. If the Department of Justice had had its way, when it sought to change the docket in the case, there would not have been any jury trial.

In the cases which would be brought under the injunction power by the pending civil-rights legislation, the United States would be party to the suits from the beginning. Hence, unless Congress actually inserts the requirement that a jury trial be given to those who are charged with acts committed or words spoken outside the courtroom, there will be no jury trial such as was granted by an accidental turn of events to the defendants at Clinton, Tenn.

The case now goes up on appeal through the higher courts, and eventually the Supreme Court of the United States will have to decide whether those defendants who stand convicted today—and who did no more than associate with one another to express opinions to their fellow citizens on the subject of segregation in the schools—are to be given the same benefits so generously bestowed on members of the Communist Party. For in recent decisions of the Supreme Court it was ruled that freedom of speech, as guaranteed by the first amendment of the Constitution, includes the right publicly to advocate even the forcible overthrow of the Federal Government itself.

Individual Security

EXTENSION OF REMARKS
OF

HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 24, 1957

Mr. NORRELL. Mr. Speaker, on the occasion of the graduation of our daughter, Judy, at Ohio Wesleyan University last month, it was the privilege of parents and friends attending the exercises to hear the commencement address given by Mr. Lawrence A. Appley.

Mr. Appley chose as his subject Individual Security, and in the development of his thesis he presented a basic tenet of Christianity: That the only real security lies in "well-founded confidence, certainty, and faith."

Under leave to extend my remarks, I will include the full text of Mr. Appley's address to those fortunate young people who are now entering responsible careers of adulthood. I believe that we of the older generations will also find a profound stimulus in the forthright discussion of individual security.

INDIVIDUAL SECURITY

(Commencement address delivered by Lawrence A. Appley, president of the American Management Association, Inc., at Ohio Wesleyan University, Delaware, Ohio, on June 10, 1957)

President Flemming, honored guests, members of the class of 1957, their friends and relatives, little did I realize when I sat in your position 30 years ago that I would ever be standing here some subsequent year presenting the commencement address. It is with a sense of heavy responsibility and deep humility that I accept this honor. I feel it particularly as a member of the distinguished class of 1927 and of the debate team to which President Flemming has referred in his opening comments.

Ever since I was initially asked to appear on this platform, I have been thinking day and night of what might be the one thought I would like to leave with you this morning. Out of the years that I enjoyed in this institution and the years I have had since leaving it, what stands uppermost in my mind in its simplest form is this: In this day and age, when security seems to be a paramount consideration, educated and intelligent people should face squarely the proposition, What is real individual security and what are the most reliable means by which one may attain it?

We are living in an age that is characterized by an intense drive for individual security, as well as a general unwillingness to earn it. Last week at the Statler Hotel in New York, president Flemming was a member of a distinguished panel that was discussing the ways and means by which the modern top executive looks for future management talent and the indexes of such talent. The members of this panel, in addition to president Flemming, were the presidents of: Corn Products Refining Co., the Boston and Maine Railroad, Chicopee Manufacturing Co., and the American Stores Corp.

In the course of the discussion, a comment was made that if a college senior, being interviewed for a possible position with a company, should ask as his first or second question about the company's pension plan, there was little use to talk with him much beyond that. Another observation was to the effect that a most important quality in a management candidate is a willingness to work. This is an old saw, but it still ranks high, regardless of how little it may impress some people today.

What is security? Whenever I am faced with a question of this nature, I am inclined to rely upon the dictionary and I find there that security is "freedom from care and apprehension; freedom from doubt; freedom from danger and risk; well-founded confidence, certainty, and faith." Let us examine each of these types of security that have been so clearly outlined here.

"Freedom from care and apprehension" we should not have. This is for the irresponsible. Those in this life who are worthy of their salt are deeply concerned about the consequences of their actions and about the activities of those for whom they have some sense of responsibility. There is no escape from care and concern for those who are considered to be reliable.

"Freedom from doubt" we should not want. This is for the happy imbecile. Intellectual curiosity is highly desirable for those who would be the leaders in life. Accepting everything at its face value is a shallow trait.

"Freedom from danger and risk" is impossible. This can only be in terms of economic freedom or physical well-being, which cannot be guaranteed in any case.

Just a few years ago, one of the vice presidents of my organization was telling me how he had just completed a comprehensive physical examination through which he went regularly every year. He had been given a complete good bill of health. I have never known one to be any more conscious of his physical condition. Two hours after telling me this, he dropped dead in his office. This is happening all around us. Physical security cannot be possessed by any human being.

Now, let us take a look at economic security. According to a radio talk by Ervin Seale on Sunday, December 18, 1955, there are some very interesting facts about a group of men whom no one would question had economic security many years ago. During the year that I entered Ohio Wesleyan as a freshman—1923—a meeting was held at the Edgewater Beach Hotel in Chicago attended by nine of the world's greatest financiers. Let us look at whom they were and what happened to them within the next 25 years.

One was the president of the world's largest independent steel company, Charles Schwab. He died a bankrupt and lived on borrowed money for 5 years before his death.

The president of the largest utility company, Samuel Insull, died a fugitive from justice and penniless in a foreign land.

The president of the largest gas company, Howard Hopson, lost his mind.

The greatest wheat speculator, Arthur Cutton, died abroad, insolvent.

The president of the New York Stock Exchange, Richard Whitney, spent a number of years in Sing Sing Penitentiary.

A member of the President's Cabinet, Albert Fall, was pardoned from prison so he could die at home.

The greatest "bear" in Wall Street, Jesse Livermore, died a suicide.

The head of the greatest monopoly, Ivar Krueger, died a suicide.

The president of the Bank of International Settlements, Leon Fraser, died a suicide.

If this be security, anyone who wishes it can have it. I certainly would not identify it as the kind of security worthy of one's search.

Well-founded confidence, certainty, and faith—this is the only real security. This is the reward of a good life.

The basic purpose of life, the reason for life is to contribute more to society than we take from it. Anyone who is physically and mentally fit has no right to much consideration if he or she does not produce more than he or she consumes. What a terrific amount of confidence it gives a person when he or she realizes that life is really worthwhile and of value to others.

The only real security for an individual is, therefore, the capacity to render a service which the community needs and wants. One could lose everything material which he has tonight, but with the ability and the skill to render a service which society wants, he starts right off again tomorrow morning without any insecurity whatsoever. It was once my privilege to know a retired vice president of the Ward Baking Co. by the name of Sam Graphlin and he had a definition of happiness that I have never forgotten—"Pick out the thing you can do better than anything else and do it so well that people will send for you and pay you to do it."

A further definition of real security, in addition to capacity to render a needed service is: A feeling of worthwhileness, and a continuing sense of attainment. What impact is one having or has one had? This is the real test of individual security.

Is the class of 1957 any better because you are a member of it? Is your sorority or fraternity any better because you have been in it? Is the athletic squad on which you served a good one because of your contribution to it? Have the literary, the dramatic, or the music activities of this school been any better because of your participation?

Is Ohio Wesleyan any better because you have been here? Have you done anything consciously to improve the conditions you did not like, or have you gone through complaining and taking things as they come without any effort on your part to leave your footprints? Is the alumni organization going to be any stronger because you are now a member of it?

Will the job you go to be any better done because you are on it? Will the home you have be any better because you are in it? Will your children be any better because you are one of their parents? What has been and what will be your impact upon people and life about you? The answers to these questions will determine what sense of attainment you possess, and sense of attainment is what gives one confidence, certainty, and faith in oneself.

The basic purpose of education is to help train human beings in how to attain something of value, how to get things done. How does one have an impact on the world about him? How does one attain this feeling of worthwhileness? The formula is quite simple and it applies to any activity in life.

First, set objectives; determine what it is you want to see done or get done; establish long-range plans which reflect the impact you wish to have.

Second, organize your work in a way that these objectives can be attained. This means a determination of what has to be done to reach the goal. It takes some carefully organized thinking.

Third, train oneself for the work to be done. If we know clearly what it is we want to accomplish, if we have organized the work that is required to accomplish it, then it should be clear what knowledge, skills, and capacities we must have to do the required work. It is then easy to determine what training is required.

Fourth, evaluate the progress of the work. Is it being done satisfactorily enough to assure attainment of the established objectives? This requires careful, periodic attention to measurements of effectiveness.

Fifth, take the corrective action indicated by the evaluation of progress. Be decisive. Do not leave things to chance. Real leaders act rather than react. They do not wait for the future; they determine the future.

To summarize what has been said here about how to attain individual security, take these steps: Set objectives; organize work; train for work; evaluate work; correct work action and attitudes.

All of this approach just outlined must be sprinkled with idealism. Our objectives must be set high. There is no better guide than fundamental basic Christian ideals.

There is much loose criticism today of those who are reaching for the unattainable. There is the laughing, snarling, cynic who, in his earthly realism, belittles the dreamer. It is this type of person who says: "Why set and publicize ideals which cannot be reached?" Such people were adequately answered by Thomas Watson, Sr., the late president of International Business Machines, who said: "When you reach for the stars, you will never get a star, but neither will you get a handful of mud."

In conclusion, it has been the contention of this presentation this morning that the only attainable, retainable, and admirable individual security is confidence in self, certainty, and faith. This can be attained by setting worthwhile objectives and by developing the skills and abilities to attain these objectives.

Might I suggest in all humility that it helps once in a while to get down on one's knees and pray God for help. It is a good thing in the morning to thank God for another day and for strength to make it a day of value in your life. It is a good thing at night before going off to sleep to thank God for the day just past—good, bad, or indifferent. There is nothing more precious than a day of life and regardless of what has happened during it, it has been a day of experience and this adds to every life.

My final plea is that if one cannot accept some of the thoughts contained herein, he or she at least not be a cynic. I am reminded of an experience I had some years ago when I climbed Mount Vesuvius. It was in eruption for the first time since 1929.

Mount Vesuvius was just like an inverted ice cream cone with the tip blown off. The crater inside the jagged edge of the tip was about a mile across and right in the center of it, a new tip to the cone was forming. It was about the size of a hill. The volcano would boil and steam and blow tons and tons of lava into the air which would settle back on this new cone being formed within the crater.

As I approached this new center cone, I was conscious that it had a regular rhythm. It would growl and groan and boil for about 4 minutes to the watch and then would blow tons and tons of lava into the air. As I walked around on the windward side of the base of this new one, I came upon a little fellow about 5 feet high. He had come up out of a crack in the crater's floor. There he stood in all of his pride with a tip on him, just like the mouth of a fish. He sounded like a tugboat as he puffed, puffed, puffed, and blew these smoke rings out of this fish-like mouth. As I watched him, I realized that he, too, had a rhythm and that it was related somewhat to the mother cone.

As the mother cone would rumble, and growl, and groan, this little fellow would go "chug, chug, chug—chug, chug, chug." Then, as the mother cone blew tons and tons of lava into the air, this little fellow would hesitate momentarily and then go "pfft" and blow one little piece of lava out.

It came into my consciousness how much like many people that little cone was. While the great majority of the people in the world are working and struggling to produce something, this little fellow goes on chug, chugging about his business bothered by and impressed by no one. Then, when some section of the world of humanity suddenly produces something, this little fellow goes "pfft" and continues about his own little business. He is the cynic.

My plea is, let us get in on the big show because this show is governed by a basic plan of civilization which, in turn, is controlled by a supernatural power which we call God.

South Now Getting National Hearing

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 24, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding article by Mr. Ray Tucker which appeared in the July 19, 1957, issue of the Greenville (S. C.), News. It is entitled "South Now Getting National Hearing." Mr. Tucker is one of America's most distinguished newspaper writers.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOUTH NOW GETTING NATIONAL HEARING

(By Ray Tucker)

WASHINGTON, July 18.—Veterans on Capitol Hill admit that they have rarely witnessed such a skillfull parliamentary operation as southern Senators have staged in their battle against the extreme civil-rights bill originally proposed by the administration.

While their first objective is defeat or drastic modification of the measure, a secondary purpose is to present the South's viewpoint on the racial problem, as well as its difficulties, to the American people. There are psychological as well as political undertones to their strategy.

They have contended, at least until recently, that non-South mediums of communications have not presented their side of the controversy to their audiences and readers. Now, for the first time since the dark days of Reconstruction, they have had that opportunity. Moreover, they are speaking for the new South that has emerged since World War I.

DEBATE ON HIGH PLANE

They have performed this task with remarkable restraint, relying on close legal arguments rather than on political or emotional exhibitions. There have been no ranters or demagogs such as "Cotton Tom" Heflin, of Alabama, "The Man" Bilbo, of Mississippi or "Kingfish" Huey Long, of Louisiana.

In fact, such leaders and strategists as Senator RICHARD B. RUSSELL, of Georgia, and Senator SAMUEL J. ERVIN, JR., of North Carolina, have routed the ablest advocates of the civil-rights bill. ERVIN was a former chief justice of his State's supreme court, and RUSSELL was speaker of the Georgia General Assembly when he was only 26 years old.

The two leaders—Senator LYNDON B. JOHNSON, of Texas, and Senator WILLIAM F. KNOWLAND, of California—also have used their influence to keep the debate on a high plane.

THREATS OVERLOOKED

The southern bloc has concentrated on two originally unnoticed sections of the measure which, in their opinion, offend the Americans' sense of fair play and equality before the law. Even President Eisenhower did not appreciate their threat to civil liberties as essential and fundamental as the right to vote and to attend unsegregated schools.

Even such "liberals" as Senator JOSEPH C. O'MAHONEY, of Wyoming, and Senator CLINTON P. ANDERSON, of New Mexico, were shaken when their attention was called to these proposals in floor debate.

The first, of course, is the provision for a juryless trial of persons alleged to have violated general and vague sections of the civil-rights bill. Nobody can say now what future United States prosecutors will regard as violations.

The result will be endless litigation and court delays, especially in view of the attitude of the legal staff of the National Association of Colored People. They have indicated that they intend to police and supervise whatever enforcement methods may be established, should the bill pass.

COULD CAUSE FRICTION

The second provision offensive to many fairminded people is that which permits the President to call on the military or militia to enforce the proposed statute, which could mean the use of colored troops.

Such an action would endanger the general peace and worsen relations between the races. Nor would it tend to endear the national-defense forces with the population against which they were dispatched.

Finally, southern spokesmen ask another question which has gained them sympathy and understanding in other sections of the country:

Is the Congress of the United States willing to classify and condemn so many millions of Americans as "second-class citizens"?

Francis J. Larkin Elected President of American Law Student Association

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 24, 1957

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a recent release of the American Bar Association relative to Mr. Francis J. Larkin, a constituent of mine from Milford, Mass., and a student at Georgetown University Law Center, who was recently elected President of the American Law Student Association.

That such a great honor should come to this brilliant young man from my district is gratifying indeed and impressive testimony of the high regard in which he is held by his fellow students of this association.

I am happy to extend to him and his distinguished family heartiest congratulations upon this well-merited honor and express the hope that Mr. Larkin will enjoy a most successful administration as president and continued success in his legal career.

I may say further, Mr. Speaker, that the people of my district and State join me, I am sure, in expressing our pride in the progress of this fine young man. I have no doubt that his achievements to date, not only reflect his high character and ability, but presage for him out-

standing advancement and success in the years to come.

The release follows:

NEW YORK, July 16.—Francis J. Larkin, a student of Georgetown University Law Center in Washington, D. C., was today elected president of the American Law Student Association, a national organization of 40,000 law students with chapters in 115 law schools in the United States.

Larkin is a graduate of Holy Cross College, Worcester, Mass., and formerly served as a circuit vice president of the American Law Student Association. At Georgetown he was president of the Student Bar Association, and was a member of the Georgetown team which last year won the championship of the national moot court competition sponsored by the Association of the Bar of the City of New York.

Larkin is a resident of Milford, Mass. In his new post he will have an extensive speaking itinerary embracing many of the Nation's law schools and bar associations. The American Law Student Association is the student affiliate of the American Bar Association.

The National Labor Relations Board

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 24, 1957

Mr. HUMPHREY. Mr. President, I have often had occasion to state on the Senate flooor that our laws are only as good as the people who administer them. During the present administration we have time after time found administrators appointed who are out of sympathy with the basic legislation they are supposed to be administering.

An excellent case in point has been the record of the National Labor Relations Board since 1953. The current issue of Textile Labor has an article entitled "Ike's NLRB: Its Bias Is Showing." The article recounts statistics to back up its allegations of the contrasting record achieved by the new NLRB as compared with its pre-1953 predecessors in the areas of unfair labor practice charges and complaints.

I ask unanimous consent that this article by Alexander Uhl be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IKE'S NLRB: ITS BIAS IS SHOWING

(By Alexander Uhl)

Like the old gray mare, the National Labor Relations Board ain't what it used to be—but there's nothing to joke about after you've made the comparison.

Once the NLRB was—or was meant to be—a neutral agency. But under the Eisenhower administration it has degenerated into a club designed to beat labor to its knees. The NLRB's own annual report for the year ending June 1956 proves that in tables of cold figures.

Tear the report apart, and you'll find four major ways labor has been hit heavily. Both Board decisions and actions within the Board itself have encouraged management to fall away with the Taft-Hartley Act's built-in bludgeons more vigorously than they did in the past.

The thing that hits you in the eye right off the bat is the way the Office of the General Counsel has been used to beat unions down and down and down.

The second way labor is being crimped shows in the drastic reduction of union victories in representation elections during the period the NLRB has been controlled by Eisenhower appointees.

The third factor is that employers have been greatly encouraged to bring charges against unions. While at the same time—and this is the fourth area in which the change has occurred—unions have been losing more appeals on unfair labor practice cases.

On each of these fronts, hope is dwindling for the fair shake labor once expected. But particularly harmful has been the impact of the General Counsel—especially the swath cut while the office was in the hands of Theophil C. Kammholz from March 1955 to January 1957.

Before the Senate confirmed Eisenhower's appointment of Kammholz, responsible union leaders reeled off his dreary antilabor record (Textile Labor, September 1955). At that time, they warned of the consequences that could be expected once this Chicago management lawyer was handed such unrestricted power.

That the office is one of such tremendous striking power can be attributed, of course, to the passage of the Taft-Hartley Act. Under the Wagner Act, the General Counsel was the servant of the Board. With the arrival of Taft-Hartley in 1947, his office was given separate stature. And to compound this, the Board cravenly handed him even more authority—the right to hire, fire, discipline, and maintain the regional offices of the NLRB.

The dire result of this can easily be illustrated. Suppose a regional officer receives an unfair-labor-practice charge filed by a union.

In the first place, since that regional officer was picked by and is at the mercy of the General Counsel, not the Board, his decision is preordained. He'll base his decision on how the General Counsel thinks and would act in such a situation. With a Kammholz in the saddle, chances of dismissal are high.

Add to that the fact that the union can appeal this dismissal only to the General Counsel (the man who really dismissed it in the first place) and not the Board, and you can see the farce made of justice.

One union attorney estimated that less than 1 percent of these dismissals are now reversed by the General Counsel. And the General Counsel's decision is final. There is no higher tribunal in such cases.

What happened when Kammholz took over is there to see in the NLRB's report.

The machinery works this way. Unions or individuals bring an unfair-labor-practice charge against an employer (or vice versa). Then it's up to the General Counsel to decide whether or not to prosecute. If he decides to, he issues a complaint. If he doesn't, he dismisses the charge.

Before Kammholz, roughly 75 to 80 percent of all charges filed were brought by unions and individuals against management. And logically enough, just about 75 to 80 percent of all complaints issued by the General Counsel were against employers. The first year of Kammholz' tenure saw a violent change.

In 1955, for instance, the percentage of charges brought against unions was only 29.3 as against 70.7 against management. Yet, the percentage of complaints issued by Kammholz against labor shot up to 42.3.

In 1956, it got even worse. The percentage of charges against labor was only 33.1 in contrast to 66.9 against management. But Kammholz' percentage of complaints against unions leaped up to 56 percent while those against management were only 44 percent.

Clearly, here was a complete flipflop of the normal pattern. Here was powerful evidence the union leaders were right when they charged Kammholz with antilabor bias.

The year 1956 marked the first time in the history of Taft-Hartley that complaints against unions went over the half-way mark—even though the charges filed against labor were actually less than half those filed against management.

A similar trend is apparent in the decline of union election victories. In 1953—when the board's complexion shifted as Truman appointees were replaced by Eisenhower's choices—unions won 73 percent of the elections. A year later that figure had dropped to 65 percent.

Even sharper was the falloff in the number of workers in units which chose bargaining agents. This statistic dropped from 79 percent in 1953 to 63 percent in 1956.

Union leaders concede a less favorable attitude on the part of the board toward unions. What really distresses them is that this blow can be blamed on the Eisenhower board's widening of the "free speech" rights of employers.

These decisions have emboldened management to the point where intimidation of workers is becoming more open and more common—a bitter, first-hand experience textile workers know only too well.

In any event, the figures are clear: In 1952 there were 584,080 employees in units that chose bargaining agents. In 1956 there were 291,292.

At the same time the board was giving employers encouragement to file charges against unions. From 1952 through 1956, employers' charges against unions leaped 100 percent. Last year they repreesnted 16 percent of all charges filed and 47 percent of those filed against unions, a jump of 12 percent over 1955.

And while employers were being patted on the back into believing they could win their cases against unions, labor was getting the back of the hand by losing more appeals to the NLRB to resolve unfair labor practice charges.

The 1956 figures show a drop of 44 percent as union confidence in the board dwindled. In 1952, 75 percent of the unfair labor practice charges brought against employers were brought by unions. By 1956, this percentage had dropped to 63.

It doesn't take a posse to discover that, more and more, labor is finding the NLRB openly unsympathetic to its cases. The old gray mare is showing her heels.

Kammholz' black record

Year	Percentage of unfair labor practices charges against—		Percentage of unfair labor practices complaints issued against—	
	Employers	Unions	Employers	Unions
1948	77.3	22.7	69.2	30.0
1949	78.2	21.8	73.8	26.2
1950	77.0	23.0	77.8	22.2
1951	79.1	20.9	79.5	20.5
1952	79.0	21.0	83.1	16.9
1953	80.6	19.4	79.7	20.3
1954	73.7	26.7	72.0	28.0
1955	70.7	29.3	57.7	42.3
1956	66.9	33.1	44.0	56.0

Mr. JOHNSTON of South Carolina. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. JOHNSTON of South Carolina. Does the article state that we are protecting our labor as much as we protected it during the past years?

Mr. HUMPHREY. I regret to say that the article does not demonstrate that kind of consideration. It shows, to the

contrary, that that is not being done. The Senator from South Carolina has always been a friend of the working people, and he will find this article of great interest to himself and to his constituents.

Civil-Rights Legislation

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 24, 1957

Mr. FORRESTER. Mr. Speaker, the question has been raised by Senator LAUSCHE, of Ohio, and others as to who is the author of the civil-rights legislation. This question has been asked many times in and out of the halls of Congress.

For the information of the United States Congress, I advise that the National Lawyers Guild on July 27, 1955, wrote the gentleman from Massachusetts, Hon. THOMAS J. LANE, chairman, Subcommittee No. 2, House Committee on the Judiciary, a letter, a copy of which was sent to the other members of that subcommittee, and amongst other things, that letter said:

> The National Lawyers Guild, which has pledged its full effort to secure a comprehensive civil-rights statute and which drafted the model civil-rights bill, urges you to report favorably upon one of the pending comprehensive bills, such as H. R. 389 or H. R. 3688, in this session of the 84th Congress.

On April 23, 1956, the National Lawyers Guild wrote the various members of the House Committee on the Judiciary, and, among other things, said:

> The guild drafted the model omnibus Civil Rights Act because we believe that the passage of legislation can have a strong effect upon the positive action of individuals, as well as providing a method of punishing those who violate the constitutional and moral principles of equal protection of the law and equal treatment regardless of race, color, or creed. The United States Supreme Court's decisions outlawing discrimination and segregation in public schools, universities, and recreational facilities have laid down a pattern which has already been followed in some parts of the country and in some aspects of life, and it only needs the coercive force of some additional Federal legislation to give the 14th and 15th amendments new life and strength.

Reference to hearings before Subcommittee No. 5 of the Committee on the Judiciary, House of Representatives, 85th Congress, 1st session, pages 170–187, will show the contents of H. R. 389, and on pages 187–204 will be found H. R. 3688, both introduced in the 84th Congress.

Reference to the same hearings, pages 325–347 will show the legislation proposed by the then Attorney General, Hon. Tom Clark, before the House Committee on the Judiciary in the 81st Congress, together with his arguments and his legal discussions.

A casual reading of H. R. 389 and H. R. 3688, together with the legislation proposed by Attorney General Tom Clark in the 81st Congress, will completely demonstrate that there is nothing new and novel in the proposals of Attorney General Brownell which are now pending in Congress. Indeed, a study of that legislation will show that the same drastic powers for injunctive relief, to be instituted by the Attorney General, were then and there recommended. The only difference that I have been able to discover is that the Brownell legislation provides civil remedies, whereas the other legislation provided for civil and criminal remedies. With this single exception, there is a marked similarity.

Doubtless the National Lawyers Guild claims great credit for the pending legislation. It might be well to ask them if the Brownell legislation substantially represents their brain child.

Certainly it is interesting to observe that the omnibus legislation heretofore referred to, which the National Lawyers Guild in a resolution passed at their 1956 convention said they proposed, contains almost identical provisions relating to the setting up of a commission, the duties of the commission, the salaries of the commission, the use of uncompensated personnel, the establishment of a civil-rights division, and the appointment of an Assistant Attorney General, deals with the same provisions in the conspiracy statute on civil rights, and empowers the Attorney General to seek injunctive relief. Certainly, the Attorney General must have had these omnibus bills before him when he prepared this legislation, although it is possible that he did not investigate the authorship. I feel reasonably certain that the Attorney General did not know the claimed authorship of those omnibus bills, because he is proceeding to have the National Lawyers Guild listed as subversive.

Resolution Calling for a Study by the House Interstate and Foreign Commerce Committee of the Censorship Practices of Television and Radio Networks

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 24, 1957

Mr. WATTS. Mr. Speaker, I have been shocked by recent reports that major television and radio broadcasting networks pursuant to pressures from minority groups, have been, as a matter of general policy, banning references in the texts of Stephen Collins Foster's songs which are allegedly objectionable to such groups.

This, to my mind, suggests strongly the type of action taken by communistic Russia in its suppression of certain styles of literary writing deemed by the despotic leaders in that country to be objectionable and "non-Marxist."

As of today, so far as I know, this policy has been made applicable to such of Foster's works as My Old Kentucky Home, Kentucky's State song, which is known and loved throughout the world. However, the logical application of such a policy might well equally apply to the literary works of Margaret Mitchell, William Faulkner, Mark Twain, Harriett Beecher Stowe, and to such currently popular musicals as Damn Yankee, The King and I, and so forth. The list could be a long one.

With a slight modification of the policy, according to the wishes of those who make the policy decisions for the major networks, the policy could be broadened so that most any type of economic, political, religious, or literary censorship could be invoked according to the likes or dislikes of the censor.

I maintain that these censorship acts are repugnant to our constitutional rights of freedom of speech. In fact, this is the worst incidence of "book burning" that has been called to my attention in the United States in modern times.

Of course, I am not criticizing the right of the networks or radio stations to edit material for adaptation to particular programs or for different uses. But there is quite a difference between such editorial license and a general policy banning particular phrases or references in literature, news, or other material.

Television and radio facilities are operated under license by a Federal agency and are granted monopolistic privileges in the dissemination of material to the general public. A thorough study of this policy should be made for this reason. I offer the following resolution calling for an investigation by the House Interstate and Foreign Commerce Committee of the policy and the authority of the Federal Communications Commission to cope with it in the light of our constitutional safeguards.

Report of National Projects Committee to the Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. SID SIMPSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 24, 1957

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the report of the national projects committee, which was unanimously adopted by the recent 44th national convention of the National Rivers and Harbors Congress held in Washington on May 16–18, 1957.

The permanent national projects committee of the congress consists of an outstanding expert on water-resource problems from each of the major drainage basins of the United States. They serve without compensation of any kind whatsoever and bear all of their own expenses when coming to Washington and while here serving on this committee.

The committee's purpose is to assist the sponsors of projects in preparing and presenting their data, so that they may be placed in line for approval. The projects recommended by the committee and endorsed by the congress are vigorously pressed for inclusion in the Government's public-works program, and appropriations or allocation of funds sought therefor.

We are grateful to the members of this committee for their public-spirited service in an effort to assist the Congress of the United States and the governmental agencies charged with the responsibility for these public works, as well as the people in the areas to be served thereby.

The members of the committee who served at its recent session follow:

NATIONAL RIVERS AND HARBORS CONGRESS—PROJECTS COMMITTEE

Representative SID SIMPSON, of Illinois, chairman.

New England division: William S. Wise, executive secretary, Flood Control and Water Policy Commission, State of Connecticut, Hartford, Conn.

North Atlantic division: Brig. Gen. James H. Stratton, United States Army (retired), consulting engineer, New York, N. Y.

South Atlantic division: H. H Buckman, consulting engineer, Jacksonville, Fla.; vice chairman.

Southwestern division: Dale Miller, executive vice president, Intracoastal Canal Association of Louisiana and Texas, Houston, Tex.

Lower Mississippi Valley division: Hu B. Myers, chief engineer, Department of Public Works, State of Louisiana, Baton Rouge, La.

North Central division: Al Hansen, comptroller, city of Minneapolis, Minneapolis, Minn.

Missouri River division: John B. Quinn, executive vice chairman, National Resources Development Association, Inc., Lincoln, Nebr.

Ohio River division: J. I. Perrey, chief engineer, Indiana Flood Control and Water Resources Commission, Indianapolis, Ind.

North Pacific division: Harold B Say, manager, Washington office, Portland, Oreg., Chamber of Commerce.

South Pacific division: Col. Thomas J. Weed, United States Army (retired); Washington representative, city and county of San Francisco, Calif.

Western Inter-Mountain Region: E. W. Rising, Washington representative, State Water Conservation Board of Montana, Helena, Mont.

REPORT OF THE PROJECTS COMMITTEE TO THE 44TH NATIONAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS

MAY 18, 1957.

Hon. OVERTON BROOKS,
President, National Rivers and Harbors Congress,
Washington, D. C.

DEAR MR. PRESIDENT: In pursuance of the call of the president, your projects committee met on May 16, 1957, to consider the projects submitted since the last session of the National Rivers and Harbors Congress. Hearings were afforded all who made appearance.

The committee at this session has examined 56 proposals embracing all resource improvements with which this congress is concerned, including navigable waterways, harbors, flood control, soil conservation, reclamation, and water conservation.

Of the proposals examined, this committee is convinced that 14 constitute projects sound in conception, needful, and sufficiently advanced in status to warrant endorsement, involving a total estimated cost of $354,467,000. Five proposals appear to be without sufficiently advanced development to warrant project endorsement at this time, but are believed to be meritorious and entitled to further consideration by this committee, if and when additional information may be adequate to warrant an endorsed status. We find that on 23 proposals, surveys have been authorized but the reports on such surveys have not been completed and we therefore recommend in these cases that the congress request the appropriate authority to complete reports of its investigations and surveys as soon as practicable in order that action may be taken toward classification by this congress. We find nine proposals, which on preliminary examination appear to be desirable and needful, and we accordingly recommend that engineering and economic investigations of survey scope be made in these cases with a view to developing projects for subsequent authorization. Of the proposals investigated, we find five are without necessary data or sponsorship to enable the committee to reach a reasonable conclusion on their worth. However, we desire to give the applications sympathetic consideration, and, if possible, offer to the proponents the services of this congress in reaching a solution to their problems. We have, therefore, not classified these but have suggested that the secretary communicate with the applicants concerned and request additional data upon the receipt of which further consideration will be given to their proposals.

Appendix A of this report sets forth in detail a list of all proposals and projects examined and the action taken thereon.

At the time of our national convention last year, the Congress of the United States was considering an omnibus rivers and harbors and flood-control bill. The bill had passed both houses of the United States Congress but was vetoed by the President. In the Presidential veto message, reference was made to 32 reports which had not been completely processed to Congress which was one of the principal reasons for the veto. In addition, questions were raised concerning 8 other reports which had been submitted to Congress prior to the veto message, making a total of 40 reports which were questioned by the President. As the Members of this Congress know, bill S. 497, which was reported by the Senate Public Works Committee contains all the projects that were in the vetoed omnibus bill, with the exception of one project. In addition, several projects and items were added to the bill in the committee and on the Senate floor. The bill is now before the Committee on Public Works, House of Representatives, for consideration.

Since consideration of the 1956 omnibus bill, additional river an harbor and flood-control surveys have been completed by the Corps of Engineers and reports thereon submitted to Congress. Some of these reports which are scheduled for consideration by the committee recommend construction of additional needed improvements for navigation, flood control, and other allied water uses. A total of 104 reports is included in the present authorization bill now under consideration by the House Public Works Committee; 53 are flood-control projects estimated to cost $552 million; 40 are navigation projects estimated to cost $120 million; and 8 are shore-protection projects costing an estimated $5 million. The bill also includes increased river basin authorization for 15 basins and 2 Bureau of Reclamation projects estimated to cost $863 million. The additional 15 favorable reports of all types now before Congress not included in the bill as passed by the Senate have a total estimated cost of $107 million. All of these projects have been found to be economically justified and the anticipated benefits will materially exceed the costs. Many of the pending recommendations in the reports included in bill S. 497 and those being considered by the House Public Works Committee are of high importance to the Nation's expanding economy, and should be provided as soon as possible. Your projects committee, therefore, recommends that the Congress of the United States be requested to give consideration to early authorization of these projects, and to the appropriation of funds for construction.

Since our last meeting, there has been much activity in connection with the Federal civil-works construction and investigation program and in the field of water resources policy. During the past weeks and at the moment another great flood is taking its toll of destruction in the States of Texas, Oklahoma, Louisiana, and Arkansas. Heavy inundation is occurring on the Red River below Shreveport, La., and the flood on this river is the second highest of record. Several lives have been lost, and the estimated damage to agriculture, residential and industrial areas in Texas alone has exceeded an estimated $50 million. The damages in this area would have been much larger had not some of the authorized flood-control projects been constructed and placed in operation. Existing projects on the Trinity and Brazos Rivers have prevented an estimated $88 million in damages and authorized projects would have prevented an additional estimated $29 million of damages. The devastating floods in New England and Pacific Northwest during the past few years are still fresh in our minds, and show that much remains to be done in the field of flood control particularly in the determination of the feasibility of projects for the prevention of these flood damages and the loss of human lives. Where or when another great flood may strike is not known, but it could be in any river basin at any time.

As we all know, the Corps of Engineers' survey program is nationwide, and it includes specific investigations called for by Congress in recognition of the devastating floods in the Northeastern States and the Pacific Northwest in 1955 which authorized investigations of these areas to determine the practical means of reduction of loss of human lives and damages to property. Reports recommending flood-control works, on the most severely damaged areas in New England, have been completed and submitted to Congress by the Corps of Engineers and are included in the omnibus bill now before the Congress. As a result of hurricane damage to our coastal and tidal areas, Congress has authorized an investigation to study hurricanes to include the securing of data on hurricanes' frequency and behavior and the establishment of means to prevent loss of human lives and property damage. It is evident, therefore, that the development of plans for the control of floods and minimizing the destructive force of hurricanes are of paramount importance. Areas severely damaged by the hurricanes of 1954 have been studied in detail and less severely damaged areas are receiving a general appraisal to ascertain if more detailed study is warranted. Field reports on two of the areas most seriously damaged have been completed and are now in the process of being submitted to Congress. In this connection we must never for one moment lose sight of the objectives of the National Rivers and Harbors Congress in supporting this great program of water resource development.

The need for funds for carrying out investigations for flood control, hurricanes, navigation and related uses is as urgent at this time as any time in the history of this program. The investigations should go forward in order that a well-planned construction program can be made for the time that construction funds can be made available

for those projects which may be recommended as a result of these studies and that are authorized by Congress. We have watched with concern the gradual retardation of the navigation and flood-control program of the Corps of Engineers, not only for new work but also for maintenance and investigations. Although much work remains to be done in the field of water resource development throughout the country, we feel that the problem is being expertly handled by the Federal agencies in cooperation with the States concerned. The need for full-scale development of our water resources program is greater today than ever before. The projects committee, therefore, considers it highly important that sufficient funds be provided in order that the Federal agencies can carry out their respective water resources program in an orderly fashion. Your committee is concerned over the large backlog of investigations authorized by Congress to be carried out by the various Federal agencies and recommends that appropriations be increased at this time in order that the backlog be reduced and that a reserve of projects may be built up for activation at such time as the economy of the Nation demands.

We wish to commend the various Federal agencies involved in the investigations and provisions of water resources projects on their improvements in development of sound procedures of project analysis and formulation, and the increased cooperation among agencies and with the States and local interests. We believe that true partnership between the Federal Government and its citizens lies not only in the sharing of costs, but also from the common sharing of problems and their development and solution. An example is the pending hurricane studies being made along the eastern and southern seaboards, in which the States, local municipalities, and many of the Federal agencies are cooperating in making these studies.

We renew our previous recommendations that existing and proposed channels for inland navigation be studied with a view to developing a practical and rational method for evaluating their strategic importance. The Committee hopes to develop procedure under which, when specifically requested by the proponents, it may assign to navigation projects and to the navigation features of multiple-purpose projects a "strategic value rating" in addition to and aside from their peacetime economic value. These ratings would express the Committee's judgment as to the relative strategic value of any project for inland navigation according to the standards, considerations and definitions which the Committee may develop. The purpose of assigning such ratings is to develop our strategic reserve of inland-water-transport facilities and the coordination of these with facilities for other means of transport in order to aid local, State, and Federal Governments to assess the value of the contribution by a project to such reserve so that it may have weight in the overall evaluation of the project. A high strategic value rating is not at all necessary to the complete economic justification of a project, but such a rating may serve to justify a project not justified by the application of strictly economic criteria alone. In general, the Committee would include in its definition of "strategic value" any existing or potential use, device, or feature of a project which may be reasonably expected to importantly and specifically contribute to the defense potential of the United States, either military or civilian, with respect to its overall rail, highway, waterway, and air-transport network.

The Committee further recommends that the executive vice president be authorized to issue to proponents, when requested by them, an appropriate certificate of classification with respect to any project classified by the Committee.

Attention is called to the fact that the recommendations made by the President's special committee appointed to review the rules governing the applications by proponents for the classification of projects are pending before the board of directors, and that promulgation of the revised rules may be expected within the near future. The Committee recommends a careful study of these by all future applicants.

Respectfully submitted.

SID SIMPSON,
Chairman.

NOTE A.—A project which has been placed in class II, III, IV, or V by the Committee may be reexamined from time to time upon due application and the submission of material supplementary information, with a view to advancing its classification; but no project will be reported upon by the Committee more than once in each year.

NOTE B.—Attention is called to the fact that when a project is once put in class I, endorsed, such status continues and it is unnecessary to follow up at subsequent sessions with new applications. All projects endorsed by the Congress, upon the recommendation of the Committee, retain their status until finally constructed, unless such action is rescinded by the Congress, and the Congress stands pledged to do everything possible to assist in reaching that goal.

APPLICATIONS FOR APPROVAL OF PROJECTS RECEIVED BY THE PROJECTS COMMITTEE

APPENDIX A

[Letter "R" following the project number indicates revision of a previous application]

CLASS I. PROJECTS ENDORSED

Endorsed.—This means that the committee is convinced that the project is sound, needful, and sufficiently advanced in status, and should be promptly constructed in the public interest.

Docket No.	Name of project	State	Division
898-R-1	Salem, Mass., Harbor Navigation project	Massachusetts	New England.
898-R-2	Salem Harbor	do	Do.
740-R-1	Annisquan River dredging	do	Do.
852-AR-3	Norfolk Harbor	Virginia	North Atlantic.
870-R-3-B	Delaware River, Philadelphia to Trenton	New Jersey, Pennsylvania, and Delaware	Do.
875-R-5	Whitewater River East Fork at Brookville	Indiana	Ohio River.
883-R-3	San Juan Harbor, improvements to channels and turning basins	Commonwealth of Puerto Rico	South Atlantic.
1041-R	Dillon Reservoir project	Ohio	Ohio River.
1042-R	Oscoda harbor of refuge	Michigan	North Central
1043-R	Whitefish Point harbor of refuge	do	Do.
1044-R	Harrisville harbor of refuge	do	Do.
1045-R	Morehead City Harbor and Beaufort Inlet	North Carolina	South Atlantic.
1063	Monroe Reservoir on Salt Creek near Harrodsburg	Indiana	Ohio River.
1072-A	Toledo Harbor	Ohio	North Central.

CLASS II. PROJECTS CLASSIFIED AS MERITORIOUS

Meritorious.—This means that the committee believes that although the project is not sufficiently advanced in status to warrant its present endorsement, it is meritorious and open for further consideration by the committee.

Docket No.	Name of project	State	Division
793-R-3	Cleves flood protection	Ohio	Ohio River.
890-R-3	Kahului Harbor improvements, Maui	Territory of Hawaii	South Pacific.
909-R	Seedskee project	Wyoming	Missouri River
910-R	LaBarge project	do	Do.
1039-R-2	New York and New Jersey channels	New York and New Jersey	North Atlantic.

APPLICATIONS FOR APPROVAL OF PROJECTS RECEIVED BY THE PROJECTS COMMITTEE—Continued

[Letter "R" following the project number indicates revision of a previous application]

CLASS III. EXPEDITIOUS REPORT ON AUTHORIZED SURVEY REQUESTED

Expeditious report on authorized survey requested.—This means that the committee believes the Congress should request the engineering authority to expedite the report of its investigation and survey of the project to the end that appropriate further action may be had thereon in regard to classification by the Congress.

Docket No.	Name of project	State	Division
2-R-2	St. Johns River, Fla., Jacksonville to the ocean, 42-foot channel	Florida	South Atlantic.
720-R	Cape Fear River Basin	North Carolina	Do.
788-R-3	Waccamaw River	do	Do.
806-R	Neuse River Basin	do	Do.
843-R-4	Levees east of Chandlerville (Sangamon River)	Illinois	North Central.
870-R-3-A	Delaware River, Philadelphia to the sea	New Jersey, Pennsylvania and Delaware	North Atlantic.
967-R	Breakwall—Port of Cleveland	Ohio	North Central.
979-R	Wilmington Harbor (lower Cape Fear River)	North Carolina	South Atlantic.
994-R	Flint River channelization flood control, and hydroelectric development	Georgia	Do.
1033-R	Drum Inlet	North Carolina	Do.
1040-R	Hudson River channel	New York and New Jersey	North Atlantic.
1057	Penobscot River	Maine	New England.
1060	Corea Harbor	do	Do.
1062	Passaic River Basin flood control	New Jersey	North Atlantic.
1066	Black River Bay as the port of northern New York	New York	North Central.
1067	Tunnel Mill Dam	Iowa	Do.
1068	Lobster Cove—Gloucester Anchorage Basin	Massachusetts	New England.
1069	Knik Arm Causeway Dam	Western Alaska	North Pacific.
1070	Siuslaw River and bar	Oregon	Do.
1071	Rogue River and tributaries survey report	do	Do.
1072-R	Toledo Harbor	Ohio	North Central.
1073	Snake River project, Mountain Home division, Guffey unit	Idaho	North Pacific.
1074	Sanford-Titusville Canal	Florida	South Atlantic.

CLASS IV. PROJECTS RECOMMENDED FOR SURVEY

Recommended for survey.—This means that the committee believes that sufficient showing on behalf of the project has been made to warrant further examination in the form of an adequate survey by an appropriate agency of the Federal Government.

Docket No.	Name of project	State	Division
1053	Big Bay harbor of refuge	Michigan	North Central.
1054	Little Lake harbor of refuge	do	Do.
1055	Lac LaBelle harbor of refuge	do	Do.
1058	Breakwater, Monhegan Island	Maine	New England.
1059	Portland, Maine, harbor	do	Do.
1061	Stave Island	do	Do.
1064	Additional improved anchorage in Norfolk Harbor	Virginia	North Atlantic.
1065	Channel from Old Point to Newport News	do	Do.
1077	Wilkes-Barre-Hanover township flood-control project	Pennsylvania	Do.

Supreme Court Aids Subversion

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include an editorial from the July 1957 issue of the National Republic, a monthly magazine published in the Nation's Capital and devoted to the cause of fundamental Americanism.

The editorial follows:

SUPREME COURT AIDS SUBVERSION

All America is shocked and dismayed by the recent trend of Supreme Court decisions aiding and abetting Communist penetration and subversion in the United States. In little more than 1 year our Supreme Court has handed down 12 major decisions undermining and weakening the Federal Government's drive against Communist infiltration at home. In short, the Supreme Court has given the green light to communism.

In the opinion of the president of the National Association of State Attorneys General (Louis C. Wyman, of New Hampshire), these recent hairsplitting decisions "have set the United States back 25 years" in its efforts to control world-wrecking communism. Moreover, these decisions, Attorney General Wyman continued, "have made infinitely more difficult, if not impossible, the taking of testimony relating to subversive activities."

The upshot of the Supreme Court's recent rulings is a new doctrine in United States law, namely, that communism is merely another political party, worthy of all protections and securities under the Constitution of the United States, just like Republicans, Democrats, or any other American organization.

"By equating lawful politics with communism," Attorney General Wyman added, the Supreme Court now has "suggested to America and to the world that Communists and communism may not, in fact, be subversive of our way of life, at all."

One vigorous and determined piece of new legislation promptly enacted by Congress could set the Court right on this scope, in short order.

Communism, in whatever country, is always the instrument of a foreign government. Communism comes only to destroy. The first power of any government is to protect itself against destruction by its enemies. This fact our present Supreme Court appears to neglect and ignore.

Some of the Court's recent rulings have limited drastically the scope of antisubversive laws and regulations. Others have made it much more difficult for the Justice Department to prosecute violators of these laws.

In still other cases, the Court has ordered new trials for Communists on technical grounds, which dissenting Justices have called picayunish and immaterial.

The Court has split on most of these rulings. But three members have concurred in all critical decisions. They are Chief Justice Earl Warren and Associate Justices William O. Douglas and Hugo L. Black.

Justice Felix Frankfurter has concurred in all but two decisions. Justice William J. Brennan, Jr., has concurred in all 5 of the decisions reached since he joined the Court.

Justices Tom C. Clark and Harold H. Burton have dissented from most of these decisions. Justice John M. Harlan has concurred in 6 and dissented in 4. Justice Charles E. Whittaker has not participated in any of the cases.

Here is a brief summary of the Court's actions in the 12 cases:

Communist Party case: Sent back to the Subversive Activities Control Board (SACB) on grounds that testimony of three of the Government's witnesses might be tainted. The Board threw out the disputed testimony, but the Court will have to pass again on its finding that the party is Soviet-dominated.

Cole case: Limited the Government's security-risk program (under President Eisenhower's Executive Order 10450) to employees in sensitive jobs.

Slowckowner case: Invalidated a provision of the New York City charter providing for dismissal of city employees who took the fifth amendment.

Gold case: Ordered a new trial for Labor Leader Ben Gold, who had been convicted of lying when he signed a non-Communist affidavit. The decision was based on the technical ground that FBI agents, investigating alleged jury tampering in another case, had questioned members of the Gold jury. The Government has dropped prosecution of Gold as a result.

Kremen case: Ordered new trial for Shirley Kremen and two others convicted of sheltering Communist Leader Robert C. Thompson while he was a fugitive from justice. Court held FBI lacked warrant to search the mountain cabin in which Thompson was hidden.

Nelson case: Upset conviction of Communist Leader Steve Nelson in Pennsylvania State courts on ground Smith Act gave Federal Government exclusive jurisdiction in

subversive cases. This decision has effectively blocked all prosecutions of subversives under State laws.

Nelson case: Ordered new Smith Act trials for Steve Nelson and four others on ground testimony of one Government witness might be tainted.

Konigsberg case: Overruled California courts to force applicant to be admitted to bar even though he refused to answer questions about past Communist associations.

Schware case: Upset New Mexico's refusal to admit to the bar an applicant who admitted past Communist Party membership.

Jencks case: Ordered new trial for Clinton E. Jencks, labor leader convicted of lying when he signed non-Communist affidavit, on grounds trial court had denied him access to FBI reports.

In another case the Court freed 5 of 14 California Communist leaders and ordered new trials for the other 9, convicted for violation of the Smith Act, which outlaws organizations advocating overthrow of the Government by force and violence.

The Court set aside State court convictions of 3 Communist leaders in Ohio; ordered new trials in the contempt convictions of a top Communist Party leader of Illinois and another in North Carolina; ordered a review of the cases of 6 Communist leaders in Michigan; reversed a decision of the New Hampshire courts in the case of a professor who defied the State's investigative body; upheld the right of individuals to defy congressional committees through fifth amendment pleadings and denounced an assumption of guilt of those adopting the protection.

Finally, the Supreme Court ruled in late June that Secretary of State Dean Acheson was without authority to dismiss John Stewart Service for alleged Communistic sympathies and associations during his State Department career.

Taken together, all of these decisions appear to parrot the doctrine so long advocated by the Fund for the Republic, the Ford Foundation satellite allegedly set up to block and frustrate effective Federal action against communism.

Perhaps it is time for a rigorous congressional inquiry into the personnel of the Supreme Court below the level of Justice?

Who writes these anti-American decisions and then converts a majority of the Justices to their Red logic?

History will long remember the words of Congressman HOWARD W. SMITH, of Virginia, author of the Smith Act of 1940. Commenting on the recent trend of Supreme Court decisions, Representative SMITH told the House:

"I do not recall any case decided by the present Court which the Communists have lost."

For the Particular Attention of Name Callers

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 24, 1957

Mr. MULTER. Mr. Speaker, under date of July 23, 1957, I received the following letter from Emil Ammann of the Newark Spinning & Stamping Co., Hillside, N. J. The third paragraph of this letter is particularly pertinent and I commend it to the attention of our colleagues.

The letter follows:

NEWARK SPINNING & STAMPING CO.,
Hillside, N. J., July 23, 1957.

Hon. ABRAHAM J. MULTER,
House Office Building,
Washington, D. C.

DEAR MR. MULTER: I wish to express my opinion that I am 100 percent in agreement with the speech made by Senator MANSFIELD which I read in the Newark Sunday News of July 14, 1957.

As long as we fear the Communists and don't trust them, I think it is the wrong time to talk disarmament, air inspection, and making the H-bomb obsolete. As long as we have the H-bomb, there will be no major war. In my opinion it is like advising the enemy that we are throwing our weapons away, disconnecting our burglar alarm and inviting them to our store.

The best thing to do is first make friends. This can be done by doing business with the nations. Eliminate calling other countries names and creating hatred through the newspapers, radio and television. After we have made friends and trust one another, then it will be the proper time to talk disarmament.

I trust that you will give this letter your sincere consideration.

Very truly yours,

EMIL AMMANN.

This Could Be Carried Too Far

EXTENSION OF REMARKS

OF

HON. JOHN C. WATTS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 24, 1957

Mr. WATTS. Mr. Speaker, in connection with a resolution that I have introduced today concerning certain censorship policies of major radio and television networks, under unanimous consent I include an editorial appearing in the Lexington Herald on July 23, 1957, following my remarks:

THIS COULD BE CARRIED TOO FAR

NEW YORK, July 20.—The big radio and television networks have banned the original texts of My Old Kentucky Home and Way Down Upon the Swanee River and hereafter any writings to which any racial group or people might take exception will have to submit to censorship. Words or phrases which come within the ban must be removed and substitute words provided on all networks, it was stated.

If words or phrases of any of our old songs are offensive to any groups they should, by all means, be changed. It will not affect in any great degree the sense or theme of the songs but it will serve to satisfy every listener—and, after all, isn't that what we want?

Let's take that Stephen Collins Foster masterpiece, the song that is known from one end of the world to the other, the song that makes every listener wish that he were a Kentuckian, and make it presentable for network singing:

"The sun shines bright, in my old Kentucky home."

(Make it brightly, as the original is offensive to grammarians.)

" 'Tis summer, the darkies are gay."

(The networks already have made this "people.")

"The corn top's ripe, and the meadows in the bloom."

(This is a reflection on the farmer who hasn't cut his meadow.)

"While the birds make music all the day."

(By permission of Petrillo and American Federation of Musicians.)

"The young folks roll on the little cabin floor."

(Word folks is archaic, use folk. Cabin indicates poverty and we suggest "On FHA housing project" floor.)

"All merry, all happy and bright."

(The way we were before the radio and TV took over.)

"By and by hard times comes a-knockin' at the door."

(This is awful. Hard times in 1957. "Comes a-knocking" is poor grammar and rather silly, don't you think?)

"Then my old Kentucky home, good night."

(With about one more of these foolish rules, you've said it.)

Thank goodness we were permitted to see the late Al Jolson drop on one knee and implore the "mammy" of the old South to take him once more on her knee before the broadcasters made him change it to "mother" or "mam-ma," or told him that he would have to substitute "nurse of my childhood" for the familiar:

"Just hang my cradle, mammy mine, on that Mason-Dixon line."

What this country needs more than anything right now is a songwriter to write a ditty to the broadcasters of America under the title, "How Silly Can You Get."

By what new name shall we call Abie's Irish Rose? Shall we ban from the stage My Fair Lady, Dam Yankees, and the Mikado because they reflect upon some group or nation? Shall we forego hearing the great George Jessel talk over the telephone with "mamma" or miss the delightful humor of Molly Berg as she takes off on the members of her race?

This Is the Right Place

EXTENSION OF REMARKS

OF

HON. WILLIAM A. DAWSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. DAWSON of Utah. Mr. Speaker, this is a very special day for Utah and for Utahans wherever they may be. One hundred and ten years ago, on July 24, 1847, the main body of the first party of Mormon pioneers—143 men, 3 women, and 2 children—emerged from a nearly impenetrable mountain fastness into the then-barren valley of Great Salt Lake.

What they, and the thousands who followed them, accomplished in that arid wilderness is too well known to need repetition here. By faith, energy, and determination they subdued the wilderness and made the desert bloom. I know of no epic to match it in American history.

Now, each July 24 is a Utah holiday during which Utahans of all faiths pause to celebrate this anniversary of pioneer settlement; to pay homage to these forebears of ours; to draw on accomplishments of the past for the inspiration for the future.

I invite my colleague to share with us the pride we feel in these Mormon pioneers who made such a contribution not only to their church but to their country. I am sure no one can ever visit that now-green valley without affirming the prophetic words of Brigham Young: "This is the right place."

Call To Save Hoover's FBI

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 24, 1957

Mr. SMITH of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Mr. George Todt, noted columnist of the Valley Times, North Hollywood, Calif., which I feel is worthy of attention by every Member of this Congress.

The editorial follows:

CALL TO SAVE HOOVER'S FBI

"We are under a Constitution, but the Constitution is what the judges say it is."—Charles Evans Hughes.

The highest court in the land is no better than the men who comprise it. There is no such thing as sancrosanct courts or sancrosanct judges. The latter are human beings, the same as everyone else, and as such are not infallible in their wisdom.

What is a judge? In the majority of cases in the United States—especially in the lower courts—he is simply a lawyer who runs for election and beats his opposition. Then he sits on the bench for the duration of his term in office and interprets the law as an umpire, or sorts, between opposing lawyers who try their cases in his court.

Generally speaking, the judge does not make the law—that is left to the legislators to do. However, in his interpretation of the law, a judge can sometimes cause the same effect to be felt by the public as though he had actually created new legislation on his own. If his decision is a wise one, it will probably hold up—even if challenged in higher courts. But what if his decision is an unwise one?

Well, such a judicial decision—granting that it is a wrongful one, for whatever the reason might be—stands an excellent chance of being defeated and reversed when argued in a higher court upon appeal at a later date. And if not—the public can make it quite certain that judges who render uncalled for verdicts may have a hard time standing for reelection the next time up to bat. That's one way to recall unpopular jurists.

But what about the higher court justices who do not run for office, being instead appointed to their positions? In the case of the Supreme Court, tenure is for life. No member of the high court has ever been impeached or removed from office. So what recourse does the public have if it considers that such an august body might get out of line? The answer is a difficult one to give with any degree of assurance.

However, I believe that the strongest remedy—all things considered—lies within the reach of Congress alone. For the President only has the power of appointment—not removal—of the members of the Court. Once they are in, he cannot touch them. Not so with Congress, however. For the legislative branch of our Government has the authority to make the kind of legislation which can be so crystal clear in its intent that it defies misinterpretation.

"In questions of power," said Thomas Jefferson in the Kentucky resolution, "let no more be heard of confidence in man, but bind him down from mischief by the chains of the Constitution." Man, in this case, might be applicable to some of our "modern justices" of the Supreme Court. It would not be untrue to say that there is a large segment of the American people today who would like to see the chains of the Constitution applied here.

One such person, as an example, might be J. Edgar Hoover of the Federal Bureau of Investigation in Washington. The last I heard, Mr. Hoover seems to think that the opening of FBI files to defense counsel in the future might spell the doom of his department's efficiency—not to mention the very lives of many of his intelligence agents.

Another such person who seems deeply offended at this incomprehensible action, according to a female INS reporter, is none other than Ike, himself. In the account I read, he seemed infuriated at the lack of judgment which put the FBI in such an untenable position. If this was his true reaction, and I assume it was, the President has about 95 percent of all normal Democrats and Republicans in his corner on this one.

I cannot think of anything this country needs more as an emergency measure today than for Congress to come up immediately with some strong remedial legislation which will reverse the effect of this unfortunate decision of the Supreme Court regarding disclosure of the FBI files. Barring that, Mr. Hoover might as well be told to close up his shop.

Judge Edgar Hoover has been one of the greatest bulwarks in the Nation against the criminal Communist conspiracy directed by Moscow over the years against our country. He has used his power wisely and well—as a first-rate American should do inherently. To hamstring this man and his dedicated mission would be a miscarriage of justice. It's up to Congress to see that it doesn't happen. Note to Capitol Hill: Roll up your sleeves and get on with it, Mr. Congressman.

Resolution of Condolence, Senator Joseph R. McCarthy

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 24, 1957

Mr. WHARTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution adopted by council No. 275 of the Knights of Columbus, Kingston, N. Y., which was presented to Mrs. Jean McCarthy, beloved wife of the late Senator Joseph R. McCarthy:

RESOLUTION OF CONDOLENCE

Whereas it has pleased Almighty God, in His infinite wisdom, to withdraw from our midst Senator Joseph R. McCarty; and

Whereas Senator Joseph R. McCarthy was a Brother Knight of Columbus and a distinguished Senator of the United States; and

Whereas Senator Joseph R. McCarthy performed an outstanding service by alerting the American people to the dangers of Communists in our Government; and

Whereas by his death, we have sustained the loss of a beloved patriotic American: Therefore be it

Resolved, That while we bow in submission to the will of our Heavenly Father, Kingston Council No. 275, Knights of Columbus, does nonetheless mourn the loss of Senator Joseph R. McCarthy who has been taken from us; and be it further

Resolved, That this testimonial of condolence, duly signed and sealed, be offered to Mrs. Joseph R. McCarthy, as an expression of heartfelt sympathy in her deep affliction; and be it further

Resolved, That this resolution of condolence be spread on the minutes of this meeting; and be it further

Resolved, That this meeting of May 6, 1957, be closed in prayerful memory of our departed brother, Senator Joseph R. McCarthy.

Annuities of Civil Service Retirees

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. MILLER of California. Mr. Speaker, I have submitted a statement, which I would like to have extended in the RECORD, to the House Post Office and Civil Service Committee in support of legislation to increase the annuities of retired civil-service workers.

My statement follows:

STATEMENT BY CONGRESSMAN GEORGE P. MILLER TO THE POST OFFICE AND CIVIL SERVICE COMMITTEE IN BEHALF OF H. R. 786, A BILL TO INCREASE ANNUITIES PAYABLE TO CIVIL SERVICE RETIREES

Mr. Chairman, the annuities of the civil service employees who have retired under the provisions of the Civil Service Retirement Act should be immediately increased. Such an increase is long overdue and the House Committee on Post Office and Civil Service and the Congress should act with dispatch and celerity in bringing a bill before the House to effect such an upward adjustment.

If the President exercises his prerogative and vetoes such a measure, as has been rumored, let the responsibility of his action rest with him.

You and I are both aware of the story recently carried on the front pages of newspapers across the Nation, recounting the fact that the cost of living hit a new alltime high for the ninth month in a row. High prices for food, medical expenses, rents, clothing, et cetera, affect each American consumer alike. No one is spared. However, annuitants on a fixed income are the hardest hit when prices soar since their incomes remain static.

If we analyze the Bureau of Labor Statistics reports we find that the costs of food varies seasonally while there has been a progressive increase in such items as rent, utilities, transportation, and medical expenses. Rent has been going up and up since the removal of rent control.

A superficial argument and one, incidentally, without moral foundation, has been made against increasing annuities on the ground that it would be inflationary. Any money coming into the economy is inflationary if you want to be highly technical, I suppose. But is the money we will pay these people any more inflationary than the rise in the cost of gas granted the big utilities? Is it more inflationary than the arbitrary rise in the cost of steel—basic to our economy—or the stock dividends paid by the big corporations out of their recordbreaking high earnings? Is it more inflationary than the continued tight-money policy of the administration? I do not think it is.

Annuitants are caught in a trap. They are victims of the times and their troubles are not of their own making. We are in a position to free them from this entrapment and, as far as I am concerned, we have a moral obligation to do so.

Three-fourths of all retired Federal workers receive less than $150 a month. It is difficult for them to maintain a decent stand-

ard of living and, at best, all they can afford are the bare necessities of life.

The money paid to annuitants circulates. It is not impounded where all the people do not enjoy its benefits. They are, by necessity, forced to spend the money they receive. And they spend it at the lowest level of our economy, for food, clothing, medical care, and shelter. It goes to small business and professional men. It is the kind of spending that stimulates small business—the kind of spending we need right now.

The Congress should give serious consideration to changing the formula by which pensions are computed under the Civil Service Retirement Act. Armed services personnel receive retirement pay based on the current salary of the job. In my opinion this is a reasonable solution to the problem.

Pensions received by retired Government workers are presently based on the average annual salary of the highest continuous 5 years of the beneficiaries former employment. In most cases the employee reaches his maximum salary just before he retires so it is his average last 5 years salary that becomes the "multiplier." His years of acceptable service times the "multiplier" is his retirement pay.

The salaries of Government employees have steadily risen over the long years in rough proportion to the higher cost of living. However, this raise has not been a real one but a relative one. So we find that the percentage paid into the retirement fund, a denial of buying power, is relatively the same.

For instance, a letter carrier earning $1,800 15 years ago paid into the fund, on the basis of a 6 percent contribution, $104 a year. A letter carrier today, paid at the median level of $4,000 a year, would contribute to the retirement fund about $250 a year. The benefits paid to the annuitant and to the man in active service when he retires will be in substantially the same proportion.

The $104 that the annuitant denied himself during his working life would have purchased 1,040 loaves of bread at 10 cents a loaf. The $250 paid by today's worker into retirement would purchase about 1,130 loaves of bread at 22 cents a loaf.

So if we interpret the 2 contributions in terms of loaves of bread, we find them in the same relative position to their respective incomes. But under the fallacious theory that we pay fixed annuities, we give no consideration to the fact that the annuitant today can buy only 473 loaves of bread—a decline in purchasing power of over 50 percent.

Congress should give earnest thought to the continuing plight in which retired Government workers find themselves and enact legislation to give them a deserved increase in their annuities which will enable them to live with the dignity that is the inherent right of all Amercans. They paid for their security: It is not a gift. They are not responsible for the galloping cost of living. They served us well. Let us be as generous with them.

Postal Pay Increase

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK

SPEECH

Tuesday, July 23, 1957

Mr. DOOLEY. Mr. Speaker, I stand firmly for the passage of H. R. 2474 because I believe it is a step in the right direction. To my mind, the amount is insufficient to meet the needs of the postal employees but it is better than no increase at all.

The postal workers are the representatives of our Government. They deserve to be treated as regular employees who have the best interests of their country at heart. They perform an arduous multitude of tasks daily and the monetary reward should be sufficient to meet the requirements of this inflated period and enable them to live without resorting to duplicate employment and borrowing.

The average postal employee, be he clerk or carrier, is proud of his job but he is disheartened because of the apathy of his employer, the United States Government, to give him his due. The lag in equitable pay for post office employees is regrettable. This bill will offset some of the deficiency. Despite my succession of votes for cuts in the budget, I fully believe that I am justified in supporting this measure.

Elmer Lewis

SPEECH
OF
HON. EDWARD T. MILLER
OF
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. MILLER of Maryland. Mr. Speaker, all of us who knew him are saddened by the death of the late superintendent of the House Document Room, Elmer Lewis. The thoughts of many are expressed in a tribute written by my constituent and recent page, Robert Bauman, which follows:

THE PASSING OF A FRIEND—ELMER LEWIS

(By Robert Bauman)

Whenever a well-known personage dies many people are sorrowed by his death, but each day many people pass away whose names never make the front pages. In their own way they may have been as great or greater, but their work did not perhaps lead them into the daily limelight. Such a man was Elmer Lewis.

To a new page in the 83d Congress, Mr. Lewis appeared as a man who was not to be trifled with, sitting behind his familiar roll-top desk, distinguished by his iron-gray hair and his serious mien. He seemed to be a man who knew his business and truly he was. For over a generation he ran the House Document Room, revamped its antiquated bill system, organized and streamlined it into a smooth-running part of the legislative machinery. Much can and will be said about the work he did as superintendent, but he had another and more personal side that he often displayed.

He was warm and human underneath his stern dignity. He was not too busy to engage a young page in political discussion about his own Wisconsin or the page's native State. He greeted you with a reserved but friendly "Good morning" amidst ringing phones and buzzing activity. He always knew the answers to innumerable questions, or at least where to find the answer.

In recent months he had been ill and many were the people who inquired at the Document Room as to his health. The boys in the Document Room chipped in and bought him a TV set to occupy his hours. It was taken for granted that he would soon be well enough to return to the job which he had served for 37 years. But that was not to be. On last Monday afternoon he passed away in his 61st year, a victim of cancer.

Many friends will mourn his passing and remember him kindly for years to come. Life here at the Capitol goes on as usual, but Elmer Lewis has left his mark on the job he filled so capably and on the many of his friends. We are perhaps all better for having known him, even if but for a short time. May he rest in peace.

Resolutions Adopted by Polish-American Veterans of Massachusetts

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. DONOHUE. Mr. Speaker, I would like to include the resolutions adopted by the Polish-American Veterans of Massachusetts in convention assembled in Fall River, Mass., on June 7, 8, and 9, 1957.

The resolutions follow:

Whereas Poland has struck the first effective blow for freedom within the Soviet orbit in Poznan and shook the very foundations of the Communist colonial empire; and

Whereas this was accomplished without bloodshed by the organized and asserted will of the Polish people and not through voluntary liberalization of Communist tyranny; and

Whereas in the present circumstances, the Polish people cannot go farther on the road toward complete liberalization without moral and material support: Therefore be it

Resolved, That the Polish American Veterans of Massachusetts, assembled in Fall River, Mass., June 7, 8, and 9, for its ninth annual convention, go on record in favor of immediate economic aid for Poland from the United States Government to help weaken communism not only on the peripheries of the Red empire, but deep within the Soviet orbit; and be it further

Resolved, That copies of this resolution be forwarded to President Eisenhower, Secretary of State Dulles, and Federal Government representatives from the State of Massachusetts.

Whereas an economic aid pact with the United States and the Warsaw government was signed June 7, 1957; and

Whereas the agreement was much smaller than that asked for by the Warsaw government, but nevertheless, proves that the United States does want to aid the Polish people enslaved behind the Iron Curtain: Therefore be it

Resolved, That the Polish American Veterans assembled at their ninth annual State convention in Fall River, Mass., June 7, 8, and 9, 1957, acclaim the signing of the economic aid agreement and commend the United States Government policy in aiding the people of Poland.

Whereas members of the United States Armed Forces are required to serve involuntarily outside the limits of the continental United States; and

Whereas the United States through the status of forces treaties negotiated by the State Department with various foreign governments, has agreed to place American military personnel under the jurisdiction of the courts of such foreign nations; and

Whereas such action has deprived United States citizens serving in the military service of their constitutional rights; be it

Resolved, That the Polish American Veterans of Massachusetts in the annual convention session protest this action by the United States Government and respectfully urge the termination of such treaties; and be it further

Resolved, That copies of this resolution be forwarded to President Eisenhower, Secretary of State Dulles, and Federal Government representatives from the State of Massachusetts.

Submitted in accordance with the wishes of the Polish American Veterans of Massachusetts.

EDWARD L. LEPKOWSKI,
State Department Commander.

Charges of Illegality Unfounded

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. PORTER. Mr. Speaker, the following was released by my office today and speaks for itself:

PRESS RELEASE FROM THE OFFICE OF REPRESENTATIVE CHARLES O. PORTER, WASHINGTON, D. C.

Representative CHARLES O. PORTER, Democrat, Oregon, has received from the American Law Division of the Library of Congress a memorandum which rejects the stand taken by Representative B. CARROLL REECE on July 19 that Congressman PORTER violated any statutory provisions in connection with his recent trips to Latin American countries.

The memorandum had been requested by PORTER from the Library of Congress through the Legislative Reference Service. It is signed by Spencer M. Beresford, an attorney and Assistant Chief of the American Law Division.

Beresford notes that in his remarks of July 19 (CONGRESSIONAL RECORD, vol. 103, No. 128, p. 11067) concerning Mr. PORTER's trips to Costa Rica and Colombia, Representative REECE implied that PORTER had violated two Federal statutes. Beresford said the statutory provisions to which REECE appears to refer are 18 U. S. C. 1914 and 22 U. S. C. 611. The first section forbids the receipt by a Government official or employee of any salary in connection with his services * * * from any source other than the Government of United States * * *." The other section defines the term "agent of a foreign principal," for purposes of the Foreign Agents Registration Act, as any person who does specified acts within the United States as the agent of a foreign government or political party.

In his memorandum Beresford says in part, "The facts as set forth by Representatives PORTER and REECE do not seem to substantiate the charge that either of these statutory provisions have been violated." He goes on to say that it does not appear that any salary "or indeed any money or its equivalent was received by any of the persons involved."

"As to the Foreign Agents Registration Act," said Beresford, "it does not appear that any of the prohibited acts has been committed." Beresford points out that REECE's "explicit charge is limited to 'accepting moneys' from a foreign government or other entity. To this extent, it would again be sufficient to point out that no money or its equivalent appears to have been received by any of the persons involved." •

After reading the American Law Division memorandum Congressman PORTER said, "It is really too bad that my distinguished colleague did not request a similar opinion before he decided to make his remarks on the subject."

A United Nations Force To Police the Peace

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 28, 1957

Mr. REUSS. Mr. Speaker, more and more people are interested in the possibility that out of the present United Nations emergency force in the Middle East a permanent U. N. force may develop. I am glad to be a sponsor of a concurrent resolution now before this House which urges that such a force be made a regular agency of the United Nations. Recently I had called to my attention an excellent editorial statement on the value of creating such a body. Under leave to extend my remarks, I am pleased to insert the following cogent editorial from the April 10, 1957, issue of the Appleton, Wis., Post-Crescent:

A PERMANENT UNEF?

When the United Nations created its special expeditionary force to police the peace in the Middle East it was doing something no international organization had ever done before. For the first time a military force, financed and commanded by a world organization, was sent into a troubled area to prevent angry nations from flying at each other's throats.

It is true that the allied forces in Korea were called a United Nations army and flew the U. N. flag from their headquarters, but that was pretty much a euphemism since some members of the U. N.—the Communist bloc—were openly helping the so-called enemies of the U. N. And while General MacArthur and his successors were dignified with the title of "U. N. commander" they actually served under the orders of their own country's government.

UNEF, of course, does not possess any real military power; its guns are merely symbolic of the moral prestige of the world organization. It is now becoming popular to refer to its as a "para-military" force, by which is meant that it is military in its organization and method of operation, but is not really expected to fight.

Nevertheless there exists the possibility that from this modest beginning the U. N. may be able to develop a real military police force of its own. It is now universally recognized that the U. N. is completely helpless in the face of big power determination or intransigence, the big powers in reality being only two in number—the United States and the U. S. S. R. If on any occasion either of those powers decides to go to war the U. N. has no power to stop it, except insofar as the other nations of the world expressing themselves in the U. N. forum are able to shame one or both of these adversaries into keeping the peace.

But it has long been recognized that wars between great powers often develop from disputes involving lesser nations, and here is where a permanent UNEF might be extremely valuable. The extraordinary prestige the U. N. enjoys in many parts of the world—even, apparently, in Communist and neutralist countries—means that most if not all of the world's governments would think twice before opening fire on soldiers wearing the U. N. emblem. Why not, therefore, use the technique of sending in a UNEF anywhere and any time some local or regional dispute threatens to flare up into a major war?

It is, of course, both inefficient and confusing to organize a new UNEF every time one is needed, as was done in the Middle East crisis. There would be great advantages to having a permanent UNEF already organized and ready to move whenever it received orders from the Security Council or General Assembly. It has been pointed out, for instance, that if such a force had been available during the few days of the Nagy regime in Hungary, it might have been rushed into the breach and the tragedy of Budapest avoided.

Since the United Nations is merely an association of states and not a world government, any military forces it might possess can be sent into a country only upon the invitation of that country's government. Yet undoubtedly there will be other situations in the future like the Hungarian case just cited, where a government in danger of being overwhelmed by internal or external forces might cry for help.

From the viewpoint of the United States there are a number of advantages to the idea of a permanent UNEF made up of soldiers from the small nations of the world. If that force should ever actually get into a fight, this country would not be supplying the bulk of the blood and treasure as was the case in Korea. Furthermore, if the UNEF turned out to be a really effective police force, even if limited in its scope and area of influence by big power realities, this country might be relieved of the job of becoming the world's policeman, a job into which we seem to be being pushed more and more every day.

A permanent UNEF, of course, would not be the U. N. military force that was envisioned by the U. N.'s founders back in 1945, but that was an impractical if wonderful dream, for the world had not then, nor has it yet, moved far enough along the road of good sense to give the U. N. that real weapon with which to keep the peace. But the UNEF could be a small beginning toward those "legions of peace" that the world must have some day if it is not to be blown apart by the nervous trigger fingers of impetuous or fearful men.

Tribute to Hon. Joseph R. McCarthy

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 24, 1957

Mrs. ST. GEORGE. Mr. Speaker, my friend, Mrs. Joe McCarthy, the widow of the late Senator, has sent me a copy of the American Order of General Pulaski presented to her in memory of her late husband, and also a citation presented to her by the Queens County Chapter of Catholic War Veterans, after a solemn high mass in Forest Park that she attended.

Mrs. McCarthy would like these two documents incorporated in the CONGRESSIONAL RECORD, and it is my great honor to place them here at this time.

"By their deeds you shall know them" (Matthew 7: 20).

When God in His wisdom saw fit to send us Joseph R. McCarthy, He showed His love for us, because as an individual and as a United States Senator, this man emptied himself, by undergoing every kind of personal humiliation and condemnation, so that the menace of atheistic communism might be disclosed. Joseph R. McCarthy worked and fought toward peace in order that we, as children of God, might know that peace.

The people of these United States are deeply grateful that the Senator accepted the challenges of God's call.

On their behalf, the Queens County Chapter, Catholic War Veterans of the United States offers a pledge of gratitude and fealty to this man who was not content with giving anything less than life itself as the measure of his love and devotion.

"Greater love than this no man hath—that a man lay down his life for his friends" (John 15: 13).

JAMES E. MCGINNISS,
First Vice Commander, Chairman.
EDWIN G. HOOD,
Commander.

The holy sacrifice of the mass offered in memory of Joseph R. McCarthy by Rev. Joseph A. Grogan, sponsored by Queens County Chapter Catholic War Veterans, June 29, 1957, Forest Park, Queens, N. Y.

THE AMERICAN ORDER OF GENERAL PULASKI

This certificate of award is presented to Mrs. Jean McCarthy, in respectful tribute to the memory of her illustrious husband, the Honorable Joseph R. McCarthy, United States Senator, of Wisconsin. A valiant American, an ardent patriot, a learned statesman, brilliant and fearless legislator. A courageous warrior who made the supreme sacrifice in zealous defense of his country, civilization, and Christianity against the ever-growing menace of the evil and diabolic forces of communism.

In witness whereof the American Order of General Pulaski has caused these present to be signed by its authorized officers and directors and its official seal hereunto affixed this 28th day of June, in the year of our Lord 1957.

[SEAL] K. STEFAN POMICIESKI,
President Emeritus.
CORNELIUS W. PUSZYNSKI,
President.
REV. ANTHONY F. ZASOUSKI,
Chaplain.
ROBT. M. HARRISS,
Chairman.
JOSEPH A. SUOZZI.

Phony Pay Raises

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 24, 1957

Mr. WAINWRIGHT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News:

PHONY PAY RAISES

House passage of a $320 million pay raise for postal workers leaves unanswered the question: Where do we get the money?

Without the increase, the postal deficit is estimated at about $650 million in the current year. This would make it close to a billion.

Thus, if Congress passes the postal rate increase—estimated to raise receipts by about half a billion, the Federal budget will be right back where it was before—running top speed to keep from losing ground.

And there is no assurance that the rate increase will get past the Senate, where it still is holed up in Senator OLIN JOHNSTON'S Post Office and Civil Service Committee.

This gives an idea what's happening to all the sudden heroic vows concerning economy which were prompted by an avalanche of mail from back home when the $71.8 billion budget was unveiled. The scare is wearing off.

Postal workers should, of course, get a living wage, but it should come out of the services they have to sell. The Post Office should be put on a pay-as-you-go basis, and even the pending bill won't do that.

By failing to face up to its fiscal responsibilities, Congress is handing out a pay raise which will be worthless before it is received. The inflation it helps encourage will rapidly make the buying power of the workers less than it was before.

The Voice of Poland in America

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. ANFUSO. Mr. Speaker, I was more than happily surprised to find in the August issue of the Catholic Digest a most interesting article on Michael Kecki: Voice of Polonia, written by Ralph Land.

I have know Michael Kecki for many years and I am proud to say he is one of my constituents from that garden spot of the world known as Greenpoint, in Brooklyn. He is of Polish immigrant origin, who has never forgotten the country of his birth and who every day strives to bring that country into closer alliance with the United States.

In his heart and in his soul Michael Kecki knows that it is not difficult to achieve a closer link between Poland and America as far as the people are concerned. From personal exchanges and correspondence taking place between Polish subjects and their relatives and friends in this country he knows that deep roots bind them.

The Poles are a freedom-loving people, just as are the people of our own country. In fact, from our history we well remember the great contributions toward the freedom and independence of the American people by men like Gen. Casimir Pulaski and Gen. Thaddeus Kosciusko, whose names have become watchwords for liberty.

The Polish nation, suffering under the yoke of communism, is no longer able to maintain full spiritual, religious, and cultural ties with the western nations as it did in the past. Nevertheless, the Polish people remains indomitable. Today, tiny sparks of freedom are burning in the hearts of men and women throughout Poland. These sparks should be kindled, not allowed to die.

This is what Michael Keck is doing day in and day out, encouraging his people here and their kinsmen in Poland, keping them informed on all developments, urging them on to greater deeds and patience, supporting them spiritually and morally. For these efforts, I wish to congratulate Michael Kecki for the wonderful job he is doing and to express my sincere hope that his beloved Poland will soon be completely liberated from Communist slavery.

The article on Michael Kecki reads as follows:

MICHAEL KECKI: VOICE OF POLONIA—POLISH-AMERICANS HAVE BEEN LISTENING TO HIM FOR A QUARTER OF A CENTURY

(By Ralph Land)

Michael Kecki (pronounced Kenski) has often been referred to as "the Polish Arthur Godfrey." He is America's foremost Polish-language radio broadcaster. As the stirring, persuasive Voice of Polonia he is heard 6 days weekly over Station WLIB, New York City, by hundreds of thousands of Polish-Americans in New York, New Jersey, Pennsylvania, and parts of Connecticut and Massachusetts.

"He is not just a radio personality," commented one of his fans on the occasion of Kecki's 24th anniversary on the air. "He is a tireless champion of every good Polish and American cause."

Kecki has earned commendations from Presidents Roosevelt, Truman, and Eisenhower; from Governors Dewey and Harriman of New York and Meyner of New Jersey; from Mayor Wagner of New York City, and from Cardinal Spellman for his activities on behalf of civic and religious organizations.

For 18 years he has beamed on-the-spot descriptions of the great parade down 5th Avenue in honor of General Pulaski, the Polish-born hero of our Revolutionary War.

He was the last radionewsman to interview Ignace Paderewski, world-famous pianist, composer, and Poland's first Premier, before his death in 1941; the first to interview Jarecki, the Polish flier who fled from the Reds in a Russian Mig and made international headlines; and the first to place before a microphone Polish Captain Cwiklinski, of the steamship *Batory*, who escaped from his Sovietized ship to the United States.

For Kecki, one of his most thrilling broadcasts occurred last January 8. It was a special recording received from Poland several hours before: the eloquent voice of Stefan Cardinal Wyszynski, the primate of Poland, who had been just released by the Communists after years of internment. His 20-minute sermon delivered at the Christmas midnight Mass ended with a special blessing and a prayer for peace. The cardinal had never been heard before in America.

Kecki's daily broadcasting schedule runs the full range of gladness and sadness. It includes world news, Polish interorganization news, announcements of weddings, funerals, births, baptisms, appeals for various charities, appearances of guest speakers, recordings of favorite Polish artists, and songs and commercials.

He receives hundreds of letters every week. Many ask his help in solving personal problems. His aid is frequently enlisted to locate missing persons or even strayed pets.

Once a mother begged him to find her son's dog. "My boy is heartbroken," she wrote, "and he is very sick. I'm afraid he will die if his dog isn't found. Please, Mr. Kecki." He told the story on the air. Some listeners in the boy's neighborhood began a house-to-house search. They finally spotted the dog in a basement. It had been stolen.

A 14-year-old girl vanished. The police could find no trace of her. Newspaper

notices brought no result. The mother was certain that her daughter had amnesia. She turned to Kecki.

Although fruitless weeks passed, Kecki doggedly kept broadcasting her description. His perseverance paid off. He finally snagged a listener who remembered seeing the girl. She was sharing an apartment with a girl friend in another city. The informant quickly got in touch with the parents, who brought their daughter home. They gratefully made a substantial donation to charity in Kecki.

Michael Kecki was born in Warsaw, Poland, on January 20, 1908. It was a troubled time for the city, then under tyrannical Russian rule. Many families were mourning loved ones who had died in the 1905 uprisings. A Russian edict had dissolved Polish schools and had forbidden study of the beloved Polish language.

Michael grew up in this bitter, frustrating atmosphere. But he, like other Polish youngsters, was taught secretly to read and write the mother tongue.

When a free Poland emerged on November 11, 1918, educational opportunities began to develop. Kecki attended the medical officers' school, and then completed his studies of dental surgery at Warsaw University. At 22, he was a dental surgeon and a reserve lieutenant in the Polish Army.

He decided to study advanced dental techniques in the United States. He arrived in New York on September 29, 1930, full of enthusiasm for a medical career. His spirits were quickly dampened, however, when he found that his training was insufficient to practice dentistry in this country, and that his plan would require more years of dental study than he could afford. To sustain himself, he turned to part-time work on a Polish daily newspaper.

Kecki's fine command of the Polish language turned out to be his greatest asset. He was drawn to radio broadcasting. In January, 1933, he became an announcer on station WWRL. He then worked for several other stations, constantly improving his delivery, and finally secured his own Polish hour over WHOM, a program which he conducted for 14 years.

Once he had decided to make a career of radio, he set out to become acquainted with all Polish organizations, religious, civic, and social. "I put my heart into this effort," he says, "because I sincerely desired to be of service to the Polish people. I felt that their problems were mine, and that they needed a voice in this country."

In 1949, Kecki transferred to station WLIB. He has been there ever since.

He is a member of Cardinal Spellman's Committee of Catholic Laity in New York, and incessantly carries on appeals for various Catholic and other charities. He has raised funds for the eight Wozniak children of Elizabeth, N. J., orphaned by fire; for the building of a new chapel for the Carmelite Sisters (who later dedicated the Sacred Heart altar in St. Teresa's chapel to his listeners); for a water pump for a leper colony in Tarafangana, Madagascar; for a new bus for the St. John Kanty prep school of Erie, Pa. His listeners' generosity has enabled Father Mroz, a Polish Franciscan missionary in Nagasaki, Japan, to visit several small islands in his mission. Kecki's appeals brought the priest a motorboat.

During World War II, Kecki worked furiously for both the land of his birth and his adopted country.

When Polish soil was brutally overrun by Nazis and Communists alike, he conducted a 3-month campaign to equip the Polish army with flying ambulances. He collected thousands of dollars to aid impoverished Polish children. After the Japanese attack on Pearl Harbor, Kecki began a series of war bond drives. He was cited six times by the United States Treasury Department for distinguished service.

In 1944 he married a girl named Natalia Lesniewski, a graduate of Brooklyn college. "Although my wife was born in Brooklyn," says Kecki, "she speaks Polish fluently and has worked with me on many broadcasts during the last 12 years. She is my severest critic and my guiding angel."

The Keckis live in a modest two-family house in the predominantly Polish section of Greenpoint, Brooklyn, close to five Catholic churches. The family attends St. Alphonsus Church directly across the street from their home. They have two children, Thomas Michael, 10, and Natalia Alice, 1. "Tommy," says Kecki proudly, "frequently gets up to serve at the 6 o'clock low mass."

Kecki has twice been honored by the Constitutional Polish Government in London. In 1951, he was decorated with the Gold Cross of Merit. On October 28, 1956, he was awarded the Polonia Restituta, its highest civilian award, for meritorious service on behalf of a free Poland.

After a new wave of Polish immigrants arrived in America in 1946, Kecki, an active member of the Polish Immigration Committee, geared himself to the huge task of helping in their rehabilitation.

As a former immigrant, now a proud American citizen, he stresses the importance of rapid Americanization of newcomers. "We try to explain to our listeners the advantages of becoming American citizens, and of learning the language and customs of this country," he says. For more than 7 years, as a public service to the Polish people, he has presented, with the help of Attorney William T. Maday, a program entitled "The Law in Your Life," dealing with everyday legal problems and the functions of various branches of Government.

Kecki thinks that the Polish immigrant need not and should not quench his love for Poland in the process of becoming an American citizen.

He points out that any patriotism worthy of the name is an unselfish thing, and that the man who has a deep reverence for the traditions and culture of his native land will probably make the best kind of American citizen. Several hundred thousand Polish-American radio fans will tell you that an excellent confirmation of this theory is to be seen in the life of Michael Kecki.

Alcoholic Beverage Advertising

EXTENSION OF REMARKS
OF
HON. HORACE SEELY-BROWN, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 24, 1957

Mr. SEELY-BROWN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith, by request, a petition signed by residents of my congressional district, in support of legislation to get alcoholic-beverage advertising off the air and out of the channels of interstate commerce.

The petition follows:

To Our Representatives in Congress:

Since alcoholism, delinquency, and mental illness have become serious health problems, we your constituents of Connecticut, earnestly implore you to use the powers of Congress to get alcoholic beverage advertising off the air and out of the channels of interstate commerce and thus protect our people and the rights of States to prevent advertising of commodities which have been declared unlawful by the rights of local option granted them under State law.

Legislation To Provide Penalties for Membership in Communist Party

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 24, 1957

Mr. SMITH of California. Mr. Speaker, I am today introducing a bill, the title of which is as follows: "To provide penalties for membership in the Communist Party and to permit the compelling of testimony relating to such membership and the granting of immunity from prosecution in connection therewith."

I have long felt that the Communist Party should be outlawed and that it should be a crime to be a member thereof. In view of the recent Supreme Court decisions, I am introducing a bill to that effect and also to try and take care of the situation whereby a congressional committee can hold appropriate hearings and obtain information from the witnesses to avoid the problem recently raised by the Supreme Court decisions.

In view of the many Federal laws now on the statute books including the Smith Act, the Communist Control Act of 1954, the Internal Security Act of 1950, and the various sections having to do with compelling testimony and granting immunity, this is an extremely difficult and complicated situation.

The approach is as follows: to amend the first paragraph of section 4 of the Communist Control Act of 1954 in order to provide specific penalties for membership in the Communist Party, if such membership is acquired or retained with knowledge of the purpose or objective of said party. At the present time, section 4 of the Communist Control Act of 1954 provides generally that members of the Communist Party, or any similar organization shall be subject to the provisions and penalties of the Internal Security Act of 1950 as members of a Communist-action organization.

The amendment made by my bill substitutes specific criminal penalties in lieu of incorporating the provisions and penalties of the Internal Security Act of 1950 by reference. The reference to similar organizations is eliminated as duplicating in substance the so-called membership clause of the Smith Act—Title 18, United States Code, section 2385—which provides penalties for membership in "any society, group, or assembly of persons who teach, advocate, or encourage the overthrow," by force or violence, of the Government of the United States, or the government of any State, Territory, District, or possession thereof. The bill provides penalties of not more than $10,000 or imprisonment of not more than 10 years or both for anyone who knowingly and wilfully becomes or remains a member of the Communist Party with knowledge of the purpose or objective thereof.

Section 2 of the bill amends section 3486 of title 18, United States Code to permit congressional committees to compel testimony with respect to membership in the Communist Party in the course of any investigation relating to interference with, or endangering of, the national security or defense of the United States by "membership in the Communist Party or its successors." Section 3486 is also amended to permit any grand jury or court of the United States to compel testimony with respect to violations of section 4 of the Communist Control Act of 1954, as amended by the first section of the bill. Section 3486 contains established procedures for compelling any such testimony and for the granting of immunity in connection with such testimony.

As a former member of the FBI I have always felt that the Communist Party should be outlawed as such. However, I realize that the argument that this will cause them to go underground has considerable validity. But in view of the recent Supreme Court decisions it seems to me that we must now squarely face this matter and pass appropriate legislation relative thereto. I intend to send copies of the bill and an explanation thereof to Mr. J. Edgar Hoover, Director of the FBI, to the Attorney General, and to other leading authorities requesting their opinion as to whether or not this bill will meet with their approval and be of benefit toward preserving America from continuous attack by members of the Communist Party and fellow travelers.

Rights for Women

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to take note of the fact that 109 years ago this month—on July 19, 1848, a group of pioneer women met in Seneca Falls, N. Y., in what was the first women's convention for the purpose of establishing civil, political, and economic rights for women.

This movement has progressed greatly over the years. A part of the success of this great movement may be attributed to a score or more of women who we are proud to claim as residents of the State of Connecticut.

At this time I wish to list some of these worthy women who contributed toward the development of women's rights in this Nation.

EMMA WILLARD, FAMOUS FOR HER WORK IN EDUCATION OF WOMEN, BORN IN BERLIN, CONN., 1787

"When she presented her plan for improving female education to the New York Legislature and to the public in 1819, she became a national figure, and her experiment, the Troy Female Seminary, founded in 1821, exerted an ever-widening influence on the development of our country. Because of the change wrought in public opinion by her daring and persistent stand for the higher education of women, seminaries and high schools for girls, and, later, women's colleges and coeducational universities, became a permanent part of our national life.

"Not only women, but men and the whole Nation have reaped the benefits of the intelligent useful womanhood developed under her plan of education."—from Emma Willard by Alma Lutz.

She was honored by Lafayette when he visited this country in 1833, and has been honored by receiving votes for the Hall of Fame.

Emma Willard's ancestor, Thomas Hooker, a minister of the Church of England, heard of the very fertile land in Connecticut and

brought 100 of the members of his church through the wilderness from Massachusetts over an Indian trial to Connecticut where they founded the town of Hartford. Being isolated from other settlements this new settlement developed an independent government and "in 1662 was granted the most liberal charter of any colony, giving the people power to elect their own governor and make their own laws." This advanced the point of view was prominent in Thomas Hooker's descendents of whom Emma Willard was the most famous.

ISABEL BEECHER HOOKER, FAMOUS FOR HER WORK IN MOVEMENT TO GAIN SUFFRAGE FOR WOMEN

Daughter of Dr. Lyman Beecher, the illustrous preacher. Born in 1822 at Litchfield, Connecticut.

"Individually and collectively, the Beecher family is considered the most remarkable in the United States"—From The Part Taken by Women in American History, by Mrs. John A. Logan.

Married John Hooker of Hartford, descendant of the Thomas Hooker who founded Hartford. Famous as a great leader in reforms among which was the movement for woman suffrage which she considered the "greatest movement in the world's history." Became active worker in this movement. In 1869 she called and managed a 2-day convention in Hartford at which time the Connecticut Woman Suffrage Association was formed.

WOMEN WHO WERE PROMINENT IN WORK FOR EMANCIPATION OF WOMEN BEFORE VOTE WAS OBTAINED

The following women came down from Connecticut and picketed the White House in protest against "taxation without representation," were arrested and thrown in prison.

Miss Catherine Flanagan of Hartford: Father came to this country as Irish exile because of his efforts in movement for Irish freedom. Sentenced to 30 days in Occoquan workhouse because of picketing, August 1917.

Miss Minnie Hennesy of Hartford: Business woman, sentenced to 6 months for picketing, October 8, 1917.

Miss Edna Purtell, sister of the distinguished Senator Purtell of Connecticut: Sentenced to 5 days in District jail for participation in Lafayette Square meeting, August 1918—a meeting to ask for votes for women.

Mrs. Ruby E. Koenig of Hartford: Sentenced to 15 days in District jail for taking part in Lafayette Square meeting, August 1918. Suffered sprained arm from rough treatment by police.

Miss Elsie Hill of Norwalk: Daughter of Ebenezer J. Hill, 21 years a Congressman from Connecticut. Teacher of French in District of Columbia High School. Sentenced to 15 days in District jail for speaking at Lafayette Square meeting.

Miss Ruth Scott of Bridgeport, munitions worker: Sentenced to 5 days in District jail for participation in watchfire demonstration, January 1919.

Mrs. Elsie Vervane of Bridgeport, munitions worker and President of Woman's Machinist Union of Bridgeport: In January 1919 came to Washington with group of union women and took part in watchfire demonstration; arrested and served 5 days in District jail.

Mrs. Helena Hill Weed of Norwalk: Daughter of late Congressman Ebenezer Hill. One of few qualified women geologists of country. Vice president of D. A. R. Served 3 days in District jail in 1917, 15 days in 1918, and 24 hours in January 1918.

Mrs. C. Weaver of Bridgeport: Worked during war in munitions factory. She and her daughter Eva Weaver sentenced for attendance at watchfire demonstration to 5 days in District jail in January 1919.

Mrs. Helen Chisaski of Bridgeport: Munitions worker and member of Machinists Union. Sentenced to 5 days for attending watchfire demonstration, January 1919.

Mrs. W. J. Bartlett of Putnam: Leader of Connecticut State Grange. Sentenced to 60 days for picketing, August 1917.

Mrs. Josephine Bennett of Hartford: Member of D. A. R. and Colonial Dames. Sentenced to 5 days in District jail for attendance at watchfire demonstration, January 1919.

Mrs. H. C. Havemeyer, of Greenwich: One of the most eloquent speakers; active in Liberty Loan campaigns. Sentenced to 5 days in District jail, February 1919.

Mrs. Betty Gram Swing, of Westport: Abandoned stage career to take part in picket demonstration of November 1917. Sentenced to 30 days in Occoquan workhouse.

Mrs. W. D. Ascough, of Hartford: Former Connecticut State chairman of National Woman's Party. Studied for concert stage in London and Paris. Abandoned concert stage to devote time to suffrage. Sentenced to 15 days August 1918.

OTHERS WHO TOOK PROMINENT PART IN WORK FOR EMANCIPATION OF WOMEN

Mrs. Katharine Hepburn, of Hartford: Wife of Dr. Thomas Hepburn. Mrs. Hepburn led as president of the Suffrage Association in the fight for the vote for women until Congress and the States ratified the 19th amendment.

Miss Clara Hill, of Norwalk: Daughter of Congressman Ebenezer Hill; a leader in Connecticut in the movement for suffrage.

Mrs. Mary Beard, of New Milford; worked with her husband on many famous books on American history. Aided the suffrage campaign by her writing.

Geraldine Farrar, of Ridgefield: Famous opera singer.

Nora Stanton Barney, of Greenwich: Granddaughter of Elizabeth Cady Stanton who was one of those who called the Seneca Falls Convention in 1848.

Dr. Emily Barringer, of New Canaan: Leading woman physician. Chairman of the committee that got through the law enabling women physicians and surgeons to serve in the Armed Forces during the last war. First woman to be an interne in a hospital. Author of the book Bowery to Bellevue which was made into a movie. President of the Connecticut branch of the National Woman's Party at present.

Miss Katharine Hepburn, of Hartford: Well-known actress. Has continued the work of her mother for equality for women by working for the equal-rights amendment now pending before Congress. She stated recently, "In the theater there is complete equality between men and women. We have men and women playwrights, actors, scenic artists, and stage managers. If that has worked well for the theater, why not for all other walks of life? I have just heard that hospitals where internes have gone to war hesitate to take women doctors, although they are available, and industrial concerns that need doctors still discriminate against women doctors. This attitude toward women goes back to the fundamental law of our country. That is why I support the equal-rights amendment to the Constitution."

Clare Booth Luce, of Ridgefield: Only woman ever a member of Congress from Connecticut and first woman diplomat to a major power. Gave valiant and able aid to the equal-rights amendment when in the House. Began as a young girl in her teens when she carried the equal-rights banner in the pageant in celebration of Seneca Falls Day at Seneca Falls, N. Y., in 1923, which celebrated the 75th anniversary of Seneca Falls Day, as we are honoring the 109th anniversary today.

Looking Ahead

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. DAVIS of Georgia. Mr. Speaker, I insert herewith an editorial from the Metropolitan Herald, Atlanta, Ga., for Wednesday, July 17, 1957, entitled "Looking Ahead."

The information given in this editorial should help to correct erroneous beliefs in the minds of some who are misinformed regarding actual conditions in the South.

The editorial follows:

LOOKING AHEAD

It is hard to believe that many really intelligent people actually believe the debate now going on in the United States Senate over the civil-rights bill is designed entirely to protect the voting rights of the Negro.

It is also hard to believe that the daily press of the Nation can print some of the arguments they are printing without holding their tongue in their cheek.

Too, it is doubly hard to believe that the fundamental principle on which this country was founded, the right of every man to a jury trial by his fellow citizens, would be scuttled through an obvious political maneuver to pull the wool over the Negro voters' eyes, without a great outcry of protest rising throughout the Nation.

If, through the efforts of Negro vote solicitors who pose as "statesmen," the right to trial by jury is scuttled in this case, it is not too farfetched to believe that there will be other attempts following to completely drop this important phase of American justice.

As is pointed out in a story on the front page, the political columnists and others in the North and East would have their readers believe that the entire opposition of the South to passage of the civil-rights bill now pending in the Senate, is because of the fear that Negroes will vote in hordes in coming elections.

What the Northern columnists do not seem to realize is that there is little or no effort in the South to prevent the registration and voting by Negroes. In fact, it is generally conceded that there are literally thousands of ineligible Negro voters now going to the polls and voting blindly and in blocs who are truthfully incapable of taking part in decisions of government.

But, as we also point out, if all the Negroes of voting age in the South were registered and voted, they would comprise only 50 percent of the votes now being cast. Too, if all the Negroes registered, and in 1950 their number (of voting age) totaled only a little more than 5 million in 13 Southern States, it would stimulate registration of the millions of eligible white southern voters who would outnumber the Negroes by more than 20 million.

There are many white people who actually believe it would be a fine thing if all southern Negroes were registered to vote for they feel such a situation would stimulate the now complacent whites to register and vote.

It is a losing fight if the agitators think the Negro vote in the South can, within the life span of anyone now living, outnumber that of the southern whites. At best they can only look forward to polling 20 percent of the total southern vote if they all register.

Now that the fat is in the fire and the debate has started in the Senate, we are hopeful that the deceit and subterfuge behind

this bill will be revealed to the extent that it will show up as repulsive to all students of good government and classify the attempt to pass the civil-rights bill for what it is, a cheap, political trick of ambitious politicians who run in areas where the minority Negro vote is the deciding factor in the two-party States.

The American public likes honesty in politics as well as in business and there is a chance that the true purpose behind this bill could kill it off forever when its true colors come to light.

Son Joins Father in Solar Project

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. CANFIELD. Mr. Speaker, the interest of scientists, amateurs and the lay public is currently focused on the activities of the International Geophysical Year, and I am proud that a father-and-son team from my district is making an important contribution to the IGY program.

The New York Times of Monday, July 22, carried a feature story by Milton Honig, describing the work being done by Mr. Philip J. Del Vecchio, Sr., and his 13-year-old son Robert, from their home at 971 East 22d Street, Paterson, N. J.

Mr. Del Vecchio is one of some 9,000 cooperative weather observers who work year in, year out without compensation for the United States Government gathering information and making reports for the United States Weather Bureau.

SON JOINS FATHER IN SOLAR PROJECT—PATERSON AMATEUR AND BOY, 13, ARE IN INTERNATIONAL GEOPHYSICAL PROGRAM

(By Milton Honig)

PATERSON, N. J., July 21.—These days there is more than the usual activity in the basement and backyard of 971 East 22d Street here, where Philip J. Del Vecchio, Sr. lives with his family.

Mr. Del Vecchio, a member of the solar division of the American Association of Variable Star Observers, and his 13-year-old son, Robert, a high school sophomore, have teamed up as amateur contributors to the International Geophysical Year.

At this point father and son have contributed 180 solar disk photographs to the Sunspot-Evolution Program of the I. G. Y. If all goes as planned, they hope to participate in two associated projects that have I. G. Y. approval—the electronic recording and photographing of flares shot out from the sun's surfaces and the visual tracking of artificial satellites sent aloft by scientists in the I. G. Y. program.

Their efforts have won praise from officials of the High Altitude Observatory at Boulder, Colo., and the Royal Observatory at Edinburg, Scotland.

The Del Vecchios worked for a year and a half designing, constructing and testing the instruments in the basement and backyard of their home. It took them 3 months to focus and line up a camera of their own making for astrophotography through a refracting telescope. When in use the telescope, with camera attached, is set up in the backyard.

ANOTHER DEVICE IN BASEMENT

The home-built electronic apparatus for the detection of solar flares is kept in the basement. It is similar to the modified transistorized receiver developed by David Warshaw of Brooklyn. Mr. Del Vecchio saw the plan in the Solar Division bulletin and constructed it at a cost of only $30.

However, there is one obstacle in using the instrument, Mr. Del Vecchio explained. The receiver must be watched constantly to be aware of intense solar activity. This disadvantage was overcome by contributions from the Federal Telephone & Telegraph Co., in Nutley, N. J., and the Bell Telephone Company Laboratories, Inc., in New York. These concerns provided the amateur astronomers with recorder-type meters and amplifiers for the duration of the International Geophysical Year.

As an additional check, they use a short-wave receiver for broadcasts from station WWV, the National Bureau of Standards station at Fort Belvoir, Va. The station sends out time signals and alerts its listeners on any intensive solar activity.

The most ambitious aspect of their activities—the tracing of manmade satellites—has not yet been realized because of money and personnel. According to Mr. Del Vecchio, the apparatus would cost about $1,500. He hopes to enlist financial support from local industrialists and then obtain volunteer observers.

He has applied to the board of education for permission to use the roof of the local high school as an observation post.

"It should be a matter of great civic pride to have such a history-making group operate in Paterson," Mr. Del Vecchio said.

Mr. Del Vecchio, a purchasing agent for the Benjamin Eastwood Co., a Paterson foundry and machine shop, comes by his interest in things astronomical, naturally. A cooperative observer for the United States Weather Bureau in northern New Jersey, he has been gathering scientific data for nearly 25 years.

In his unsalaried job, he uses instruments provided by the Bureau for calculating rainfall, humidity, and temperature. He also is a staff meteorologist for the Passaic County civil-defense unit.

In recent years, his son's study in astronomy has stimulated Mr. Del Vecchio's interest. He has combined another hobby, photography, to develop his proficiency. Last term, Robert won first place in the freshman division of the science fair at Eastside High School for his work with his father.

Facts and Figures on the Need for a Naval Hospital in the Long Beach-Los Angeles Area

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. HOSMER. Mr. Speaker, the United States Naval Hospital, Corona, located 46 miles from Pine and Ocean Avenues, Long Beach, is the only major military hospital between Camp Pendleton and Fort Ord near Monterey. The mission of the hospital is to treat sick and injured military personnel with the object of expeditious return to duty, and to treat the dependents of active duty and retired military personnel when space and facilities are available. It has been ordered closed by the Navy Department.

The averages for the hospital for the first 6 months of 1957 are: (a) Beds available, 725; (b) bed patient load, 605.9 per day; (c) in-patient dependents, 92.9 per day, included in (b); (d) out-patient dependents, 146.4 per day; (e) baby deliveries, 3.48 per day.

Personnel served include members of all of the Armed Forces—active and retired. In the event of a disaster or emergency, Corona could be expanded to 1,741 beds. The numbers of personnel in the greater Los Angeles-Long Beach-Orange County area eligible for care in the Naval Hospital, Corona are:

(a) Navy active duty afloat	37,756
(b) Navy active duty ashore	3,373
(c) Active duty marines (El Toro and Santa Ana)	9,558
(d) Retired/Fleet Reserve	8,741
(e) Army active duty	4,500
(f) Army retired	15,000
(g) Air Force active duty	1,488
(h) Air Force retired	3,100
(i) Coast Guard active duty	500
Total	84,016

All of the above are by law entitled to hospitalization.

(j) Dependents of active or retired members. When space and facilities permit, hospitalization for these people is authorized (based on 1.5 per active and 1.0 per retired member)	112,600
(a) to (i) above	84,016
Grand total	196,616

The Naval hospital in Haven at Long Beach Naval Shipyard has a bed capacity of 150 with an average of 97 per day utilized. This could be expanded to approximately 500 beds with modification to facilities and considerable increase in staff. The primary mission is service to forces afloat. Hospital berths are double-decked and environment cannot be of shore facility quality.

Camp Pendleton, 70 miles from Long Beach, has a bed capacity of 900, with between 600 and 900 in use each day.

The Naval station dispensary has a capacity of 15 beds with an average of 4.9 in use daily. The dispensary handles approximately 275 outpatients per day.

The Long Beach Veterans' Administration Memorial Hospital has a capacity of 1,380 beds, and is reportedly operating at capacity.

The Fort MacArthur station hospital has a bed capacity of 70 beds, which is being reduced to 60 beds, and has an average of between 27 and 30 beds utilized per day. Fort MacArthur has about 88 outpatients per day and serves all active duty Army personnel within a 70-mile radius.

City of Long Beach and incorporated Lakewood have a population of 373,807 which requires approximately 2,418 beds in normal times. At present, there is a total of 1,227 beds available with an urgent need for 1,191 additional beds. With the loss of 725 beds at Corona, the increase in patients to be handled could not be absorbed by present civilian and/or military hospitals now in existence.

This information is from studies made the Community Welfare Council of ng Beach in October 1955. A survey uesday, October 18, 1955, at 5 p. m., owed not one hospital bed was avail- le in St. Mary's, Community, or Sea- ie hospitals. This is a frequent oc- rrence and with the increase in popu- tion of approximately 2,500 per month is condition is not likely to improve un- completion of additional hospital fa- ities authorized by Long Beach voters November 1956. The estimated date readiness of these facilities is Jan- ry 1960.

The real and pressing need for a val hospital in the Long Beach-Los geles area is thus clear. Such a hos- al was authorized by Congress in 1950. is apparent that the Bureau of Medi- e and Surgery and the Navy Depart- nt should include this item in the t budget. There is both a humane d and a more practical need from the gencies of naval operations.

Firmer Control of Federal Spending

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. RUESS. Mr. Speaker, this House ll shortly act on one of the most im- rtant pieces of legislation to come fore it during this session, H. R. 8002, establish a system of annual accrued penditure budgeting. In support of is legislation I am glad to extend my marks by inserting the following edi- rials from the Washington Evening ar and the New York Times:

[From the Washington Evening Star of June 23, 1957]

FOR ORDERLY BUDGETING

In passing the Kennedy budget reform bill, e Senate has given its support to what has en regarded as the most important Hoover mmission recommendation still requiring gislation. The bill would put the Govern- nt on an accrual system of budgeting and counting that would give Congress firmer ntrol of Federal spending and that, it is timated, could save up to $4 billion a year nonessential expenditures.

Federal budgeting and accounting proce- res not only baffle the ordinary citizens, y baffled a competent task force which uded them for the Hoover group. The dy revealed that it was virtually impos- le to list what the Government owned and w much it owed. The Kennedy bill, among her changes, would substantially reduce e carryovers of unexpended appropriations m year to year, thereby putting the Gov- ment on an annual expenditures basis. e appropriation carryovers run into bil- ns of dollars a year, with Congress con- ed as to the amounts involved and with- t control of the leftover funds, once the ney has been voted.

The commission pointed out that obliga- nal authority relating to long leadtime grams may be exercised over several years, h resulting expenditures continually re- ved from the particular fiscal year under consideration by the budget makers. The Budget Bureau, for example, reported that in 1953 $81 billion of unfinanced appropriations existed as a claim against current and future income or borrowing. The contracts and commitments made as a result of these appropriations became in effect c. o. d. obligations of the Government.

The reforms suggested by the Hoover Commission and embodied in the bill sponsored by Senator KENNEDY of Massachusetts have the approval of the Secretary of the Treasury the Budget Director and the Comptroller General. We hope the House will follow the Senate's example and thus assure budgetary and accounting improvements of the sort already firmly established in private industry.

[From the New York Times of June 27, 1957]

POWER OF THE PURSE

There is a popular illusion that because Congress votes the money necessary to run the Government of the United States it must automatically have control over all expenditures. It doesn't, as the Hoover Commission and many other people long ago discovered.

Today the Rules Committee of the House is scheduled to consider a bill that would go far toward restoring to Congress, where it belongs, the power of the purse. This bill is described by the Citizens Committee for the Hoover Report as "one of the most fundamental" of all the Commission's recommendations. It is H. R. 8002, to establish annual accrued expenditure budgeting, which means in simple language that Congress would grant money to the departments and agencies to be spent on a yearly basis only.

The bill would do away with carryovers which represent appropriations, annually running into the billions, made in 1 year but not spent until the next year or years following. The result has been that Congress itself never knows just how much money is actually being expended within the Government each year or, because of changes of program, for precisely what purposes. The bill would not prevent authorization of long-term contracts, but it would limit the funds actually appropriated to estimated expenditures for the next 12 months. A companion bill passed the Senate earlier this month.

It is particularly odd that the most vociferous opponents of this measure in the House include some Members who beat their breasts most loudly over the size of President Eisenhower's budget. If Congress is really serious about controlling expenditures and is willing to take the responsibility that goes with this power it will pass this bill, which has the endorsement of the President, many leading Members of Congress and thoughtful private citizens.

[From the Washington Evening Star of July 13, 1957]

CONTROL OF THE PURSE

As Congress nears the end of consideration of the yearly apropriation bills it is estimated that approximately $4 billion will be trimmed from the administration's original request for $73.3 billion in new spending authority. This is not, by itself, a guaranty that actual spending in the present fiscal year—projected at $71.8 billion—will be cut accordingly, as many billions of undisbursed funds have been carried over from earlier appropriations. In this respect, however, it is gratifying that President Eisenhower now has requested department and agency heads to restrict expenditures to fiscal 1957 levels—or a total of about $70 billion. As guidance for this effort, Budget Director Brundage has issued an economy directive calling for the following: (1) Detailed justification for any spending above 1957 disbursements. (2) Postponement "of a significant part" of obligations planned for construction, procurement and research. (3) Quarterly allotment of payroll funds. (4) Quarterly review of programs by each department and agency head.

If successful, this proposed saving of approximately $2 billion will be at least a step in the right direction. There are, however, many pitfalls ahead. The economy directive itself contains its loopholes. There are fixed obligations that have risen between the 2 fiscal years and rising prices still are pushing upward the costs of existing programs. Along with these forces, there is the ready temptation of the available unexpended balances, and it was a timely warning on this score issued by former President Hoover in a San Francisco speech this week. It was Mr. Hoover's thesis that Congress has lost its constitutional control of the Federal purse through permitting accounting procedures that allow the executive branch to amass these huge unexpended balances over a period of years. One of the major Hoover Commission recommendations was for a budgeting and accounting reform that would restrict this practice as well as result in annual savings estimated at more than $3 billion.

Actually, legislation to accomplish this purpose already has been passed by the Senate and, in a somewhat modified form, has been reported favorably by the House Government Operations Committee. In the light of wide agreement that Federal economy is both desirable and essential, particularly in this period of inflationary pressures, the House leadership should give high priority to completing action on the legislation.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

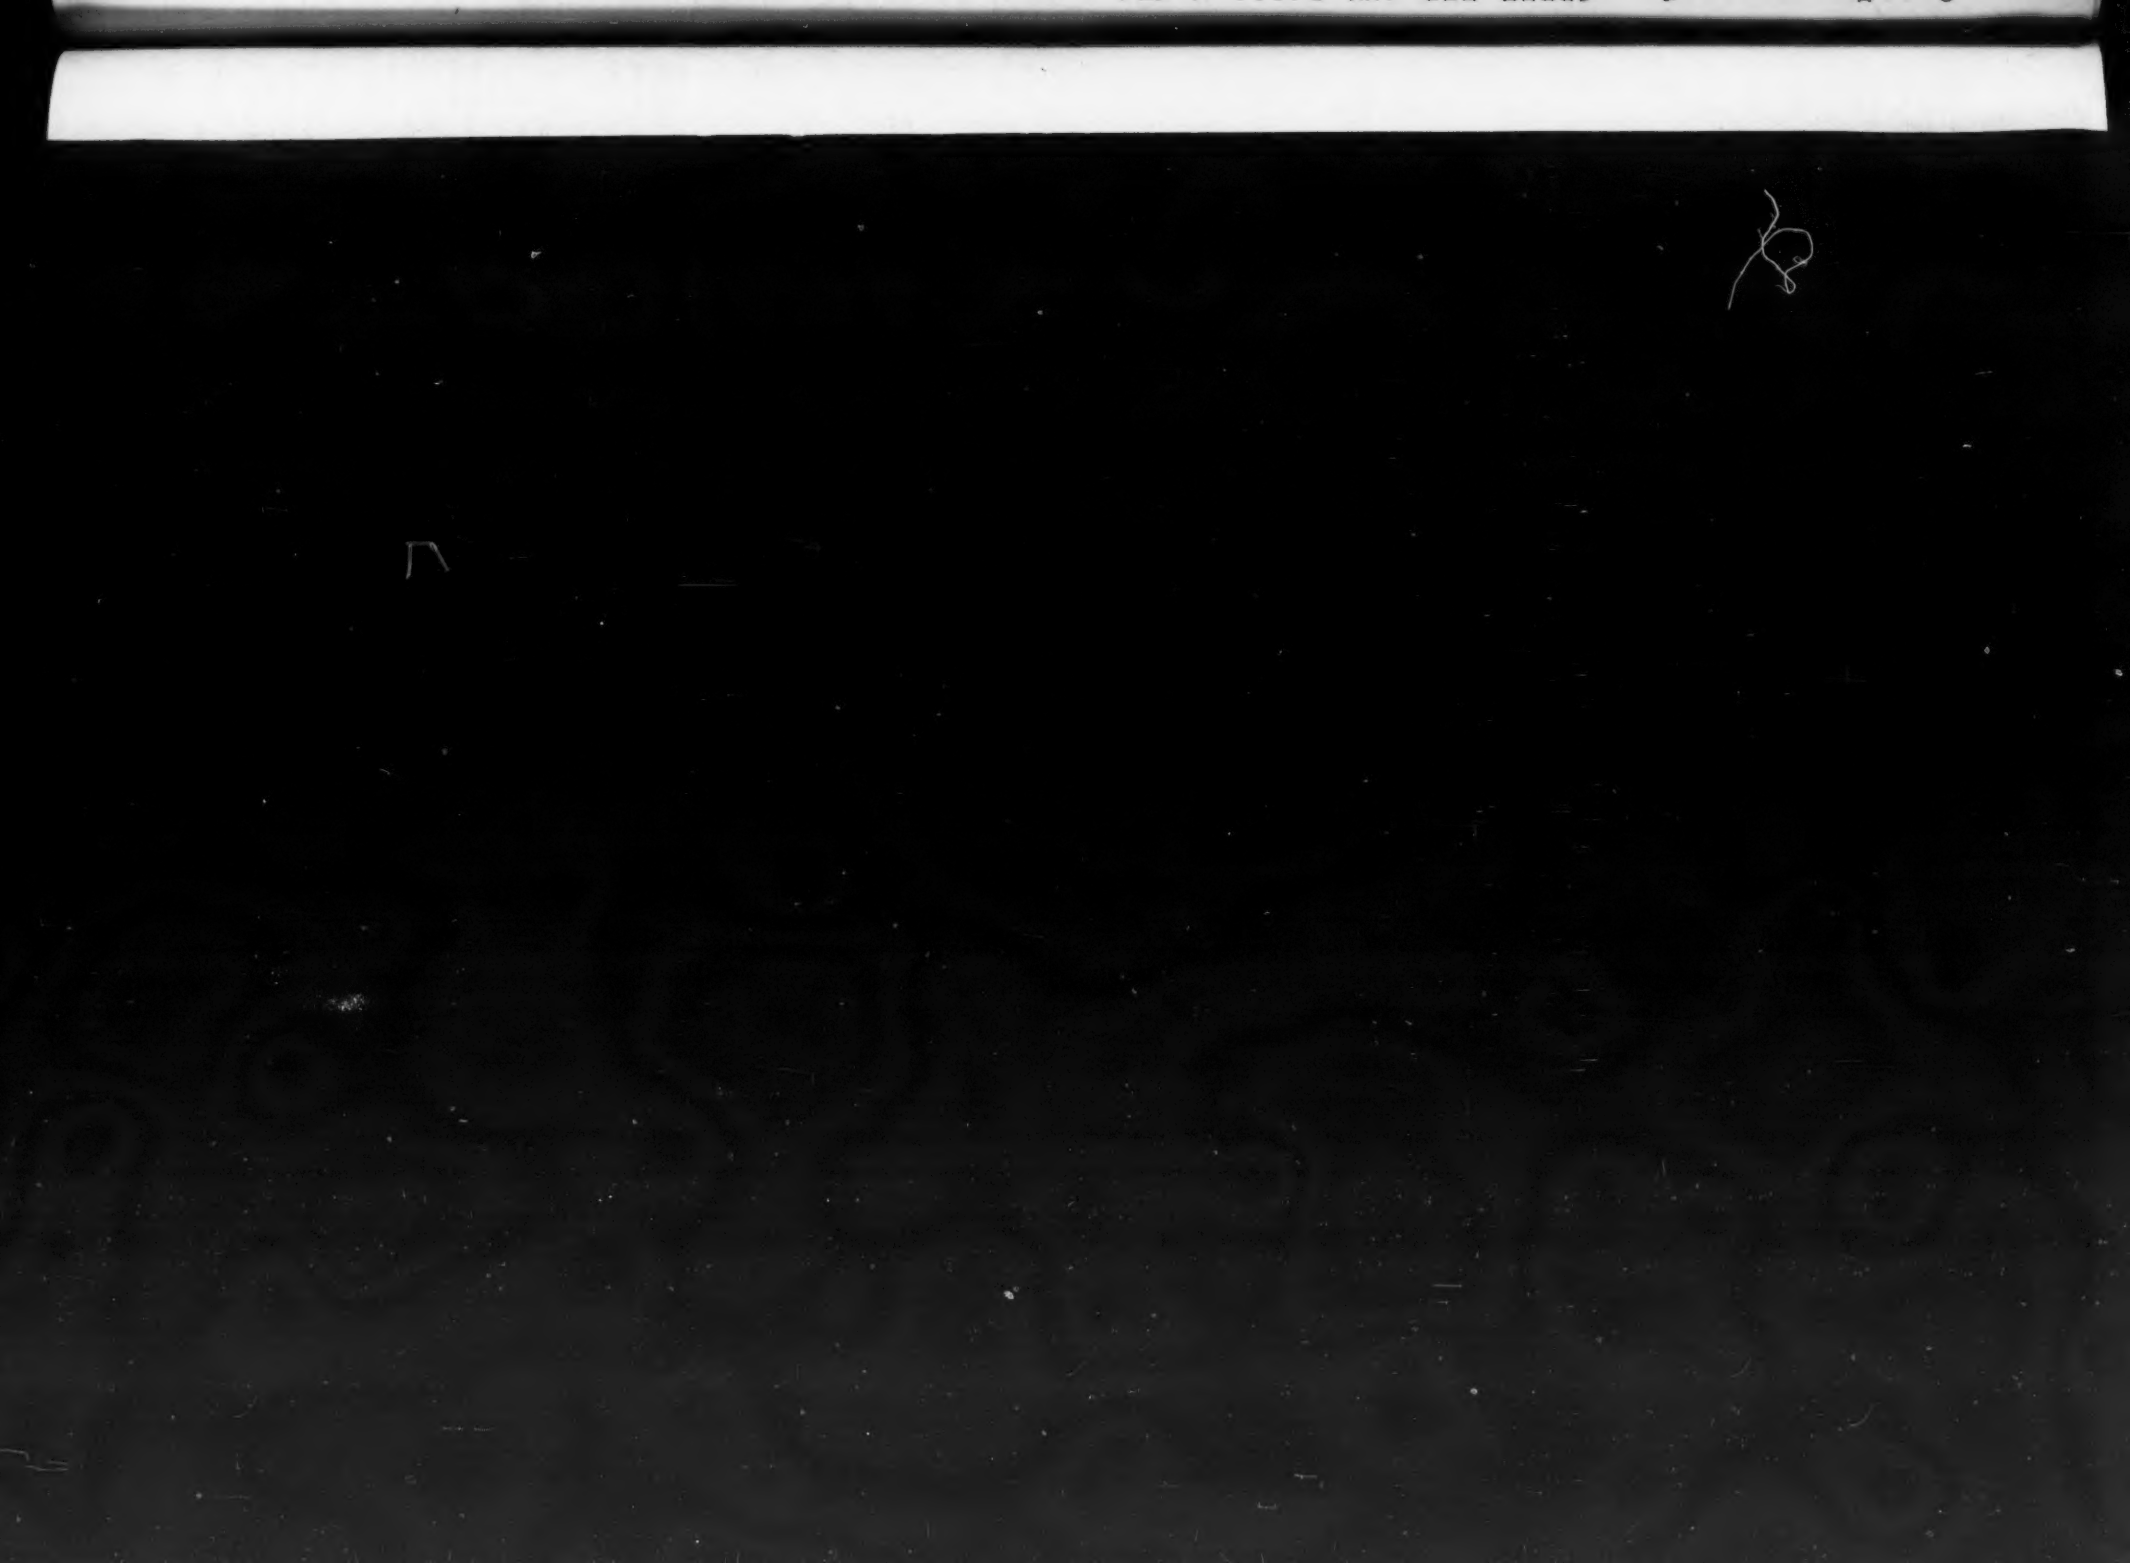
Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).



Appendix

Ringing Words From a Time Gone By

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, July 25, 1957

Mr. JOHNSON of Texas. Mr. President, I quote from an editorial in the Beaumont (Tex.) Enterprise:

Winning the peace requires hard work and great patience.

That statement, both realistic and inspiring, appeared in an editorial tribute by the Enterprise to a great American, the last James M. Cox. The sentiment, as the Enterprise points out, was basic in the philosophy of this great Democrat.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEMANDS OF DECENCY

Upon the recent death of James M. Cox, Democratic candidate for President in 1920 and distinguished American journalist, it was recalled that he had been a strong supporter of the League of Nations.

A southern newspaperman, commenting upon this fact and the idealism of the Ohio publisher, quoted these lines from the latter's book Journey Through My Years:

"Human nature may not change, but human intelligence can and does increase. It is clear now, with the new destructiveness of war, nations must conform to the demands of decency and humanity or perish at each other's throats. This is the supreme question before the human race today. Upon it all other issues hinge."

Those who support and believe in the purposes of the United Nations, successor to the League of Nations, should be encouraged by these ringing words.

They are the words of one who believed that this country cannot live alone, one who believed that winning the peace requires hard work and great patience.

And it will be recalled that Governor Cox kept right on being an internationalist until he died, although his advocacy of the League is given much of the credit for his resounding defeat at the polls when he sought the White House role.

Texan Describes Community Chest Work to Austrian Audience

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, July 25, 1957

Mr. JOHNSON of Texas. Mr. President, the role of the community chest in American life is well known to us. The community chest, as it exists in so many of our cities, is one of our most noble institutions. All of us know of the good works of the community chest.

One of my fellow Texans, Mr. Fred M. Lange, of Dallas, has been engaged for many years in social-welfare work. Mr. Lange is now executive vice president of the Dallas community-chest fund. Wherever he goes, he is a missionary for the community chest.

Last week, on July 17, Mr. Lange explained the work of the community chest, as we know it, to an audience in Vienna, Austria, composed of persons interested in social welfare in that country. His address was delivered under the auspices of the National Ministry for Social Welfare of Austria.

Mr. President, I ask unanimous consent that a digest of Mr. Lange's address be printed in the Appendix of the RECORD.

There being no objection, the digest of the address was ordered to be printed in the RECORD, as follows:

MANY IN ONE, FOR ALL

(Lecture delivered under the auspices of the National Ministry for Social Welfare, Republic of Austria, in Vienna, Austria, July 17, 1957, by Fred M. Lange, L. H. D., LL. D., executive vice president, Dallas Community Chest Trust Fund)

I appreciate your kind invitation to come and meet with you. I wish to thank the National Department of Social Welfare. I am especially indebted to Dr. Carola Redlich, liaison officer to the United Nations Technical Assistance Administration; to Mr. William L. Grenoble, deputy public affairs officer, and to Miss Ann Eckstein, assistant exchange-of-persons officer of the American Embassy.

I believe that an exchange of ideas among people from different countries is helpful. This is particularly true in the field of the humanities. I come realizing that your country has a long history of social legislation and of social services. I come knowing that there is much that I can learn from you, and I hope to take your ideas back with me to the United States of America.

* * * * *

In your kind invitation you suggested that I tell you about the work of the community chest. This is a complicated story and I will try to do it in general terms. * * *

Every large American city has a very large number of private welfare organizations, each devoted to a specific area of service. In my community there are at least 75 such private organizations. * * *

The main reason we have so many organizations in the field is because so many private groups are interested in and doing such a great variety of things. Their services touch the lives of everyone regardless of economic or social position. Welfare services in the United States of America are not confined to services for the indigent. A good example of this is the tremendous amount of money spent on research, public education, and case finding in regard to almost every known disease. We have many services classified as welfare services in which all economic groups participate. For instance, the community chest raises funds to support our Boy Scouts, Camp Fire Girls, Girl Scouts, Young Men's Christian Association, and Young Women's Christian Association. Boys and girls from the very high income families participate in these activities in exactly the same way as do children from homes where for various reasons the income may be modest. In certain programs some of the participants pay and some do not. The knowledge of who pays and who does not is kept confidential and is known only to the administrative office. As far as participation in the program is concerned, everyone is on an equal footing and treated alike.

* * * * *

Because of the number of these organizations, it is essential that there be some place where they all can come together, so that they can plan their many activities cooperatively and coordinate their programs. As you can readily understand, unless this is done there would be chaos and waste. Every large American city, therefore, has an organization called a council of social agencies or a welfare council. Representatives from all these organizations, both governmental and private, together with interested citizens, come together to plan their part in the total effort. The result is that these organizations are made aware of what social services are needed most in their county, and they are encouraged to give those services with as little duplication as possible. Although this coordinating and planning council works with all organizations, it is financed by voluntary gifts through the community chest.

I am telling you about the work of the council of social agencies before I tell you about the community chest because in this way I believe that my later remarks will be clearer. In addition to working and planning with representatives of all the agencies in our county, the council is constantly making studies concerning changes which need to be made as a result of changing social and economic conditions. The council also keeps the general public informed about what is being done, and also about what needs to be done in the future. The council, on the basis of experience, knows that an effective overall social-welfare plan in any city must include a variety of basic social services. If more money than necessary is spent on one problem, this can mean that another problem, perhaps equally important, may be neglected. Too much of one service or too little of another upsets the balance and can make for inefficiency. * * *

In an effort to generalize the many complex problems and services in a large city, some communities, including Dallas, classify the numerous social services into four large categories. First, those problems and services directed toward what we call economic needs. In other words, directed toward those individuals and families who cannot provide minimum living essentials for themselves because of some misfortune. This usually means food, shelter, and clothing. Second, problems and services related to health and health education. These services are directed toward everyone. Those who cannot afford to pay for essential medical care receive it free. Others pay in accordance with their ability depending upon their income, based on a scale developed by the council of social agencies called the standard family budget, which is developed by expert homemakers. Much service and treatment is available from social agencies which is not available anywhere else.

Third is the area which we call counseling services. This area concerns casework, coun-

seling, psychological testing, guidance, and psychiatric services for individuals, including children, who have emotional or personality problems which are causing difficulties. Here again these services are for everyone.

The fourth area of service is the recreation, groupwork, informal education field. This includes community centers, clubs, scouting, and groups activities for all ages but especially for young people. We have learned that providing opportunities for creative play and enjoyment is a necessity, not a luxury. Experience of such national groups as our National Recreation Association has indicated that constructive group activity is essential not only to good physical but also to good mental health.

* * * * *

Last July I appeared before a group of social welfare leaders in Stockholm, Sweden, under the auspices of the control committee representing 16 private business associations in Sweden. The members of these associations contribute to separate appeals by voluntary philanthropies approved by the committee. Last year they gave 47 million kroner for the support of Swedish voluntary agencies. I was pleased when my remarks at that meeting were printed and made a permanent record of our National Government in the CONGRESSIONAL RECORD of the United States of America. The Swedish leaders were most interested in one particular aspect of my remarks, the fact that so much of the private social work activity in my country is carried on by nonpaid volunteers. This fact seemed to impress them most of all. In our total private welfare effort there is a low proportion of paid professional workers to nonpaid volunteers. We have several organizations where just one or two professional workers have several hundred volunteers to call upon to help get the agencies' work done. We have a very large number of volunteers who contribute their time working in hospitals, thus freeing the professional and technical staffs from doing many of the nontechnical chores. Another typical example is our group programs where a few well-qualified professional workers recruit and train large numbers of volunteers to carry on the bulk of the program.

This same thing is true of activities directed toward financing private social services. Thousands of interested citizens volunteer their time in soliciting funds during the intensive campaigns. This participation on the part of nonpaid volunteers not only helps to lower costs but also builds up a strong interest in the social services on the part of the citizens. For these reasons you can see that social services in my country are truly for everyone and supported by everyone.

I cannot overemphasize this fact since it is so important. Because everyone benefits from these services and helps support them, it removes the old-fashioned idea that social services are an act of condescending charity on the part of those who have financial means toward those in the lower economic group. In our city social service is "Many in one, for all." This is consistent with our democratic way of life.

Because so many citizens are involved in supporting these activities, it is impossible for anyone to tell exactly how many there are. I can only give you these examples and estimates. For instance, in one campaign for funds on the part of a health agency 20,000 citizens in my city actively participated. I believe it would be conservative to estimate that at least 75,000 citizens in Dallas are engaged in some form of nonpaid volunteer activity in our social service organizations. This does not include doctors, lawyers, and other professional groups who give millions of dollars of service free, contributing thousands of hours both day and night.

One of the most notable developments in this field in the United States of America is the Community Chest. This is the part of the total picture which I know best, since I have been engaged in work related to social service for the past 25 years and have been a director of the Dallas Community Chest for the past 13 years.

* * * * *

Because we have a great many voluntary welfare organizations their financing through private contributions is a large task. Many years ago each of these organizations collected its own funds by making separate appeals to the population. It was realized many years ago that this pattern of each one asking funds separately was inefficient. Gradually more and more of these private organizations came together and had one large appeal during the year for the benefit of all. * * * This method of raising funds for private welfare organizations has been very successful and has spread rapidly. According to United Community Funds and Councils of America, last year about 2,000 American cities used this method and the movement has spread to Canada, Hawaii, Australia, Cuba, the Philippines, and south Africa. Funds raised this way in 1956 for use in 1957 totaled more than $379 million, and represented contributions from over 26 million individuals and companies. This total effort was carried on by over 3 million volunteer citizen workers and supported the programs of over 21,000 private welfare organizations.

It is easy to understand why this method of fund raising is increasing in popularity. It allows the volunteer solicitors to concentrate on a single campaign instead of separate campaigns for each agency. It relieves the director and workers of the agency of the responsibility for raising their own funds and so enables them to concentrate on performing needed service. It helps the contributor because he knows that each organization which will receive money has been thoroughly studied by the citizen leaders in the Community Chest. Because the cooperative campaign is larger and more inclusive, it has an appeal to all people at all levels.

These cooperative fund-raising efforts in the United States of America have various names. Many are called Community Chests and generally include only local agencies. An increasing number of local Community Chests are taking in more nationwide organizations and are becoming known as United Funds. The prime purpose is the combining of many appeals on the part of private organizations into a single campaign.

* * * * *

I would like to tell you how this plan works in my home county of Dallas. The Dallas Community Chest, which includes 35 local welfare agencies and 2 nationwide voluntary agencies that give services locally, has made significant strides in recent years. For instance, in 1948 we raised $1,470,000. In 1956 we raised $2,553,000. This is an increase of 74 percent. In 1948, 105,000 persons contributed. In 1956, of the 337,000 employed in Dallas County, 202,000 persons contributed. This is an increase of 92 percent. Remember we are talking of voluntary giving.

The Dallas Community Chest has an overall board of directors composed of 105 men and women. These people come from all walks of life. The board of directors, elected by those who give at least $1 to the fund, sets the general policies of the community chest, while many of the important day-by-day decisions are made by a 16-member executive committee. The small year round paid staff of 15 members carries out the policies and decisions of the board and executive committee. * * *

This citizen participation is further strengthened by the fact that each of the 37 member agencies of our community chest, operating a total of 105 centers of operation, has a board of directors of its own. There is a total of 670 board members serving with the member agencies. Agency board members help operate their agencies and also are expected to work in the chest campaign. This broad citizen interest is further strengthened by an additional 6,000 citizens who volunteer to work in the central fund raising efforts. Each of these volunteer workers learns much about the work of the agencies and becomes an informed spokesman for them. It is their community chest and the agencies are their agencies. This whole project is carried on with the philosophy of "many in one for all." Put in another way, when we help people who need us, we are helping everyone, and what hurts the general welfare hurts everyone.

To some degree our success depends upon our year round public relations program. All publicity media are used. Television is being used more and more. Agencies are encouraged to use constructive human interest stories for publicity purposes. Each agency always states in its publicity that it is a member of the community chest. Periodically, we have public relations clinics, when agencies are given ideas of how better to interpret their services to the general public. In all of this the chest receives invaluable help from a publicity committee made up of outstanding public relations and advertising people in Dallas who give their time free. People who help in these ways become active partners in this enterprise.

In the actual solicitation of contributions every encouragement is given to make the giving convenient and fair. The total campaign organization is divided into divisions according to the major grouping of contributors, based on their type of business and ability to give. In this we have the cooperation of many business and labor union leaders; for instance, the worker can pledge an annual amount of money and have this amount deducted from his regular paycheck in monthly installments. At the employee's request the firm he works for will handle the deduction and send it to the community chest office. In our community, most salaried workers are encouraged to give 1 day's pay as a fair share while people with higher incomes are encouraged to give on a more generous basis. Their giving or not is a matter of conscience and election on their part.

A "speaker's bureau" composed of informed volunteers gives talks before civic, professional and employee groups explaining these matters. In all of this we have the encouragement of our National Government since under our income tax regulations a corporation may make tax-free gifts for charitable purposes up to 5 percent of profits. Individuals can make tax-free gifts of 20 to 30 percent. * * *

One more factor which requires attention relates to the activities of our "appeals review board." All fund raising efforts for charitable purposes in Dallas must be licensed by the city government. In this way time of the campaign is designated also, so that several campaigns are not carried on at the same time. In addition the leading business and industrial people in Dallas have a committee called the "campaign screening committee." This group works closely with our council of social agencies, and studies the need for the proposed campaigns before they contribute to them. As you can see, this helps the essential welfare efforts by discouraging the unessential ones.

Another of the many important aspects of our work is the way in which we determine the annual overall amount which is needed for the operation of the combined agencies of the chest for the coming year. This is the amount which we call our annual campaign goal. The Community Chest receives monthly financial reports and monthly activities reports from each member agency.

This makes possible year-round study and budget control and trends are noted quickly.

Each spring outstanding local citizens are appointed to serve on what we call the Citizens Budget Committee. It would be impossible for one committee to review the budgets of all 37 chest agencies. Therefore, the committee is divided into 4 groups and each agency is assigned to 1 of the 4 budget groups, depending on its field of service.

The board of directors of each chest agency every year studies its own program in view of future financial needs. Then each board of directors draws up a proposed budget which it believes its agency will need during the coming fiscal year beginning November 1. In June, a committee from each agency personally appears before the Community Chest Budget Committee to explain and justify the request for future funds.

During these conferences staff of the Community Chest and also of the Council of Social Agencies are present. The chest staff has at its fingertips data concerning previous expenditures of each agency, for each of the many individual items which comprise the total budget. Staff members of the Council of Social Agencies whose overall job is to know the work of all the many welfare groups in Dallas, are available during the discussions for consultation.

This procedure is used with all chest agencies, regardless of how much or how little of the agency's total income comes from the chest, and how much is derived from charging fees for its services, or from other sources. Several chest agencies in Dallas receive only a small proportion of their total income from the chest. On the other hand some agencies receive all of their funds from the Community Chest. This is so because, depending on the nature of service, some agencies can charge fees while others cannot. Some agencies have been able to supplement their chest income by receiving grants from foundations and trusts; still other agencies receive part of their funds from the Community Chest and part from the local government. The scrutiny of each budget item is the same regardless of the sources of the funds.

A good example of an agency which receives funds from a variety of sources is the Dallas Child Guidance Clinic which provides psychological testing and psychiatric services for emotionally troubled children. That agency is currently receiving support from six sources: the Community Chest, fees from clients, the Texas State Department of Health, the Dallas public schools, a local private foundation, and a private statewide foundation. The budget of this agency is handled in the same way, as the budget of the Neighborhood Recreation Association, a small community center which receives all of its operating funds from the Community Chest.

The campaign goal for the year is based upon information provided by the budget committee. An additional amount must be added and earmarked as a "reserve for necessary unforeseen expansions" during the coming year. Also, an amount must be added as a "reserve for emergencies" and an amount for "uncollectable pledges and shrinkage." * * *

Each agency is immediately notified of the action taken on its particular budget request. Should the agency feel that its request was not given proper consideration, that agency can return to the budget committee for a rehearing. Although in Dallas the chest raises about $2½ million, the total expenditures of the chest agencies are close to $6 million. This means that for an investment from voluntary contributions of $2½ million the chest agencies are providing $6 million worth of service to the community.

The budgeting process is an important part of not only financing, but planning for welfare services. The chest budget committee made up of outstanding local citizens represents the persons who use the agencies' services and who contribute to the cost of the services. It includes people of all races and religious backgrounds, housewives, salaried workers, union labor officials, professional men, career government men, and leaders of business and industry. It is important to clarify that although these people are identified with these various groups, they do not come as official delegates. They come as citizens and are free to act as individuals. * * *

The budgeting process pledges to the community that the funds which the community chest collects for the agencies is vitally needed and is being spent wisely. Also, the budget committees learn very quickly that the various agencies could provide more good services than current funds can support. This means that the budget committees must choose and approve only those expenditures which they feel are important. Because of this they can tell the general public the necessity for not only attaining the current goal, but the need to raise more money in future years, so that additional services can be given. It is democracy at work through public education and voluntary commitment.

I believe you will agree with me that the process which I tried to outline contributes much to our community life. It is far more than merely a check on the validity of the agencies' requests. It not only keeps fundraising costs low, it not only makes for greater efficiency, it not only helps to keep balance among the many various types of social services; but it has educational, social, and spiritual values.

* * * * *

Working together for a common unselfish goal is basically a spiritual experience which cuts across all religious and denominational lines. We never lose sight of this fact. Participation by clergy of all faiths is emphasized. Many of the campaign meetings are led by outstanding spiritual leaders and the efforts of the volunteers and the significance of the money raised is constantly translated into spiritual values.

We are convinced that the democratic way of life is best. We are convinced that the quality of our democracy depends upon our standard of values, which in turn depends upon the quality of our religious life. We know that our community chest efforts gives our people an opportunity to put their religion to work. Through this work they dedicate themselves to the finest in life. There is no question in our minds but that this program, hand in hand with the church, strengthens the foundations of our lives. This truly is our concept of "Many in one for all."

Address by Judge W. Walter Braham on 200th Anniversary of Birth of Alexander Hamilton

---

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 25, 1957

Mr. MARTIN of Pennsylvania. Mr. President, in commemoration of the 200th anniversary of the birth of Alexander Hamilton, which is being celebrated this year, a notable address was delivered at the Chautauqua Institution in New York by an able and distinguished Pennsylvania jurist, Judge W. Walter Braham, of New Castle.

Judge Braham served two 10-year terms on the bench of Lawrence County, Pa., until his return to the private practice of law in January 1956. He is president of the Chautauqua Institution, and has devoted many years of research and study to the growth and development of American constitutional government.

Because many of the ideals to which Hamilton was dedicated are applicable to the problems of today, I ask unanimous consent to have printed in the Appendix of the RECORD a summary of Judge Braham's address.

There being no objection, the summary of the address was ordered to be printed in the RECORD, as follows:

ALEXANDER HAMILTON

CHAUTAUQUA, N. Y.—Alexander Hamilton and his fellow Americans in colonial times had to take a stand on the bloody French Revolution just as today we have to decide what to do about Communist Russia.

Speaking in the Chautauqua (N. Y.) Amphitheater on Alexander Hamilton, Judge W. Walter Braham, president of Chautauqua Institution, said, "In Paris, the mobs took over in 'the reign of terror.' Radical leaders one after another—Mirabeau, Danton, Robespierre—rose and died under the guillotine. The rumblings of the tumbrels of destiny sounded loud in many lands. Then the French people passed from the role of defenders of themselves against domestic tyrants and foreign foes to the role of aggressors and invaders, determined to bring their type of bloody liberty to the other nations of Europe, quite after the fashion of the Russian Communists of our own time."

Lecturing in commemoration of the 200th anniversary of the birth of Alexander Hamilton (July 19), Judge Braham pointed out that there were stanch sympathizers and also rabid denunciators of the French revolutionists even as today there are "fellow-travelers" advocating the Communist line as against those who consider communism the mighty menace that it is.

After eulogizing Alexander Hamilton for his impressive contributions to the marvelous growth of American constitutional government, the distinguished jurist and lifetime student of Hamiltonian history and lore, remarked that, "It is impossible to portray the true Hamilton without comparing him with Jefferson, unpleasant though it is to make one great man stalking horse for another. Hamilton's weakest point was precisely the point at which Jefferson was strong; this is the understanding and the management of practical politics. Hamilton, and Washington, too, had a naive belief in a government above politics. Washington included in his Cabinet his political foes who sought constantly to frustrate his policies. Jefferson, with a truer insight, knew that everything connected with the Government is sooner or later affected by political considerations. He foresaw the rise of the two-party system, the party in power and the opposition."

Comparing the two Americans, Judge Braham stated:

"Jefferson carried the fire and the fury of the French Revolution to the New World; Hamilton rejected its excesses and stood for firm, competent, orderly and honest government. Jefferson, the idealist, thought more about the rights of man, a free press, and religious toleration than he did about government; Hamilton, the supreme realist, believed that a government must be well organized and resolute and that its ability to provide peace, security and economic opportunity for its people is its only true test. Jefferson believed in the sovereign States and was jealous of a strong Federal Government; Hamilton deliberately sought to lessen the hold of the State governments upon the peo-

ple and to increase their loyalty to the Government at Washington. Jefferson saw something noble in the violence of Shay's rebellion in Massachusetts, in the September massacre in France, and in the whisky rebellion in Pennsylvania; Hamilton distrusted the mob and advocated first a government vigorous and able to defend itself."

He declared that both Jefferson and Hamilton were needed, "Jefferson to put dignity and ambition into the hearts of Americans, many of them from the so-called lower classes of England, indentured servants, little 'bound boys' and the like; Hamilton to teach them to select competent leaders, to trust only competent leaders and not to rely on mob tactics."

The chautauqua president went on to say that he considered Hamilton's views on government modern and gave a number of illustrations to prove his contention. He reminded his audience of Hamilton's proposal that the Federal Government reserve to itself a share of the mineral wealth of the country and stated that, "Had we done so there would have been fewer Texas millionaires, and a smaller national debt today. His idea that citizens should be encouraged to invest their money in joint enterprises with the Federal Government appears today in our national bond system, our present Federal power policy, and the modern device of authorities."

Hamilton's view of the Federal Government as an active, aggressive force in protecting the people and guiding their destinies has become the modern view, he continued.

The irony of history and the measure of Hamilton's greatness is that the modern Republican conservative claims with properiety to be a Hamiltonian and the New Deal innovators dipped into Hamilton's bag of tricks to solve the economic difficulties of their day. One might wish that Herbert Hoover had had more of Hamilton in him and Franklin D. Roosevelt somewhat less. Hamilton would have acted to relieve widespread misery more promptly than Hoover. He would have avoided the indiscriminate largess of Roosevelt.

"What would Hamilton do if he were to enter the Treasury today?" Judge Braham queried, and then answered, "I believe he would recoil with horror from the idea that the Canadian dollar is worth more than the American dollar. He would regard as plain folly the situation where a wage raise followed by a price raise in an ever increasing spiral are regarded as inevitable. I believe he would say that if there is money for an increase in wages and dividends there is money to lower prices and give everyone a raise. I believe Hamilton would regard the monumental public debt as charged with disaster for all of us and would lay plans for paying it."

He concluded his memorial speech on Alexander Hamilton by a final comparison with Thomas Jefferson, declaring that, "So well balanced were his qualities of boldness and restraint that only in the most critical moments did George Washington need to curb him. So true was his love of his adopted land and its people that he needs take second place to no one, not even to Thomas Jefferson in his devotion to the common man. Jefferson helped the common man by giving him hope and pride and confidence. Hamilton helped the common man by giving him security, the stout roof of a sound Government over his head and a sane economy under which he might work and prosper."

Tight Money Holding Back United States Economy

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, July 25, 1957

Mr. HUMPHREY. Mr. President, occasionally one notes in the columns of the daily newspapers which publish letters to the editors, some very outstanding letters which are worthy of attention. I have before me a letter, signed by Evan J. Henry, of Winona, Minn., which was published in the Minneapolis Morning Tribune under the title "'Tight Money' Holding Back United States Economy." The writer of the letter, Mr. Henry, has given a very succinct, instructive, and thoughtful analysis of some of the economic problems which face our country, and has taken sharp issue with the monetary and fiscal credit policies of the present administration. The headline "'Tight Money' Holding Back United States Economy," reveals the theme of his letter, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

"TIGHT MONEY" HOLDING BACK UNITED STATES ECONOMY

To the EDITOR:

In the July 7 Minneapolis Sunday Tribune an editorial appeared commending the Federal Reserve Board's tight-money policy. I believe, on the contrary, that the policy should be carefully reexamined.

About 2 years ago the Federal Reserve Board embarked on the policy of restrictive credit with the intent of influencing the tempo of the economy. In times of boom, when demand for goods outraced available supplies, credit brakes would be applied to reduce demand by raising reserve requirements and discount rates; in times when demand was off, supplies up and the economy in need of a stimulant, reserve requirements and discount rates would be lowered to provide impetus to keep the economy in high gear.

When prices of basic commodities did commence their rise in 1956, the Board clamped on the so-called credit brakes by raising discount rates throughout the country to limit the amount of money and credit chasing available goods. This policy continues today and is the cornerstone upon which the administration in Washington relies to sustain continued prosperity.

Unfortunately, however, certain significant facts are at wide variance with principles of the policy. For instance, George Humphrey, former Secretary of the Treasury, who supports the Board's policies, has long contended that the cause of inflation is due entirely to a short supply of goods in relation to the supply of money and credit.

Thus to prevent inflation, money and credit must be reduced and brought into line with the short supply of goods.

Yet the strange fact is that a shortage of goods simply does not exist today yet inflation persists. According to the Department of Commerce, business inventories are at an alltime high value of $53 billion. This compares with $48 billion worth a year ago and $43 billion worth on hand at the inception of the Board's restrictive credit policy.

If it is the intent of the Board's policy to restrain demand for goods without adversely affecting expansion of productive capacity, the opposite has evidently been the result. There has occurred a steady increase in that demand, as reflected in expansion of consumer debt, approximately $6 billion a year for both 1955 and 1956.

Evidently it has had an adverse effect on expansion of productive facilities. The increase in corporate debt declined from $19.4 billion to $12.9 billion, a strong indication that many businesses have tabled plans for expansion of productive facilities.

Thus it appears that the "Fed's" policy has not only failed to reduce demand for goods and services but has actually tended to discourage the development of new productive facilities. Yet is not steady expansion of productive facilities necessary to meet the demands of an increasing population?

The policy is based on the assumption that the economy is "bumping on the ceiling of capacity output" while demand in excess of that output continues uninterrupted, that while capacity output continues to lag behind demand, credit must be restricted to balance demand with available goods.

Yet the facts indicate the economy is not operating at full capacity, as is indicated by current steel production at 85 percent, autos at 85 percent, and similar reduced activity in many other consumer hard goods lines.

The question naturally arises: Is too much reliance being placed in a policy that is so apparently inconsistent? Perhaps a second look is in order.

EVAN J. HENRY.

WINONA, MINN.

Slum-Clearance Program in Huntsville, Ala.

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, July 25, 1957

Mr. SPARKMAN. Mr. President, in the Huntsville (Ala.) Times of Monday, July 22, there was published an editorial entitled "Huntsville Will Be Different." The editorial deals with a very fine program which is in progress in the city of Huntsville.

Huntsville is not a large city. I suppose its population is between 50,000 and 60,000. However, a very fine program is in progress in that city for eliminating slums and providing decent housing for those who are unable to pay full rent. I read the last paragraph of the editorial:

All these past, present, and future renewal, redevelopment, and housing projects have, or will, cost millions of dollars.

But the payoff over the years ahead will come in elimination of the cancerous conditions that were eating into the very vitals of Huntsville, destroying property values, lowering tax revenues, and breeding crime conditions that are so costly financially and so damaging to public health.

That applies to every city in the country today. I point to this particular program as a fine example of what can be done.

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HUNTSVILLE WILL BE DIFFERENT

The residential, as well as the business, face of Huntsville will look mighty different after the next 2 or 3 years.

The slum areas, which were eating like a cancer into several sections, will all but have been eliminated.

The day of growing up like Topsy, which prevailed almost a century and a half, is about over.

Careful, thoughtful planning, plus zoning, is putting an end to haphazard growth.

Some, of course, take exception to the Federal assistance that has been given, and that will be given, to remaking the map of Huntsville by erection of low-rent housing, or by purchasing and redeveloping those areas that are being upgraded and once again being made substantial tax-paying property. This will pass, however, as time moves on and the beneficial results become increasingly evident.

Erection of Binford Court was the first step in the long-range program.

It was followed by construction of Butler Terrace and Sparkman Homes.

Construction on the parkway led to the first of the major redevelopment and relocation projects on West Clinton Street. It is by no means complete, as a few more lawsuits must be settled to clear title to all the property needed for this project.

Forty-nine families in the area already have moved out, leaving 13 more to be relocated.

The Winston Street area, lying roughly north of the Southern Railroad and west of Meridian Street, comes next. Federal approval of its urban renewal in cooperation with the city, has been granted. It is now at the loan-and-grant stage. Plans call for leveling all the miserable hovels in this area and development for commercial and light-industry property.

Boogertown in the western section of the city along the Madison Pike and Ninth Avenue, will be wiped out also, under the redevelopment program.

Three big low-rent housing projects are on the schedule for start this year.

A total of 194 buildings for white tenants will be erected behind the old Lincoln Mill ball park; 76 more housing units for white tenants will be built on Brook Street, west of Pinhook Creek and south of Fifth Avenue; while west of Calvary Hill and north of Highway 72 West, 269 units for Negro families will be built.

FHA approval for these 539 new housing units was granted earlier this month.

All these past, present, and future renewal, redevelopment, and housing projects have, or will, cost millions of dollars.

But the payoff over the years ahead will come in elimination of the cancerous conditions that were eating into the very vitals of Huntsville, destroying property values, lowering tax revenues, and breeding crime conditions that are so costly financially and so damaging to public health.

Roland C. Koehler's Impressions of Europe

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Thursday, July 25, 1957

Mr. McNAMARA. Mr. President, I recently received a letter from a constituent of mine, Mr. Roland C. Koehler, of Detroit, in which he gave me his impressions of his recent trip to Europe.

I was particularly impressed by his remarks on the benefits of the Marshall plan and other foreign-aid programs.

I ask unanimous consent that Mr. Koehler's letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

KOEHLER-PASMORE CO.,
Detroit, Mich., July 9, 1957.

Senator PATRICK V. MCNAMARA,
Senate Office Building,
Washington, D. C.

Mrs. Koehler and I have just returned from a 2 months' trip in Europe, during which time I was in contact with many businessmen and government officials.

The trip involved only the countries of the Netherlands, West Germany, Switzerland, and a small portion of Austria. It did include a trip to Berlin.

I was very much interested in getting the viewpoint of the people over there as to how they felt toward the United States and what they expected the future to bring forth. Sometimes it is rather astonishing to get those viewpoints, particularly from people who can stand at a distance and look at a situation with which we might not even be conversant, having lived with it for so many years. Bear in mind that all of the people I contacted could probably be classified as middle class. There were no outstanding political leaders among them, and neither were there any rabid reformers.

Here are the conclusions:

1. There is a unanimity of opinion that if it had not been for the Marshall plan and similar helpful projects that Europe would have dissolved into anarchy.

2. There is a deep and abiding sense of gratitude for the help that the United States has given in the past which has enabled these countries to recover so amazingly.

3. There is beginning to dawn a slight resentment at the presence of American forces in Europe, as it is felt that foreign armies on their own soil can be a potential source of friction. While they recognize that this is a situation they will have to live with for a while longer, they sincerely hope that ways and means will be found of withdrawing our forces back to the United States.

4. There is frank wonderment as to how long the United States can continue to be Santa Claus to the rest of the world. They told me frankly that they just could not understand how we, in the United States, could give so freely of our resources without expecting a complete economic collapse in the future if we did not reduce this tremendous drain.

This last was most remarkable to me because it was spoken in good faith and, in many cases, merely as one good friend to another counseling caution—even though it might mean that they over there would not be such large beneficiaries of our generosity if we curtailed our expenses.

I thought you would like to know these conclusions because sometimes it's good to look at ourselves through other persons' eyes.

ROLAND C. KOEHLER.

A Voice of Reason Honored

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, July 25, 1957

Mr. KEFAUVER. Mr. President, during the difficult days when tension was running high in Clinton, Tenn., due to the efforts of John Kasper and his followers, a calming voice was raised in the community. It was the voice of Horace V. Wells, Jr., editor of the Clinton Courier-News, who spoke out in the finest traditions of American journalism. I am happy that his courage and leadership have not gone unnoted.

I ask unanimous consent to have printed in the RECORD editorials from the Nashville Tennessean and the Chattanooga Times commenting on an award—the third that Mr. Wells has received—for his courage in journalism.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Nashville Tennessean of July 18, 1957]

A VOICE OF REASON HONORED

Earlier this week, at Carbondale, Ill., Mr. Horace V. Wells, Jr., editor of the Clinton, Tenn., Courier-News, received the Elijah P. Lovejoy award for courage in journalism.

It was the third such recent honor bestowed upon the former State news editor of this newspaper. At the annual convention of the Tennessee Press Association 2 weeks ago, Mr. Wells was cited by his colleagues for "his courageous leadership in journalism." Last March, he received the green eyeshade award presented by the Atlanta chapter of Sigma Delta Chi, professional journalistic fraternity for "contributions to journalism in the best tradition of the profession."

Such recognition is fully deserved. For in the face of intense pressures, physical threats and mob violence, Mr. Wells stuck steadfastly to the path of reason when racial disorders erupted in Clinton last year.

This small town editor admittedly did not agree with the Supreme Court decree on public school desegregation. But neither did he agree with the extremists who proclaimed, in effect, that they would choose the laws they wanted to obey. For that, he recognized, was the way to anarchy.

As emotionalism swept the little community, it would have been easy enough for Mr. Wells to say nothing. Or, had he been so inclined, it would have been possible to use the influence of his newspaper to fan the flames to greater intensity. Instead, he said the things that he knew needed to be said in Clinton.

"You have the right to believe in segregation and so do we," he told his readers through the columns of his newspaper. "But neither you nor I has a right to violate the law, nor do we have a right to take the law into our own hands. We must stand together in Clinton, obey all laws (whether we like them or not) so long as they are laws."

There is no way, of course, to measure the exact impact of Mr. Wells' steadying influence, but there is every reason to believe that it was a major factor contributing to Clinton's return to sanity. And it is not pleasant to contemplate what turn events there might have taken if the newspaper editor there had cast his lot with the hatemongers intent on seeing blood spilled.

For his reasoned and courageous leadership, Mr. Wells richly merits the honors that have come his way. And his example is one that we would commend to all of his fellow Tennesseans and particularly to the other members of the profession to which he has brought such high credit.

[From the Chattanooga Times of July 20, 1957]

WORTHY OF TRIBUTE

Horace V. Wells, Jr., editor of Clinton Courier-News has received a second award for his devotion to the highest principles of newspapering during the stress-filled days of the school-integration crisis in his community. It is the 1957 Elijah P. Lovejoy award for courage in journalism, given him at the national conference of weekly newspaper editors.

Mr. Wells personally does not favor integration of the races in public schools. Despite these inner feelings and the most intense sort of pressure from others, he steadfastly stood for obedience to the court orders which led to integration of the Clinton High School.

To Mr. Wells, the citizen, the course was clear:

"We believe that the Government of the United States is a Government of law and not of man and that the Supreme Court is the final arbiter in deciding what is law. Therefore, once the Supreme Court has spoken and until the decision of that Court is changed by amendment to the Constitution by a vote of the people, we have no choice except to obey the law."

To Mr. Wells, the editor, the course was equally clear. He appealed for reason rather than emotion in handling the situation and he besought cooperation rather than conflict among the opposing elements.

As a citizen and as editor, Mr. Wells acted most courageously and commendably, and is due the tributes now coming his way.

Fast Work on the St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, July 25, 1957

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Fast Work on the Seaway," which was published in the Minneapolis Tribune of July 14. The editorial refers to the progress being made on the St. Lawrence Seaway, and it also refers to matters other than those concerned with actual construction of the seaway, for it directs attention to the activity of shipping companies which will be using the seaway. As many of us predicted, the seaway will not only mean a reduction in transportation rates, and thus a saving to the users, producers, and consumers, but it also will mean a decidedly increased economic development in terms of shipping, dockage, and everything else connected with maritime transportation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FAST WORK ON THE SEAWAY

This is a great year for progress on the St. Lawrence seaway. From the Welland canal, which bypasses Niagara Falls, through the channels being dredged, blasted, and harnessed with locks along the St. Lawrence to Montreal, thousands of workmen are pushing the project ahead.

Thus the dream of the early 1930's—to link the ports of the Great Lakes to the Atlantic shipping lanes—is taking on the reality of stone and concrete and water 27 feet deep. It now looks as if the open route from Duluth to the sea will be completed on schedule, by spring of 1959.

Beyond the actual construction, perhaps the most significant sign of progress is the flurry of activity of shipping companies which will use the seaway. Already, the intercontinental operators have stepped up their shipments, though such transport is still limited to ships small enough to get through the old 14-foot channels and sturdy enough for ocean travel. Fees for chartering such vessels have risen sharply, yet shipping rates are running from 15 to 50 percent cheaper by water than by land, according to the Wall Street Journal. This year 450 sailings have been scheduled by the 27 lines operating along the seaway route.

American shipping companies, which have lagged behind foreign lines in developing Great Lakes-export trade, are now trying to catch up. At least four major firms in the United States are trying to obtain more ships suitable for immediate service, and plans are being made for bigger oceangoing vessels for later use. Half a dozen or more leading companies of other countries are building new ships for delivery after the opening of the deep channel.

The easy, natural transportation link between midwest United States and Canada and the great seaports of the world should give a substantial boost to the trade, the general economy and international relations of this part of America. Minnesota, the end of the line, stands to benefit greatly by the speedy completion of the seaway.

American Industry Must Not Be Sacrificed

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 25, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the letter which I have received from Hon. Donald Comer, chairman of the executive board of Avondale Mills, Inc., of Birmingham, Ala., setting forth persuasive arguments why it is imperative that action be taken to protect American industry and workers against unfair competition from products manufactured at slave-wage levels abroad.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AVONDALE MILLS, INC.,
Birmingham, Ala., July 23, 1957.

Senator HERMAN TALMADGE,
United States Senate Office,
Washington, D. C.

DEAR SENATOR TALMADGE: The Southern Garment Manufacturers Association has just had their annual convention in New Orleans. Mr. Philip Talbott, president of the United States Chamber of Commerce addressed them and advocated a more liberal policy on imports as necessary as he said to our national welfare and what he said was largely carried by our press.

His theme seemed to be that the United States was responsible for providing a market for what other countries, which he did not name, might want to sell to us and he was talking to a group of people whose interests are already being hurt and are further threatened by imports from Japan. When anyone in this country argues for reciprocal trade I think they should state what it is that we want to sell to other countries and what it is we want to take from these other countries in payment for what we sell them, and how much.

America's prosperity was built largely by our industrial wage, by our farm income, and by our research, advertising and merchandising know-how, all undergirded by our faith in God who told us that His truth shall make us free. Speaking to the point in question, our cotton farmers, our cotton spinners, and garment manufacturers provide all our country's needs, and then some. In our reciprocal trade arrangements I do not know of any country that takes from us any thing of which they already have an ample supply. We seem to be the one country that is willing to shut down our machinery and put our employees out of work in order to help some other country by accepting from them unwanted and unneeded goods.

American capital is invited to invest itself in industry. We pay a license, and tax, and we pay the American standard of wages with a minimum fixed by the Government itself and we are determined to resist all efforts not only on the part of the officers of the United States Chamber of Commerce but of the Government itself to swap this American purchasing power for this or that made by a foreign country and in the present situation, things made under the Asiatic standard of wage.

Mr. Randall, late of the Inland Steel Co., in a recent article in the Saturday Evening Post, argues along the same line as Mr. Talbott. Our industry is fiercely competitive but the steel industry at this very time is having its recent price advances investigated by the Government. The steel industry has not yet felt the unfair competition that will come when their customers begin to buy Japanese steel cheaper because of the Japanese cheaper wages. The American wages are the highest in the world. They have reached this point by mutual agreements of those concerned with the Government itself establishing certain bottoms.

In America we must buy what each of us makes. No segment of our industry can take its American wages and spend it for cheaper imports, cheaper only because of cheaper wages. This has got to be our procedure in order to maintain America and to keep America strong.

To those who continue to believe that we can fight communism by a giveaway program, I ask why not give Japan our cotton, pay her to weave it and give the cloth to the naked people of New Guinea, Borneo, and Africa? Incidentally, we might win some new customers for cotton in the years to come.

Our industry cannot be sacrificed in some will-o'-the-wisp idea of preventing com-

munism here or there or yonder. Our foreign trade should be very largely limited to buying what the other fellow has in overabundance that we need and we should sell to him what we have in overabundance that he needs, with some three-way trading. We are not liimted to bilateral trading.

For example, Japan can sell her cotton goods to southeast Asia for tin and rubber which she could swap to us for our cotton or sell her cotton goods to South and Central America and take her pay in coffee, tin, bananas, nitrates, bauxite, iron ore, etc. which she can sell to us for our cotton or any other agricultural needs. Mr. Talbott and Mr. Randall should spell out their world trade program. Whose ox will they have gored? What are we to export and what are we to import? They should also tell us how they propose to equalize our wages with these of Asia.

The S. G. M. A. said: "The willingness of the United States to encourage increases in imports of cotton textiles and apparel to this country is frustrating the plain intent of the Trade Agreement Act as set forth by Congress as well as other legislation for the same purposes," and further stated that, "the only way they will ever get fair protection from the influx of Japanese imports will be through Congress."

Under a news headline from New Bedford, "Cotton Chief Sees Tariffs or a Slump," Mr. Leon Lowenstein, a leading figure in the textile industry said, "We cannot be saved by quotas on imports. We can be rescued from this flood of destructive, cheap goods only by the proper protective tariffs. Unless the Government gives us protection by tariff, I regret to say, we will have a recession, a depression, whatever you choose to call it, and dire unemployment."

The textile industry and all of its branches are deeply appreciative of your maintained interest.

Very truly yours,

DONALD COMER,
Chairman, Executive Board.

The Civil Rights Bill

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Thursday, July 25, 1957

Mr. STENNIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thoughtful article from the July 22, 1957, issue of the Jackson, Miss., Clarion Ledger. It was written by an outstanding Washington correspondent, Mr. Bascom N. Timmons, and is entitled "Reconstruction Era, II, Looms; However, Civil Rights Law Is Softened." This article contains much food for thought, is admirably presented and I think should be considered in the current debate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RECONSTRUCTION ERA, II, LOOMS; HOWEVER, CIVIL RIGHTS LAW IS SOFTENED

However mild and sugar-coated the Eisenhower civil rights bill may be when it finishes its congressional journey and receives the President's signature making it law, this legislation, plus the fact that the fate of the South's public school system is in the hands of Federal courts will mean that reconstruction era II has been ushered in throughout the South.

This is not to say that reconstruction era I will be the tragic era that reconstruction era I was. It will be carried on in a prosperous income-tax paying South, now heavily industrialized, instead of the impoverished agrarian section that the old Confederate States were at the end of the Civil War.

But the law which now almost certainly will go on the statute books will remain there longer and a more serious effort be made to enforce it than at any time since Rutherford B. Hayes and moderate men in his administration decided that the South should no longer be treated as a conquered province.

The South will be on notice that the President of the United States, the Supreme Court and an overwhelming majority of both branches of Congress have unmistakably said that the historic southern way of life is outmoded and must be reconstructed. All three branches of the Government are on record that the process of integration of the races, however, long or short may be the period, required, must go on. There will be adequate implementation through 1957-and-later court decisions and laws.

The South's eloquent insistence by its Senate and House spokesmen, aided by such liberals as the late Senator William E. Borah (Republican from Idaho) that both races in the South were making progress and would continue without outside pressure, has been brushed aside. From now on there will be this outside pressure.

Conceding that no measure containing all the force bill features of the measure as it passed the House of Representatives can become law, or even granting that it will be stripped down until it applies only to voting, it will still be strong medicine.

The very minimum—and this will not be the minimum by any means—is that a Civil Rights Division will be set up in the Department of Justice, and as Assistant Attorney General at the head of this Division will be appointed. There is no doubt either that there will soon be 100 or 200 lawyers in the Civil Rights Division of the Department of Justice and that these lawyers and other officials will have secretaries and clerks and investigators and file cases filled with complaints. And if anyone thinks a Federal agency of this size won't find work to do, that person has no acquaintance with Federal agencies, nor with the needling this one can be expected to have from interested organizations and politicians.

The work that agency finds to do will be almost exclusively in the States that once formed the Confederacy. Some of the reconstruction era I, voting legislation was repealed during the administration of Grover Cleveland, as was pointed out by Senator ALLEN ELLENDER, of Louisiana, during the Senate debate. But no more Grover Clevelands are going to be nominated by either party or elected President.

It is privately conceded by both friends and foes of the legislation that the milder the form of the bill now passed, the more certain it is that there will be additional legislation by future Congresses. Nor will the issue be taken out of future campaigns. It can be depended upon that there will be demands for both Democratic and Republican National Conventions in 1960 to put demands for stronger civil-rights measures in their party platforms.

For that matter, it can hardly be expected that there will be congressional surcease from civil-rights legislation, even as long as the next national conventions. Here, too, the physical facts of political life makes certain that should the Senate pass and the House accept a watered-down version of the bill now under discussions, bills will immediately be dropped into the legislative hopper extending its scope.

The present measure, whatever its final form, will merely be the first fundamental legislation in the field of civil rights in three-quarters of a century. The next such legislation will come easier in future Congresses.

Statehood for Alaska and Hawaii

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, July 25, 1957

Mr. KEFAUVER. Mr. President, letters to the editors of newspapers, as written by interested citizens, express grassroots opinion of value on public issues of the day. I am happy to note in various newspapers an increasing interest in granting statehood to Alaska and Hawaii. I find in the Nashville Tennessean of July 18, 1957, a splendid letter, written by Mr. S. D. Davis, urging the granting of statehood.

The writer states that the Democratic and Republican National Conventions, in their platforms, always promise statehood. I should like to read the next, very important paragraph:

Both sides promise these people everything including statehood if their party is elected. After the election, these people are forgotten. So far they have been denied statehood. Surely these two fine territories which meant so much to us during World War II and mean so much today to the defense of our country because of their strategic location and their will to help their mother country deserve statehood and shouldn't be used as a political football.

Mr. President, I ask unanimous consent that the entire letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

IT'S TIME ALASKA, HAWAII WERE STATES

When the Democrats and Republicans hold their national conventions to select a candidate for President and Vice President of the United States, the matter of giving statehood to Hawaii and Alaska always pops up.

Both sides promise these people everything including statehood if their party is elected. After the election these people are forgotten. So far they have been denied statehood. Surely these two fine territories which meant so much to us during World War II and mean so much today to the defense of our country because of their strategic location and their will to help their mother country, deserve statehood and shouldn't be used as a political football.

In 1867 the United States purchased Alaska from Russia for $7,200,000. The worth of Alaska to the United States can't be measured in money. Today Alaska is rich in forestry, minerals, fisheries, and fur, and in the last few years has done all right for itself in developing their vast field of agriculture.

In 1893 an appeal was made by Hawaii to the United States for annexation and was rejected. In 1898 a second appeal was made to President McKinley and Hawaii was accepted as a Territory of the United States. The people of Hawaii have been true to the United States ever since, and suffered with them at

Pearl Harbor on December 7, 1941. The chief industry of Hawaii (which consists of Hawaii which consists of 20 islands) is agriculture. No. 1 product is sugar, with pineapple a close second.

Hawaii is a vacation paradise with its ideal weather and attracts hundreds of thousands of tourists from the United States. Most people in the United States would like to see these people and their countries become a part of the United States and have their voice in our country. We shall look forward to the day when Old Glory will have 50 stars.

S. D. DAVIS.

Germans Produce Well on Small Farms

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, July 25, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Germans Produce Well on Small Farms," written by Axel Hansen, and published in the Minneapolis Tribune of July 21, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GERMANS PRODUCE WELL ON SMALL FARMS
(By Axel Hansen)

The large refugee population in West Germany and control of Germany's eastern breadbasket by Russia are forcing West Germany to import agricultural products, according to Dr. H. C. Niklas, German Secretary of Food, Agriculture, and Forestry.

Still, traveling in northern Germany, we passed many beautiful, well-kept farms with excellent grain and root crops.

Farms here are small. Sixty-five percent are from 10 to 40 acres; 30 percent from 40 to 200 acres and only 5 percent over 200 acres.

Most land is of a clay-loam texture, though in some sections it is lighter and even sandy. With good crop rotation and liberal application of barnyard and commercial fertilizer, they raise excellent crops.

There are few beef cattle here. The dairy cattle have a dual purpose and are used for both beef and milk production.

The average per-cow production each year is higher here than in Minnesota—8,000 pounds of milk and nearly 300 pounds of butterfat.

About two-thirds of West Germany is very hilly. It is common to see steep hillsides planted to crops and cultivated with equipment drawn by horses or steers.

In sections of more level terrain, where power machinery can be used, cooperative and private equipment owners rent machinery to small landowners during heavy-work periods.

The family farm is an accurate description for many of the holdings here. Large land holdings are sold in lots of 8 to 10 acres with a very small downpayment.

The Government will finance the building of a house, barn, and other buildings on these small parcels at a very low interest rate over 30 years.

Usually these small landowners have 8 to 12 cows, 5 or 6 sows, a flock of chickens, and a large garden.

The owner and his wife do all the work. They don't, of course, amass any great fortunes. But they usually pay off the loan before retirement and they seem happy and independent.

The recovery of German agriculture and industry is the main topic of conversation among tourists. It speaks well for the thriftiness and thoroughness with which the German people tackle difficult and sometimes almost hopeless problems.

Worthy Men and Politics

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, July 25, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an extremely fine article written by C. W. Dressler, Associate Editor, Johnstown, Pa., Tribune-Democrat, which appeared in the June 14, 1957, issue of the Harrisburg, Pa., Patriot.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENATOR KENNEDY AND SENATOR CICERO AGREE
(By C. W. Dressler)

Senator JOHN F. KENNEDY, of Massachusetts, gave the graduates at Syracuse University some good, if not original, advice last week. He advised them to get into politics "Politics," said the Senator, who is a successful politician at 40, "has become one of our most neglected, our most abused, and our most ignored professions."

Politicians, he said, must decide the greatest problems of our times, both domestic and foreign. Above all, they must decide the "complex problems of war and peace," and war now means nuclear war. "It is not necessary," said the Senator, "that you be famous, that you effect radical changes in the government, or that you are acclaimed by the public for your efforts. It is not even necessary that you be successful."

Senator KENNEDY is right in emphasizing the need for young blood and able minds in politics. There is a tendency in every republic, probably, to follow the Epicurean maxim: "Let no wise man meddle in politics." But the logical result of that attitude is that only unwise men will meddle in it, with results which wise men will not like. The Roman political writer and orator, Cicero, in his "Republic," argued against the Epicurean theory.

Such apologies for political inactivity are not worth listening to, Cicero wrote. If, as was said, those who meddle with public affairs are "generally good-for-nothing men with whom it is discreditable to be compared and miserable and dangerous to contend," it was the part of wise men to take the reins away from such people. To virtuous, brave, and magnanimous men, said Cicero, there could be no better reason for seeking public office than this, "to avoid being subjected to worthless men, and to prevent the commonwealth from being torn to pieces by them."

How, Cicero asked, could he himself have become a consul, except by pursuing a political course from his youth? "You cannot produce extempore, and just when you please, the power of assisting a commonwealth, although it may be severely pressed by danger, unless you have attained the position which enables you legally to do so," Cicero said.

"And what most surprises me in the discourses of learned men," he continued, "is to hear those persons, who confess themselves inacapable of steering the vessel of the state in smooth seas, (which, indeed, they never learned, and never cared to know), profess themselves ready to assume the helm amid the fiercest tempests. For those men are accustomed to say openly, and indeed to boast greatly, that they have never learned, and have never taken the least pains to explain, the principles of either establishing or maintaining a commonwealth * * *."

"How then," he asked, "can it be reasonable for such men to promise their assistance to the state, when they shall be compelled to it by necessity, when they are ignorant how to govern the republic when no necessity presses upon it, which is a much more easy task?"

Those whom the Greeks called the seven wise men almost all lived in the middle of public affairs, Cicero said. And, in our own times, men to whom the country pays its highest respects are, in most instances, those who have played a part in public affairs.

The Senator from Massachusetts and the senator from Rome are in fairly close agreement on this subject. And they both make sense. Politics calls for skill and training, and only rarely is an individual called to high position in government who has not had a great deal of experience in public affairs at a lower level.

Politics plays a steadily increasing part in our national life, as Government expands itself into virtually all the domestic affairs of the Nation. An apathy toward politics which might have been justified many years ago, when Government was small, is totally unjustified when national budgets rise to $70 billion, and 1 out of 11 members of the Nation's labor force is on some public payroll.

The Late Senator McCarthy

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Thursday, July 25, 1957

Mr. HRUSKA. Mr. President, in the National Review of May 18, 1957, there appeared an article, written by William S. Schlamm, and a comment by Sam Jones, on the subject of the late Senator McCarthy, of Wisconsin.

I ask unanimous consent that both articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

ACROSS MCCARTHY'S GRAVE
(By William S. Schlamm)

There was no roof from which to jump and so there were no editorials bewailing an innocent man's annihilation by the hound dogs of malice. There was only a young man of 48, a young mountain of a man, but fatigued to the bone, fatigued and harassed and greatly astonished. It seems that Joe McCarthy never fully understood what had happened to him. When a stupid virus struck, a tired, young body gave up. At the wake, Mr. Acheson said "de mortuis nil nisi bonum," which is a certified gentleman's and Harvard overseer's way of saying that the deceased was a ———.

But the deceased was a good man, and I have come here to bear this witness. I

knew him, not too well, but well enough to testify. And about the hound dogs that kept snapping at him until he fell prostrate, I know everything there is to know. So here I am to deposit testimony, for a certain tomorrow of trial, on an epoch of insane guile, an epoch in which Joe McCarthy was tarred and feathered by genteel Ivy Leaguers, by gracious ladies of Women Voters Clubs and by noble princes of the press.

Joe McCarthy became the center of the century's most scandalous fracas because he had the strength and the defects of organic innocence. When his day of destiny came, he looked around, innocently, saw the gargoyles of antichrist staring and sneering at him from everywhere, and innocently he reached out to crush them. Now others had seen the gargoyles before him, and some had even visibly shuddered. But, at midcentury, everyone who spoke or wrote or emoted before the public had gone through the postgraduate school of relativism (which is the insolent denial of the free will that chooses between right and wrong). And so the speakers and the writers and the emoters, who among them are the true rulers of our society, kept constantly changing the subject. To them, the sneering gargoyles were artifacts, morally neutral, esthetically interesting, intellectually provocative and, of course, not really serious. But Joe McCarthy, once he had caught sight of them, could never again speak of anything else. The subject had taken possession of the speaker. For the subject was deadly serious. And so was the speaker.

Joe McCarthy must have had many defects, and I know some of them, but I will admit none—not because he is dead (Mr. Acheson speaks, in Latin as well as in English, sheer cant), but because he was hated and hunted for his virtues. He was hated, above all, for his impregnable innocence. What the learned frauds could not stand about McCarthy was his certainty: he knew what he knew, he believed what he believed, and there were no two ways about it. But the learned ass balks with invincible stubbornness when there are no two ways on which to move at the same time. And then, Joe McCarthy just could not be lukewarm. This, in the catechism of modernity, is the gravest of all mortal sins—not to be lukewarm. Let your word be never yea, yea and nay, nay. The hot and the cold will be spewed out of the establishment's mouth, but the lukewarm shall be forever accepted. For the establishment lives according to this blasphemous perversion of the Apocalypse.

Joe McCarthy could not have conformed with it if his life had depended on it. (It did.) And, as I was not born in this country, I might be clearly seeing something that native Americans so easily forget: that there is no greater American virtue, in fact, no other, than the American's natural revulsion against cynicism. Which is why progressive education proves so much more pernicious in America than anywhere else: it corrodes the native resistance to cynicism and so deprives the American of his one formative trait. Joe McCarthy, who would have politely put up with, but secretly yawned over, such an abstraction, was its ideal test case and evidence. He, so often and so stupidly accused of cynical crudeness by the liberal falsificators, was physically incapable of a cynical act. He said and he thought and he did what he said and thought and did for the one unheard-of reason only: to him, it seemed the thing to say and to think and to do. All his defeats and all his blunders were due to the fact that he was incapable of the clever maneuver, of the professional's prudent opportunism. He had seen the truth—and it killed him.

When McCarthy proceeded to uncover the immense Communist infiltration of free government and society, this was his activating premise: that man is responsible for the choices he has made in an exercise of his free will; and that, until a man is proven an irresponsible fool, he must be presumed to have made his choices in earnest. McCarthy's rationale was invariably the same: certain people are dedicated to certain ideas—ergo, whatever they do in positions they have obtained must have been determined by, and serve, these ideas. It is the obscene joke of the age that this ultimate compliment to the supremacy of the mind has been taken by the liberal intelligentsia as the supreme affront against the intellect, a sordid assault of know-nothingism on reason.

The huge intellectual scandal around McCarthy has always been the frightening frivolousness of his opposition which holds that man's choices signify nothing; that on his walks through the valley of decisions man picks and then discards commitments the same way Peter Pan picks and discards daisies. That Caliban, McCarthy, insisted that man must be taken seriously. The intelligentsia tarred and feathered him, because it insists that man is intellectually an eternal child and morally a vegetable. In short, at the heart of what McCarthy said and did was the very essence of western civilization; while his postgraduate opposition lost its mind on a savage binge of irrelevancy.

There he came, from the heartland of America, a tenacious and quite ordinary politician; and in a sudden and lasting moment of recognition, he saw the central truth of his age; that his country, his faith, his civilization was at war with communism, war pure and simple. "This war will not end except by either victory or death for this civilization," he said again and again. And it was this hot sense of urgency which distinguished him from all jovial practitioners of the political trade. It is this hot sense of urgency which he, for a short moment of truth, forced upon his country. But the automobiles were much too sleek, prosperity much too tepid, Eisenhower much too nice, TV much too amusing; and so the country grew tired of the truth and of the man who kept shouting it, redundantly and, at the end, hoarsely. The country went to sleep again. And the man lay down and died.

Then they gave him a funeral in the same Senate Chamber in which the world's most exclusive club had gathered, only 2 years before, to ostracize the young Member who had had the temerity to see and to say the truth. The mourning Senators looked, almost all of them, as if they all had drafted Mr. Eisenhower's message of condolence—ill at ease, confused, and rather exasperating. The black suits looked rented and the miens of mourning borrowed. Never before had an outlaw been so honored by the posse. Was he honored for having died in time?

Yet there was a weird feeling in the air on that day, a tremor of urgency throughout the Nation, a sudden fearsome shock. This, somehow, was an unnatural death. A man had died in bed, but the country felt that he had been stoned unto death. This, in spite of its slick communicators and ruling hucksters, is an inarticulate Nation. Too often it expresses its truest feelings by reflexes rather than in orderly prose. And, last Friday, I felt violent shocks contort the well-fed body of the Nation.

Last Friday morning, when the TV networth were finally ready to exploit the death notice of the night before, they found no better climax to the McCarthy story than the allegedly unforgettable TV shots of his collision with the eloquece of Mr. Joseph N. Welch, the attorney from Boston. I for one had forgotten Mr. Welch's act, but when I saw it again I felt, again, the painful shame of the badinage of what Professor Max Lerner called, the very same Friday, "a part of the history of great utterance." The last time I had witnessed Mr. Welch utter greatly on TV was when he performed, also for a fee (Ford Foundation), as actor-narrator of Lizzie Borden's ax-murder story; and though the greasy old juggler was here much more in his element than in the chambers of statecraft, there was still that phony sanctimonious creak in his voice even when he considered the forty whacks.

Indeed, I can conceive of no better casting for the role of the anti-McCarthyite than that clown from Boston. He, more than any other figure from the comic strip of our age, personifies the establishment. He reeks of gentility. He is as eloqent as a Cicero who has gone to school at Dale Carnegie's. He is as witty as Georgie Jessel himself, as urbane as any one of the Brooks Brothers, almost as sophisticated as the whiz who composes Time's promotion letters, and keen enough a legal mind to fill several pages of close-ups in Life. He is cute. But a century ago, a personality of his dimensions would hardly have qualified its possessor to seek employment as a gentleman's gentleman. Today, it assures for a supernumerary much fame and respect and a more than comfortable living in the employ of an entertainment industry which, let's face it, runs our Government as surely as it runs our television. For Jack London (another organic innocent from the heartland of America) was foolishly wrong when he suspected that the "Iron Heel" of a ruthless gang rules the modern state. It is ruled by the soft-spoken and the soft-brained, the well-mannered and the lukewarm, the genteel and half-educated asses. And Mr. Joseph N. Welch is properly their attorney and clown.

I shall be perfectly satisfied to be called for the rest of my life a McCarthyite, provided Messrs. Welch and Lerner shall be known as anti-McCarthyites. The dividing line is acutely drawn and quite precisely marked. A McCarthyite is a person who is instructed, either by organic innocence or by true sophistication, to fight for his life and his verities—those simple verities which only organic innocence or true sophistication can fathom. An anti-McCarthyite is a person who, for the sake of godlessness, puts the genteel rules of a vulgar game above life itself, above life and the verities which, to an anti-McCarthyite, are only figments of a superstitious imagination.

This, then, shall be the dividing line, and it is drawn across a fresh grave. In this grave we have put, for whatever future God has in His mind, a young man who, in 5 gruesome years, was stoned by the genteel into an ultimate fatigue. We do not crave his fate. We dread it. But we are ready to face it. We, too, have seen the gargoyles stare and sneer at us. We, too, are reaching out to crush them. We mean it. We are McCarthyites.

(By Sam Jones)

R. I. P.: "And Joseph dreamed a dream and he told it to his brethren: and they hated him yet the more."—Genesis XXXII: 5.

Almost 7 years ago—September 1950—I had my first meeting with Joe McCarthy. The occasion was a radio interview for the Arizona network. I did not know what to expect; another Huey Long, a new species of virulent demagog (McCarthy's enemies had already launched the deadly smear campaign). I found a man of intense sincerity, a patriot whose courage was to prove superb under an ordeal the like of which no one else has suffered in our country in decades. My last radio interview with the Senator was in April 1955. I have preserved the tape recordings of both discussions. Excerpts from both were included in my Arizona broadcast of last week. The years had wrought great changes, but the sincerity, the patriotism, and the courage were as evident in the second interview as in the first. And there was no bitterness. "Once in our times there was a man."

Malaria Comes Back in Canal Zone

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Panama American of Thursday, July 18, 1957, which discloses that there has been a marked increase of malaria cases reported in recent weeks in the Canal Zone:

WEATHER BLAMED—DISEASE ALSO PROBLEM IN REPUBLIC OF PANAMA

A strong warning to all zone residents was issued today by the Canal Zone Health Bureau because of the marked increase of malaria cases reported in recent weeks.

More than four times as many cases have already been reported in June and July than were registered during these 2 months last year.

A total of 47 cases were reported last month, and 20 more have already been added thus far in July.

Dr. Alberto Bissot, Jr., Pamana's Public Health Director, indicated that there may have been an increase in the number of cases of malaria in Panama also, although the exact figures are not yet tabulated.

Bissot indicated that this might be due to the fact that the spraying control program has not yet been started this year because of a change in Panama's malarial control program to one of eradication.

Meanwhile, the zone's health bureau warning contained a special word of precaution to residents against staying outdoors after daylight hours.

The warning was predicated on the fact that several cases which have been reported within the last few weeks showed that malaria had been contracted within sanitated areas in the zone.

Weather conditions this year have made the task of controlling pest mosquitoes particularly difficult, the health bureau reported.

Heavy rains which normally come well before this time of the year they said help flush out mosquito breeding places.

Because of the increase in the incidence of malaria, zone health officials have increased their efforts for both pest and malaria control.

Two extensive air sprays have been made on the Atlantic side with the cooperation of the Army, and fogging has been increased in all zone communities. The Atlantic side field forces have also engaged in larvacide work.

The Health Bureau announcement said that all residents of the Canal Zone should take special precautions against the disease. Those whose duties do not require it should stay out of unsanitated areas, and residents should not stay outdoors at night unnecessarily.

Last year, Canal Zone records show a total of 15 cases for the entire months of June and July, as compared with a total of 67 already recorded for June and 2 weeks of this month. These figures include both civilian and military residents of the zone.

Of the cases reported in June, 23 were contracted within the Canal Zone, while four this month on which investigations have been completed so far indicate they were also contracted in the Canal Zone.

The task of mosquito control is carried out through cooperative efforts of the health authorities of Panama and the Canal Zone.

Col. Charles O. Bruce, the zone's health director, said today that they were receiving "fine cooperation" from health officials in Panama, particularly in mosquito control of areas near the boundary lines.

Dr. Bissot explained they were at present engaged in a program in conjunction with WHO and UNICEF which calls for the establishment of special zones.

The first phase of this program, which includes preparation of maps, has already been completed, he stated. The second and final phase begins within 30 days or 45 days.

He said that this year the malaria "control" program has been changed to a long-range one of eradication.

For that reason, spraying has not yet started this year, whereas last year it was carried out in April and May.

Dr. Bissot added that he felt the new approach toward malaria eradication would be very beneficial for wiping out malaria in Panama.

Song Censorship by Radio and Television Networks

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. HALEY. Mr. Speaker, attention has been called by many interested parties and the press to the recent action of the major radio and television networks in prohibiting the playing of any songs which make references to darkies, massa, mammy, colored man, and old black Joe. The censorship that has been imposed on songs containing such references prohibits the playing of these songs unless they are edited or revised and such expressions are deleted. It means that the songs of the beloved Stephen Foster, the only composer in the history of our Nation to be elected to the Hall of Fame, cannot be played unless his lyrics are edited. The same is true of the songs of other composers. It means that the official State song of Florida, Foster's Way Down Upon the Suwannee River, cannot be presented over radio or television unless such phrases as "that's where this ole darky's heart am long to go" are deleted. It means that the official State song of Kentucky, My Old Kentucky Home, can no longer be sung unless substitutions are made for the words, "Oh, darkies how my heart grows weary far from the old folks at home."

This action by the major networks can only be recognized as an arbitrary censorship of American folk music. Under this ruling, folk music which for generations has preserved for posterity the love and affection that one race felt for another race during a particular time in our history will lose its meaning. Its value as folklore will be destroyed because the lyrics will no longer be authentic. It seems ridiculous to me for any group to try to erase from American folklore the genuine spirit of feeling that prevailed at any time in our history. It is ridiculous to refuse to recognize that this music is great music because of the truth embodied in its lyrics—lyrics which were not offensive when they were written—lyrics which have been sung by many generations of Americans and have a warm place in the memories of many Americans. This effort to force the revision of folk music which is a part of the very heart of Americana is to my thinking the most absurd situation that has developed in the history of our country. I thoroughly agree with one constituent who, in writing me, referred to this edict as "the height of asininity."

We spoke loud and long about freedom of speech and constantly have been alert to prevent any abridgment of this right. Now, we are faced with the abridgment of another form of the freedom of expression—namely, the American folk song. If this suppression of folk music is allowed to continue who knows how far or to what more ridiculous extremes it will be carried. There could never be another Al Jolson—what would he sing? There would never be another minstrel show, regardless of the fact that this too is an American tradition. What will happen to other folk music? Will they next edit western songs because of references to the American Indian? What about the "Great White Father" of the American Indian?

If this asinine censorship continues and references to color, creed, race, and nationality are forbidden, perhaps someone will even consider it necessary to change the name of the White House as that too may become offensive.

We have been quick to condemn Russia and other nations when they have altered their histories to reflect political thinking of current times—when they sought to rewrite world history by laying claim to inventions and deeds which were not theirs—when they allegedly reported incorrect texts of our own history.

And yet, in our own country, two of our most important mediums of public opinion are permitted to arbitrarily censor the American folksong. They have insisted on editing and revising musical verse to meet the wishes of a few. I cannot consider this in any light other than an abridgment of free expression and the destruction of famous American works.

I urge each of my colleagues to give careful thought to the seriousness of this situation and to the possibility of future infringements on individual rights which may develop from this censorship. I hope that each Member of the House of Representatives will exert every possible effort to see that this ridiculous censorship on the part of the networks is rescinded immediately.

Rice Allotments

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks, I wish to include in the CONGRESSIONAL RECORD the following statistics about rice allotments:

Rice: 1956

State and county	Number of farm allotments	Total acreage allotted	Production	Value of production	Average allotment acreage per farm	Average production per farm allotment	Average value per farm allotment
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
MISSOURI			*Hundredweight*	*Dollars*	*Acres*	*Hundredweight*	*Dollars*
Butler	14	1,437	40,180	186,837	103	2,870	13,346
Dunklin	1	47	1,340	6,231	47	1,340	6,231

An Opinion of "The People on Capitol Hill"

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 25, 1957

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I include a letter from Col. Ralph J. Watson of the Office of the Secretary of the Department of the Air Force.

Mr. Speaker, it is not my practice to insert letters from people in the RECORD, but Col. Ralph J. Watson who is concluding his tour in General Kelly's office, expresses an opinion of the "people on Capitol Hill."

I am sure that those who know of the activities of a Member of Congress are aware of the tremendous amount of work that is associated with the high honor of being a Member of Congress. However, to hear it from one of the members of the armed services in a high position, I think, is well worth recording in the archives. I submit it to the membership and hope it will act as soothing medicine when some of our mail gets rather critical.

DEPARTMENT OF THE AIR FORCE,
OFFICE OF THE SECRETARY,
Washington, July 8, 1957.

Hon. J. HARRY MCGREGOR,
House of Representatives.

DEAR MR. MCGREGOR: As you may know my tour in General Kelly's office of Legislative Liaison is about to be concluded. I wish to take this opportunity to thank you

and your staff for the fine cooperation and reception you have given me. It has been a real privilege and a high honor to be associated with you during my assignment. I shall always have a warm spot in my heart and the very highest praise for the people on Capitol Hill who so unselfishly devote their life for our country.

Sincerely,

RALPH J. WATSON,
Colonel, USAF.

House Joint Resolution 127

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. MILLER of Maryland. Mr. Speaker, a few days ago, our colleague, the brilliant gentlewoman from New York [Mrs. ST. GEORGE], spoke of the long-pending equal-rights amendment and the campaign initiated at Seneca Falls, N. Y., by Susan B. Anthony, 109 years ago this month.

Mrs. ST. GEORGE listed in the CONGRESSIONAL RECORD the names of 239 of us who are cosponsors of House Joint Resolution 127.

With such a weight of sponsorship it seems, indeed, strange that this resolution remains dormant in the hands of the committee, as it has in so many previous sessions. Why, Mr. Speaker, when so much time is devoted to debating other phases of civil rights in this and the other body cannot this resolution come to the floor for consideration? Certainly it has been under discussion for well over a century.

I am pleased to note that the 239 sponsors include all seven Representatives from the Free State of Maryland.

In that connection permit me to quote from the writing of Susan B. Anthony—The History of Woman Suffrage, volume IV, published in 1902.

Of the State of Maryland she wrote—page 695:

> If but one State in the Union allowed woman to represent herself it should be Maryland, which was named for a woman, whose capital was named for a woman, and where in 1647 Mistress Margaret Brent, the first woman suffragist in America, demanded "place and voyce" in the Assembly as the executor and representative of her kinsman, Lord Baltimore. Her petition was denied but she must have had some gallant supporters, as the archives record that the question of her admission was hotly debated for hours.

And if I may be pardoned a personal reference in the same chapter—page 697—Miss Anthony commenting on my grandparents, whose enthusiasm for equal rights for women I am proud to have inherited, said:

> One of the first and most efficient of the workers (in Maryland) is Mrs. Caroline Hallowell Miller, who has represented her State for many years at the national conventions and pleased the audiences with her humorous but strong addresses. Her husband, Francis Miller, a prominent lawyer, was one of the very few men in the State who advocated suffrage for women as early as 1874, when he made an appeal for the enfranchisement of the women of the District of Columbia before the House Judiciary Committee.

It appears from the above quotation that in 1874 the great Judiciary Committee of the House held hearings on this subject. Now, 83 years later, it should not be so difficult as it seems to have the committee hold hearings on House Joint Resolution 127.

Troubles Grow in Red China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. JUDD. Mr. Speaker, for years Communist propaganda, generally spread quite unknowingly by Americans who thought with kind hearts more than with cold heads, sang praises about the allegedly wonderful efficiency and constructive work for the common people of China done by the new Red masters. Fortunately, these siren songs were resisted long enough by the majority in our country and in our Government so that the truth is at last coming out, as it always does eventually. What is needed now is a continuation of patient firmness and strength on the part of ourselves and our allies. Red China could not be overthrown from the outside; it will be weakened and brought down from the inside, if only the free world will keep the pressures on—diplomatic, political, and economic pressures plus social isolation.

An instructive article, from the U. S. News & World Report of July 12, 1957, portraying the rising unrest in all sections of the Chinese population, follows:

> IS RED CHINA NEAR REVOLT?—MILLIONS FACE FAMINE, FARMERS STRIKE, UNREST SEETHES IN CITIES, UNEMPLOYMENT GROWS, SABOTAGE, STUDENTS COMPLAIN
>
> (Now there's serious trouble brewing in Red China. Behind it are Communist failures in trying to manage both industry and farming. People are demanding a change—or else. Mao Tse-tung is worried. He shows it by making new promises—while replacing peasant soldiers with security police.)
>
> HONG KONG.—While new rumblings take place in Russia, next door in Red China there are rumblings of another kind as that country's rulers resort to even more drastic measures to try to make communism work in the face of mounting troubles.
>
> Revolt is stirring in the Chinese countryside, where peasants now are resisting collectivized farming with deliberate slaughter of livestock and with sitdown strikes. Some 70 million people, near famine as a result of storms and floods, are demanding relief—or else.
>
> In the cities of Red China there is seething unrest due to setbacks and failures in industry. Disgruntled workers, their wages outpaced by a runaway inflation, are staging strikes and sabotage. A growing army of unemployed roams the streets.
>
> Students and intellectuals, too, are growing restive. These groups, long considered the backbone of the Communist regime, are holding protest demonstrations and openly voicing their complaints over the way the Red regime is handling things.
>
> It is against this background of rising discontent that the Communist leaders are promoting a campaign which they hope will avert a "second Hungary" in China.
>
> BOOMERANG INVITATION
>
> Mao Tse-tung, the boss of China's Communists, spearheaded the campaign by admitting that "contradictions" exist among the people and inviting critics to speak out and suggest what they think should be done.
>
> The invitation opened up a floodgate for public criticism. People called things far worse in China than the Communists had ever let on. Many critics even pinned the blame squarely on Mao and his fellow Red leaders, and blasted the Communist system. Mao struck back at these attacks with a warning that the regime may label certain critics as enemies of the people—eligible for liquidation.
>
> Main purpose of the so-called rectification campaign, apparently, is to smoke out extreme critics of the Communist regime, isolate them and use them as scapegoats. That would prevent them from becoming rallying points of revolt. As for milder critics, Mao's hope seems to be to let them blow off steam as a way to avoid a further build-up of tension.
>
> Western observers are convinced that in all this the men who run Communist China are merely attacking the symptoms of that country's troubles and not the real sources of its smoldering unrest. What's happening in China, as these observers see it, is due as much to bad Communist planning as to Communist oppression.
>
> China, after a major effort to expand heavy industry under a Soviet-style 5-year plan, now finds it has slighted light industry to a dangerous degree. No longer can it meet the everyday needs of its expanding population for household goods. Cooking oil, soap, cloth, pots and pans and even writing paper are so short that people stand in line for hours, sometimes days, before they can hope to buy any.
>
> For all the emphasis on expansion of heavy industry, China now discovers that it has pushed that phase of its industry too fast and too far to make real use of it. Big, modern factories were built at enormous cost—but without developing enough fuel or raw materials to operate them. Potentionally rich deposits of various ores are only beginning to be tapped. It will take much time and effort before they can be put fully to use.
>
> SIGHTS ARE LOWERED
>
> Meanwhile, the shortages are beginning to tell in a number of ways. The building of several factories begun in 1956 is being abandoned. Plans for big new steel and chemical plants have had to be shelved indefinitely. The rate of industrial expansion planned for 1957 is barely one-fifth that of 1956, and some experts call that prediction overoptimistic.
>
> Workers are feeling the full brunt of the cutbacks. Staffs are being reduced and wages are being frozen, or cut, in an effort to cope with the industrial crisis. Many workers, caught in a squeeze between frozen wages and soaring living costs or thrown out of work, have taken out their resentment in strikes against the Government. In one province alone, the Communists admit, 13 strikes have taken place this year.
>
> Agriculture, under Communist planning, presents a picture of even worse chaos and confusion. In fact, some observers say that most of Red China's present troubles can be traced directly to the decision taken by Mao 2 years ago, in the face of hardening resistance among peasants, to go ahead at full speed with collectivization of all 120 million peasant families.

So far, more than 96 percent of China's peasants have been forced into collective or cooperative farms, under a firm belief that this would work wonders in agricultural output. Its effect has been just the opposite. Farmers are falling far short of producing enough to feed and clothe adequately China's growing population.

Yields are actually falling in some crops. Output of cotton in 1956 declined so sharply that the scant cotton ration had to be cut in half. Vegetables and dairy products are not turning up as plentifully as before in city markets. Meat is getting scarcer, too, with production of pigs down by 20 percent in 2 years.

NEW ROUND OF FAMINE?

Even the Communists admit that China last year suffered its worst famine since they came to power and that another famine this year cannot be ruled out. They blame "natural calamities" for most of their farming troubles, but the fact is that collectivization is failing to get any real support among the millions of peasants who comprise most of the country's population.

Chinese farmers are bitter about the rough treatment they suffer at the hands of bureaucratic "cadres" assigned to rural areas to encourage them to produce more and consume less. They resent the fact that they must sell their produce to the Government at fixed prices but are unable to buy many things because of scarcities or steeply rising prices.

Many farmers are so sullen and resentful that they are making their Communist rulers pay dearly. Some have slaughtered their livestock, chopped down their trees or sold their meager farm implements rather than turn them over to collectives. Other peasants have staged sit-down strikes. Large numbers have fled to Hong Kong with their families, or streamed into nearby cities to look for jobs.

No matter where the Communist leaders look today, there seems to be trouble brewing. Lately, discontent has spread among students and intellectuals. These groups, once fanatic supporters, now are scornful of Communist failures. Technical students are particularly bitter at a decre that 4 out of 5 of them quit school and return to the land because of big cutbacks in industry.

Early this year the unrest in China reached such proportions that Mao decided something drastic had to be done. That was when he invited critics of the Government to speak up. But, instead of easing tension, the attacks upon the Government have only increased it. They have exposed the full extent of Communist failure and given people new reason for distrusting—even hating—their Red masters.

"KILL THE COMMUNISTS"

For example, many Chinese found themselves agreeing with the words of Ko Pei-chi, a university lecturer, when he made this blanket criticism of the regime:

"I want to reiterate once again that the masses want to overthrow the Communist Party and to kill the Communists. If you do not reform and put forth effort, and the degeneration is allowed to continue, there would be a day when you would lead yourselves to this end."

Such indictments prompted Mao to move in several directions at once. He and his Premier and Foreign Minister, Chou En-lai, frankly acknowledged many of the errors and failures of the Government. They admitted that 70 million Chinese are short of food and clothes in flooded areas—although not admitting that the Government takes so much of each peasant's production that he has little reserve with which to face famine.

Even oppressive measures used by the Communists were admitted. Mao confirmed reports that large numbers of enemies of the people were killed or sent to labor camps—he said 800,000 had been killed since the regime began, although reports put the number as high as 15 million. He promised that no such harsh measures would be used again, and announced that two non-Communist members of the cabinet, who had openly criticized the party, would not be punished.

RETREAT ON FARMS

To try to placate his people further, Mao announced a whole series of new measures. In the rice fields, there would be greater incentives and higher payments to peasants. What's more, they could sell their own fowl and livestock if they wanted to, plus any rice they grow above quotas. Capital investment in heavy industry would be cut back 20 percent, to allow more capital and raw materials to flow into factories making consumer goods. Exports of farm products, mostly to Russia to pay for heavy industrial equipment, would be cut sharply to allow more food and cloth for all.

Amid all these promises, the people remain wary. At the same time Mao is holding out the carrot, he is also readying the stick—in the form of new security measures to deal with any real trouble. The army's feared public security forces—which could arbitrarily arrest anyone on a charge of counter-revolutionary activity—are to be replaced by a new democratic people's police. In effect, this will take peasant soldiers out of areas where they might side with fellow peasants in case of trouble, and put city-trained police in their place.

Thus, Mao as the boss Communist in China finds himself moving to avoid a second Hungary in a situation of growing unrest among the world's largest national population.

NO REVOLT—YET

Western officials doubt that this unrest is about to explode into open revolt. Not right away, at any rate. But it is clear to them that Mao and his fellow leaders are worried—and have reason to be.

The fact that the Communists have been forced to announce such drastic changes in their policies and police controls is one tip-off on this. Mao's confession of errors and contradictions is another. Together, these actions underline just how deep the trouble in China really is.

Some Cotton Income Totals

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 25, 1957

Mr. BECKWORTH. Mr. Speaker, I wish to include in the CONGRESSIONAL RECORD some statistics about cotton allotments.

COTTON: TOTAL VALUE OF PRODUCTION IN 100 LEADING COTTON COUNTIES AND PERCENT OF TOTAL VALUE OF UNITED STATES COTTON PRODUCTION, 1955

United States, total number of cotton counties, 1,007.

United States, total value of cotton produced, $2,367,886,000.

One hundred leading cotton counties—total value of cotton produced, $1,338,022,000.

Total value of cotton produced in 100 leading counties as a percent of total United States cotton production, 56.5 percent.

Range in value of cotton produced in 100 leading counties, $6,119,000—$58,549,000.

Total value of cotton produced in 100 counties out of 1,007 cotton counties was 56.5 percent of the total value of cotton produced in the United States, 1955.

Source: Daily CONGRESSIONAL RECORD, June 17, 1957, pp. A4758-A4769.

United States by cotton States: Percent of State total number of counties and percent of State total cotton acreage allotments accounting for approximately 50 percent of total value of cotton produced in each State and related data, 1955

State	Total number of cotton counties	Number of counties accounting for approximately 50 percent of State total cotton production	Percent of total number of counties in State	Percent of State total cotton allotments in selected counties	Total value of cotton produced in selected counties	Percent of total value of cotton in State produced in selected counties	Range in average value per allotment [1]

Ukraine—Our Unrecognized Ally

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. FEIGHAN. Mr. Speaker, the recent consolidation of power by Mr. Khrushchev has led to some wishful reactions on the part of many Americans. Some view it as a turn for the better. Othere unrealistcally see it as a further step in the Russian Communists relaxing their tight control over the people and nations within the U. S. S. R. Many, including our Secretary of State, claim they have predicted something like this and interpret the change in terms of a vague and misleading doctrine of evolution toward freedom in the Soviet Union.

Each of these views can be easily challenged. The prospects for enduring peace are even worse with a guileful Khrushchevism than they were with blunt Stalinism. Moreover, despite the many known pressures for freedom within the Soviet Union, even the criminal Khrushchev or any other despot in Moscow, will be compelled to observe the narrow limits of such relaxation efforts in the U. S. S. R. if the entire empire structure is not to fall on the heads of the Russian Communist imperialists. Thus, to pray to the goddess of evolution for the eventual freedom of the enslaved nations in the Soviet Union is a poor substitute for imaginative action to aid these nations in securing their freedom.

In recent weeks all the official reports flowing out of the Soviet Union stress in one way or another the nationalities policy of Lenin and that the measures of Khrushchev uphold this policy. Western commentators have curiously enough almost completely overlooked this vital aspect which basically explains much of the trouble in the U. S. S. R. Non-Russian nationalism is the dominant freedom force in the Soviet Union. Stalin failed to annihilate it; now Khrushchev in a guileful manner seeks to harness it. That he, too, will fail, I have no doubt.

My lack of doubt on this score rests on a factual knowledge of the non-Russian nations in the U. S. S. R. To give an indication of the realities in the largest of these non-Russian nations, Ukraine, for example, I should like to bring to the attention of the Members a cogent talk delivered by Mr. Joseph Lesawyer on Ukraine, Our Unrecognized Ally. Mr. Lesawyer is vice president of the Ukrainian Congress Committee of America. As many Members know, this ardent, anti-Communist American organization is led by Dr. Lev E. Dobriansky, of Georgetown University.

Mr. Lesawyer's lecture was recently given at St. Joseph's Commercial High School in Brooklyn, N. Y. It was one of a series entitled "The Future of Satellite Countries," sponsored by the social action department of the Brooklyn diocese, of which the Right Reverend Monsignor William F. Kelly is director. This talk on Ukraine can serve to shed much light on the spurious "nationalities policy of Lenin." Because of its current importance, I insert this address in the RECORD by unanimous consent previously granted:

UKRAINE, OUR UNRECOGNIZED ALLY

At the outset please permit me to thank Right Reverend Monsignor Kelly and his staff of the social action department, and the Brooklyn diocese for including Ukraine in this lecture series entitled "The Future of Satellite Countries." Ukraine, generally is not regarded by America as a satellite country but is thought of as merely a Russian territory of the Soviet Union. Ukraine's failure to be commonly accepted as a separate and distinct nation is largely the result of diplomatic salesmanship on the part of Russian imperialists, both Red and Czarist. Of course, history, where authentically recorded, resolutely refutes all attempts to erase Ukraine from the European family of nations but history, at a given moment, is often obscured by ubiquitous propaganda and that appears to be the case here. Regardless of prevailing misconceptions, past events provide unchallengable evidence that Ukraine's destiny inexorably influences the fate of the many millions of neighboring people in Central and Eastern Europe. It is obvious now that Ukraine's 35 years of Communist agony and her inability to overthrow this tyrannical power, foreshadowed the coming disaster to her neighbors. For the past 15 years they all have been enslaved and subjected to the same ruthless tortures and exploitation suffered by Ukraine since 1922. Almost hermetically sealed in the muck and filth of immorality and physical degradation by Godless despots, these victims have only occasionally stirred restlessly in their chain. Recently we have witnessed flareups that have resulted in armed revolt. Most of us in America, unfamiliar with the true conditions in the Red slave empire, probably find it difficult to comprehend the full significance of the new trend of events. This unique current lecture series that Monsignor Kelly and his staff have programed, for which we all should be grateful, is, therefore, most timely. The discussions unquestionably will shed much needed light on the side of the Iron Curtain that has been blacked-out by the dictators in the Kremlin. This knowledge and information may prove to be helpful in enabling us to decide in our own individual minds what course of action this country should and must follow to aid in the reestablishment of human dignity, truth, and freedom wherever people yearn for it. Since America, the foremosts military power and the leader of the democratic world, will follow the course that you and I and our fellow Americans designate, then it becomes our bouden duty to give this matter deep, serious thought. Let us devoutly pray that we think and act squndly and that God's firm hand will guide us to the final goal of true peace with justice for all peoples where ever they may be.

Our topic for tonight is entitled "Ukraine, Our Unrecognized Ally." The objective is to present to you factual information about this country and her people which will reveal beyond reasonable doubt that Ukraine is our natural ally and to indicate some of the reasons why the Ukrainian nation has not and is not receiving the consideration and recognition it justly merits.

Ukraine's true history is not widely known and this applies to even her recent past. The fact that she was an independent nation at the end of World War I and that she became the first victim of Russian Communist imperialism in 1920 and 1921 has been extremely well camouflaged by the Moscow rulers. The cleverly contrived "people's democracy" propaganda which emphasizes independence, the right of self-determination, freedom of religion, and other human rights all guaranteed by a written constitution has been fantastically successful in convincing a good part of the world that the Ukrainian people are deliriously happy beause they now are Soviet people. In actuality, Ukraine's position in the 1920's was starkly similar to the status of present-day Hungary. Yet today this fact would be difficult to prove with the documentary evidence available in the Soviet Union unless one had access to underground sources. The propensity of the Kremlin Communists to rewrite history to suit their immediate and devious purposes, which incidently was a practice not overlooked by the Czars, was given unlimited leewway in Ukraine's case and the building up of a proper Communist record for Ukraine received Stalin's most careful attention. So well was the job done, that the world soon was made to forget the Ukrainian National Republic of 1918–20. Not only that, but our great daily newspapers in the United States including their renowned foreign editors even forgot how to spell "Ukrainian." They invariably left out the first "i" when using the term.

Ukraine today is called a Soviet Republic but in reality it is a completely enslaved nation physically and it is tightly annexed to the primary Communist empire known as the U. S. S. R. or the Soviet Union and erroneously referred to by the Western World as Russia. Covering an area of over 215,000 square miles, Ukraine extends from the Carpathian Mountains in the west to the foothills of the Caucasus in the east. It is bounded on the north by the plains of Byelorussia and the Russian Soviet Federative Socialist Republic and on the south by Rumania and the Black Sea. Considered one of the most resourceful regions of the world, Ukraine for centuries was known as the granary of Europe. Today its black soil belt with rich topsoil running as deep as 6 feet in the breadbasket and the sugar bowl of Moscow's police-held empire. Industrially it is highly developed, ranking second in the world in the mining of iron ore, third in pig-iron smelting, and fourth in coal mining and steel production. Potentially, the industrial capacity is much greater than these figures suggest but Ukraine's development for strategic reasons has been deferred to permit concentration on the industrial buildup of the Soviet Ural and Central Asia territories.

The population of Ukraine on the basis of the best estimates available is believed to be in excess of 40 million. This includes about 32 million people who lived in the prewar Soviet Union, the Ukrainian Soviet Socialist Republic; 6 million in western Ukraine which was under the control of prewar Poland; and approximately 2 million in the territories of Bessarabia, Bukovina, and Carpatho-Ukraine. Bessarabia and Bukovina were under Rumanian control and Carpatho-Ukraine was the eastern province of prewar Czechoslovakia. Outside of Europe there are 5 million Ukrainians in the Soviet Far East and Central Asia; an estimated 6 million political prisoners in Russian slave labor camps; over 1.5 million in the United States, most all of whom are American citizens; about 400,000 in Canada, most of whom are Canadian citizens; and a scattering of communities in South America, Australia, and other parts of the free world.

The recorded and documented history of the Ukrainian people extends back to the ninth century with the establishment of the Ukrainian Kievan State and the embracement of Christianity. The centuries-old language is a separate and distinctive Slavic tongue, quite different from Russian or Polish and in itself it scientifically disputes any and all contentions that there is no separate and clear-cut Ukrainian national identity and culture.

Politically, the Ukrainian nation has had its great moments of glory and long nights of tragedy. The Kievan State founded in the 9th century flourished until the 14th century when it fell before the expanding dynamic kingdoms of Lithuania and Poland. Two and one-half centuries later, it reestablished its independence as the Ukrainian Kozak state. In the middle of the 17th century it was again overrun and taken over, this time by the powerful Czar of Moscovy and the King of Poland. Before the 18th century drew to a close, a new conqueror came upon the scene. The rising Hapsburgs of Austria, in the processing of welding together their Austro-Hungarian Empire, participated with Prussia and Russia in the final partitioning of the Kingdom of Poland in 1795 and thus came into possession of the lands of western Ukraine that had been held by the Poles. With minor changes, this lineup remained set until World War I.

From the point of view of our discussion tonight, it may be noted that historians and scholars agree that Ukraine's difficulties in maintaining her independence were due n great measure to the lack of natural border barriers. Her northern and eastern flanks, open steppes of flat or gentle rolling land similar to parts of our Middle West, were beckoning welcome mats to any enemy who coveted her productive lands. A contributing factor was the welfare of the people. The predominately peasant population, content with the abundant fruits of its labors and passive by nature, was a comparatively easy victim for any well organized military force. It was only when exploited beyond human endurance by their subjugators that swords were unsheathed and the chains of bondage broken. This was true in 1648 when the Ukrainian Kozak state was established; it was true in January 22, 1918, when the free and independent Ukrainian National Republic was proclaimed; and it can be true again tomorrow, or the next day or the next. The failure of our country and the entire Western world to grasp the full import of the possibilities is not surprising nor is it necessarily a condemnation of the intelligence of the democracies. It is, on the contrary, a monumental tribute to the cleverness of the enemy and the effectiveness of its propaganda.

The primary enemy of Ukrainian freedom and also of the free world is Russian Communist imperialism. Not so evident but equally dangerous from the point of view of Ukraine and other non-Russian nations in the Soviet Union are the ambitions of the Russian royalists, or Czarist imperialists. Actually this group can be considered to be a more irreconcilable foe. The Communists at least concede that there is a Ukrainian nation, a Byelorussian nation and so forth, even though they do everything in their power to prevent these nations from exercising their rights. The so-called White or Czarist Russians, on the other hand, and particularly the aristocrats and intelligentsia, crassly deny the existence of a Ukrainian nation, contending that it is nothing more than Little Russia. Other nationality groups are similarly disavowed. This is a carryover of the ruthless Russification policies followed by the Czars and is aptly exemplified in a decree issued more than 90 years ago by Count P. A. Valuyev, the then Minister of Interior to His Imperial Highness, Alexander II, the Czar of all the Russias. The edict forbade the publication of Ukrainian literature on the grounds that "the majority of the Little Russians (Ukrainians) prove conclusively that there never was any separate Little Russian (Ukrainian) language, there is not one now and there cannot be one." This was indeed an amazing statement, obviously self-contradictory, but not an unusual one for despots of that period to make. What is astounding, however, is that people today, mostly of Russian aristocratic origin and their friends, still believe implicity in the edict handed down by Valuyev and what it stands for. Hand in hand with that belief goes a burning desire for a new imperial mother Russia with the reestablishment of monarchical control not only over the Russians but over all the nationality groups in the Soviet Union. This type of chauvinism in a country such as ours at first blush may be dismissed as harmless but when we remember that it is actively concentrated in our highest society circles in the form of persuasive Russians with noble titles reinforced matrimonially by America's greatest financial fortunes, the problem takes on a more serious aspect. People of this caliber can and do influence the thinking of governmental policymakers and our leaders in other critical and sensitive fields, such as education and journalism. There is ample evidence that such influences have been effective, with the result that Ukrainian and other non-Russian problems of either the old Russian empire or the present Soviet Union have not always been properly evaluated or acted upon in our own best interests.

A case in point was the decision of our State Department to deny even moral support in 1919 to the newly declared Republic of Ukraine, which was fighting desperately with the Communists and the White Russians for its very existence. On October 29 of that year, Secretary of State Lansing wrote a letter to the American delegation at the Paris Peace Conference spelling out the American policy toward this new state, and this is what he said: "On the basis of past investigations the Department is disposed to regard the Ukrainian separatist movement as largely the result of Austrian and German propaganda seeking the disruption of Russia. It is unable to perceive an adequate ethnical basis for erecting a separate state and is not convinced that there is a real popular demand for anything more than such greater measure of local autonomy as will naturally result from the establishment in Russia of a modern democratic government, whether federative or not. The Department feels, accordingly, that the policy of the United States, while leaving to future events the determination of the exact character of the relations to exist between Great and Little Russia, should tend in the meantime, rather to sustain the principle of essential Russian unity than to encourage separatism." Obviously this United States policy was a victory for the Russophiles in our country and was a direct result of the powerful Russian propaganda apparatus maintained here and throughout the world by the czars. But it proved to be a pyrrhic victory. It didn't help the cause of the White Russians and succeeded only in insuring the Bolshevik conquest of Ukraine. If the Ukrainian armies and the new, truly democratic government had received even minimum material support from the Allies, the Bolsheviks would have been defeated in this, their first imperialistic venture.

Recent statements made by no less an authority then George Kennan, former Ambassador to the U. S. S. R. and an adviser of long standing to the State Department, particularly on Russian matters, indicate that the old preserve mother Russia theory is still an active force on high levels in this country. Mr. Kennan, if he mentions Ukraine at all when discussing problems of the Soviet Union, simply points out that it is nothing more than an integral part of Russia, somewhat comparable to the position of the State of Pennsylvania in our Federal Union. This has encouraged similar comments from politicians and uninformed writers and educators to the effect that Ukraine is the Texas of Russia or very much like the Commonwealth of Massachusetts. When men of Kennan's background, authority and influence propagate such an obvious misconception, errors of policy on the highest level are the inevitable result.

One of the consistent trends of Moscovy's history is its imperialistic tendencies. This applies equally to the Czars and the Bolsheviks. It was summarized exceptionally well by Dean Acheson, Secretary of State in the Truman administration, in testimony to the House Foreign Affairs Committee in 1951. He stated: "It is clear that this process of encroachment and consolidation by which Russia has grown in the last 500 years from the Duchy of Muscovy to a vast empire has got to be stopped." Though the aims of the Czars and the Bolsheviks may have been identical, imperialistically speaking, the methods have differed. The Czars claimed all lands conquered as Russian for all time to come and declared all the people as Russians excepting, of course, when dispensing favors or levying taxes, developing Siberia, and so on. The Communists, on the other hand, technically recognize most all nationality groups as such and set up "republics" to prove it. However, woe to any one who taints himself with any nationality activity other than Russian or that specifically ordered by the party. This combined Czarist and Bolshevik effort of closely controlling and censoring all information about the peoples and the nations they subjugated has made it possible to flood every nook and corner of the world with their side of the story. This achievement is so complete that at a time when nationalist reawakening even among comparatively primitive peoples is being applauded by the world with great fervor, the centuries-old nations in the Soviet Union with nearly 100 million people, no more Russian than Irish are English, are still lumped together as Russians. But the Soviet Union remains structurally a prison of nations enslaving peoples whose blood, unwilling sweat and tears, extracted by secret police, build and maintain the vast war machine with which the Communists hope to conquer the world. Even the fact that two of these prisoner nations, Ukraine and Byelorussia, are charter members of the United Nations has not made too deep an impression on the popular thinking. These two members are thought of and treated as Russian and their membership is considered a Stalinist trick to obtain two additional votes in this world organization.

A few astute observers of the United Nations scene have decried this failure to grasp the opportunity to exploit the national differences inherent in this situation. Edward Weintal, diplomatic correspondent for Newsweek magazine, in commenting on this subject about 1½ years ago, stated: "Serious American thought also must be given to the nationally conscious Soviet components, such as the Ukraine and Byelorussia. The fact that these two nations have their own representatives in the United Nations has never been properly utilized by the United States. To encourage their independence and to strive for the decentralization of the Soviet Union into its separate though not necessarily unfriendly components is likely to become one of the chief United States objectives." As yet there is little evidence that such an admirable objective is being pursued with any consistency.

Americans of Ukrainian descent, many of whom are intimately familiar with Russian Communist methods, firmly believe that, so long as the makeup of the Soviet Union remains as it is today and supreme military control is maintained over the non-Russian captive nations and the satellites, western democracies dare not relax their vigilance for one fleeting moment or reduce their military strength one rifle cartridge. They further believe that, should the Kremlin overlords launch a war against the West, the subjugated nationality groups such as the Byelorussians, Georgians, Armenians, Ukrainians, and all others as well as the

satellites would immediately and willfully sabotage the Communist war efforts at home and, wherever possible would flee from their captors in greater numbers than they did in World War II. The records show that during 1941 and 1942 after Nazi Germany attacked the Soviet Union, nearly 2 million Ukrainians deserted the Red army and fought against it. When it became evident that the German Gestapo was not going to permit the establishment of an independent Ukraine, these same soldiers and all the civilians fought the Nazis as well. Recent evidence of similar dissatisfaction is found in last winters uprisings in Hungary. Ukrainian elements in the Red army were reported as joining the Hungarian rebels when the shooting started in Budapest.

It can be urged that the opinions expressed about the probable reaction of the Ukrainian people in the Ukraine to a war involving the Soviet Union are, at best, a guess. This may be so. Nevertheless, these beliefs are substantiated not only by past events but also by firsthand information received from the thousands of Ukrainians who have come to this country during the past 11 years as DP's and who know well the conditions in the Communist paradise because they were once a part of it. From their lips come lurid details of day-in and day-out misery in the Ukraine under the Russian tyrant's iron heel. Family life disrupted, churches destroyed, the clergy murdered or imprisoned for life in slave labor camps, patriotic intelectuals periodically purged, and economic exploitation so drastic that poverty is commonplace. From them we get eyewitness confirmation of the man-made famine of 1932 and 1933 which was ordered by Stalin to curb the rising tide of Ukrainian nationalism. This famine snuffed out the lives of approximately 5 million men, women, and helpless children. It did not, however, kill the pepoles' love for their motherand, Ukraine.

The bitter struggle ketween Ukrainians and the Bolsheviks reached new heights during and after World War II. Added to this was the Nazi terror when Germany attacked the Soviet Union. Both sides resorted to the cruelest brutality in their treatment of Ukrainian civilians. This caused more and more people to join the underground fighters against these foes. In 1943 the many groups that were involved in underground activities were able to consolidate their forces and to form what became known as the Ukrainian Insurgent Army. Organized at the beginning to fight the Nazis who then occupied almost all of Ukraine, the UPA, as it was called, fought the Red army forces with considerable success when Ukraine was retaken. The war ended in 1945 but the UPA continued its struggles until around 1951. By that time, its strength had dwindled under the repeated hammerings of the superior Red forces, and it was no longer capable of engaging in direct combat. The survivors then went underground and it is believed that limited activity is still being carried on, primarily against the secret police and particularly against onerous officials. Reports of the activities of these Ukrainian fighters, incidentally, come not only from Ukrainian nationalist sources but also from the Communist press in Ukraine. Frequent notices appear of arrests and executions of men labeled as nationalists who are charged with treasonable acts such as possession of arms or attacking Soviet personnel and at times mention is made of raids on Soviet installations by armed bandits. Notices also have been published by the Communist regime in official publications offering amnesty to all underground fighters who surrender voluntarily indicating that the Reds are unable to completely eradicate these elements.

The present status of the Ukrainian people is an unhappy one. Twice in the present generation they have failed in their quest for freedom and independence. Their struggle, though lost, nevertheless was no less heroic than if final victory had crowned their efforts. Neither has defeat altered the character of the people. To judge their deeds, their aspirations, and their prayerful hopes in the proper perspective, one need only to hark back to the days of our own Revolution. If the American colonists had lost to Great Britain in 1776, the heroes that fought, suffered, and died for our great cause would have become nameless or at best listed as traitors to the crown. Men such as Washington, Franklin, Adams, and Patrick Henry instead of being revered the world over would be recorded in English history as bandits who unlawfully resisted their ruler, King George III. If they had been caught, they would have been summarily hanged, or if lucky, executed by a firing squad. Their very names would have become synonyms for dastardly political deeds. The story of the embattled farmers at Concord and Lexington and the "shot that was heard round the world," the saga of Bunker Hill, and the epic of Valley Forge would have been wiped off the official record books as meaningless fanaticisms of reckless adventurers. Nothing would have remained of the colonists' valiant struggle except what a victorious Britain would have wished to remain to honor its own and to officially defile the defeated foe. That, in a nutshell, is what happened to Ukraine, to her heroes, and to her gallant people. Ukraine's conqueror, Russian Communist imperialism enjoys all the glory. Ukraine's heroes are unmentioned and except to be sneered at as nationalist bandits as was done in the United Nations a few weeks ago by the renegade Ukrainian Communist representative in a speech castigating the United States for aiding and abetting what he called subversive activities in the countries behind the Iron Curtain including the Soviet Ukraine.

But the final chapter in Ukraine's history has yet to be written. The desire of its people for freedom, independence and a religious life of their own choosing burns deeply in the heart of every Ukrainian patriot. This irresistable force cannot be denied forever. We pray and hope that such comes to pass without a catastrophic and devastating world conflict. If, however, war should come, the record confirms that the Ukrainian people will be our ally. The big question is will the Western World again pass up the opportunity to take advantage of this situation. As Rev. Robert I. Gannon, former president of Fordham University stated in an address at Dickinson High School, Jersey City, N. J., on January 20, of this year, commemorating the 39th anniversary of the proclamation of Ukrainian independence: "Given a chance now, the Ukrainians could take care of themselves for theirs is the spirit of the gallant Kozaks. They were the first to take arms against bolshevism to 1917 and the first to fight nazism in 1938. The West had everything to gain by supporting Ukrainian independence and yet it was twice ignored by Western civilization. That is why we can say that the Ukraine's modern tragedy is a result not only of fraud but of ignorance."

The Honorable MICHAEL A. FEIGHAN, Member of Congress from Ohio, one of the country's leading authorities on the non-Russian nations in the Soviet Union, in his introduction to the publication called the Ukrainian Insurgent Army in Fight for Freedom, aptly summarized our course of action when he stated: "In the perilous days in which we live, days in which the very survival of our way of life hangs in a delicate balance, we have been compelled to look carefully at the world arena to better know our friends and to clearly understand and identify the enemy. If we do anything less than this, we will be playing lightly and dangerously with the ultimate survival of the United States."

I am sure no American will disagree with that statement.

Tasks Ahead for the Free World

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, July 25, 1957

Mr. HUMPHREY. Mr. President, the distinguished Assistant Secretary of State for Policy Planning, Mr. Robert R. Bowie, made an important address before the American Society of International Law, in Washington, last April. I have been deeply impressed with the sweep of Mr. Bowie's remarks.

Because they seem to me to be an accurate summary of the assignment set for himself by his topic, Tasks Ahead for the Free World, I believe his address needs wider circulation than it has had thus far. Therefore, I ask unanimous consent that the text of Mr. Bowie's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TASKS AHEAD FOR THE FREE WORLD

(By Robert R. Bowie)

This occasion has inspired me to peer ahead in international affairs. It is impossible to predict in detail how the world will look in 5 years, much less in 10. It may not be quite so hopeless to identify the factors which will influence the outcome and to appraise their direction. In any case that will be my endeavor.

In doing so, I will consider two questions: One is: What basic forces, other than our own actions, are likely to shape world affairs over the next 5 or 10 years? The other is: What goals or objectives should we set for ourselves in the face of that kind of world?

BASIC FORCES AND TRENDS

First, then, what are the basic factors and trends that are at work in the world? Leaving aside our own actions, it seems to me that one can isolate at least four forces which are crucial. Let me explain briefly what these four are and why they seem central.

Soviet power

The first is the obvious one: Soviet power. Over the past four decades the Soviet system has shown itself to have great capacity for survival. It has gone through a remarkable variety of challenges: the abuse of its rulers, the chaos of invasion, the death of Stalin. It has managed to survive all these strains and stresses and to solve the problems of succession, at least so far.

Moreover, the Soviet Union has shown great capacity for growth and for increase in its power, both economic and military. Over quite a long period it has maintained a very rapid rate of growth—in the last 10 years, for example, something of the order of 7 percent a year. And in the industrial sector, where they have concentrated their effort, the Soviets have achieved a growth rate of about 10 to 12 percent.

These are high rates of growth compared with those of other industrial countries, including our own, where the rates are much nearer 4 percent. Soviet growth has been bought, of course, at terrible cost in human welfare and freedom. It has been done at the expense of the consumer and agriculture. These demands will certainly loom larger in the future.

Indeed their rate of growth may well slow down somewhat. Even so, we must still

assume that the next decade will show steady Soviet growth, especially in the industrial sector.

Now that prospect has obvious implications, both for Soviet military capability and for its ability to assist Communist countries like China and also, if it wishes, underdeveloped countries, as it has been doing.

But this is only half the picture. We should also recognize that there are major pressures for change within the Soviet Union.

These are largely inherent in the evolution of Soviet society. To achieve their growth, the Soviet leaders have had to train and educate their people. They have now developed an industrial society, over 50 percent of the population is urban and industrial. And these factors gradually increase the demands for greater legality, for better living conditions, for more freedom, for wider dispersion of authority, and so on. Similarly, in the satellites there are the pressures for national independence which erupted in Hungary and Poland.

Over time, these forces are surely going to bring changes within the Soviet Union and in its relation to the satellites. But they do not threaten to disrupt the Soviet system or materially to reduce its strength. And a long time will probably be required to erode its expansionist tendencies.

So the first basic factor, it seems to me, is the fact of growing Soviet power, which will probably remain hostile over the next decade.

The revolution in warfare

The second major fact is also one with which you are fully familiar, I am sure. This is the revolution in military technology resulting from superweapons.

Destructive capacity has been multiplied by a factor of a million as compared with the largest weapons of the last war. Today a single plane can deliver explosive force over four times as great as all the bombs dropped during World War II.

Even when these facts are familiar, it is hard for our thinking—the thinking of any of us—to take in their meaning. But it is clear that they have utterly altered the significance of war and deprived large-scale warfare of rational political purpose. Conversely, they have put a tremendous premium on maintaining peace and stable conditions which will not give rise to armed conflict.

What will be the consequences in a world where two powers have, or shortly will have, this capacity for mutual obliteration? It is hard to foresee. It could give rise to blackmail of nations which do not have these capabilities. It could give rise to temptations to local aggression under the supposed shield of atomic stalemate. Or, under some conditions, it could perhaps give rise to a considerable degree of stability based on mutual deterrence.

How the situation actually develops will turn on many other factors besides the weapons themselves. Not least of these will be the degree of instability in areas of the world outside the borders of the Soviet Union and the United States. What happens, for instance, in the satellites, what happens in areas like the Middle East, what happens in the Far East, will all have a bearing on whether these weapons make for stability or make for greater instability, blackmail, local war, and the like.

Afro-Asian revolution

The third major factor shaping our world arises from the radical changes taking place in Asia and Africa. Here within the last decade some 700 million people have achieved national independence and created some 19 new nations.

The people in these countries are driven by the aspiration to improve their economic lot. Their societies are now marked by the most extreme poverty. Their per capita national income averages about one-tenth of that in the industrialized countries of the West. These countries are determined to improve their economic conditions. They believe it is possible, and they are demanding that it be done.

The obstacles to their improvement are fantastic. There is the sheer fact of poverty itself. There is the illiteracy, which is typically 80 or 90 percent. There is the serious scarcity of skills. There is the great shortage of capital. There is the lack of those habits of mind and custom, of self-discipline and managerial experience essential for economic progress.

Thus their task in trying to achieve economic development is staggering. Yet their success or failure is going to determine very largely the political course in these countries. If moderate leaders, as in India, are not able to produce results which offer their people hope, they are almost surely going to turn to other more radical solutions, and the Communists are almost certain to be able to exploit this frustration.

A second characteristic of these peoples derives from their colonial experience. Their nationalism is intense and often takes an antiwestern bias; their thinking is colored by the memories of past domination, by a sense of inequality, which the West means for many of them. The bias against the West is a serious obstacle to the kind of work with these people that is in our mutual interest. The Communists exploit these feelings with great skill and pose as the supporters of the independence of these countries as against fancied western efforts at domination.

In addition, this nationalism produces conflicts or quarrels with neighbors, as in the Kashmir dispute, the dispute between Afghanistan and Pakistan, the Israeli issue, and so on. These local disputes are a constant threat of outbreak of violence which could embroil other parts of the world by taking sides. Thus these areas are inherently a serious source of instability, both in the political sense and also as possible sources of military conflict.

Relative decline of Europe and Japan

The fourth factor which seems to me central is the relative decline of former centers of power in Europe and Japan since World War II.

In neither case is there really an economic decline, because both areas are enjoying a scale of economic activity which they never before reached. Nor is there essentially a loss of political stability, because in general the moderate groups are in control in these areas. The shift in their relative position reflects the growth of the United States and the U. S. S. R., the development of atomic weapons, the loss of colonies, and the like. As a result, these formerly strong areas are no longer able to carry on the role in the world which they were once accustomed to. The process of adjusting to this change is not an easy one. It tends to create frictions and to strain the ties among us.

These then are four basic factors that seem likely to shape the world we will face for some years: a strong and hostile Soviet Union; a growing arsenal of weapons of unprecedented destructive power; the drive for political and economic progress in the less developed areas; and relative weakness in the former power centers of western Europe and Japan. The analysis so far leaves out of account one factor which may be decisive: our own actions. Let me now turn to them.

FREE WORLD TASKS

In the light of these forces or trends, what should be the main goals or tasks for the free world over the decade ahead? I would suggest five:

Safeguarding peace

The first task must be to stabilize peace so as to prevent both deliberate and unintended war. This has two aspects.

To deter deliberate aggression our best hope at present is to have the means to punish it effectively. The aggressor must be convinced that his crime will not pay. For this purpose it is not enough to be able to retaliate with all-out power. The free world must also be able to apply limited force in more selective and flexible ways. Otherwise we should run the risk of not being able to respond to specific limited acts of aggression.

The other danger is that the world could blunder into a major war without meaning to. In areas like the Middle East, parts of the Far East, and the satellites, which are unstable or inflamed, great power interests are involved or could easily become involved. The outbreak of conflict in these areas could lead by steps and countersteps to the kind of all-out war which would not serve the interests of anybody.

We need to use all the skills and machinery we have to keep such situations from breaking out into violence. For this purpose the UN can be very useful.

It would be a mistake to overestimate its capabilities, but it would also be a mistake not to use it fully in the ways in which it can be effective. And it seems to me essential to foster in all the ways we can the concept of the rule of law and the outlawing of resort to force in the settlement of disputes. Much can also be done by other organizations such as NATO and the Organization of American States. And not least is the need for old-fashioned diplomacy in resolving existing conflicts and disputes peacefully.

Control of armaments

Let me turn now to the second task which is closely related to the first. We must try to bring armaments, especially nuclear armaments, under some degree of control.

In saying this I am not suggesting that armaments can be eliminated entirely in this period. The practical and political obstacles make any system of total disarmament out of the question. But the issue is a false one if it is posed as a choice between doing nothing and attempting to disarm totally. We need a much more flexible approach to the problem. Small steps may have great value in reducing the likelihood of nuclear war. For example, any degree of inspection might materially increase the deterrent by making it more difficult to launch a surprise attack. In the absence of ability to achieve surprise any temptation to initiate all-out nuclear war would be substantially reduced. Similarly, it would be useful to put limits on the spread of nuclear weapons throughout the world. In many hands they could hardly fail to create new tensions and dangers. Finally, we should try to divert future output of nuclear material into peaceful uses and at least start to transfer some of the existing stockpiles to such purposes.

Such modest measures would fall far short of disarming entirely. But they would serve to limit and control armaments and perhaps gradually to reduce the burden of safeguarding the peace. And that could lay the basis for further steps.

Economic development

The third task for the free world is to assist economic growth in the less developed areas. We have a deep interest in the continued independence of these countries under moderate governments. If they cannot achieve social and economic progress under these auspices, the prospects look grim indeed. Their failure could radically change the present uneasy political balance in the world.

As I have said, there is no easy road to growth in the less developed countries. They start with severe handicaps in terms of skills, experience, illiteracy, and capital. Economic progress will require a social revolution over a very short period. The disruption of old traditions and institutions will create un-

stable conditions and offer great opportunities for Communist exploitation.

If these people are to achieve economic growth, it will have to be done mainly by their own efforts. No outsider can possibly organize and bring about the basic changes which will be required. But even if they make the best use of their own resources, the margin between success and failure will be a narrow one. Capital and training from outside can do much to widen that margin. And such help will be required for some years to come.

Our interests and our ideals dictate that we should devote substantial resources to training and technical assistance and to providing economic help for development purposes. In extending it our methods should be designed to foster self-help and efficient use of resources. The Secretary of State has recently submitted to the Congress certain proposals on our mutual security program. Those relating to economic development are designed to clarify our purposes and to create machinery better adapted to the task. If adopted, these proposals should improve the program and enhance its value.

Western Europe and Japan

Our fourth objective must be to assist Western Europe and Japan to play a role in the world in keeping with their potentialities.

Under modern conditions, Western Europe is weakened by its fragmentation. In recent years the European states have attacked this weakness in various ways. In the Council of Europe, the OEEC, the European Payments Union, they have worked together on common problems. Six of these nations have gone even further. In the Coal and Steel Community and now in Euratom and the common market, they are seeking to create an integrated European community with common institutions. We must do all we can to foster this integration and the drawing together of the European countries in their effort to create a more effective unit in the free world.

In the Far East prospects for peaceful progress depend greatly upon Japan. The prosperity of Japan rests heavily on access to raw materials and to markets and trade outlets overseas. A prosperous and free Japan can contribute much to the vitality of the free world. But if these benefits are to be achieved, ways must be found to allow Japan to sell its products within the free world.

Communist evolution

As a final objective we must do what we can to foster the evolution of the Communist states toward a more liberal pattern. Let us not overestimate what we can do for this purpose. Our first aim must be to try to create a set of conditions to which the Soviet Union will have to adjust and adapt its own conduct. That, of course, is a fundamental purpose of the actions I have already outlined. They are designed to forestall Communist resort to military force and the spread of communism by nonmilitary means. In this way time will have a chance to work its changes on Soviet society.

Meanwhile, there are some other things we can do which may have a modest effect in speeding that evolution. For instance, exchanges of information and of people open up the Communist world to ideas and influences from abroad and tend to strengthen the forces for change within.

Again, we can at all times make it clear that the free world does not threaten Soviet national interests if these are defined in ways which do not call for domination of other states. In other words, the Soviet Union should be made aware that it could have a secure national life in a world of independent states if it is prepared to forego expansionist goals.

With respect to the satellites our aim should not be violent revolution but the steady growth of greater independence of the Soviet Union. And again we can assure the Soviets that, if they accommodate to the pressures for freedom in the satellites, the free world will not seek to create hostile neighbors along its borders.

These, then, are five major tasks to which I think the free world must devote itself in the coming years. In a brief speech it is not feasible to fill in details. I can only hope that enough has been said to indicate why each of them seems necessary in coping with the conditions that lie ahead.

CONCLUSION

In concluding, I would like to stress two final points about these tasks.

The first is this. Each of them will require cooperative action among the free nations. None of them can be achieved in isolation by any single nation—even our own. Our military power, our economic power, our diplomacy, and our ideas can do much to influence the direction in which the world develops. But, to be effective, our efforts will have to be combined with those of other free nations. Each will have to contribute its due share and play its proper role.

My final point is that the tasks I have outlined pose special problems for democratic nations. These goals are not to be realized within a year or even within a decade. They call for steady, patient effort over an extended period of time. They will demand heavy burdens and sacrifice. The challenge is not a dramatic one. And the necessary actions will not produce clear results at a specific time. There will be a constant temptation to let down and to cut back. Yet these tasks are essential for the survival of freedom.

It is an article of faith with all of us that in the long run the triumph of freedom is inevitable, that the future is on our side. In a very real sense this is true. Hungary and Poland are the most recent testimony that the values and institutions of freedom respond to the deepest yearnings of mankind. But in this situation we should also recall a wise saying of Mr. Justice Holmes: "The inevitable comes to pass by human effort." We can be sure that freedom will prevail if freemen put forth that necessary degree of effort.

Rev. Michael G. Kovach, Ph. D., New Pastor of Edwardsville (Pa.) Parish

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News of July 17, 1957:

NEW ORTHODOX PASTOR

As the successor to the late Right Reverend Archimandrite Anthony Repella as pastor of St. John's Russian Orthodox church in Edwardsville, the Reverend Michael G. Kovach, Ph. D., comes highly recommended.

Like his predecessor who was a noted linguist, the Reverend Dr. Kovach is a scholar. Thus, he will carry on a tradition of intellectual attainment in the west side congregation, so ably advanced by Archimandrite Repella.

A chaplain in the Second World War and a pastor at Ambridge for a decade, he brings to the community a reputation as a civic leader which augurs well for Edwardsville. The fact that he qualified for the Young Man of the Year award in the Beaver County town indicates character and capacity.

With such an impressive background of education and service, his assignment is good news for the west side as well as the congregation.

Recollections of a Member of Senator McCarthy's Staff

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Thursday, July 25, 1957

Mr. HRUSKA. Mr. President, one of the members of the staff of the late junior Senator from Wisconsin [Mr. McCarthy], L. Brent Bozell, has written an account of some of his experiences as a member of that staff. His article was published in the National Review for May 18, 1957. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS WAS A MAN

(By L. Brent Bozell)

I did not know him well while he was alive. And because after the deed was done he never reminisced, and politely resisted all invitations to relive the past, the man who fought those exciting battles might just as well have lived a thousand years ago. I have, however, a few very good impressions. Before censure I studied his work, and helped write a book about it; and in the course of professional interviews, caught glimpses of the buoyancy, the strength of will, the awesome singlemindedness, the gentleness.

I have, also, a few concrete recollections. During the Watkins hearings, I saw him, on several occasions, rise from the committee table and stride around the room in an effort to ease the excruciating pain that had plagued him since an abdominal operation 2 years before. Attending newsmen recorded the event as evidence of his arrogance, as an act of calculated contempt for the committee. And a few other incidents that would, I suppose, be more relevant. But I did not know him then. It was not until several weeks after the censure, when I went to work for him, that I came to know intimately, and to love, the wreckage.

What was left? An intellect, still keen and absorbent and discriminating. Still able to concentrate, ruthlessly, on the central problem of our time. And still able, on specific issues, to bore in lightning thrusts to the heart of the matter. But the intellect worked only part time; it needed rest frequently because it had become tired, terribly tired.

And a vivid moral sense was left. Vivid, I can say, not because I ever heard him verbalize it cogently or eloquently, but because it was clear from watching him make decisions that it completely, imperiously, ruled the man. He was putty in its hands. Forget the objective content of his ideas of right and wrong: I have known few men for whom the moral argument was so obviously the relevant one, for whom intellectual movement from the right thing to do to the thing to do came so naturally.

An iron will was still there, on things that mattered. He never lost his determination to set the world right, to bring down his country's tormentors. And, crazily enough, he remained optimistic about the future, including his own role in the fight. Or so it appeared, as he planned ahead: with the comment he would make tomorrow on the Suez, the speech about aid to Tito, the campaign of 1958.

An afflicted body, tormented by a hundred ailments, remained. Yet this is the kind of body, I am told, that he had had for years.

And an incapacity for gloom. When my heart is torn, I want to cry. He wanted to laugh. His heart was on the rack, and there he sat in the big leather chair in his living room, cracking jokes. Levity is unseemly at wakes. But it was his wake. He was alive to preside over it, and he was damn well going to set the tone.

What, then, was gone? It was one thing, but it was everything. Call it fuel. Whatever it is that makes mind and body do what the spirit wills. The spirit itself, that failed to break—even to dent. Understand this much: that he never gave up. And, therein, the central tragedy. The mind, the will, the spirit, all consciously alive—striving, straining forward. But nothing would move. He once had more of this thing, this fuel, than any man in public life. Now it was gone. And he knew that, too.

He was a boxer, driven to his knees, terribly hurt, wanting to rise and fight again, trying to rise, planning his strategy for the next exchange, wondering why nothing happened, determined to rise, and even smiling a little to prove it. He knew that he would get up, they, that he wouldn't. And he heard them count over him for 2½ years.

At his funeral, Monsignor Cartwright said that God would honor the brave. I suspect, moreover, that God has accounted his gameness on the floor as the bravest act of them all.

I think he did not see the punch coming, but that, afterward, he knew what hit him. He said on a number of occasions during the Watkins hearings, during the Senate debate 2 months later, that he expected to be censured, and didn't much care if he was—that the important thing was that the public still believed in what he was doing. I think he believed that, right up to the moment the blow struck. Then, suddenly, nothing was as important as that his peers had done him a monstrous, personal injustice. He was, in a sense too profound for his peers ever to understand, a clubman. Attacks by individual Senators, he could absorb; as he expected them to absorb whatever he delivered in the give-and-take of every day political combat. But in their corporate capacity, they could hurt him. They could, indeed, and did, sever the communion. From the gaping wound left by that breach whatever substance it was that had sustained him and kept him charging ahead, instantly poured forth.

The individual Senator who voted against him—though he held some of them in the highest contempt—he quickly forgave. It's a fact: he was temperamentally incapable of bearing personal malice. With the Senate, it was a different matter. He had led it in some of its most important battles; and had fought for it—against the Nation's enemies, and against its own special enemies at home. But the Senate turned on him, and that ruined him. God was merciful to stop his heart.

Recreational Facilities of Owyhee Reservoir, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 25, 1957

Mr. NEUBERGER. Mr. President, recently when the Senate was considering the bill to establish a National Outdoor Recreation Review several Senators mentioned the growing pressure on national parks, national forests, and monuments as a source of enjoyment for the American people. I am pleased that the Senate has passed the bill under which an inventory may be compiled of the scenic outdoor areas available for future recreational uses.

In the vast areas of the West, many opportunities exist for tapping new recreational assets. One of these is the Owyhee Reservoir area of eastern Oregon, an artificial lake created 25 years ago as a part of the system of Bureau of Reclamation dams. The reservoir is located in a remote and scenic section of Oregon's eastern plateau region. Impounding of water in the reservoir has created a lake which provides unparalleled bass and other fishing and a shoreline for delightful exploration by boat. But lack of road facilities has kept this interesting section of the West closed to any but the most hardy of outdoorsmen.

As a step toward fuller realization of this area's recreation possibilities, a bill was introduced by my senior colleague [Mr. MORSE] and me on July 1, 1957, to authorize minimum recreation facilities in this section, including necessary roads. The Owyhee Reservoir development is one which can justifiably be added to the list of potential, undeveloped recreation sites to be studied under the recreation review. Some of the major attributes of the Owyhee Reservoir area have been described in an article in the Oregonian of June 6, 1957, by Albert McCready, associate editor of the newspaper and an able advocate of better custodianship of recreation and scenic assets.

I ask unanimous consent to have printed in the Appendix of the RECORD the article by Mr. McCready.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OWYHEE: AN ASSET OREGON HAS MISSED

(By Albert McCready)

In the remote southeast corner of Oregon lies a vast body of water few Oregonians know much about and even fewer have visited. Only the hardiest motorists care to risk tires and springs on the rocky, rutted, one-way tracks which pass for roads into Malheur County's Owyhee Reserveor. Those that do, come out raving about Owyhee's superb fishing and breathtaking scenery. They all say the same thing: Somebody ought to build a good road to this 53-mile-long manmade lake, so Oregon could cash in on a tremendous recreational asset.

Those who seek the answer to the question of why this has not been done long ago run into the bigger puzzle of why Oregonians, who look to tourist spending as their third biggest source of cash income (after forest products and agriculture), accept uncomplainingly a State policy which assigns a low priority to the development of isolated recreational areas which could enhance Oregan's allure for vacationers and increase the harvest of tourist dollars.

There is no doubt that Owyhee Reservoir—created 25 years ago as a reclamation project—could become one of the vacation meccas of the West if there were some way tourists could reach it in comfort and find civilized accommodations once they got there. It has plenty in the way of natural attractions: Battling largemouth bass running up to 8 pounds and a tremendous population of fat and eager crappies that the most unskilled fisherman can catch by the gunnysackful; a skyline of rugged, colorful, volcanic peaks that are happy hunting grounds for rockhounds; remnants of old Indian encampments that are ditto for amateur anthropologists and archeologists; and clear mountain air and steady sunshine.

All this is pretty much wasted at present, however; for almost no one now goes to Owyhee except fearless anglers from the Vale-Ontario-Nyssa-Boise area who'd crawl on their hands and knees if need be to get to a place where there are plenty of cooperative fish.

Malheur countyans have received a cold shoulder from the Oregon State Highway Commission in the many years they have been urging construction of an Owyhee Reservoir access road.

The commission says it can't spare money for such inconsequential purposes while there is a great need for new four-lane expressways linking population centers elsewhere in the State. When Owyhee boosters declare they would be well satisfied with a simple, two-lane graveled road, commissioners explain they can't possibly build any cheap roads like that; the department has its construction standards and these must be adhered to or Uncle Sam won't come through with the vital matching funds.

Those who argue for the establishment of a State park on the rim of Owyhee Reservoir get the same runaround. The operation of State parks now is left to a most subservient subsidiary of the highway department, and officials of the latter cannily figure they will soon be obliged to build a road to Owyhee if they agree to put a park there. So they won't.

It has been suggested Malheur County ought to build its own road, if it wants one so much. This is easier said than done. The Malheur County court already is up to its neck in financial difficulties, with taxes coming in from a population of only 23,000 residents scattered over an area of 9,870 square miles, bigger than the State of Massachusetts.

Creation of a separate parks department has been advocated as one step toward a more adequate policy of developing Oregon's recreational attractions.

The highway department has resisted this move, not that it particularly desires to retain parks responsibility so much as it wants to avoid the diversion of funds to an independent department. It has powerful support from short-sighted Oregonians who think we have an adequate parks policy because the department has done a good job

with those recreational areas which by geographic accident happen to be traversed by major highways.

Anyone hardy enough to make the pilgrimage to Owyhee Reservoir will agree that here is an asset which, if located in Arizona or California, by now would have been so thoroughly ballyhooed and developed that it would be a bonanza of tourist gold.

But this is backward Oregon, which thinks so little of its No. 3 industry that neither house of the legislature has a committee to look after its interests and recreational policy is made by roadbuilders. As long as Oregonians remain satisfied with such a system, great recreational resources such as Owyhee Reservoir will remain undeveloped and unproductive of tourist revenue.

Alabama Forestry Industries

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. ROBERTS. Mr. Speaker, forestry industries in my home State of Alabama are a major part of the State's overall economy and are contributing greatly to the productivity of the South and the Nation. One out of every seven employed in manufacturing in Alabama earns his living in some form of the lumber industry.

In the fourth district, which I am privileged to represent, we have about 11 percent of the total forest acreage in Alabama. Moreover, we have a number of forestry industries including a huge newsprint plant at Coosa Pines, near Childersburg.

Some of the facts and figures pointing up the importance of wood in Alabama were set forth in a recent editorial in the Birmingham News. For the RECORD, I would like to submit this editorial, which appeared under date of July 22, 1957:

THE STATE'S PAPER INDUSTRY GROWS

Production of woodpulp, paper, and paper products is increasing at a rapid pace in the South. Southern mills, it is estimated, already supply 40 percent of all the paper other than newsprint used in the country, and the number of such mills is growing.

Alabama is sharing in this growth, which is contributing materially to the diversity and strength of the State's industrial economy. According to the 1957 edition of Facts About the Nation's Pulp, Paper, and Paperboard Industry, published by the American Forest Products Industries, the State now has a total of 32 mills, including 12 pulp mills, engaged in manufacturing and processing paper. Presently operating pulp mills have a total daily capacity of 3,558 tons of pulp, and in 1955, the latest year for which accurate figures are available, turned out some 680,000 tons of paper and paperboard.

Three new pulp and paper mills are now under construction in the State, and several established plants are engaged in, or are planning, expansion programs.

The industry at present provides direct employment for 8,700 Alabamians, and the new facilities will substantially increase this figure. Value of the State's pulp and paper output last year, according to the Blue Book of Southern Progress, was $157 million.

John Raeburn, chairman of the Alabama Forest Industries Committee, notes that Alabama woodlands furnish nearly 2 million cords of wood a year for the paper industry, making the State third in the South in pulpwood production. The future growth of the paper and other wood-using industries, he points out, will be keyed to the management of our woodlands. With annual growth of timber exceeding removal by more than 28 percent, the 140,000 timber landowners in the State are doing a good job, but there is still room for improvement.

Public Interest in Conservation

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. REUSS. Mr. Speaker, one of this country's outstanding current writers on conservation and natural resources comes from my home city of Milwaukee, Wis. The topnotch reporting job which R. G. Lynch of the Milwaukee Journal does on conservation issues has been widely recognized by conservation leaders throughout the country. What is perhaps more significant, the quality of his writing is apparently also recognized by the readers of the Milwaukee Journal throughout the State of Wisconsin. The following news item from the July 15, 1957, issue of Conservation News, published by the National Wildlife Federation, reflects high credit both on the ability of Russ Lynch and on the level of awareness and interest of the people of Wisconsin in the major conservation issues now before the Nation:

ANOTHER PROOF OF PUBLIC INTEREST IN CONSERVATION

Russell G. Lynch, one of the old pros of the Milwaukee Journal staff, has been proving that the public is interested in, and will read about, natural resource problems and controversies. Since he graduated from the position of sports editor to full-time writer on conservation subjects, his articles have been quoted, discussed and reprinted far beyond the Journal's normal sphere of influence.

One series of Lynch articles, on the Dakota drainage problem and entitled "Ditches, Dust, and Ducks," received nationwide circulation through a reprint by the National Wildlife Federation.

The Journal's circulation department decided to check up itself on the readership of the Lynch stories. A survey conducted by standard methods in 15 Wisconsin towns showed the following:

[In percent]

The series were read by—	Men	Women	Combined
Military land grabs	48.3	20.0	36.4
Forest insects	55.0	22.3	41.4
Highways and drainage	44.0	24.6	35.9
Overall nonsporting	49.1	22.3	37.9
State license fees	56.8	20.0	41.4
U. S. Fish and Wildlife Service	46.6	29.4	39.4
North Dakota drainage	37.3	22.3	31.3
Overall wildlife	46.9	23.9	37.3
All 6 series	48.0	23.1	37.5

According to accepted journalistic standards the popularity of the Lynch articles has been spectacular. Features which show 5 percent readership are usually kept in a newspaper. Leading sport columns, covering baseball, boxing, etc., often show less acceptance than Lynch is scoring with his conservation reporting.

Criminal Optimism and the Four Summits

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. FEIGHAN. Mr. Speaker, the forces of appeasement in this country, stimulated by recent changes in the imperialist Russian Communist regime, are once again urging us to reconsider our position toward the Soviet Union, to trade with the Communist empire on a larger scale—particularly with Red China—and to further support the myth of national communism. As though experience has not taught us, they urge also that we consider another summit conference. Lacking in a positive policy of action toward the ever-present Russian Communist threat, we are prone to drift into old situations with perhaps only new names.

On the possibility of another summit conference, I wish to bring to public attention the persuasive and aptly titled article written by Lt. Col. N. Henry Josephs on criminal optimism and the four summits. Colonel Josephs is a former special consultant to the Under Secretary of War and is also a member of the New York bar.

In this article Mr. Josephs presents a cogent pattern of tragic experience with summit conferences. He is fully aware of the multinational composition of the Russian Empire known as the Soviet Union. He is alert to the formidable pressures represented by the non-Russian nations in the U. S. S. R. against Russian Communist domination of Ukraine, Georgia, Armenia, White Ruthenia, Latvia, Estonia, Lithuania, Azerbaijan, Turkestan, and other countries. Thus in his article the use of the term "Russia" serves to focus attention on the minority Russian control and domination over the Soviet Union.

Colonel Josephs' emphasis on the fraud of Khrushchev's competitive coexistence is most welcome at this time. His observation that both the House and Senate should be the stages of great national debate on these issues cannot but be generally well taken today. This article should be read for its many worthwhile observations on the course of present-day diplomacy and under leave previously obtained, I insert it in the RECORD:

CRIMINAL OPTIMISM AND THE FOUR SUMMITS

During these past 17 years, the world has toppled off three summits, the Munich summit, the Moscow summit, and the Washington summit, taking a death toll in human lives running into the millions. The world has rolled off a fourth summit, the Geneva summit. The fact that the fourth summit,

the Geneva summit, ended in failure may be a good omen, for had it ended otherwise, it would have been because of appeasement or because of blind trust in the peace overtures of a truculent enemy.

Man is a chronic wisher for peace and "meetings at the summit" always keep up his optimism and increase his hopes that "talks" may avert war. Unfortunately, history has proved, time and again, the contrary to be true. "Talks at the summit" always favored and encouraged the aggressor. The younger ones among us may not know, and the older ones among us may have forgotten, some of the historical facts of the three famous summits; the Munich, the Moscow, and the Washington. A brief review of these facts shows how leaders of great nations can become the victims of what historians justifiably describe as criminal optimism."

THE FIRST SUMMIT: THE MUNICH

The present Russian pattern in handling international affairs is neither new nor unique. As a matter of fact, it has a frightening resemblance to the pattern which Hitler employed immediately preceding World War II. He would harass some nations and make friends with others. He would create "incidents" to keep an atmosphere of tensions and of war scares, while at the same time he would make speeches and talk about peace. Every act of violence would usually be followed by actions or speeches containing tricky peace propositions.

On March 7, 1936, Hitler invaded the Rhineland, in violation of both the Versailles Treaty and the Locarno Pact. He thus provoked the greatest crisis in Europe since the end of World War I. The French wanted to march, but didn't have the nerve and the British advised a policy of caution. To fan the hopes of peace and to avert a war for which he was not yet ready, Hitler dramatically offered to return to the League of Nations and, in addition, proposed a grandiose peace plan. Under this plan, the principal powers of Europe would sign a 25-year nonaggression pact; air power was to be limited and the manufacture or use of heavy tanks or heavy artillery was to be forbidden. The world found out later, most tragically, that these were the very weapons that Hitler was secretly stockpiling.

Hitler further offered to reduce world tensions by agreeing to sign a nonaggression pact with Austria, which he did and in which he agreed to recognize the sovereignty of Austria. Of course, 2 years later, Hitler invaded Austria.

Regarding Czechoslovakia, Hitler (September 1938) said:

"The Sudetenland is the last territorial claim which I have to make in Europe * * * I have assured Mr. Chamberlain, and I emphasize it now, that when this problem is solved, Germany has no more territorial problems in Europe * * * I shall not be interested in the Czech State any more and that, so far as I am concerned, I can guarantee."

Early in the following year, Hitler said:

"Only the warmongers think there will be a war. I think there will be a long period of peace."

Six weeks later (March 15, 1939), Hitler seized Czechoslovakia.

In order to neutralize Poland, Hitler signed a nonaggression pact with Poland and with pride pointed to this treaty as proof that coexistence was possible, saying (February 20, 1938):

"The Polish State respects Germany and Germany respects Poland. Thus * * * in spite of the assertions of many warmongers, Germany and Poland have succeeded in removing all friction * * * and made it possible to work together in true amity."

Eighteen months later he invaded Poland.

Hitler was able to achieve his successes by the cunning tactic of encouraging "meetings at the summit." And by inviting the ministers of foreign countries to come and "talk things over" with him, he managed to break the League of Nations and lower the strength and the unity of the Allies. These calculated moves led finally to the now historically famous meeting held in Munich. After a hectic week, on the 28th of September, 1938, Sir Neville Chamberlain, then Prime Minister of Great Britain, announced in the House of Commons:

"Chancellor Hitler has invited me to meet him tomorrow at Munich. He has also invited Premier Mussolini and Premier Daladier. Premier Mussolini has accepted, and I have no doubt that Premier Daladier will do the same. I need not say what my answer will be."

The Commons burst into cheers.

Chamberlain arrived in Munich the following day for the Big Four summit meeting. Mussolini, Italy's head of government and Edouard Daladier, the French Premier, also arrived. They immediately met with Hitler in the Fuhrerhaus. The purpose of the meeting was to assure peace in Europe by solving the Czechoslovakian problem The Czech delegates were also there, but they were excluded from the conference. The Big Four were in session that whole afternoon and met again that evening. By 1 a. m. of the following morning, the famous Pact of Munich was signed on behalf of the four governments and the Czech representatives were immediately sent for and the British gave them signed copies of the agreement. The Czech Minister to Germany said he wished to make a comment, but was told that any observation of his would be superfluous.

Andre Francois Poncet, the French Ambassador to Germany, who assisted Daladier during the conference, on returning to his hoted around 2 a. m., immediately telephoned Mr. Georges Bonnet, to inform him of the completion of the pact, but Bonnet swept aside all detailed explanations and, showing his relief, said: "Peace is assured, that is the main thing. Everybody will be happy."

Upon his triumphant return to London, Chamberlain was received by cheering crowds that lined Downing Street. In triumph, he said:

"My good friends, this is the second time in our history that there has come back to Downing Street peace with honor. I believe it is peace for our time."

The last phrase of this naive statement has since taken its illustrious place among famous phrases in history and has since signified the optimum in optimism.

THE SECOND SUMMIT: THE MOSCOW

Stalin and Molotov were also to fall off a summit. When the nonaggresssion pact with Poland was concluded, this is what Hitler had to say (February 1938) about Russia:

"Shall I remind you of the Bolshevist Revolution which slaughtered millions upon millions of people, but whose blood-stained murderers still occupy high places? * * * With one single country alone we have detested to enter into relationships. That state is Soviet Russia. We see in bolshevism more now than before the incarnation of human destructive forces."

About a year later (May 1939) Moscow announced that Maxim Litvinov, the People's Commissar for Foreign Affairs, resigned. The reason: "ill health." Vyacheslav Molotov took over Litvinov's post. In less than 2 months afer Molotov's ascension to power rumors were flying in the principal capitals of Europe that Molotov and Von Ribbentrop, Hitler's special envoy, were feeling out a possible rapprochement between Fascist Germany and Communist Russia. Russia labeled these rumors as "outrageous lies" intended to sabotage the friendly negotiations between England, France, and Russia for military and trade cooperation.

Not heeding these rumors, and accepting Russia's denials, England and France sent their military and civil staffs to Moscow for talks, during which they were to spread out, for the Russians to look at, their top-secret military blueprints. These talks continued from August 12 to August 20. While the English and French military staffs were still in Moscow with their briefcases of military secrets wide open, Russia announced that she had signed a German-Soviet trade agreement, under which she was to receive from Germany a credit of 200 million marks, to be repaid by Russia over a period of 7 years. Twenty-four hours later (midnight, August 21), Berlin announced that Von Ribbentrop would fly to Moscow for a summit conference with Stalin to discuss a nonaggression pact.

In an attempt to explain this debacle, Daladier, in a broadcast in Paris (August 25), had this to say:

"We began civil and military conversations with Russia in agreement with Great Britain. We have done everything to bring them to success and we believed that they would shortly end happily when, reversing suddenly her policy and her doctrine, Russia signed with Germany a pact that permits her to escape the obligations that her policy had imposed and that she had always publicly affirmed."

Chamberlain, in the House of Commons (August 25), said:

"The House may remember that, on July 31, I remarked that we had engaged upon a step that was almost unprecedented in character (exchanging military blueprints with the Russians). I said that we had already shown a great amount of trust and a strong desire to bring the negotiations with the Soviet Union to a successful conclusion when we agreed to send our soldiers, sailors, and airmen to Russia to discuss military plans together before we had an assurance that we should be able to reach an agreement on political matters. * * * The British mission arrived on August 12. They were warmly received in friendly fashion and discussions were actually in progress and proceeding on a basis of mutual trust when this bombshell was flung down. To say the least, it was highly disturbing to learn that while these conversations were proceeding on that basis the Soviet Government was secretly engaged with Germany for purposes which, on the face of it, were inconsistent with the objects of their foreign policy as we had understood it."

The German-Russian nonaggression pact was signed as planned and was to become effective when ratified by the Soviet Union. This was held up for 8 days, for reasons which later became very obvious; i. e., to give both countries time to prepare for the invasion of Poland. On August 31, 1939, Vyacheslav Molotov (yes, the same Mr. Molotov we are dealing with now) urged the Supreme Soviet to ratify the pact with Germany, declaring:

"Germany abandoned its anti-Soviet policy and offered the most favorable trade agreement ever made at a time when other countries plotted to involve us in a war."

Ratification followed and at dawn the following day (September 1, 1939), the German armies were on the march into Poland from the west and the Russian armies from the east, and to quote Von Ribbentrop (Danzig, October 24), the two armies met at a "line of demarcation which we had previously agreed upon with the Russians."

This started World War II.

Stalin and Molotov, however, were soon to find out that they, too, were paid in "fool's gold." At dawn on Sunday, June 22, 1941, the German tanks were rolling east into Russia. The nonaggression pact, signed less than 2 years before, met the natural fate of all nonaggression pacts: the scrap heap! From its western borders and deep into Stalingrad, millions of Russians, soldiers and

civilians, paid with their lives for the "Moscow Summit."

THE THIRD SUMMIT: THE WASHINGTON

Japan's full-scale aggression in Asia started with her invasion of the China mainland and the capture of Manchuria. At the time, both China and Japan were members of the League of Nations and when the Chinese pleaded with the League to intervene in accordance with its charter (art. 16), the League, except for summoning Japan before it, which Japan refused, took no further action. Thereafter, Japan continued to press her plans of conquest in China with increased success.

Japan also used the technique of calculated incidents. The most serious of such incidents, from the point of view of the United States, was the bombing (December 12, 1937) of the *Panay*, which, while convoying 3 oil tankers, was attacked by 6 Japanese planes. The *Panay* was sunk and the crew and passengers strafed, with two Americans killed and many wounded. Mr. Hirota, the Japanese Minister for Foreign Affairs, when questioned by our Embassy in Tokyo, said that the incident was "unintentional, due probably to bad visibility." However, when the evidence showed that the day of the attack was a clear and sunny day, the Japanese admitted responsibility, expressed regret and offered to pay reasonable damages. This was the first of a series of incidents which were to plague us from 1937 on, up to, and including, Pearl Harbor.

Around the middle of the year 1941, our Embassy in Tokyo informed our State Department by repeated coded messages that the Japanese official press was easing up on their campaign against the United States and that statements by Japanese officials were softening up and that "it looked as if there might soon be a welcome change in the Japanese policy toward our country." This was the Japanese new look. Further information transmitted to our State Department was that Prince Konoye, the Japanese Prime Minister, would seek the support of the Emperor for a personal visit to Washington, provided President Roosevelt would accept the idea of a conference at the summit. Mr. Cordell Hull, then our Secretary of State, advised Mr. Roosevelt against holding such a conference unless the Japanese were willing to sign, in advance, a statement containing simple principles of peaceful intentions.

Throughout the summer and autumn of 1941, diplomatic conversations continued in a zig-zag pattern, at times appearing that some progress was being made and at other times with the discussions becoming regressive. Prince Konoye insisted that he agreed with Mr. Hull's position, but that he could not put anything in writing, as this could easily be interpreted by the Japanese people that the United States was questioning Japan's sincerity. The fact remains that we were being strung along while the Japanese were pouring more and more troops and supplies into southern Indochina and were strengthening all their Pacific naval and military bases. Admiral Nomura, the Japanese Ambassador in Washington, throughout this time, made repeated calls on both the President and Mr. Hull and kept up an atmosphere of optimism. Official opinion in Washington was that the Japanese new look was worth exploring.

On October 16, 1941, the Konoye Cabinet was succeeded by a new Cabinet, with Mr. Shigemori Toga as Minister for Foreign Affairs. Toga immediately dispatched to Washington Saburo Kurusu, formerly the Japanese Ambassador to Fascist Italy and Germany, to "assist" Admiral Nomura in his "peace talks" with the President and with Mr. Hull. This gesture lulled us into thinking that the Japanese wanted peace after all. President Roosevelt and Mr. Hull received the new special envoy on November 17 and talks continued to go on in Washington at the highest possible level, the summit.

The majority of the American press felt that these talks would avert war with Japan and lead to peace. Meanwhile, the Japanese were already massing their navy and air forces for the attack on Pearl Harbor. This took place just 20 days after Mr. Kurusu's arrival in this country. Admiral Nomura, Mr. Kurusu, and all other members of the "peace delegation" were then promptly taken to Hot Springs, Va., for internment.

Our optimism regarding Japanese intentions got us into World War II. Hundreds of thousands of Americans killed and wounded was the price paid for the Washington summit.

THE FOURTH SUMMIT: THE GENEVA

In the month of June 1955 representatives from 60 countries gathered in San Francisco for a week-long celebration commemorating the 10th anniversary of the signing of the Charter of the United Nations. Dr. E. N. van Kleffens, of the Netherlands, presided. Dr. van Kleffens made it clear that this was to be a commemorative meeting and invited the representatives assembled in the San Francisco Opera House to limit their speeches to "commemorative purposes." This procedure was obviously adopted for just one purpose and that purpose was to stay clear of anything that might offend the Russian delegation.

Russia's 10-year record in the United Nations had been one of constant harassing and blatant abuse of her veto power. The Soviet Union did everything possible to make the life of the United Nations "tumultuous, frequently discouraging, sometimes terrifying," as President Eisenhower eloquently described it in his opening address at San Francisco, although he was careful not to mention Russia by name. Up to June of last year, the Soviet Union had cast 62 vetoes and their representatives have walked out from at least 300 sessions, and ever since 1950, has strived by every trick and device to get its new ally, Red China, seated in the United Nations, having made in all, 160 such attempts. In spite of all their obstructive tactics, in spite of all Soviet pressures, the United Nations, throughout its 10 years of rough life, has succeeded to hold its own and keep on striving for world peace.

It was during the San Francisco gathering that the Russians first unveiled the new look in Russian diplomacy. Molotov was smiling. Molotov was friendly. The Russians were now switching their tactics. Having lost the battle against the United Nations from the inside, they decided to embark upon a series of diplomatic moves that would destroy the United Nations from the outside. Through an intensive charm campaign, carried on at breathtaking pace, they left no stone unturned to win friends and influence people and moved in wherever there was a fertile field which could be exploited to their advantage. It was later to become apparent that this offensive was global in nature.

The charm campaign encouraged the heads of the Western powers to meet with the Russians, at the summit, in Geneva. This summit meeting was received throughout the world with great optimism and with a sense of hope that war at last could be averted. The meeting of the Big Four in Geneva was held in an atmosphere of friendship, which the Russians quickly propagandized as the new spirit, the Geneva spirit.

President Eisenhower cautiously announced, at the conclusion of the Big Four conference, that at the Geneva summit "a beginning was made and * * * it is just possible that something to the great benefit of mankind may eventuate."

Khrushchev, in his usual bombastic manner, and as it still suited the Russians' purpose, said that "the Geneva Conference was of historical significance * * * its distinctive feature was the spirit of cooperation and mutual trust."

After the Geneva summit, the Russians continued to beat the drums of the Geneva spirit and during the 4 months following it, gave garden parties, exchanged special visitors with the United States, invited the French Cabinet Ministers to Moscow, and Khrushchev and Bulganin accepted an invitation to visit Great Britain in the spring of 1956. They skillfully exploited every opportunity to display jubilance and amiability at any time and everywhere, with the clear purpose, of course, to infect the world with the vicious germ of false optimism and lull everyone into a sense of security. The French started to talk about reducing military service, and the British introduced bills in Parliament with the purpose in view of cutting down defense costs, and some countries in Asia, besides India, started to talk neutralism.

But when October came and the Foreign Ministers of the Big Four met again in Geneva "to put words into deeds," the Russians, in their not unusual fashion, made another about-face and Mr. Molotov angrily hammered out the latest Russian get tough policy.

The New York Times, melancholically commenting in its lead editorial, December 4, 1955, said:

"One of the evidences of totalitarianism in government is the haste and precision with which policies can be changed. When Stalin died, Russia seemed to smile. When Lavrenti Beria, head of the secret police, was shot in December 1953, some of the terror seemed to go out of Russia. When Premier Bulganin and Party Secretary Khrushchev or their representative, Mr. Molotov, smiled at San Francisco in June, or in Geneva in August, a sort of warmth spread around the world. But now these men smile no longer. We look around the world with a sense of dismay since the end of the Foreign Ministers' Conference in Geneva, from which so much was hoped and in which so little was realized."

But, why did we permit ourselves to have our hopes raised and our optimism heightened, and why did we permit ourselves to think that much could be accomplished in a summit conference with the Russians? The fault of this foolish calculation lies particularly with the statesmen of the Big Three Powers who, through their official pronouncements prior to the Geneva summit, had spread the gospel of hope round the world.

We fell off the Geneva summit with great disappointment but, fortunately, without the tragic consequences that followed the three summits. For this, we must be thankful.

COEXISTENCE AND THE COMMUNISTS

The Soviet's professed policy of "peaceful coexistence" took us to the Geneva summit, but with this summit ending in failure, the Russians had to prepare, as they have indeed prepared, a new "come on" slogan. We have Communist Party boss Nikita S. Khrushchev to thank for Russia's latest formula of Soviet foreign policy. According to Khrushchev, from now on it shall no longer be just peaceful coexistence, but competitive coexistence. Mr. Khrushchev is a blunt man and in announcing this professed new policy, he had this to say in his speech delivered at the banquet given in Moscow in honor of the East German Communist, Otto Grottewohl:

"They say in the West that something has changed since the Geneva conference. They say that the Soviet leaders smile but that their actions do not match their smiles. The smiles are sincere; we wish to live in peace. But if anyone thinks that our smiles mean we abandon the teachings of Marx and Lenin or abandon our Communist road, they are fooling themselves. We are for coexistence. But we are also for the growth

of communism. We are confronted with the reality of two different systems. You capitalists go your way of the blind. If you really think that your system is not too old and rotten, if you believe that it is really possible to keep up in the race, go ahead and try and compete. We will find out who is right."

The Communist change in foreign policy, as announced by Khrushchev, now is attractively presented to the world by the trickily coined phrase of "competitive coexistence."

But, is Mr. Khrushchev telling the truth? Are the Soviet leaders really embarking on a limited objective, that is, the conquest of the world, not by hot war or by force, but by attrition through competitive coexistence? Or are they again, as they have so many times before, availing themselves of a policy of convenience?

Well, let us see.

Peaceful coexistence was first used by Stalin as far back as December 18, 1925, when he told the 14th Communist Congress:

"There has been established a certain temporary balance of power; a balance which has determined the current phase of peaceful coexistence between the land of the Soviets and the countries of capitalism. That which we once believed to be a short respite after the war has turned out to be a whole period of respite. Hence a certain balance of power and a certain period of peaceful coexistence between the world of the bourgeoise and the world of the proletariat. * * * We are living through a period of accumulation of strength which has great significance for future revolutionary initiatives."

But, as soon as this policy was no longer necessary or convenient to the Soviets, this is what Stalin had to say to the 15th party congress, less than 2 years later (1927):

"If 2 years ago it was possible and necessary to speak of a period of a certain equilibrium and peaceful coexistence between the U. S. S. R. and the capitalist countries, now we have every basis for declaring that the period of peaceful coexistence is receding into the past."

THE COMMUNIST CHALLENGE

Russia's coexistence policies have been used at all times as diversionary movements and for just one and always the same purpose, the purpose first announced by Stalin, to secure "a period of accumulation of strength (for the Communists) * * * for future revolutionary initiatives."

In addition to being a diversionary move, to gain time so that they can accumulate added strength, the Communists, in announcing this newfangled doctrine of competitive coexistence, have a second and even more treacherous purpose. In challenging us to an economic race, and prodding us to match our sound national economy against their false promises to foreign nations, it is their intention to get us to expand to a point where our own economy will break down and with it bring chaos and national bankruptcy. Communism thrives on economic chaos. Russia feels that it may never have to fight us if it can succeed in its plans to wear us down financially and economically.

We have been mesmerized for long enough by the Communists and followed their false clues as to their intentions much too often. While Russia's professed new doctrine of competitive coexistence bears careful watching, let us not fight Russian windmills. Let us forever remember that the Communist challenge is not coexistence, peaceful, competitive, or any other kind of coexistence. The Communists challenge is world conquest.

WE, THE PEOPLE

Our leaders have often announced that we, the people, must be awake to the dangers ahead of us. Let us tell them that we are. But, let us also tell them that they too must be awake to these dangers and that the only way we, the people, can be assured that they are, is for them to take us more often into their confidence. Our leaders should keep us more fully informed by honest, informative and more timely statements, than they have in the past.

Likewise, the floors of the Senate and the House of Representatives must again become the public platforms they were intended to be and must offer more frequent opportunities for open debates on national as well as international issues. There has been too little done along these lines these past few years. The dearth of congressional debate has been explained away by the fact that vital military information might thus become known to the enemy. Too much has been made of this. There is a vast area of information that could still be explored and discussed in open congressional debates with great benefit to the Nation and without revealing to the enemy military secrets.

Let us remind everyone that we, the people, want to make sure that this Nation remains forever vigilant and adequately protected against inimical forces. Meeting the Communist challenge is everybody's business.

You may ask yourself what, specifically, can you do. I recommend that you (1) acquaint yourself with the problems and issues relating to the National Defense by reading as many of the newspaper accounts and magazine articles on the subject as possible. Some of it may be dull reading, since the subject involves the complex machinery of Government, and when it comes to such matters as the national budget, military appropriations and economic and military foreign aid, it deals in astronomical figures, billions of dollars. But remember, they are your dollars and it is your safety and freedoms that are at stake; and (2) insist on more cooperation from persons holding key positions in Government, both civil and military, and write to them and ask them to keep Congress and the people more regularly and more thoroughly informed. Insist, in particular, that they cooperate more fully with our free press, for in a democratic country like ours, a well-informed, free press is the best guaranty for the preservation of our Nation.

Fifth Anniversary of the Commonwealth of Puerto Rico

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. REUSS. Mr. Speaker, July 25, 1957, marks the fifth anniversary of the Commonwealth of Puerto Rico. It is a day of great significance because it marks a milestone in the development of a free people. The political and economic growth of Puerto Rico has been, and still is being, closely watched by the leaders of underprivileged peoples in the less-developed lands of Asia and Africa. They are learning that economic progress and political freedom are inseparable and that each stimulates and supports the other.

Puerto Rico has been associated with the United States ever since the landing of American troops on the island on this same date—July 25—in 1898. Economic development has gone forward steadily since then but it is only in the last 10 years, with the inauguration of Operation Bootstrap, that the island has made its spectacular progress. It is not coincidental, I believe, that it was also 10 years ago that Congress granted the people of Puerto Rico the right to elect their own governor. The man who was elected, Luis Muñoz-Marín, one of the outstanding statesmen of the 20th century, has continued to serve as chief executive since the Commonwealth was created in 1952.

Puerto Rico has benefited from its close relationship to the United States but the United States has also benefited from its association with Puerto Rico. Puerto Ricans have served with distinction in uniform in both war and peace. Many have now come to live in the United States, including some, I am glad to say, in my own city of Milwaukee. Like many newcomers to our shores, they have often found it difficult at first to share in the advantages of our fast-moving civilization, but they are determined to achieve all that is rightfully theirs as good citizens.

To all Puerto Ricans, wherever they may live, I offer my congratulations on this happy anniversary.

Panama Canal Problem

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. THOMPSON of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I quote the following United Press newsstory by Harry W. Frantz, published in the July 18, 1957, issue of the Panama American, Panama, R. P.:

RISE IN PANAMA CANAL TRAFFIC TO INFLUENCE SOLONS

(By Harry W. Frantz)

WASHINGTON, July 18—The increase of commercial cargo tonnage, and not the H-bomb, may soon have a decisive influence on congressional opinion concerning an improved locks system or new sea-level canal at Panama.

Passages of oceangoing vessels through the present Panama Canal set an alltime record in the year ended June 30, 1957, with 8,579 transists compared with the previous record of 8,200 in fiscal 1956.

The present capacity of Panama Canal is currently at or near the saturation point, while world commerce continues to grow, and new and larger ships appear on the horizons.

Bills to establish an interoceanic canal commission to study the entire Atlantic-to-Pacific waterways situation have been before Congress for several years, but crystallization of political opinion was delayed by the transcending urgency of the Suez Canal situation.

Until recently, security problems pertaining to the Atlantic-to-Pacific canal overshadowed other considerations. Before World War II, the Panama Canal was constantly represented as the key to the national and hemispheric security situation.

In the early postwar years, the advent of the A-bomb was widely cited as reason for

construction of a sea-level canal at Panama, presumably less vulnerable to atomic attack than a locks canal. Later the H-bomb and more recently the guided missiles have raised doubts that any type of canal would be invulnerable.

Consequently, there is a renewed tendency in Congress to appraise the Atlantic-to-Pacific waterway problem from the measurable standpoints of potential world commerce requirements and costs of construction.

Temporarily at least, the public demand for budgetary economy appears likely to strengthen the case for an enlarged and modernized Panama locks canal, rather than a Panama sea-level canal or a canal on a new route, such as the Nicaraguan.

However, nothing like a showdown has yet occurred in Congress, and it is still uncertain whether Congress will take any significant action at all during its present session.

Representative DANIEL J. FLOOD, Democrat, of Pennsylvania, is one of a group of Congressmen who have been especially active in creating public opinion and speeding action toward the improvement and modernization of the Panama Canal.

FLOOD is the author of a bill which would create an interoceanic canal commission of 11 members, to be appointed by the President with the consent of the Senate.

This commission would be given broad authority to investigate and report on the merits of a third locks or other expansion and improvement of the present Panama Canal or a sea-level canal at Panama, or another canal connecting the Atlantic and Pacific.

FLOOD has also sponsored a concurrent resolution to the effect that the United States should not surrender to any other government or authority its jurisdiction over and control of the Canal Zone. This resolution if approved would forestall the possibility of any future internationalization of the Panama Canal.

FLOOD said to the United Press: "Under no circumstances should any international situation divest the United States of its present status in the Canal Zone. The increasing development of international trade increases in direct ratio the importance of the canal to the United States.

"The canal must be modernized, widened and deepened by utilizing its existing facilities, enlarging and improving them.

"The need for a so-called sea level canal in the Panama area or elsewhere no longer can be established. In the best interest of this country, the responsible congressional committees should act without delay.

"The report of the 1947 commission is patently obsolete. To that end the suggested commission called for in my bill should be created and set to work immediately. The time is already late. The traffic situation at Panama is saturated now, and the water supply problem becomes worse."

Fifth Anniversary of Puerto Rican Commonwealth Day, July 25, 1952

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. RODINO. Mr. Speaker, this year has been a period of great political strains, of small but brutal skirmishes in many parts of the world, and even in the area of the American hemisphere, relatively peaceful in comparison to the rest of the world, bitter animosities and bloody internal strife.

For these reasons, it is with even greater pride than ever before that today I speak of the fifth anniversary of Commonwealth Day in Puerto Rico.

Five years ago today, the Constitution of Puerto Rico was officially launched as the supreme law of the land, giving Puerto Ricans complete autonomy in running their own affairs. Many of us are guilty of being too busy to know the background of the sunny islands that are part of the United States may not even be aware that the Puerto Rican Constitution, written and ratified in a democratic process similar to the inception of our own, embodies the best liberal thought of our time. Its "bill of rights" assures every Puerto Rican of the same civil rights that we hold precious. Its governmental structure makes impossible the kind of cancerous growth of dictatorship which the 20th century has made too familiar on both sides of both oceans. It judicial system guarantees the men and women of Puerto Rico equal justice before the law.

We congratulate the people of Puerto Rico for their many fine achievements since the first Commonwealth Day, and especially do we praise them for the greatest feat of all—their having proved themselves completely able to govern themselves in a manner that is an example to all democracies; the voting privilege is universally prized and used; the government administration is efficient, enlightened, and honest; the efforts made to raise the standard of living have been successfully directed to improving the condition of the entire population.

These things are most important, from the long-range point of view, than other achievements which appear much more prominent to many observers—that is, the amazing improvement in health and education, the swift industrialization and urbanization of the islands, the fantastic momentum in creative and cultural affairs. The important point is that the Commonwealth of Puerto Rico has advanced most remarkably under the impetus of good government and has so become a model and an example for others.

The present generation of Puerto Rico and the generations to come, looking back upon the history of these past 5 years since the Constitution and the Commonwealth of Puerto Rico were established, will find that, beyond the great economic and political benefits which were initiated at that time, there was another and greater concept which was given beautiful expression—the integration into harmonious pattern of two cultures in the Western Hemisphere, a blending of the best of both of them into an inspiring, dynamic relationship.

We agree entirely with the great Governor of the Commonwealth of Puerto Rico, who said last March—

The bonds of common citizenship which unite Puerto Rico and the United States are juridical bonds which have our unswerving loyalty. But they are more than that, they are bonds of affection, of deep understanding—bonds of freedom, of friendship.

The Injustice in Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. COLLIER. Mr. Speaker, among the issues which have created editorial comment throughout the country, perhaps one of the most controversial is that which is being considered now by the House—Federal aid to education. The Garfieldian, a weekly newspaper published in the 10th District of Illinois, printed on July 11 an editorial which I believe has ably and succinctly summed up the position in which many of my constituents find themselves when confronted by this program. I think the editorial which follows merits the attention of every Member:

THE INJUSTICE IN FEDERAL AID TO EDUCATION

Both sides in the controversy over Federal aid to education are agreed that a Federal aid program would result in large prosperous States (Illinois, for one) sending money to the Federal Government which would eventually be used in supposedly less prosperous and backward States, mostly in the South.

Though this is obviously using the tax money of one State to benefit citizens of another State, the program is defended on the grounds that people in prosperous States should be more than willing to help the residents of other less fortunate States—particularly when it comes to educating children.

If taxes were levied equally in all States, and if the property assessments on which these levies were based were equal this argument might make some sense. This is not true, however.

In Illinois, for example, schools get the biggest share of the real estate tax, which is based on the assessed valuation of property owned by individuals, business and industry. The assessments are not as uniform throughout the State as they should be, though efforts are being made to bring them into line, but in all cases they are reasonably high.

Now take Alabama, which is one of the States that undoubtedly would benefit from Federal aid to education. A news story in a daily paper of one of the cities of that State reported recently that the city received only $78,000 in property tax revenue last year. The low figure was admittedly the result of inequitable assessments. It listed one building which sold for over $300,000, yet was valued at only $30,000 on the tax assessor's records. A house sold for $19,500 was valued at $1,500, and another building and property was sold for $800,000, but valued at only $77,500 on tax books. The average assessment, according to the news story, was 15 percent.

Not all cities in Alabama, or all States in the South are as lax as the example cited, we are sure, but indications are that the assessments do not come near the 65 percent of actual value paid by property owners in some counties in Illinois.

Under these conditions, it would be a monumental injustice to take Federal taxes collected in Illinois and divert them to Alabama or any other States that is not doing all that it can to support itself.

This could apply to all forms of Federal aid, but it seems particularly pertinent in regard to education because such a huge part of the real estate tax collected in Illinois goes for schools.

Puerto Rico: Democracy At Work

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. MULTER. Mr. Speaker, the 25th of July represents a dual anniversary for our island neighbors, the Puerto Ricans: It marks, first, the date that American troops landed on the island in 1898; and it marks, second, the date that the Commonwealth Constitution was adopted in 1952. It has thus been officially established as Constitution Day, to commemorate the two most significant steps that have brought the island to its current position as a locally self-governing Commonwealth joined in integral association with the United States.

From the years of American control, the island received its first training in political responsibility. The first elected House of Delegates was guaranteed by an act of Congress in 1900, only 2 years after the island was freed from Spanish hegemony. In 1917 another important step toward self-government was made when the Puerto Ricans were empowered to elect both houses of their legislature. More important, most Puerto Ricans became at that time American citizens. No longer stepchildren of the American system, they have from that time forth increasingly shared in all the privileges as well as the duties of United States citizenship. The next step came with the appointment by President Truman of Jesus Pinero, a native Puerto Rican, as Governor, in 1946. The following year this position was made elective, and in 1949 the present executive, Luis Muñoz-Marín, was elected Governor. In 1952 the Constitution of the Commonwealth was drawn up by the Puerto Ricans themselves, in accordance with the compact passed by Congress in 1950. Joyfully accepted by the Puerto Rican people, this constitution has been the basis of the present Commonwealth government. And Governor Muñoz-Marín has continued to hold the confidence and full support of his people, as recent elections have amply demonstrated.

These last 5 years, representing indeed the culmination of Puerto Rican hopes for several decades, have shown most dramatically that democracy and progress are not just words or remote ideals to the Puerto Ricans. Political responsibility has a very real meaning to all of the Puerto Rican people, from the Governor himself, once a poet in our own Greenwich Village, down to the struggling farm laborer; democracy means not only government of the people, not only government by the people, but also government for the people. Commonwealth status has given to the Puerto Ricans an added impetus to develop their island's resources and to enhance their social aspirations.

The results, as is well known, are quite phenomenal. The gains of the forties are being surpassed by leaps and bounds. Per capita income is doubling every decade. Life expectancy has almost doubled since the thirties. Illiteracy rates are almost half of what they were before World War II. The university and vocational school are constantly adding new courses and expanding facilities. Government housing projects have vastly reduced the slum areas on the island. New industries are moving onto the island every day. Efforts to encourage the tourist trade to the island have not been overlooked.

All over the island, the far-sighted planning and initiative of the government and the eager cooperation of the Puerto Ricans themselves have made the island literally a workshop of democracy. The strength and importance of the tie with the mainland on the one hand and the vigorous political activities on the island itself have given dramatic impetus to the natural Puerto Rican desire and ability for local self-rule.

The conclusion to be drawn from a study of Puerto Rico's achievements is that an area determined to win its way to political responsibility and economic stability should look first and foremost to the resources at hand—to the intelligence, the ingenuity, and the industry of its own people. To sacrifice these precious assets to a system of force and violence, as has been done in Communist lands, is in effect to chop off the roots of progress while watering the branches. Puerto Rico has shown that the democratic process is no hindrance to economic progress—quite the opposite, in fact.

Let us congratulate the Puerto Ricans, then, on this the fifth anniversary of their position as Commonwealth citizens. They have justified the highest hopes of their friends and I am sure they will continue to do so in the years to come. For the spirit of democratic action, once kindled, is not easily killed. The Puerto Rican people, our fellow citizens, have kindled a bright beacon of hope and of achievement for enterprising peoples the world over.

For Better Budgeting

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of July 22, 1957, commenting on better budgeting as proposed in H. R. 8002 which I introduced to carry out the recommendations of the Second Hoover Commission. I think it is interesting to note that this legislation also has the approval of the President of the United States, the Bureau of the Budget, the Secretary of the Treasury, the Comptroller General of the United States, has already passed the United States Senate without opposition and has been reported unanimously by the Government Operations Committee of the House of Representatives after a 2-year study.

FOR BETTER BUDGETING

A bill described as one of the most vital and far-reaching economy measures ever proposed by the Hoover Commission will shortly come before the House, having just been cleared by the Rules Committee. It is H. R. 8002, designed to restore to Congress some of that control over the public purse which most people think Congress still retains but which to a disturbing degree Congress has lost.

Establishing a procedure of annual accrued expenditure budgeting, the bill would in essence place the spending of Federal funds on a strictly annual basis. It would thus strike at the dangerously wasteful practice of appropriating funds in 1 year that might not be spent until 2 or 3 years later and possibly even for quite different purposes.

The present loose arrangement has immensely contributed to budetary confusion and has left most Members of Congress in a position of not really knowing what is going on in respect to current spending. For example, funds appropriated for military hardware shortly before the end of the Korean war were still being spent years later without further congressional review.

Such carryover funds are estimated by the Comptroller General at the astonishing figure of $70 billion. He says the proposed reform will provide greater congressional control * * * than the present method of appropriating funds. The Budget Director says it will result in improved program control. The Secretary of the Treasury says it should provide an excellent basis for improvement in control over actual costs * * * and reduce the vast carryover of appropriation balances.

A similar bill has already passed the Senate without difficulty; but this one has been running into trouble in the House, mainly from high-ranking members of the Appropriations Committee. Despite their objections, the bill deserves the wide and nonpartisan support it has generally received; and it should become law at this session.

Tribute by Woodroe Wylie Paid the Late Crawford Taylor

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. BECKWORTH. Mr. Speaker, I wish to include in the CONGRESSIONAL RECORD an article written by Mr. Woodroe Wylie, route 1, Carthage, Tex. It is a great tribute to Mr. Crawford Taylor and to our area of Texas:

CRAWFORD TAYLOR AND CRIMSON CLOVER

(By Woodroe Wylie)

Last April, I journeyed through Brachfield, Garrison, Martinsville, and below, deep in the heart of Nacogdoches County, Tex.

Being a hypersensitive dreamer whose soul sought beauty in all forms I was immensely touched by the beauty of nature in Nacogdoches County. There were multifarious trees of all descriptions. Some of the pine, oak, elm, sweetgum and the like were large, tall, slender and had market-

able value. Then there were trees of rugged beauty, short gnarled, limby ones—that had reached their stature through painful efforts. The magnolia trees, which were still faithful to the old deserted homesites, were beautiful, so were the oaks, but the most beautiful of all was a large blackjack. It seemed that the Creator was at His best when He made this object of beauty. It had large dark green leaves. Its branches were shaped like a huge umbrella. The leaves touched the ground on either side. It was an ideal shade for no sunshine could penetrate its thick leaves. But even with all of this beauty, it was not supreme. For everywhere I looked was a wilderness of crimson clover blooms. Each field looked like a huge bouquet.

I thought of Crawford Taylor incessantly for he was among the first that brought crimson clover to east Texas. In a few years the crop had spread to a large area.

Crawford Taylor was born and reared in the Brachfield community in Rusk County, Tex. He left the farm and followed public work. Then in later life he quit railroad work and came back to the old home place and farm. He immediately procured a good dairy herd and started improving the pasture. He must have done a lot of reading and thinking during the previous years before he came back to the farm for everything he did he did well. He accomplished much in a span of about 5 years. Crawford put forth everything he had in the farm. He was a hard worker, had an adventurous spirit and was not afraid to tackle the untried. He had faith in his work, in seed and in the soil. He would spend the last dollar he had for a new seed, fertilizer, or some sort of pasture improvement.

He took a poor farm and developed it into one of the best pastures to be found anywhere. He did this in just a short time. He took the manure from his dairy herd and spread it over his pasture. When his finances would permit, he used commercial fertilizer. Moreover, he immediately built the fertility of the soil with crimson clover. The clover improved the moisture content of the soil. Where the bermuda grass had thrived poorly, there became an abundance of it where the clover was sewn. He also sewed ladine clover and fescue grass.

There was one great truth that Crawford Taylor knew. He knew that land was far too expensive for a poor man to buy, so he must take a small amount of land and develop the grazing possibilities.

Then, to, the upkeep of a fence on a small pasture is far less expensive and also saves much labor. Moreover, a cow is easier kept inside a good pasture and taxes on a small place are cheaper. It is far less trouble to look after cows in a small pasture especially during calving time.

On a small place where it had previously taken about 6 acres to pasture 1 cow and there was no meadow to cut for winter use Crawford took his farm and increased the grazing yield to where an acre and one-half to 2 acres would pasture a cow. Then, too, he cut an abundance of good hay to winter his cows, and with the early pasture he had from the clovers, he cut down on the expenses of his dairy herd.

I recall having visited Crawford Taylor's dairy once. I noticed that he had no employed help but did the work himself, but his heart was in his work and he was happy. He proudly showed me his big Holstein cow that gave 7 gallons a day.

Perhaps the greatest contribution that Crawford made to his fellow man was the knowledge that, contrary to public opinion, a man does not have to be rich to develop a good pasture. The influence of his good work and management was spread over large areas by way of radio and fellow travelers. I would like to mention briefly two highlights of his dairy and pasture development program.

A nationally known farm reporter visited his place and had an interview with him. The recording was broadcast over a large 50,000-watt radio station. To say how many famers profited from Crawford Taylor's farm program can best be answered by alluding to the immortal Hans Christian Andersen's story of the Ugly Duckling. When the eggs finally hatched, the little ones said,

"How big the world is, to be sure," said all the young ones.

"Do you imagine this is the whole world"? asked the mother.

Another time Crawford Taylor was made happy was when scores of people came from far and near to view his crimson clover field. It was a beautiful sight to behold. We had read and heard of the clover in Alabama, but now the crop had come to east Texas.

Crawford's public education was limited. He was not a scientist, poet, or artist, or anything of the sort, but he made his imprint on our American way of life. Time's early frost snatched him away from this life. The hands that sowed the seed lie folded in rest. He left good and beauty on a barren land (for crimson clover thrives best on poor soils). Tourists feast upon the flower fields.

Crawford Taylor was buried in Maple Grove Cemetery at Minden, Tex. I know not a single word inscribed on his monument, but I do know that a host of farmers have benefited materially from his work and courage. I know also that a wilderness of crimson clover blooms is nodding in the breeze as a tribute to his memory come April and May.

CARTHAGE, TEX.

Hon. LINDLEY BECKWORTH,
Congressman, Third District, Texas,
Washington, D. C.

DEAR LINDLEY: Now that I have at last gotten the time to write you, I cannot find a pen. So please excuse this pencil.

I mailed the June 17 CONGRESSIONAL RECORD you requested back. I mailed it as a book. That first-class postage would have been exorbitant. The reason I sent mine instead of yours was because that yours had a bit of handwriting on it.

Although it was a lost cause, I am exceedingly grateful that you put out your all in trying to help me get some cotton acreage. I have bitterness in my heart toward those who made the laws and the local ASC office. Our manager says that she was raised on the farm and has baled cotton. I think that she should have never gotten a promotion. She is glad to have the privilege to administer out the acreage to the rich. That job should belong to a he-man.

It really lost me a lot of money in failing to get the cotton acreage. I would say perhaps $800, more or less. I worked just as hard preparing the vacant ground. Fertilized with 10–20–10, planted it in velvet beans, and they never came up. Now it is too dry to plant it in peas and almost too late if it should rain tomorrow. I would like to write a critical essay on the cotton program if you will insert it in the CONGRESSIONAL RECORD.

I am enclosing an article on Crimson Clover. As you perhaps know, Crawford Taylor is now dead. But he did so much toward building better pastures in such a short time. I wish that you would have it inserted in the CONGRESSIONAL RECORD. I am too unfortunate and unknown to sell it to a farm magazine. I know that it is customary to have anything printed in a magazine or newspaper first. That this should sell. I guess it is not meant for me to have success. It is difficult for a poor, obscure man to get any space from a magazine. If I can get it in the RECORD, at least somebody in 48 States will see my name. In that way it might help give a toehold as a writer. But never help me if it hurts you. Do not burden yourself to help me.

You may have it reprinted in any newspaper of the district if you wish. I have never sent it to a newspaper.

I must close for now. If I can befriend you, call on me. I hope all is well with you and yours.

Sincerely yours,

WOODROE.

Loans for Small Business

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 25, 1957

Mr. MULTER. Mr. Speaker, it is indeed strange that the American Bankers Association now pretends that the tight-money policy has had little effect on small business. None of its representatives dared present any such testimony to the House Small Business Committee. I am sure the Association failed similarly on the Senate side.

The best proof of the absurdity of the association's statement and survey is that the law prohibits the Small Business Administration from making any loan to small business if the money is available from private sources. That restriction in the law has been further implemented by the regulation of the SBA, pursuant to its policy board requirement, that no loan be made unless it has first been rejected by at least two banks. The Small Business Administration makes a determined effort to induce banks to make the loan either in its entirety or at least on a participating basis.

Nevertheless, the applications to SBA for small-business loans are continuing to increase and more and more good loans are being approved and made by it. The best proof of the fact that these are good loans is that many of them, after they have been seasoned, are bought without recourse by the banks from SBA.

The following letter from our good friend, George J. Burger, vice president of the National Federation of Independent Business, dated July 24, 1957, is, indeed, apropos:

NATIONAL FEDERATION OF INDEPENDENT BUSINESS,
Burlingame, Calif., July 24, 1957.

Hon. ABRAHAM J. MULTER,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN MULTER: I noted with considerable interest the statement of the American Bankers Association, released on July 22, in which the association stated: "In the judgment of the vast majority of the Nation's bankers, the tightening of credit which has occurred over the past 2 years has not borne with undue severity on small business. This is the overall conclusion that emerges from an extensive survey among bankers throughout the country recently conducted by the Department of Monetary Policy of the American Bankers Association."

With no disrespect to the findings of the American Bankers Association on this subject matter, we are a little confused as to the timing of this statement when we consider that no conclusive action has been taken by the Senate similar to the action taken by the House by a majority vote approving legislation that would tend to make

the Small Business Administration more representative as it applies to the financial needs, etc., for small business of this Nation.

To the credit of your Subcommittee of the House Small Business Committee of which you are chairman, your committee made a most thorough study through public hearings on the situation facing small business as it relates to long-term capital needs.

Then again the action of the House Banking Committee, chairmaned by the Honorable BRENT SPENCE, which committee also made a thorough study through public hearings on the financial problems facing small business resulted in practically unanimous action by the House in voting improved legislation for the Small Business Administration.

I am sure that your committee and the House Banking Committee would have welcomed any and all factual information from the American Bankers Association that would confirm their statement as to "no undue severity on small business" as to their long-term financial needs.

It is interesting to note that at one of the hearings in the Senate Banking Committee on SBA and other pending legislation before that committee that there was need for a study by the Federal Reserve System as to the long-term credit needs for small business. This planned action, in itself, does not check with the findings of the American Bankers Association.

The American Bankers Association said further: "For the most part, greater selectivity in bank lending has taken the form of stricter credit review." We are just wondering through this "selectivity" whether such action is not working an undue hardship on the financial needs for small business. We are not talking about short-term credit, but we are talking on long-term needed capital for small business—and there is a wide difference between these two operations in financial institutions throughout the Nation as it applies to small business.

The association further states: "Bankers were also asked in the survey for their judgment as to how many small-business firms in their localities are suffering from inability to obtain as much credit as they really deserve." The word "deserve" might cover a multitude of sins and give an appropriate "out" for the lending institutions.

We do know, with due respect to the banking institutions, that they are governed by regulations and State and Federal laws on long-term credit, and we have so stated that time and time again before congressional committees. Hence the reason for the Congress in the creation of the Small Business Administration to fill this necessary function for financial needs for efficient small business.

Finally, the record of the Small Business Administration as to loans approved nationwide for the past 12 or 24 months should be conclusive evidence as a reason for the Senate to ratify the House action in this present session of the Congress.

Sincerely yours,

GEORGE J. BURGER,
Vice President.

Puerto Rican Constitution Day

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. SANTANGELO. Mr. Speaker, 5 years ago this day, Puerto Rico became a Commonwealth and adopted her Constitution under which its people live. For many years now, the Puerto Rican people, despite lack of opportunities and low wages, have struggled to raise their standard of living and to improve their economy. The great public housing projects and industrial buildings manifest the material developments of the Island of Puerto Rico. The religious fervor of the Puerto Ricans is a great bulwark against the forces of communism.

I have forwarded this day the following telegram to Hon. Luis Muñoz-Marín, the Governor of Puerto Rico, congratulating the Puerto Rican people upon the fifth anniversary of the adoption of their constitution:

Hon. LUIS MUÑOZ-MARÍN,
Office of the Governor,
Commonwealth of Puerto Rico,
La Fortaleza, San Juan.

DEAR GOVERNOR: Let me congratulate you and the people of Puerto Rico on the fifth anniversary of the adoption of your constitution. We, on the mainland, recognize the contribution by the Puerto Ricans to our way of life and we look forward to greater progress in your economic development and a high standard of living. Kindly express to your people my congratulations in their possessing a liberal, religious, and dedicated Governor. Sincerely yours,

ALFRED E. SANTANGELO,
Member of Congress.

Chief Robert V. Murray and the Metropolitan Police Department

EXTENSION OF REMARKS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. McMILLAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address delivered by Mr. Renah F. Camalier.

I hope that every Member of Congress will read this address as Mr. Camalier made some very deserving remarks relative to Chief Robert V. Murray who has rendered outstanding service to the Nation's Capital as its Chief of Police during the past few years.

Not only in the Nation's Capital but the people throughout the country who have an interest in their country are proud to have Chief Murray in control of law enforcement here during these critical and changing years.

I want also to congratulate Mr. Camalier for taking time to give Chief Murray and the Metropolitan Police Department the praise they justly deserve.

REMARKS BY RENAH F. CAMALIER, ALMAS TEMPLE SPHINX CLUB, JULY 26, 1957

Illustrious potentate and nobles, I stand before my fellow nobles of Almas Temple of the Mystic Shrine, and our friends, to express again a private citizen's appreciation, buttressed by official particpation, for years upon years of faithful service rendered by our municipal officials and workers. Thank you for your courtesy.

My tenure of office as Commissioner of the District of Columbia portrayed an ever-widening living and moving picture of those men and women, with whom such office afforded the opportunity and pleasure to mingle, and to carry on the duties and face the common problems touching the lives of at least a million and a half of the finest and most delightful people on earth—my fellow Washingtonians and nearby neighbors.

The Commissioner's chair is the place of rare opportunity to exercise and test one's ability to sit in judgment on the conduct and operation of the offices of the various departments of our municipal government. Endeavoring to always maintain the character of the discerning and informed type of Commissioner and citizen, it is now, as it always has been, not difficult to state, with fear of having to retract, that the top official of every department in the District of Columbia government is a man or a woman fully qualified to handle the detailed burdens of their respective offices, aided and supported by deputies and employees of high character, ability, training, and devotion.

Here, in Washington, the skills, the knowledge and the experience of our engineers, sanitation experts, administrators, lawyers, enforcement authorities, traffic designers and students, welfare and health authorities, and leaders in all fields of community problems and needs, place this city among the better governed and operated of the Nation.

I wish the opportunity might be afforded where the outstanding contribtuions of each of our local officials and workers could be more fully publicized and known, and in line with this hope, let me initiate such a program by referring this noon to the office of chief of police, and of the man who occupies that position, and his place in our community's scheme of things.

The Good Book speaks of the worlds of business, professions, and society which pass by the windows of every man's home and office—those good worlds set apart by God for our personal and community benefit, but which some lawless segments of the human race take upon themselves to desecrate, to control, and even attempt to destroy.

It is with the need for action which arises immediately when these destroyers of orderly processes of living seek the disruption of orderly processes of government, that prompts me to trespass upon your time and brotherly civic patience.

Greed, hate, and passion form the bases for the commission of overt acts against society. Our peace and our safety are immediately jeopardized as violators skulk here and there, while the entire community becomes alerted to the dangers in its midst. Crime stalks the homes, the family life, the streets, the alleys, the highways, the ordinary pursuits of law-abiding citizens, and fear and apprehension dwell in the hearts of men, women, and children throughout the city.

But the truth of the old adage that crime does not pay immediately comes to the forefront, as we contemplate those attributes of integrity and steadfastness of purpose which characterize the head of our law-enforcement agencies in the District of Columbia—the Chief of Police—and confidence and security again become a part of the daily lives of our citizens.

This is not a personal laudation of Robert V. Murray, but an attempt to give my fellow residents a word picture, as seen through the eyes of a Commissioner, of why the men of the Metropolitan Police Department, under his leadership, are so eager to put into action, for our protection, their personal qualities and their police qualities and characteristics. The answer is founded on the principles of fair play which are an inherent component of the very life of Chief Murray, and his stern impartiality and full allegiance to duty in the administration of the police department. These are the controlling fac-

tors of his fellow workers' unswerving loyalty to him and to their city.

To draw this picture a little more clearly, however, I must resort to a few words concerning the man in action, that you might know what makes the wheels of crime prevention, detection, and deterrence revolve, and I am privileged to do this from years of personal knowledge and official cooperation.

Robert V. Murray is calm and placid on the exterior, blessed by an understanding heart and nature within, but he is a credit and an example of those basic requisites necessary to constitute an efficient and impartial officer of the law, a fact demonstrated over many years of conscientious and unblemished and unmarked service as a private, an officer, and now the honored chief of the finest police force in this country. The criminal and the would-be transgressor of the law cringe before such a man.

No words of commendation or letters of recommendation are needed for this man to stand before his fellow members of the force or his fellow citizens, private or official, fearful that he might be guilty of betrayal of trust or of honor. His record is unassailable, and the words of our former President Herbert Hoover are so pertinent I repeat them:

"No public man can be just a little crooked. There is no such thing as a no man's land between honesty and dishonesty. Our strength is not in politics, prices, or production. Our strength lies in spiritual concepts. It lies in public sensitiveness to evil."

In his appearances before the Board of Commissioners, of which I was a member, Robert V. Murray, accompanied by his deputies and other advisers, presented the problems of the Metropolitan Police Department in a manner which at once betokened the gentlemanly qualities of the man, brought to light his thorough grasp of those problems in their relationship to the people and property whose safety and preservation he is charged with protecting, yet behind it all no traces of bitterness, hatred, or passion could possibly be detected.

No evidence of acting or pretension, no tendency to present matters other than openly and objectively, no standing in the nonexistent no man's land between honesty and dishonesty of thought or of action, were apparent, and his presence before the Board was never what might be termed a battle of wits, or subject to suspicion or deception.

Promotions of subordinate officers, control, censure or other penalization of those members of the force who might have offended, changes in personnel, recommendations for the improvement of the processes of law and order, were submitted fully and definitely on merit, on record of performance, and in the public interest.

The Commissioners did not always agree with the recommendations by the Chief, or with the penalties imposed by boards created for the purpose of sifting and evaluating charges looking to the betterment of the service, and whenever either raised a doubt in favor of the one charged, Chief Murray readily suggested that the officer be accorded a second chance, unless, of course, circumstances were such that doubts by the Commissioners would prove of no avail.

Fairness controlled his every move, but there was one definite and unswerving stand which Robert V. Murray took, and for which every Board of Commissioners has publicly applauded him, and for which organizations of men and women throughout the city are now applauding, and that is, regardless of consequences to himself, the best interests of the Metropolitan Police Department, and of all of the people of Washington, were and are always his main object and concern.

The Chief needs no public salute, but the acclaim of all understanding and informed citizens goes to the man for doing his job so well and so self-effacingly, the man who constantly exceeds the call of duty to make this city of all Americans worthy of its place as the seat of the Government of the United States. I am happy to say "thank you, Chief Murray."

Civil Aeronautics Board Praised for Their Resistance to Increase in Airline Passenger Fare Demands

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. MACDONALD. Mr. Speaker, it has come to my attention that a great deal of pressure has been brought to bear on our Government, and especially on the Civil Aeronautics Board, to give the airlines an increase of 5 percent in passenger fares on tickets for transportation between the United States and Europe.

We all realize that there has been a tremendous increase in American passenger travel to Europe in recent years. I think we all agree that this travel is a mark of real progress in our relations with our European allies. This is tremendously important in my opinion for two reasons. First, American travelers to Europe get to see firsthand and to understand the problems of European countries; second, and even more important, they spend dollars in Europe that are vitally needed by every foreign country and thus aid the economy of those foreign countries. This of course is a relief to the nontraveling American taxpayer, for it reduces the amount needed by the economy of these friendly nations, which in many respects is supported by our mutual aid program.

Fares to Europe are already far higher than comparable fares within the continental limits of this country, which in fact means that every American tourist going to Europe is presently paying a premium on their European vacation. Raising the fares 5 percent would make it that much more difficult for Americans to travel abroad.

Now I am sure that the operating costs to the airlines have gone up in the past year or so, particularly since the Suez crisis, which is the reason advanced for a fare increase. But I am equally confident that their earnings must have gone up at least equally in view of the tremendous number of passengers the airlines are carrying in overseas transportation.

If a need for fare increases is shown to our Government agencies, despite the outlined increase in passengers and revenues, I am sure that our Government will not stand in the way of these increases. Nevertheless, I do not think that the American people should be subjected to higher fares unless the higher fares are probably needed by the intercontinental airlines.

I am told that the reason our Civil Aeronautics Board would not approve the requests for higher fares is that the airlines did not show that an increase was needed. Under the circumstances, we should not only approve what the CAB has done, but insist that it not allow the foreign governments to push through a fare increase that will hit every American traveler to Europe, the tourist, the businessman, and the Government employees.

It is a pleasure to praise one of our administration agencies, for recently we have seen others who have not put the public interest first. I commend the CAB for their diligence in this matter.

National Charter for Veterans of World War I

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my statement before Subcommittee No. 4 of the House Judiciary Committee, in favor of a national charter for Veterans of World War I of the U. S. A., Inc.:

STATEMENT OF HON. THOMAS J. LANE, OF MASSACHUSETTS, BEFORE SUBCOMMITTEE NO. 4, OF THE HOUSE JUDICIARY COMMITTEE, FAVORING A NATIONAL CHARTER FOR VETERANS OF WORLD WAR I

Mr. Chairman, the national organization titled, "Veterans of World War I of the U. S. A., Inc.," had its inception nearly 8 years ago.

It has grown steadily, year by year, until it now has almost 1,000 barracks covering 46 States, the District of Columbia, Honolulu, and the Philippine Islands.

This is the only organization that exclusively represents the 2,995,000 veterans of World War I.

The State of Oregon has officially requested Congress to grant a Federal charter to this organization, and other States will soon follow that example.

That this group is deserving of national recognition, is beyond question.

At the present time, the veterans of World War I have no organization with a Federal charter that is designed solely to represent them. The need for this is apparent. For in its absence, the Nation has forgotten the contributions that these men and women made to the defense of our freedoms, and has neglected their legitimate interests, rights, and benefits.

These 60-year-old veterans in spite of 40 years attrition, still constitute the third largest veterans' group, exceeded only by the much younger veterans of World War II, and of Korea.

The veterans of World War I, should have an identity of their own, through an organization that will not only perpetuate the unique memories and the loyal comradeship that cannot be shared with the veterans of other wars, but will speak up for them on legislation of concern to the veterans of 1917–18, their dependents, and their widows.

They need official recognition of an organization that will represent their generation of veterans.

Across the Nation, and in response to that need, veterans of World War I, have organized local barracks, as social centers for their special comradeship; as a means to focus and express their viewpoint in the community on issues of public interest; and as the living symbol of their service and their sacrifice in defense of the Nation during the first worldwide challenge to our freedoms.

These aging veterans, large in number, were not rewarded with the benefits that we extended to the veterans of subsequent wars.

We cannot remedy this oversight by providing retroactive entitlement to education or on-the-job training, or other benefits, but we can honor them with a Federal charter of recognition that will enable them to press for legislative attention to their problems.

As time goes on, the Nation will need the veterans of World War I as the senior veterans group, to perpetuate the meaning of our participation in that first global conflict, so that their sacrifices and their courage will inspire succeeding generations.

Almost 39 years have passed since that war ended.

And in that time, two other and larger groups of veterans have come home to enter those veteran organizations not limited to those who served in any one conflict. It is but natural for the younger veterans because of their superior numbers to take charge, but it also means that the older veterans have no place of their own. Their memories and their interests differ from those of their sons and daughters who served in World War II, or in some cases, those of their grandchildren who fought in Korea.

As one of them, I ask for official recognition of the Veterans of World War I of the U. S. A., Inc.

I cannot conceive of any objections to legislative approval of a national charter for an organization that is nationwide in scope; whose broad objectives are patriotic; and whose members served the Nation with a devotion that commands our attention and respect.

Registration Now Put at 25 Percent—New Stimulus Expected in South to Lowering Vote Bars to Negro

EXTENSION OF REMARKS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. McMILLAN. Mr. Speaker, I am very much interested in an article which appeared in this morning's Washington Post written by Robert C. Jensen, a staff reporter. The Washington Post headlines this item by stating, "New Stimulus Expected in South to Lowering Vote Bars to Negro." This article mentions 11 of the Southern States and I would like to correct this statement as it refers to South Carolina.

Mr. Jensen states, and I quote:

Despite the obstacles placed in the Negro's way, "there is evidence that he is on the move politically. This can be attributed to the new kind of leadership found among Negroes today."

I would like very much for the author of this article to give me some information as to the obstacles placed in either the white or colored people's path to prevent them from voting or offering for a political office.

I have been in politics for a long time in South Carolina and I have never heard of any obstacles being placed in the way of any person who desired to vote or run for political office. This is the type of propaganda that we people in the South are continually having to fight.

Youth Fitness Means National Fitness

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. HUDDLESTON. Mr. Speaker, both from the standpoint of promoting youth fitness and also for the purpose of deterring juvenile delinquency, it is my strong conviction that more attention and study should be given to programs benefiting the Nation's youth.

With this goal in mind, I have introduced a bill, H. R. 7875, to establish a Civic Health Through Athletic and Mental Proficiency Society, setting up a national system of awards for athletic and cultural achievement. Those earning awards would be called Champs, after the initial letters of the society's title. My bill is currently pending before the Special Education Subcommittee of the House Committee on Education and Labor.

To focus attention on the need for expanded and more effective programs for youth, the President has created a Council on Youth Fitness made up of outstanding national leaders who are interested in this important field. The hard-working executive director of the President's Council is Dr. Shane MacCarthy, a native of Ireland and the father of five children. The importance of fitness is crucial in Dr. MacCarthy's thinking. Otherwise, he believes we will become a race subservient to our many "gadgets."

Under leave heretofore granted, I am pleased to insert a speech entitled "Punching for Fitness," which Dr. MacCarthy delivered at Pocatello, Idaho, on April 3, 1957, on the occasion of the National Intercollegiate Boxing Tournament, in which athletes from 16 colleges participated. Dr. MacCarthy highly praises athletic activities, such as boxing, in developing physical fitness.

The speech follows:

PUNCHING FOR FITNESS

This gathering is uniquely singular for many reasons, not the least of which is the healthy implication for boxing in educational institutions when the president of a young and thriving college came from his academic environment to introduce me to you tonight. As I arrived in this beautiful town, tucked away in the intermountain West, I noticed that Pocatello is called "The Gateway City," and the thought occurred that this national tournament, so thoroughly and scrupulously planned, might become the gateway or portal to wider participation in the art of boxing if some of the ideas we develop this evening will be followed by you and by others. I am thrilled to be a part of this occasion which claims the eyes of the Nation by bringing together the National Intercollegiate Boxing Coaches Association and their contenders for top honors, but I am disappointed. I must confess, that no more than 13 institutions are represented among the entrants. It would be fitting if there were 13 times 13—yes, I would like to see even 13 times that total participating because each wisely conceived and properly conducted sport has its contribution to make to fitness.

Our discussions in the President's Council frequently use the phrase "Youth fitness is national fitness," showing the wide impact of this program. One can't turn off the spigot of humanity and say, "Stop growing, stay young." Young boys and girls are becoming men and women every day. In other words, we can't have a pocket of fitness in a nation of ill fitness. Thus, as youth fitness is part of the mosaic of national strength, so does boxing, the art of boxing, mind you, as distinguished from prize fighting, occupy a prominent place among the scores of sports which beckon us into activity.

As we examine the subject of youth fitness, it is appropriate that we look briefly at the method by which civilization develops.

First, the stage of rugged, primal groundbreaking, the going west of young men and women to establish themselves as many did here in Pocatello—a frontier of the West. This time of setting up something upon the virgin terrain—be it even a hovel—a lowly home— is the period when people are active, when people unwittingly are exercising and having very little need for vicarious methods of getting their energy from pills.

Second, comes the period when the assemblage of houses develops the town, and towns give to living the urban concept where commodities are needed. Then machines grind out the products, giving rise to the industrial age. To make, manufacture, distribute, repair, and maintain such commodities, the industrial and business factors of society grow.

Third, as the nation becomes a major economic unity, it looks toward cultural, social welfare, and such other phases of life. This is the time when comforts have a very natural tendency to make us forget the need for physical activity for health. People have the necessities, and they begin to look for the niceties of life. At this time, the inevitable human tendency is to put first the aspect of ease and soft enjoyment.

In this analysis, I ask the question, "Where are we as a nation?" And I think you will agree with me that we are certainly in the third stage of tremendous cultural and economic development. We are at a peak of progress, indeed, which reminds me of not so many years ago in New York State, when I climbed Mount Marcy, the highest of the Adirondacks, and at its summit had that very feeling—there's no place to go but down.

This is the question that pertains to our country today—"Where are we going?" The inventions we have, and thank God we have tremendous ability to invent, are an indication of how we can take an idea and translate it to action outside the confines of any laboratory. But these inventions aimed at softness and cushioned comfort do have a tendency to take the toil out of work and the activity out of motion itself.

This is the moment when wonders lose their awe, as the human frame can be strapped into plane and propelled through space not once, not twice, but three times as fast as the speed of sound itself. This is the moment when the little infants, before they can talk, and long before they can walk,

sit and look at actions taking place thousands of miles away, not astounded in the least by the tremendous degree of scientific inventiveness that they are witnessing.

While we enjoy, as we should, all of the gadgets and technological products that we have brought into our society, you and I, as adult members of that society, tend to minimize or ignore the tremendous obligation to compensate in the realm of physical exercise for the inactivity that is brought about by such inventions. Today any noticeable exercise of the leg while driving is almost eliminated because the power is put into the brake. Turning a car left or right can be done even with the smallest shred of movement of a little finger, because the power is in the steering. Yes, this is the moment when softness has become a pattern of life, affecting even games, where too often, for no health reason, the participant reduces the exercise factor to an absolute minimum.

Therefore, gentlemen, in this advanced yet soft pattern of life, I think all of us owe a debt of gratitude to our President, that in the year which has just passed he took cognizance of the situation, sounded the alert, and convened a meeting on the fitness of youth. I am convinced what he did can have a more far-reaching effect on the health and fitness of our Nation than many an activity that won headline space.

When it was said to the President's Conference on Youth Fitness, convened at Annapolis, that words like "strategy" and "tactics" mean very little unless the human factor exists behind them, the challenge was given to us to attempt to do something about the prevailing national pattern of sedentary habits. Among the many recommendations coming from that conference were two of major import:

First. That there be established a top-level organization to take official cognizance of the necessity for youth fitness in today's mode of life. From this came the President's Council on Youth Fitness.

Second. That a mechanism be designed to carry the alert of the fitness story to the country. This was the basis for the President's Citizens Advisory Committee on Fitness of American Youth.

The task of the council is twofold: Coordination and stimulation of programs.

COORDINATION

This word of many syllables might mean everything or very little. In this instance, coordination is needed because we ascertained that approximately 30 diverse units of national government have some direct or indirect responsibility for youth affairs and, therefore, it is essential that each know what the other is doing or planning to do and, in that sense, attempt to have coordination-in-action. We do not interpret this function to mean the building of a large coordinating organization with a responsibility for doing what others should do.

STIMULATION OF PROGRAMS

This means that we will attempt to aid persons and organizations throughout the country to do what they can within their own resources to help in the attainment of youth fitness. Accordingly, this is a responsibility of service, of encouragement, recognizing that the actual programing belongs in every home, in every school, and in every community. Though the fitness job has a task for every kind of organization, none perhaps has a more unique opportunity for action than yours at this present moment.

I should make it clear that we are discussing youth fitness—not just physical fitness but total fitness—with all components granted appropriate weight—spiritual, emotional, mental, social, and physical, with physical activities providing the springboard for our particular function. The President's Council has not been devised simply to give lip service to physical education. We are looking for tangible, visible results—for habits, attitudes, and skills on the part of all our young boys and girls to want to be physically active. Tonight we talk only of boys.

Many fitness philosophers are abroad in the land, varying in their interpretation and in their emphasis. A goodly number say that in the attainment of physical fitness by regular and well-planned activity, no strenuous competitive sports and no bodily contact athletic endeavors are needed and, therefore, should not be encouraged. And such minds consider boxing as anathema. I am inclined to think that in most of these cases the opposition is to prizefighting and not to the art of boxing, by failing to distinguish nicely between these two very different undertakings. Your first task, therefore, is a tremendous public relations responsibility so that the minds of parents, educators of all categories, and responsible officials in our society know clearly what you mean by boxing. Their thinking is influenced by the fear of serious injury or indefinite impairment to the contestants. This negative approach is the offspring of a complex that sees the contestants' objective only as bloodletting and the head knockout blow, rather than the scoring of points by means of skillful maneuvers while the contestants are adequately and appropriately protected with the carefully devised equipment now available—and required in college boxing and more being planned. Thus, whatever I say on behalf of boxing, please realize that I am interested in it as an art (call it The Manly Art of Self-Defense, if you will, or even something more apt) and not in one fighter slugging his opponent to the horizontal.

I'm thinking of the artful sport in which numerous mental and physical movements comprise the activity—the advance, quick and slow; the pivot; the feint; the block; the duck; the shift—drop, quick, and rear; the slipping to inside and outside guard; the jab; the parry—inside and outside; and many more.

Not too long ago I had the pleasure of a thorough visit of the facilities of West Point, which is in a very real sense a laboratory of fitness. It is interesting to note that every cadet is required to box as part of his well-rounded physical education and fitness program. There, boxing is supervised closely and it was in this kind of training that the leadership characteristics of many of our most illustrious military leaders were formed. Here are some widely known and well-respected service personalities, all members of boxing teams, and some were team captains and champions. Their achievements through the years show mental alertness and personality of the best caliber: Adm. H. H. Henderson, USN; Adm. M. V. O'Regan, USN; Capt. Slade Cutter, USN; Capt. W. G. Chapple, USN; Capt. Bob Foley, USN; Col. Rivers Morrell, USMC; Maj. Gen. J. W. Harmony; Lt. Col. A. A. Jordan; Lt. Col. W. C. McGlothin; Maj. Gen. W. H. Maglin; Lt. Gen. C. B. Stone; Maj. Gen. C. F. Fritsche; Maj. Gen. E. W. Barnes; Col. T. J. M. Shanley.

To this could be added successful leaders of business, medicine, law, and politics who, rather than being impaired by their experience in school boxing, learned much in this sport to benefit them in later life.

Appropriate, also, is it at this point to quote from a statement with which Dr. Philip Barba of Philadelphia, an eminent pediatrician, arrested the attention at a special session of a recent conference of the American Association of Pediatrics, liberally attended by professionals in the fields of health and physical education and recreation, to discuss youth fitness:

"I feel that competition is essential for our youth. I feel that the body contact sports are not too harmful and are really a natural expression of an inner need. I have never seen healthy young animals coexist without body contact play. I feel that my job is not to prevent or prohibit such activity but to see that it is guided and properly supervised. I do not mean merely putting a watcher on the playground while the youngsters run around knocking each other down. I mean real instruction and real inspiration."

Dr. Barba continued:

"I am not impressed by the danger of physical injury in well directed and supervised athletic competition at any age bracket. Examination of accident ward records will show many more injuries from unavoidable accidents and unsupervised play in homes and streets. The safety is in the supervision and in discouraging the do or die tactics of coaches."

Applying this philosophy to our subject of punching for fitness or boxing in education, I suggest that three items be avoided:

1. Don't stage intercollegiate boxing, or any kind of boxing in education, as a gladiator show for the satisfaction of bloodthirsty spectators. Instead, give this sport the same kind of face and significance your athletic departments accord to the popular games on the ball field, court, and track by emphasizing adequate and appropriate training, skill, stamina, and sportsmanship. Make your appeal to the fine sense of appreciation of wholesomeness, competitive spirit, and top condition that should always characterize collegiate participants and onlookers.

2. Don't allow boxing in education to be the training ground for the professional fighting ring. To do so is to pervert the function of the gymnasium and the purposes of education. If proper attention is given to boxing and education as contrasted with fighting and prize ring, the gymnasium, or that part of it devoted to personal development by means of boxing, becomes a laboratory for cultivating basic qualities of fitness for meeting the demands of the business, professional, and civic world beyond the campus boundaries.

3. Do not consider the professional fighting champion as the paragon of youth fitness. Much more beneficial is the yardstick used recently by a well-known national magazine when it staged a silver-anniversary award to ascertain the most worthy recipients for accolade from among those who were sports champions 25 years ago. They found men of prowess in many walks of life who had taken into business and the professions the lessons learned in the areas of athletic competition.

Positively, therefore:

1. The first big task is that of winning friends and confidence for boxing in education. Parents, teachers, and community leaders must understand clearly what you mean. Then you must live up to the charge to do what you preach.

2. Why not stop aping the professional prize ring psychology and think anew with depth and courage about what is called the manly art? If it is worthy of the name "art" consider the possible similarities between boxing in our context and other sports—for example, fencing. No one tends to classify this as an undesirable sport that should be avoided even though the accidental dropping of the rubber tip could make the foil a penetrating piece of steel. In fact, for poise, posture, agility, maneuverability, and other benefits to the human physique, few, if any, sports equal fencing. Viewing boxing in this light—substitute the glove for the foil and act in similar manner, with the thrust and the parry and the objective of scoring points rather than injuring an opponent and breaking him into submission.

3. Conscientious consideration will suggest initiative and variety not now followed by any schools. For example, why not stage boxing bouts in education by having A assume the offensive in round one and B the defensive. In round two, they would reverse positions, and in the third and final round, allow A and B to mingle offense and defense. Precedent for this suggestion is

found in school wrestling where A is given top position for the first 30 seconds, B gets the top for the second 30 seconds, and then A and B wrestle for advantage in the third period.

4. If boxing were conducted in this artful manner, with proper head protection and the newly-designed gloves, then it could well prove a useful sport for fitness at the high school as well as at the college level, where contests could be conducted on an intramural, nondecision basis.

5. With this approach a vast reservoir of interest in boxing and confidence in the sport as a part of the fitness process in education could be developed. From such wide participation would come those with God-given ability to represent their schools at such tournaments as this. Never should we allow the contestants to be so-called amateur boxers who have been "fighting" outside of school environs and who may be using this as merely a steppingstone of experience to a career in professional fighting.

6. In fact, recognizing that habits and desires begin early in life, I would like to see my sons (even in their grade-school days) get many of the benefits that come from the thorough training associated with boxing. Rope skipping, bag punching, shadow boxing, would lend much to the coordination of little boys. You are familiar with what happens when a student of college level, considering himself a well-coordinated physical specimen, laces on boxing gloves for the first time in his life and begins to punch a bag. The display is normally ridiculous, while the bag hits the boy on the nose more than he hits it on the leather. Imagine the fun and benefit children in the elementary schools would get, especially when too often they are crowded into tight quarters indoors during inclement weather, if they could take turns punching a bag to the tempo of music. What a symphony of sounds for fitness would result.

7. And, lastly, broaden your concept of "victory" and "champion" so that the horizontal maiming of an opponent is not the goal of boxing efforts. Recognition of various skills will change the mental objective of the opponents if championship trophies are offered for the best tournament displays of poise, footwork, defense, temper control (sportsmanship), etc.

If, therefore, you rethink the components of boxing in education and you retool facilities and programs accordingly, still be patient as you ride the blows of continued criticism from skeptical persons, but don't backpedal on principle. Keep your minds and hearts set in the right direction as you continue to punch for the fitness of our youth through boxing.

Remember that for youth fitness we're not looking for crowd appeal but for crowd of participants. To achieve this goal in the right manner I suggest that the National Collegiate Boxing Coaches Association might well give consideration to the establishment of a youth fitness committee.

School Construction Assistance Act of 1957

SPEECH
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 24, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 1) to authorize Federal assistance to the States and local communities in financing an unexpanded program of school construction so as to eliminate the national shortage of classrooms.

Mr. SCUDDER. Mr. Chairman, I have introduced a bill which I feel will meet the school construction needs immediately and is so understandable that I believe anyone can see its advantages almost at a glance. My bill reads as follows:

That 1 percent of the moneys collected annually as Federal income and corporate taxes shall be returned in quarterly installments to the State, Territory, or the District of Columbia(as the case may be), from which such Federal income and corporate taxes were derived, to be used for school construction; except that no amount in excess of $100 million shall be returned to any State or Territory or the District of Columbia for any annual period pursuant to the provisions of this act.

SEC. 2. The provisions of this act shall be effective with respect to moneys collected as Federal income and corporate taxes for the calendar years 1958, 1959, and 1960.

When H. R. 1 is up for amendment, I intend to offer this bill as an amendment. If enacted it will provide a return of moneys to the various States in the amount equal to 1 percent of the Federal income and corporate taxes paid by each State on a quarterly installment basis.

The bill which we are considering provides for setting up a Federal authority with a commission to administer this program. We all know that when Federal funds are expended, there must be some type of Federal control, and the rules and regulations set up by the commission will without a doubt have to be recognized and complied with by the State agencies. It has been pointed out that many States would not presently have sufficient laws to accept this money.

My bill would make it easy from a fiscal standpoint as the money is returned to the States and could only be used for school construction purposes. The bill would only be effective for the calendar years of 1958, 1959, and 1960, and during that time would return to the States far in excess of the moneys provided under the Kelley bill. If the Kelley bill should go into effect the taxpayers of the various States would be required to match the Federal fund through local and State taxes.

I have provided that no State should receive in excess of $100 million a year. This limitation only applies to the State of New York, but I feel there is an equity owing to the fact that so many nationwide corporate entities are domiciled in the State of New York, and there should be no objection to that limitation.

Many of the States under my plan would receive more money than is provided by H. R. 1. Some of the poorer States would have a difficult time raising the matching requirements. The philosophy of need has been greatly reduced from the original Eisenhower program and is based on the need which has been established in the past. With the great shift in population no one knows where the greatest need for school housing may be 3 to 5 years from now. I believe the provisions of my bill are fair and equitable and should not be objected to by anyone. If the States cannot use the amount of money returned to them during the yearly period, there would be nothing against stretching their building program out over the next 5 years or more.

I trust that when my amendment is offered as a substitute for H. R. 1 that the Congress in its wisdom might see fit to adopt this program which most certainly is one of equity to every State. I believe that every Member of Congress feels that our educational system should be completely within the control of the separate States. I believe our educational system should be competitive in order to provide the best educational facilities to perpetuate our American way of life. I am very fearful of the results of Federal control of any kind and will appreciate your support of my amendment.

The Federal Maritime Board

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks, I include in the RECORD newspaper stories concerning a recent case before the Federal Maritime Board which should be of interest to the Members of Congress.

The stories follow:

[From the Washington Post of July 12, 1957]

HAWAII STOP OF COMPANY'S SHIPS ASKED

The Pacific Far East Line, Inc., of San Francisco, charged in district court here yesterday that the Federal Maritime Board is supporting a near-perfect monopoly in denying it the right to stop in Hawaii.

The company asked the court to set aside a May 14 ruling by the Board refusing its application to call three times a month at Hawaii in connection with its service between the West Coast and Guam. It charged that the Matson Navigation Co. was being favored.

"Matson carries over 95 percent of the cargo moving in the Pacific Coast-Hawaii trade," PFEL told the court.

A Maritime Board examiner recommended after hearings that PFEL be permitted to stop in Hawaii, but the Board, in a 2 to 1 decision May 14, overruled him.

PFEL has asked the Board to reconsider its decision. A Board spokesman said the request would be put on the docket.

The complaint filed in district court said the Board "erred in failing to find, as the examiner found, that Matson, rather than PFEL, would have the advantage in obtaining cargo, because of Matson's intimate ownership, control, management, and other relationships with the shippers and receivers of the principal commodities, and Matson's long experience in the Hawaii trade."

[From the New York Journal of Commerce of July 12, 1957]

MONOPOLY AID CHARGE FILED AGAINST FMB

The Federal Maritime Board was charged in Federal district court of supporting a near-perfect monopoly by the Matson Navigation Co. in its trade between Pacific coast ports and Hawaii.

The charge was made by attorneys representing the Pacific Far East Line, to whom the Board has refused permission to call at Hawaii three times a month with unsubsidized vessels that are in service between the west coast and the Island of Guam.

According to Odell Kominers, PFEL counsel, "Matson carries over 95 percent of the cargo moving in the Pacific coast-Hawaii trade."

The court was asked to set aside the Federal Maritime Board's ruling of May 14, which favored Matson.

PFEL complained to the court that the Board did not give a sound reason for its decision and failed also to consider the manner in which this monopoly has been achieved and exploited, and its repugnance to the antitrust laws.

The petition to the court cites a recommended decision by one of the Federal Maritime Board's own examiners who held that Pacific Far East Lines' application to enter the Hawaiian trade should be granted.

Named as defendants in the complaint filed today were Clarence G. Morse, Chairman of the Maritime Board and Maritime Administrator, and board member Thomas E. Stakem, Jr., both of whom voted against the report of the examiner and a supporting report of the public counsel, as well as vice chairman Ben E. Guill, who voted for granting Far East the right to make calls in Hawaii.

The board's decision that Matson was exclusively a domestic unsubsidized operator and, therefore, could properly be protected, was challenged. The motion cited the fact that Matson wholly owns, controls, and operates Oceanic Steamship Corp., a subsidized international line and is, therefore, in exactly the same position as Pacific Far East which also operates a subsidized route between the west coast and the Far East.

"The board and Administration," states the complaint, "erred in failing to find, as the examiner found, that Matson, rather than Pacific Far East Lines, would have the advantage in obtaining cargo, because of Matson's intimate ownership, control, management, and other relationships with the shippers and receivers of the principal commodities, and Matson's long experience in the Hawaii trade."

[From the New York Journal of Commerce of July 19, 1957]

NEW OPINION ON MATSON TIEUP ASKED

Senator RICHARD L. NEUBERGER (Democrat, of Oregon), again called on Attorney General Herbert Brownell, Jr., for an opinion as to whether relations between the Matson Navigation Co. and certain economic interests in Hawaiian Islands constitutes a monopoly.

The Oregon Democrat said that the answer to an earlier inquiry on the same subject made by Assistant Attorney General Victor R. Hansen did not seem to go beyond a possible technical violation of the Clayton Act.

The Hansen letter, according to Senator NEUBERGER, did not answer the question, "Does a monopoly in fact exist under the system of intricate ownership which characterizes the dominant economic interests of Hawaii? If this is in fact a monopoly is its operation completely free of violation of the antitrust laws?"

The Supreme Court's decision in the du Pont-General Motors case was cited by Senator NEUBERGER as indicating that some transactions which might previously have been regarded as beyond the reach of the antitrust laws "may still be within the remedial provisions of those statutes."

The Pacific Far East Line, whose application to the Federal Maritime Board for permission to serve Hawaii was recently turned down in a 2 to 1 decision, has been making the same monopoly charges against Matson and has filed suit in the Federal district court here accusing the Federal Maritime Board of aiding in the preservation of the alleged monopoly.

In his letter to the Attorney General, Senator NEUBERGER charged that Matson President Randolph Sevier had admitted that there was a strong community of interests between his company and large Hawaiian sugar interests and that executives of 4 of the so-called big 5 form Matson's advisory board.

Where Would You Build It?

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. CHAMBERLAIN. Mr. Speaker, for some time I have observed advertisements in newspapers and magazines inviting new businesses to certain States on the basis that State taxes are advantageously low. In my State of Michigan, quite a controversy has been in progress as to whether State taxes are at best discouraging new business from coming to the Wolverine State and at worst actually causing industries to move away. In connection with this dispute, which vitally effects the future prosperity of Michigan, I ask unanimous consent that the following editorial, taken from the Flint (Mich.) Journal of July 23, be printed in the RECORD, as follows:

WHERE WOULD YOU BUILD IT?

Gov. G. Mennen Williams says it is "extremely doubtful" that Michigan taxes have been the sole influence in the decision of a big steel manufacturing firm to locate a new $16 million plant in Ohio.

The Detroit firm had announced that it intended to locate the new plant in Ohio, because the tax outlook for corporations in Michigan is not at all encouraging.

This comes in the wake of a dispute over the effect of Michigan tax policies on business in this State. Critics have pointed out that existing taxes and Williams' insistence on instituting a corporation tax have resulted in some Michigan firms locating new plants in other States, and in decisions of other manufacturing plants not to locate facilities in Michigan.

Williams has denied all along that this is the case, and has produced statistics to show that the number of jobs has increased in Michigan. His critics contend that his figures are in error, and that even if they were right they do not reflect the number of new jobs which might have been created here had it not been for the tax situation.

In commenting on the decision of the Detroit firm to build in Ohio, Williams appears to have retreated a bit from his earlier position. "From what we know of the background in this matter," he said, "it is much more likely that while taxes may have had some influence, the deciding factor was the existence of a steel plant on the site at Canton (Ohio)."

His admission that "taxes may have had some influence" is significant. Heretofore he has refused to concede that taxes have influenced any such decisions at all.

And now he says he is willing to talk it over with business and industrial leaders. His office door is always open to them, and he will listen to what they have to say.

Soapy's legal adviser, Alfred B. Fitt, refuses to back down even that much.

Addressing a group of Republicans, in Ingham County last week, Fitt stated that State and local taxes are a secondary consideration in locating a new industrial plant.

"This is so," he said, "because, even in States considered to be high-tax States, the actual tax cost of doing business is tiny compared to freight costs, labor supply and costs, availability of water and transportation, and so on."

Michigan's location "off the geographical mainstream" has given the State a competitive disadvantage in consideration of freight costs, he said.

He is absolutely right of course. Other costs are higher than tax costs. Taxes are a secondary consideration in locating new industrial plants. Michigan is off the geographical mainstream and therefore is at a competitive disadvantage with other States whose locations result in lower freight costs.

Conceding the accuracy of those statements, do they not constitute good reason why Michigan, which is reputed by impartial observers to be a high-tax State, should offer a tax advantage to industry to counterbalance the competitive disadvantatge created by these other factors?

Are not those statements good arguments for reducing, or at least maintaining, the present level of Michigan industrial taxes?

Why pile disadvantage on disadvantage and hope to attract new industry or even maintain what we have?

It doesn't take very much intelligence to recognize that taxes are a factor in deciding where to locate a new plant. Taxes are a cost of doing business, just as are such things as the price of raw materials, wages, and salaries, the cost of getting a product to market, and so on.

These other costs being equal, taxes can be the deciding factor.

Suppose someone wants to build a new factory in this area. And suppose the choice narrows down to two locations—one in Ohio and the other in Michigan. Careful investigation discloses that the two locations are about comparable as far as labor supply and cost, availability and cost of raw materials, transportation costs, etc., are concerned.

But Ohio offers a better break in taxes than does Michigan. Furthermore, the Ohio Governor emphasizes that Ohio taxes are stabilized, while the Governor of Michigan keeps insisting that a corporation tax must be assessed in his State.

Where is that new plant going to be built? And who will benefit from the new jobs that will result?

It is just about that simple isn't it?

Classroom "Contributions"

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. WHITENER. Mr. Speaker, as we consider the propriety of the Federal Government entering upon a program of participating in the operation of the public schools of the Nation, I desire to bring to the attention of the membership a very excellent discussion of this subject. The discussion is contained in an editorial appearing in the Gastonia (N. C.) Gazette on July 24, 1957.

It is general knowledge in the State of North Carolina that the policy of this great newspaper has always been to lead the battle for any improvement in public school education. It is, therefore, significant that the thoughts expressed

by the staff of that great newspaper be carefully considered by those of us who have the responsibility to participate in making an important decision with reference to the future of our public schools.

I am pleased to be able to direct the attention of my colleagues to this magnificent editorial.

The editorial follows:

CLASSROOM "CONTRIBUTIONS"

One of the most controversial issues of this day and time is Federal aid for States.

Numerous, indeed, have been the debates on the subject and right now there is pending in the House and Senate of the United States a Federal aid measure that has caused heated debate.

This one deals with Federal aid for education. On the face of it the plan for the Federal Government to aid States in education with vast sums of money might seem feasible. However, the Gazette, opposed to Federal aid in any form, sharply disagrees with those who are in favor of Federal money coming into the States.

One of the largest and outstanding financial institutions in the United States, the First National City Bank of New York, recently came out with some views on the subject of Federal aid for education. Title of the expression of views on the subject was, "Classroom 'Contributions'."

In setting forth its views on the subject the bank brought home forcibly its opposition to Federal aid for education with these words:

"It is indeed hard to see how the traditional decentralization of Government in America will have any chance for survival once the school systems begin to teach children the virtues of Federal financial support and control. The President's contention that States and municipalities have been neglectful in meeting school needs really represents an indictment of the people in their votes on proposals to raise money for school purposes. It is also an indictment of the Federal Government's own fiscal policies which have preempted so much of the money people are willing to pay in taxes that they naturally feel some reserve in voting still higher taxes."

These views are in accord with those of the Gazette, even though we are aware of the fact that North Carolina stands to net more Federal aid for education than any State in the Union. Federal allotment receipts for North Carolina are $11.8 million, with estimated tax payments being $4.8 million, making net receipts $7.5 million.

The Gazette feels that North Carolina, as well as other States, would be a lot better off if something were done toward revising the Federal Government tax structure and permitting the States to keep more of their own money and conduct their schools and other projects on their own.

Federal aid, the Gazette wants to point out again, is a vicious practice. It's a threat to States rights, and we trust that the Federal aid for education bill will be beaten.

Equal Pay for Equal Work

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mrs. GRANAHAN. Mr. Speaker, I was much interested in the ceremonies here in the House last week in commemoration of the meeting 109 years ago at Seneca Falls, N. Y., which launched the movement which resulted in the 19th amendment to the Constitution and the opportunity for women to exercise the full rights of citizenship, including the precious right to vote.

Women now constitute the majority of the voters in the United States. As a rule, women are very jealous of the privilege and cast their votes in most cases after only the most serious consideration of the issues and of the candidates.

In my still relatively short career in politics as a local leader in the Democratic Party and as a candidate for office, I have been deeply impressed by the serious manner in which women's groups demand to know the full facts on political issues. It is always a challenge to speak to a group of women in a political campaign because they are always insistent on knowing what a candidate intends to do about the issues which affect the families and the average individual.

I was pleased to note in connection with the activities commemorating the Seneca Falls meeting of 1848 that one of our great Pennsylvanian Democratic women, our national committeewoman, Mrs. Emma Guffey Miller, was paid deservedly high tribute for her efforts over the years in spotlighting the role of women in politics and in national life. She has been an inspiration to every Democratic woman in Pennsylvania active in politics, and I salute her for her energy and her skill in furthering those causes in which she is vitally interested.

One of my major projects as a Member of Congress is the enactment of legislation of which I am a sponsor to establish by law the principle of equal pay for women in performing work similar to that performed by men.

My bill, H. R. 8274, which I introduced on June 20 finds, as a matter of congressional determination, that the existence in industry of wage discriminations against women constitutes an unfair wage problem, thus leads to labor disputes, depresses wages and living standards of both men and women workers, interferes with and prevents the maintenance of adequate living standards for many families, including particularly families of deceased or disabled veterans, wastes our productive strength and thus endangers the national security and the general welfare.

When two workers, side by side, performing the same sort of work are doing it equally well, there is no justification under law or moral justice that they should not be accorded an equal opportunity for equal pay.

I believe that so strongly that I am indeed proud to be a sponsor of equal-pay legislation.

My own State of Pennsylvania has been in the forefront of efforts to assure equal pay for women and is one of 11 States which have adopted legislation to achieve this result. Gov. George M. Leader has described this legislation as a demonstration of our confidence and belief in the equal competence of women. It would be unfair to our industries in Pennsylvania not to do everything possible to protect them from the unfair competition which arises from payment in some States of substandard wages, including unjust wage discrimination against women workers.

I welcome the support of many of the organizations, such as the National Federation of Business and Professional Women's Clubs, and many other groups, which have been working so hard for equal-pay legislation.

The Weakening NATO Shield

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, Gen. Charles A. Willoughby has an outstanding military record and although he is a retired Army officer, he still maintains an active interest in the welfare of our country. As part of my remarks I am including an article which he prepared for the National Review and it appears in the June 29 issue.

Mr. Speaker, as the facts are presented by General Willoughby in this article, it would appear that the time has come for a genuine reappraisal of our NATO policies. As he has suggested, it seems pertinent that we might be using in the defense of Europe, people who live there rather than American men and women who are in danger in the event of an unexpected military move by Soviet Russia.

Another outstanding American citizen who is interested in the program suggested by General Willoughby in his article, is former Ambassador H. J. Cromwell.

The article follows at this point in the RECORD:

THE WEAKENING NATO SHIELD

(By Gen. Charles A. Willoughby)

Interwoven in the fatal pattern of Communist strength throughout the world is the apathy of Europe and the statistical decline of NATO.

The United States has attempted to counter this threat by various schemes of financial and economic aid, at an estimated cost since 1945 of some $50 billion. Ambassador Spruille Braden recently equated this astronomical figure with the combined real-estate assessment of our 50 largest cities. We do things the big way—even to cutting our own economic throats.

A study of the European situation, however, indicates that net results are not commensurate with these enormous expenditures. In his final report on NATO, General Eisenhower admitted that there is no real security yet achieved in Europe; there is only a beginning. That was around 1952. The degree of progressive deterioration since then becomes shockingly evident if one compares the current military effort of Western Europe with its effort between World Wars I and II.

These nations were politically and administratively geared to universal military service. Annual conscription was accepted as a civic and patriotic duty. The European peoples were accustomed to maintain huge standing armies. Today, they seem unwilling or unable to produce the 50–60 divisions required as an absolute minimum under recent (and precarious) NATO defense

schemes. Under the initial concepts of 1951, NATO strength was set at 90 divisions. The hostile factors that then induced the Allies to fix that figure are still present—indeed they are more threatening than ever. If 90 divisions were believed necessary in 1951, there has been no relaxation of Soviet pressures to make them less necessary in 1957. Note the tabulated record of military effort between World Wars, in comparison with the present status of NATO. The column for 1928 is important as a yardstick of capacity; that was a normal year under a peacetime budget, and Western Europe was evidently able to turn out and maintain about 118 divisions.

Country	WWI	1928	WWII	1957
Benelux	18	17	20	4.5
United States	34	12	79	5
Britain-Canada	89	23	49	[1] 5
France	118	30	90	[2] 2
Germany	248	10	190	[3] 3
Italy	45	28	50	8

[1] Britain will reduce progressively to 3 divisions.
[2] France has partially withdrawn her divisions for use in Algiers.
[3] Germany will increase from 3 to 12 divisions. This may be the turning of the tide, accentuated by the recent designation of General Speidel to command LAND-Cent, the mid-European front.

Allied demobilization after 1945 was a panicky rush job. Only the U. S. S. R., the arch-enemy, maintained its armed strength of 175 to 225 divisions, in spite of its global commitments. As regards NATO (the vaunted NATO shield), the line from Denmark to Switzerland represents about 17.5 to 19.5 ready divisions. This shrunken total is facing 22 Soviet divisions in East Germany; 22 additional Polish and Soviet divisions in Poland; and between 9 and 12 Czech armored units— i. e., a ready mass of 56 divisions, while behind it 50 additional divisions are deployed in eastern Russia, in normal garrisons. The relative speed with which Red reserves can move was demonstrated in the recent invasion of Hungary.

A military ratio of 17 to 19 Western vis-a-vis 56 Soviet divisions represents a suicidal discrepancy by normal, professional standards. A debacle was temporarily held in suspense by the transient atomic superiority of the United States. This precarious situation places a premium on our fringe allies—Spain, Greece, and Turkey.

FOREIGN AID: PRODUCT, UNIT COST

Except for the statistical yardstick of a typical budgetary year— i. e., 1928—midway between fratricidal wars, no one really knows the current war capacity of the West although it ought not to be less than its average mobilization record over the last 50 years. In gaging military capacity—i. e., ready divisions in the NATO shield—the picture is distorted by an elusive relationship of cause and effect, economic capacity, the spiral of inflation and the impact of American mutual aid grants or credits in the light of their ultimate military results and the product of this aid—i. e., ready divisions in the NATO shield. Utilizing the figures of 1953 aid (in millions) as an average, the results are hardly inspiring.

Country	United States aid	Product in divisions	Unit cost
Germany	$1,472	3	$500
France	3,100	2	1,600
Britain-Canada	3,585	4.5	900
Italy	1,477	8	200
Benelux	556	4.5	100
Spain [1]	250	11	25
Greece	550	6	90
Turkey	950	8	80

[1] Spain is not a member of the UN or NATO but has furnished military bases that are indispensable to Western defense.

Even if we make full allowance for the triple inflation since 1933, the product of mutual aid and the unit cost per ready division are totally unsatisfactory. The British now propose an ultimate reduction in their forces from 4.5 to 3 divisions. The French have already pulled out their best contingents (except two divisions) for use in Algiers: The process of weakening the shield is accelerating.

COUNTING THE COST

We observe here a flagrant case of butter versus guns. The Russians are committed to guns, and there is no butter for their slave population. Our agonizing reappraisal must be a readjustment from butter to guns. Here again, the British throw light on the problem: their 1956 defense expenditures of $4 billion, compared to 10 times that amount by the United States, were balanced by welfare spending in the same amount.

There is a current attempt to minimize this factual discrepancy by semantic sleight-of-hand; to make it appear innocuous through high-sounding plans for atomic or pentomic divisions and final reliance on nuclear weapons as compensation for further reduction in personnel and conventional units.

There is, of course, bound to be a transformation in weapons, to make use of atomic charges, etc. But this transformation takes place on both sides of the Iron Curtain; the West has no monopoly on it. No amount of demagogic ranting will eliminate a single Soviet battalion. The continuous weakness of the West will not induce the Russians to forego their plans for global conquest. They are still rapaciously hanging on to the immense areas and millions of oppressed peoples which Potsdam tossed into their lap.

It is the will to resist that is important. Impoverished Spain has stood the test, fought and vanquished Russian agitators on her own soil in 1936–39. She is an index of what can be accomplished on a shoestring. She has 11 frontline divisions and can mobilize twice that number in 30 days. The low unit-costs per ready division of Greece, Spain, and Turkey are in a category that invites a reappraisal of our foreign aid.

At this moment, we must face the fact that Europe cannot or will not furnish the minimum number of divisions forced by the current Russian menace.

The situation could be partly remedied by calling on the victims of Russian despotism to rally to the cause of NATO and by utilizing the potential manpower within the ranks of millions of expellees who have been driven from their former homes at the point of Soviet bayonets and have both moral and material incentives to fight Soviet aggression.

There are between 9 and 12 million such expellees in Western Europe who are willing and able to furnish a reasonable percentage for some military service. Even a modest 5 percent would produce between 450,000 and 600,000 men. Organized into national units, brigades or regiments, they could automatically strengthen the NATO contingents in many ways: as military and semimilitary formations on lines of communications; as guards for depots and warehouses; in short, as infantry, the least expensive and the ultimately indispensable military branch.

If the infantry component of a division is set at 5,000 to 6,000 men, we have here the makings of 90 to 100 divisions, to bolster the sagging strength of NATO. They would also furnish a grim reminder to the Communist looters that there will be a day of reckoning.

In simplest terms, the global commitments of the United States, in forty-odd world localities, have become too heavy a burden, and it is already evident that the partners in these commitments may contribute only an irreducible minimum. Our enormous budget for 1957 accurately reflects this discrepancy; over $40 billion is absorbed by United States defense requirements. The silent revolt of the taxpayer, slowly gathering strength, makes it imperative to tackle the monetary aspects of the problem.

It is obvious that the enlistment of European manpower would be cheaper than the maintenance abroad of American infantry, who are grossly overpaid by European standards, and whose comparative affluence creates envy and resentment among European contingents. The largest slice of the American budget is in expensive technical branches: the air arm and missile projects. In some respects, that feature is repeated in our allies' forces though it is becoming evident that they can no longer afford both conventional and nuclear armaments. A redistribution of services and fiscal loads may become necessary; Europe to furnish the Infantry divisions while the United States concentrates on expensive air and nuclear contingents and a proportional Navy. Immediate budget savings of 50–60 percent would probably result if the American divisions were progressively replaced by expellee formations. We already have such a situation in Korea and Formosa.

MOVES FOR A FREEDOM CORPS

The idea of international brigades is not new. The Russians set the pace long ago and furnished a working model. They recruited Communist brigades in the United States, France, Italy, and Great Britain, to fight in the Spanish civil war. And in this country, during the past few years, there have been various moves to establish a freedom corps in Europe, as follows:

1. Eighty-second Congress, first session, January 6, 1951: S. 238 was introduced by Senators Lodge, Brewster, Hickenlooper, Ives, Mundt, Hendrickson, and Hunt "* * * to provide for the enlistment of aliens in the Army of the United States for service outside the continental United States in a volunteer freedom corps and for other purposes * * *."

2. The American Legion. New York national convention, August 25–28, 1952: "* * * Resolution No. 596 as provided under the MSA of 1951 * * * provides $100 million to form national military units of escapees from the several Communist-dominated countries. The existence of such national military units would reduce the number of American troops required overseas * * * would strike at the basic weakness of the Communist tyranny, by undermining its hold on the people it has enslaved and cause large numbers in the Communist-dominated armies to have a will to turn against their oppressors and fight for freedom * * *."

3. The Honorable Charles J. Kersten, Member of Congress, amendment to the Mutual Security Act providing for the formation of national military units, section 101 (a) Public Law 165. Title 1, section 401 etc., MSA 1954 and 1956: "* * * not to exceed $100 million of the funds available under this section may be expended for any selected persons * * * either to form such persons into elements of the military forces supporting NATO or for other purposes * * *."

4. Memo by Mr. Charles J. Kersten, February 4, 1957, to the Foreign Relations and Armed Services Committees: "* * * The Communist threat to world peace rests in their control over extensive armed forces, together with supporting political police. This control is as yet uncontested by any effective magnetism from the free world. The establishment of national military units will provide the tangible mechanism to activate potential defection from the captive armed forces. Recent massive escapes from Hungary raise the question of resettlement of increasing numbers of refugees from Communist terror. National military units provide a place and a positive purpose for freedom-loving and courageous military defectors. They also foreshadow the means by

which captive nations will be free of Communist rule. Such units would provide a symbol for all enslaved people of Central and Eastern Europe. They would be looked upon as manifestations of the legitimate hopes and aspirations of the captive peoples. This would be accomplished by each unit being formed on national lines with identifying flags, chevrons, arm patches, etc. * * *"

5. Senator RICHARD B. RUSSELL, February 5, 1957. Hearings on Senate Joint Resolution 19, Senate Foreign Relations Committee: "* * * The Senator raised the question why these national military units provided for in the Kersten amendment have not been brought into being. Why this operation, for which $100 million was allotted (for the sixth consecutive time) has not been implemented while billions of taxpayers' money were spent on less useful projects. * * *"

The discerning Senator probably had in mind a recent Franco-American operation, a highly instructive classic in abortive military aid, because the net results were practically nil: the French war in Indochina.

In money and materiel, Indochina's cost to Paris was comparatively small. A French spokesman commented on this fact with disarming frankness—perhaps cynicism would be a better term. He coolly admitted that the United States was carrying 78 percent of the costs of the war: United States aid amounted to 400 billion francs while the French provided 156 billions; their contribution was largely to cover the pay of their soldiers in the Far East. Since American dollar credits were all funneled through French fiscal channels, to be converted to francs and piasters, they represented a tremendous leverage toward general stability of currency. The legionnaires would have to be paid in any event, whether they were in Africa or the Far East.

This brings to mind the thought that these funds might perhaps have been more productive in the organization of expellee brigades, along the only front that counts in the end: the West European front.

Baring Proposes Several Bills on Minerals Program

EXTENSION OF REMARKS
OF
HON. B. F. SISK
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. SISK. Mr. Speaker, I have been interested in reading from time to time the outstanding job that my colleague, WALTER S. BARING, of Nevada, has been doing in behalf of the domestic mining industry and who in his determined fight has gone all out and produced a long-range minerals program of his own.

It is a pleasure for me to insert in today's RECORD an example of some of the reactions and/or feelings of the people behind the mining industry. Evidence of the need for protection for our own mining industry here in the United States is apparent.

[From the American Metal Market of July 16, 1957]

BARING PROPOSES SEVERAL BILLS ON MINERALS PROGRAM

WASHINGTON.—Believing that Secretary of the Interior Fred Seaton came up with a dud when he recently published his long-range mineral program and sent drafts of implementing bills to the House and the Senate, Representative WALTER S. BARING, of Nevada, has introduced a series of minerals bills. "I was greatly disappointed in the Government's alleged long-range program," said Representative BARING, "as it appears to solve very few of the problems of the mining industry. Various industry representatives, although happy that the White House has acknowledged the principle of protective import duties, feel the administration bill does not go far enough for lead and zinc, the peril points being too low and the import taxes inadequate. Further, industry would have to return to Congress from time to time as the 'peril points' and duties would have to be changed to meet changing costs. I approve, however, of the administration bill to extend the life of the Defense Minerals Exploration Administration."

SUBSIDIES PROPOSED

In order to point out to the Congress that there is more than one solution to industry ills, Representative BARING has introduced several plans which would be long range. Among these are a direct-subsidy bill to take care of tungsten, manganese, chromite, mica, antimony, lead, zinc, cobalt, copper, tin, asbestos, beryl, and columbium-tantalum. He also has introduced the administration lead-zinc bill; a bill, also for import duties, which was drawn by industry; separate subsidy bills for lead and zinc; and a bill to regulate the domestic prices of lead and zinc by means of a quota system based upon the Sugar Act, which act is now in force. This just might be the solution to the lead-zinc and other mineral problems. Comments on the bill will be welcome, stated Representative BARING.

The administration stated in the Seaton-Wormser plan that although mine taxes should be studied, no recommendation was made for remedial legislation. Congressman Baring recently commented that only Federal tax remission for new ventures (like the Canadian system) would put new life into the development and operation of new mines. So, as a part of his long-range program the Congressman decided to introduce a bill which would suspend Federal taxes on venture risks for five years or until (if before) the mine is making a profit. Representative BARING remarked, "If the administration is not sufficiently interested to help mining taxwise or not ingenious enough, here is the bill which will do the trick."

Another bill as part of the BARING long-range mineral program permits drill-hole discoveries to validate the title to unpatented mining claims as though the discovery was on a surface cropping. This amendment to the mining law is long overdue.

TUNGSTEN

A separate bill to help the tungsten industry was introduced by Congressman BARING when it seemed sure there would be no money voted for Public Law 733. This bill would support the domestic primary producer at a price of $50 per short ton unit. [Imported tungsten now sells under $20 per unit.] Mr. Baring commented, "The Congress made a definite commitment to industry under Public Law 733. The Senate made every attempt to keep this moral commitment but the House, being composed of principally Eastern members, was swayed by a few powerful men who did not want to spend the money to keep the industry going.

There are several other Baring bills pending of importance to the domestic mining industry which there is not the space to discuss, copies of which may be had from his office.

MINERALS SECRETARY

Congress BARING has also introduced a bill to create a United States Department of Mineral Resources with a Secretary of cabinet rank. All the various mineral and metal functions of the Government would be transferred to this department and, for the first time, there would be someone in the Cabinet to watch out for the domestic metals and minerals industry. Mr. BARING concluded: "Such a move is long overdue—the mining industry is tired of being kicked around and having no special champion. The dollar volume of mineral products in the United States now runs to a formidable figure and deserves an agency the special function of which is to look out for it."

THE MINING RECORD,
Denver, Colo., July 16, 1957.

HON. WALTER S. BARING,
House Offices, Washington, D. C.

DEAR MR. BARING: We thank you for your letter of July 10, with enclosures, and for several previous copies of legislation which you have introduced.

We regard your bill for the stabilization of the domestic prices of lead and zinc per pound as a step in the right direction.

But the most interesting thing, we believe, is legislation to create a United States Department of Mineral Resources, with a Secretary of Cabinet rank.

We do not believe that mineral resources should be under the control and direction of the Department of the Interior than should our agricultural resources. And we do have a Department of Agriculture, and a Secretary of Agriculture.

And the Secretary of Agriculture can cause hundreds of millions of dollars to be paid out to "agriculturists" for not producing crops, and in the form of price bonuses on perishable commodities in order to maintain fictitious "parity prices."

Nothing is paid to the producer of any metals for not mining; the gold and silver miner, who cannot operate at a profit under the Government's "rigged" prices of new gold and new silver produced in the United States of America receives nothing for his enforced idleness; no money can be found to enable the development and operation of mines producing strategic metals, and to stockpile this product, which does not deteriorate.

The outside world is laughing at our tactics—paying the farmer for keeping his land idle; swapping our surplus farm stuff for metals produced by the slave labor of other nations and making it impossible for United States of America to mine metals in competition with these cheap imports.

These are some of the things which must be remedied if our United States of America is to remain free and prosperous—or, to say the least, free.

You asked for "criticism" of your political schedule. You are doing fine. More power to you. In the above I have simply offered a few comments to show how lots of western mining men are thinking.

Sincerely yours,

THE MINING RECORD,
———— ————, *News Editor.*

Community Action Needed to Attract New Industry to the Badger Ordnance Works Area

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. REUSS. Mr. Speaker, the citizens of the 10 counties surrounding the Badger Ordnance Works, near Baraboo, Prairie du Sac, and Sauk City, Wis., are

facing a difficult challenge. The Badger Ordnance Works, long the principal industry of this area, is steadily reducing employment and by June 1958 is expected to cease production entirely. The impact on the area's economy is already serious and will become more so.

Under these circumstances, one might expect a feeling of defeatism. Instead, however, I am glad to see real determination not to accept this situation passively but rather to join forces to meet and overcome it. Action is already underway to establish an area industrial development committee, widely representative of business, labor, and other civic leaders, to survey the area's resources and to undertake a campaign to attract new industry. To assist these efforts, I am hopeful that Congress will soon act favorably on legislation such as I have introduced to provide Federal assistance to economic "trouble areas."

An excellent statement of the need for united community action appeared recently in an editorial in the July 11, 1957, issue of the Sauk Prairie Star, published at Sauk City and Prairie du Sac, Wis. I commend the editors for their statement which reads as follows:

THE CAT IS OUT OF THE BAG—WELL, IT LOOKS AS IF WE CAN QUIT SPECULATING ABOUT WHAT IS GOING TO HAPPEN AT BADGER ORDNANCE WORKS

For the past several months we have heard rumors that the plant, which provides employment for a great many people in the Sauk-Prairie area, and throughout the southern section of Wisconsin, would be closed. These rumors created a furor of activity on the part of civic leaders in a number of communities that would be affected by the closing of the plant.

Wires, letters, petitions were sent off to our Congressmen and Senators in Washington. Newspaper editorials were written about the unemployment problems that would arise if Badger Ordnance Works was closed. Our Government representatives responded with assurances that they were doing everything they could to see that Badger Ordnance would continue to operate.

Last week's Star carried a news release from Col. J. G. Haynie, commanding officer, that the work force would be cut to 921 employees—a drop of 533 contract workers. By the end of November the employment figure will be down to 600.

Saturday night, July 6, Congressman HENRY S. REUSS, Democrat, of Milwaukee, told a Baraboo audience that "by the end of June 1958 production will cease altogether."

Of course, we've seen the handwriting on the wall, as neighbors and friends have packed their belongings to move on to new jobs, new homes, during the past several months.

The important thing now is not to sit around wringing our hands and crying that "they can't do this to us." After all, we've been hollering for economy in Government ever since President Eisenhower brought out his $71.8 billion budget early this year. Economy is where you find it. * * * Badger ordnance plant is a Government-owned plant, operated by a civilian contractor, Liberty Powder Defense Corp. If we really want economy in Government, we'll have to accept the decision to close the plant.

However, it is time to get off our duff and do something besides wishing for new industry to fill the gap that will be left by the closing of the plant. We'll have to get our community nose to the grindstone, our community shoulder to the wheel * * * we've got to get busy and work if we expect to attract some new industry to Sauk-Prairie.

The future of our community depends on what action we taken in the next few weeks and months. Are we going to progress and grow, or are we going to roll over and play dead?

Seventy Billion Dollars in Free-Flowing Pipelines

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. CURTIS of Missouri. Mr. Speaker, I am inserting in the Appendix of the RECORD an editorial from the St. Louis Globe Democrat July 25, 1957, entitled "$70 Billions in Free-Flowing Pipelines." This is an excellent discussion of the need for H. R. 8002.

I, too, cannot understand the opposition of my highly respected colleague JOHN TABER, though I recognize his great knowledge in this field and his dedication to economy in Federal fiscal affairs. I am happy that the matter will be on the floor of the House for debate. Perhaps then the differences of opinion can be cleared up.

I can understand the opposition of my good friend from Missouri Congressman CANNON. He has not taken kindly to Hoover Commission recommendations, nor has he so set up the Appropriations Committee and its staff so that it can do the most effective job of bringing about economy in the Federal Government. In other ways he and I have not see eye to eye on how to go about getting real economy in the Federal Government.

The editorial follows:

INFLATION-BULGING FEDERAL BACKLOG—$70 BILLION IN FREE-FLOWING PIPELINES

In a shrewd and eloquent analysis of the abiding fiscal morass in Washington Government, Herbert Hoover told the American Society of Newspaper Editors one of the most dangerous causes is that Congress has lost control of the purse strings.

The habit of making advance appropriations covering future years has knocked Federal economy whopperjawed, sharply contributed to inflation, excessive Government spending and oppressive taxation.

Mr. Hoover estimated these advance appropriations over the years have heaped up $70 billion of unexpended balances in Federal pipelines.

This enormous sum represents appropriated money which has not been used but has not been returned to the Treasury. The balances exist mainly in defense and foreign aid agencies.

They can be expended at any time. They don't require further action by Congress. They can be spent in addition to the large budget allotments the departments get every year.

As an example, Congress appropriated approximately $12,500,000,000 in 1953 for the Defense Department in the Korean war. Now—4 years later—the Pentagon is still spending this money.

The two Hoover Commissions on Federal Government recommended legislation to correct the situation. The key solution is a bill to compel a yearly review by Congress of all fiscal needs and dealing. It would substitute an annual accrual expenditure budget for the current slack system of spending controls.

The Senate has unanimously passed such a measure, sponsored by Senators BYRD, of Virginia, and KENNEDY, of Massachusetts, both Democrats, and by Senator PAYNE, a Republican of Maine. It is eminently sound legislation, which will reestablish in Congress control of the Federal pocketbook, as the Constitution most clearly provided.

A similar proposal, House bill 8002, is before the lower Chamber. It would call for annual fiscal review and make all unexpended balances revert to the Treasury at end of the fiscal year.

If further need for such appropriations, or a part of them, was evident, Congress could reappropriate enough for the ensuing year.

President Eisenhower has warmly indorsed this reform, as has Secretary of the Treasury Humphrey. But the measure has been stalled, partly because, as Mr. Hoover says, it has no tear-jerking attachment and arouses small public interest.

The roadblock in the House has been thrown up by Representative JOHN TABER, of New York, ranking GOP member of the Appropriations Committee, and Missouri's own Representative CLARENCE CANNON, Appropriations Committee chairman.

Either they do not understand the significance of the move, or they are so dedicated to the status quo they oppose this obviously needed reform.

The size of Washington's pipeline balances is approximately as great as the present Brobdingnagian budget being fashioned on Capitol Hill. But it is tax money that can be spent in excess of budget allotments.

It is all too grimly clear how this system helps compound extravagant spending by Government, heaps higher the overall burden of taxes which at present have mounted—including Federal, State, and local taxes—to more than $110 billion a year.

No single category in Federal operation is so hazardous to the inflation potential as the stockpiling of these unused funds—which can be tossed into the spending hopper by agency heads whenever they wish.

This is fantastic fiscal stewardship. It is repugnant to the proper authority of Congress, to the Constitution's intent—and completely frustrating to sound monetary policy of Government.

House bill 8002 should be brought out of committee and passed.

The resultant savings in tax funds could well exceed the economies of $5 billion predicted for adoption of the entire Hoover report.

Whose State Department?

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. BOYLE. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Chicago American entitled "Whose State Department?" which comments on the O'Brien lake-diversion bill H. R. 2.

This article bears most importantly on that bill which has cleared the House and is presently pending in the Senate.

I hope that every Member of that august body will read it carefully, and give this much-needed piece of legislation

the President's desk in this 1st session of the 85th Congress.

The editorial follows:

[From the Chicago American of July 21, 1957]

WHOSE STATE DEPARTMENT?

In the recent talks in Ottawa between the Canadian and United States Governments over increased lake diversion at Chicago, the State Department, as this newspaper had predicted, made no real effort to persuade the Canadians to end their opposition. Representative O'BRIEN, Democrat, of Illinois, declares the Department took an innocuous and impassive role in the discussions.

And since the conference, Representative O'BRIEN says, the State Department has told him that unless Canada withdraws its objections to the bill authorizing an increase in the flow for a 3-year experimental period, the Department will have no alternative except to recommend again that President Eisenhower veto the legislation, as he has done twice before.

What this statement of the State Department's amounts to is an assertion that it represents the views of Canada and not of the United States. Congress, elected to represent the American people, has twice voted to authorize the increase. The House already has passed the legislation a third time and the Senate will approve it before the session ends.

But the conviction of Congress that the increased diversion would benefit the people of the United States carries no weight with the State Department compared to the fact that some Canadians say it wouldn't help Canada.

The department's declaration that it will go on opposing the increase unless the Canadians consent to it is particularly outrageous because of the fact that legally the matter is no business of the Canadian government at all, and the Canadians admit it. Lake Michigan is not international water. It is entirely within the United States.

The treaties between Canada and the United States clearly say that the United States may do what it pleases with Lake Michigan water without consulting Canada, and last winter the United States Supreme Court did order an enormous temporary increase of diversion into the Illinois Waterway without asking the Canadian Government whether it liked it or not. This increase was designed to overcome a drought that had lowered water levels so far that barge travel was crippled.

The State Department, without any authorization in any treaty and in opposition to the will of Congress, stubbornly is supporting the prejudices of Canadians against the legal rights of the people of America—especially the people of Chicago and Illinois.

Representative O'BRIEN has written President Eisenhower a letter asking him to order the State Department to urge earnestly that the Canadian objections be withdrawn. It is time, Representative O'BRIEN wrote, that the American Government tell the Canadian Government it is deeply interested in making the experiment in increased diversion. It is time. But the Government will never do it while the State Department is making the policy.

Instead of taking the Department's advice in the diversion matter, President Eisenhower should tell it to stop representing Canada and start representing the United States, which is what Representative O'BRIEN is asking him to do.

"The people of Illinois," O'BRIEN wrote to Mr. Eisenhower, "have not received fair treatment in this most vital matter." They have not. What they are asking for is 1,000 gallons per second of additional lake water to perfect the efficient operation of Chicago's tremendous new sewage-disposal plants, to purify the Illinois River after its long misuse as a sewer, and to insure (together with a projected new dam at Alton) high enough levels to keep traffic moving in the Illinois waterway with no danger of interruption.

The waterway is not an Illinois facility alone. It is a link in the channel from the Great Lakes to the gulf, which carries a vast share of the Nation's water commerce.

Opponents of the increase persistently have charged that the water was wanted to wash Chicago sewage down the Illinois River. It simply isn't true. No untreated sewage is sent down the river. The sewage treatment plants release nothing but clean water, but it is water from which most of the oxygen has been extracted in the treatment process. The additional fresh lake water is needed to make it wholesome by restoring the oxygen.

Illinois needs this small increase in diversion. The whole Illinois congressional delegation and the people of the State should join in urging Mr. Eisenhower to consider their needs instead of the State Department's demonstrated anti-Illinois prejudices.

What of Hells Canyon

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 25, 1957

Mr. ULLMAN. Mr. Speaker, a great deal has been written and said concerning the sound policy of the development of our natural resources which would be characterized by Federal construction of the high dam at Hells Canyon. Seldom, however, have I read as penetrating an analysis of the real issues involved in this project as that presented in an excellent editorial in the July 23 edition of the Eastern Oregon Review. Mr. C. J. Shorb, the editor of this fine publication, is indeed to be congratulated.

Under unanimous consent, I insert this editorial in the Appendix of the RECORD:

WHAT OF HELLS CANYON

The greatest disaster in connection with the whole Hells Canyon promotion is the fact that it became enmeshed in partisan politics. Because of it, a vital resource is threatened and many people who are vitally interested in the betterment of the section will walk away from any mention of the subject of Hells Canyon, in disgust rather than in enlightenment.

Regardless of the activity of the private power company or any segment of any political party, Hells Canyon will eventually be built. The delays that have been caused merely makes the eventual cost all the greater upon the people.

The reason why Hells Canyon and other outstanding reservoir spots will be developed is because the Northwest, like the rest of the Nation is growing in population and industry. The need for water is ever becoming a greater problem. Our neighbors to the south are at a point where the need for water is terribly great and when all sources are utilized, it will become necessary to start pumping and freshening sea water and the moving of some of the industry to points where water is available. Here in the Northwest is that water but in our own stupid manipulating we are stealing from posterity the use of vast quantities of water which could now be cheaply developed and could have been even more cheaply developed a few years back.

With each passing year, more and more people are seeing the light. They are coming to the realization of the need for this vast potential of water storage. It is not at all unlikely that the politicians of today who are obstructing progress in the development of our water resources will be considered in years to come more of a traitor than a statesman.

Even if there is never a kilowatt of power developed at a high Hells Canyon Dam, it is still a very good investment in the future of our country and especially of our Northwest. It is difficult to see why people, like our President, and others in high places cannot see the need for high dams in rivers like the Snake where the impounded waters injure no one and cost less to develop because there are no important highway or railroads, farms or cities to be moved. Vast recreational advantages may be enjoyed at the sites. Water to firm up the flow of the river will aid in navigation and make possible a constant output of power at Bonneville, The Dalles, McNary, Ice Harbor, John Day and other dams as they built and equipped with generators.

Someday the need for water in the lower valley, at Portland, and nearby spots will be so great that the people of that community will not feel kindly toward their newspapers who have so stubbornly fought upriver development.

It is surely shortsightedness on the part of the people in Congress and elsewhere when they become a party to the blocking of such needed conservation programs as the Hells Canyon high dam.

The present attitude of the politicians and newspapers as well as the industrialists toward the water resource development is reminiscent of the obstructionist who fought the reclamation of the arid west, who hampered and fought the programs of sustained yield and reforestation programs in our forests. The attitude is much like the attitude of "What was good enough for grandpa is good enough for me."

One needs to but look back upon the page of our national history to see that even the men, who were supposed to be the smart ones in their day, were soon discredited because of lack of vision. One of our former statesmen remarked, in a debate about United States claim to the Northwest, that in a hundred years that section will be populated with wild animals and wilder men. That hundred years has scarcely past and we are proud of our Oregon, Washington, and Idaho that was carved from the territory that he considered not worth the effort of development or even owning.

It was not the obstructionists nor the men with little foresight that have made America great. It has been the men with vision and determination that have created the great America. It has not been an easy row for them but they persevered and won. A fine thing is that their names and memories have lived on long after the obstructionists have been buried and forgotten.

Toward an International Language

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, June 28, 1957

Mr. REUSS. Mr. Speaker, the possibility of the creation of a permanent

United Nations police force has raised the question should there be a common language for the use of the members of the force? I am indebted to Mr. Glenn P. Turner, of Middleton, Wis., for providing me with a copy of the resolution adopted by the General Conference of UNESCO on December 10, 1954, which for the first time gave recognition by an international governmental organization to Esperanto. This official recognition by an agency of the United Nations family suggests that Esperanto might well be considered as a possible international language for the U. N. police force. The text of the UNESCO resolution follows:

OFFICIAL ENGLISH TEXT OF THE UNESCO RESOLUTION 8C/DR/116

The general conference, having discussed the report of the director-general on the international petition in favor of Esperanto,

1. takes note of the results attained by Esperanto in the field of international intellectual relations and in the rapprochement of the peoples of the world;

2. recognizes that these results correspond with the aims and ideals of UNESCO;

3. authorizes the director-general to follow current development in the use of Esperanto in education, science, and culture, and, to this end, to cooperate with the Universal Esperanto Association in matters concerning both organizations;

4. takes note that several member states have announced their readiness to introduce or expand the teaching of Esperanto in their schools and higher educational establishments, and requests these member states to keep the director-general informed of the results attained in this field.

The Constitution of the United States: Solar System of Liberty

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 25, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, one of the most widely distributed but, apparently, least read writings on the Government of the United States is The Story of the Constitution, published in 1937, by the United States Constitution Sesquicentennial Commission, of which Representative Sol Bloom, of New York, was director general.

Prepared by Ira E. Bennett, former distinguished editor of the Washington Post, and an experienced student of constitution history, it reflects the wisdom gleaned from a lifetime of study, observation, and reflection. As such, it is commended for reading in connection with current constitutional issues, particularly in our public schools, colleges, and universities that supply the leaders of the future.

One of Dr. Bennett's strongest sections is the conclusion that likens the Constitution to the solar system with the people of the United States as its center. This is a part of the book in which he justifiably took pride, for it epitomizes the significance of the Constitution in the maintenance of our liberties.

In order that the high quality of this excellent work, The Story of the Constitution, may be better known to the people of our Nation, under leave accorded to extend, I quite the indicated conclusion of Dr. Bennett's notable work:

THE CONSTITUTION OF THE UNITED STATES: SOLAR SYSTEM OF LIBERTY

(By Ira E. Bennett)

The symmetry of arrangement and beautiful coordination of motion in the several governments constituting the American system may be compared with the solar system.

As the sun is the center of attraction and controlling power that binds and moves the planets in one system, so the people are the center and controlling power that binds and moves their governments in one system.

The law which the solar system obeys is not written, but its operation is partly disclosed and partly understood. The law which the American political system obeys is partly written, for all men to read. It is the Constitution of the United States.

The limits of the powers of the sun and the people are not known. They have never been tested to the limit. The composition of the sun is hidden in nature. The composition of the people is hidden in human nature.

Reason assumes that the sun has powers beyond those known to us. Reason reinforced by knowledge, asserts that the people have reserved powers which never have been expressed in written law.

The United States and the States may be compared to planets revolving around their sun, the people.

In order to comprehend the peculiar nature of the American system it must be borne in mind that the States existed before the United States was created. It was to bind them together, to swing them into their coordinated orbits that the Union was perfected.

Some of the powers possessed by the people are exerted in the States. Others are kept in reserve.

The powers necessary to bind the States together in one solar Union are set forth in the Constitution. All other powers are kept in reserve.

The States perform certain functions which the United States cannot perform. The United States performs functions which the States separately cannot perform. The people retain a sphere of personal liberties into which neither the States nor the United States can enter.

The law which controls the solar system is divine, and therefore perfect. The law which controls the American political system is human, and therefore imperfect. But under a trial of 150 years it has been found to approach more nearly the symmetry of the law that rules the universe than any other emanation of the human mind and will.

Several unique features of the Constitution distinguish it from any previous inventions in the art of government. Among these are:

The Constitution binds individuals as well as States. Under it all individuals have equal duties and rights.

The legislative, executive, and judicial powers are lodged in separate bodies of public servants whose powers and duties compel them to check and balance one another. No uncontrolled power is lodged in any one.

The written Constitution is made paramount to any legislative, executive, or judicial authority.

A court is created with power to hold all authorities within their allotted spheres, and this court itself is bound to remain within its allotted sphere.

The Constitution contains within itself a method whereby it may be amended by the people.

These principles, never practiced before, are the bone and sinew of a fabric suitable to a nation whose government obeys those whom it rules, and whose people rule the government which they obey.

The Capitol's East Front

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, June 28, 1957

Mr. REUSS. Mr. Speaker, the following editorial from the July 1957 Architectural Forum should stimulate thought on the architectural problem of the Capitol's east front:

CAPITOL SOLUTION

It is high time that an important misunderstanding be cleared up between the architects of America and the leaders of Congress, on the question of what to do with the Capitol in Washington. And this can be done quickly, simply.

The Congress wants a workable Capitol, with certain new facilities and conveniences, which every sensible citizen—and every sensible architect—wants the Congress to have. No quarrel there. Few, indeed, are the architects who would like to see repeal of the congressional building program.

But Public Law 242 passed by the 84th Congress says that these real needs are to be met by a specific architectural solution: a certain "scheme B" inherited from a 1905 study. This fact alone is the reason for the present architectural uproar.

Scheme B would mean tearing down the historic east front of the building and re-erecting it farther forward. (Scheme B, let it be said, was not even advocated by those who formulated it; they said explicitly that they didn't really favor it even then.) This scheme B extension of the east front is what is solidly opposed by the majority of architects and by the great weight of historical and architectural criticism: on grounds of beauty, symbolism, and utility.

Does this mean that Congress must start all over again if it is to meet the architects' objections? Must there be delay and major readjustments? Not at all. The architects' objections can be met and the uproar stilled by 1, possibly 2, quick, simple steps by Congress:

1. Strike out of the legislation the reference to scheme B.

This will free the architectural consultants who have already been at work on the problem to make their own best uninhibited solutions.

Today they are not at liberty to do this. They are like doctors compelled to make a prescribed prescription. They are allowed to advise only how to work out solutions that include moving the east front. It's the law.

The names of these three architects are: Henry R. Shepley, Arthur Brown, Jr., John F. Harbeson. (Although certain other architects have been individually vocal and officially quoted on the Capitol problem, only these three are the official consultants, and their lips are accordingly sealed.)

There are certain strong reasons to believe that solutions have been reached by this committee, which would not only leave the east front alone but would be functionally easier to plan and build, cleaner, and less costly in obtaining the purposes of Congress.

2. If any doubt remains in the minds of Congress leaders about the real trend of

opinion among architects, let them hold open hearings, well announced. The present appropriations were passed without the benefit of open hearings.

In these simple ways a needless conflict could be cleared up between the political leaders of America and the cultural leaders they should be depending on.

Nobody is more anxious than the architects of America that the Capitol be workable as well as beautiful and symbolic. Nobody is less anxious to have the grand old building gradually deserted and converted into a museum piece. Congress need only yield on this detail of its program, this east front notion which is not essential for the Congress, and which the architects in convention have voted against in 1939, 1949, 1955, 1956, and again in 1957 at their centennial convention a few weeks ago, when a standing vote revealed an overwhelming majority against it. Congress will then find in the architectural profession its most effective friends, and a fine cultural heritage will stand useful but unmolested.

Preservation of Our Natural Resources

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. ULLMAN. Mr. Speaker, the Christian Science Monitor of July 22 carried a very interesting article by its special correspondent, Mr. Roscoe Fleming. This article sets forth certain considerations regarding the preservation of our natural resource heritage which I think should be kept in mind by all interested in this important matter.

Under the unanimous consent of my colleagues, I include this article in the Appendix of the RECORD along with my remarks:

FOREST SERVICE OPPOSES SEALED WILDS

(By Roscoe Fleming)

DENVER.—The United States Forest Service is in favor of setting aside large and well-selected areas of the national forest as wilderness not to be invaded by roads and to be kept in a primitive state as far as possible.

But it is not in favor of the specific terms of a bill proposed by conservationist groups which would freeze all present wilderness areas into law, and put them in effect under authority of a wilderness council composed of a minority of Federal officials and a majority of conservationists.

These views have been made known to the Congress and are being disseminated throughout the forest regions of the United States.

CURB ON USE SEEN

The service proposes a substitute bill. Whether the conservationists are strong enough with Congress to override objection to their proposal remains to be seen.

They have shown their power more and more in recent years, particularly in opposing commercial or multipurpose use of various areas such as the Echo Park area in Colorado, which was originally intended for a dam site.

Richard E. McArdle, Director of the Forest Service, said the service is just as dedicated to the proper preservation of wilderness areas—of which there are now nearly 14 million acres—as anyone. But it does object, he said, to the wilderness use of the forests being made a separate objective overriding all other uses.

He said the widespread creation of areas to be kept in primitive condition actually narrows the use of the forests, since such areas are clearly not accessible for enjoyment by picnicking families, or those on short vacation trips. They require extra preparation and equipment, etc., and therefore run up the cost of a forest trip.

INACCESSIBILITY CITED

Mr. McArdle objected also to the interposition of another layer of authority between the executive and the Congress. Under the conservationists' bill as it is framed, the Wilderness Council it would set up could lessen, add to, create, or abolish any wilderness area, and the order would become effective unless either House of Congress vetoed it within 120 days.

He added: "Because of their inaccessibility and lack of roads, wilderness areas are difficult to protect from fire, insects, and disease. If forest pests are not controlled, wilderness areas may serve as sources of infection to surrounding national-forest timber. The wilderness areas themselves include valuable timber, forage, water, wildlife, and mineral resources."

In short, he pleaded that the Forest Service is now dong a good job in this respect and that it be left relatively unhampered to carry out the forest administration as a whole, and to decide in the light of the whole management problem what is to be done about such areas.

ALTERNATE RECOMMENDED

There are now 81 national forest areas classified as to be kept in relatively primitive condition, totaling 13,845,000 acres. This is a slight decline in acreage since 1939, when present wilderness policy was first formulated, but about 9 areas have been added. Some 600,000 acres have been turned into national parks.

The Forest Service recommends a bill for a permanent wilderness policy. It would leave control in the hands of the Secretary of Agriculture, but would direct him, within the limits of the multiple-use policy, to classify all such areas as to their usefulness within 10 years, and it would provide that primitive areas not concretely established as wilderness areas within 15 years, should revert to the general forest domain.

It would provide that only the President by executive order could establish wilderness areas, and his consent would be required for any withdrawal for other purposes, such as for power, reclamation, or mining.

The Secretary of Agriculture could modify boundaries of such areas but only to the extent of increasing or decreasing them by less than one-fourth of their original area.

Boys' Nation Holds 12th Annual Meeting

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. BOLAND. Mr. Speaker, the American Legion's 12th annual Boys' Nation week-long program concludes on the nearby campus of the University of Maryland. During the time they have spent here, these young high-school students have not only observed the proceedings in this House and in the Senate, but they have conducted sessions of their own Boys' Nation Congress.

I am particularly proud of the two delegates from Massachusetts to Boys' Nation because they come from two communities in my own congressional district. They are Chester J. Baj, Jr., of 142 Russell Street, Hadley, Mass., and David J. Korkosz, of 27 White Street, Chicopee, Mass. I think it is a tribute to them, their respective parents, and American Legion Post, No. 271, in Hadley, and Post No. 452, in Chicopee, that they were selected by the Massachusetts Boys' State, sponsored by the Massachusetts Department of the American Legion, to attend this Boys' Nation program. These boys were recommended for Boys' State because of their leadership, character, scholarship, and service in high school. The program of Boys' State is highly specialized and competitive, and only youths with outstanding qualities are capable of participating in the intensive citizenship course of instruction. It was a pleasure to have these two boys from my district here with me in Washington and to visit the Capitol with me as their guide.

Mr. Speaker, I want to congratulate the National American Legion for conducting Boys' Nation, and the respective State departments of the American Legion for sponsoring Boys' State. These programs certainly do fulfill the objectives of the American Legion to provide a laboratory for a functional study of citizenship and to arouse in young citizens a desire to maintain our form of Government.

President Eisenhower Urged To Lower Downpayments on Government-Insured Home Loans

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mrs. GRIFFITHS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two letters which I have written on this subject:

President DWIGHT D. EISENHOWER,
White House, Washington, D. C.

MY DEAR MR. PRESIDENT: The president of the Detroit Builders Association informs me that after the House of Representatives passed H. R. 6659, the Housing Act of 1957, on May 9, 1957, their members started using FHA purchase agreements containing the following statement:

"FHA mortgage terms contemplated in this agreement are based on the new Housing Act of 1957 and whereas application for said mortgage cannot be processed until the law is put into force by the appropriate authorities. Therefore, sellers reserve the right to refund deposit hereunder and cancel this agreement if the above referred to law is not given full effect so that processing may pro-

ceed according to mortgage terms contemplated by purchaser in agreement within 10 days from date hereof."

On July 12, 1957, you approved the Housing Act of 1957, Public Law 104, 85th Congress, which authorizes lower downpayment schedules on Government-backed home mortgage loans.

If these lower downpayment schedules are not put into effect, it is estimated that three-fourths of the sales made under these purchase agreements will go back. This is in Detroit, the area which I represent, where housing starts are already down 55 to 60 percent.

Now, I respectfully request that you instruct Mr. Norman Mason, the Commissioner of Federal Housing, to immediately authorize the lower downpayment schedules which the Housing Act of 1957 permits.

Sincerely yours,

MARTHA W. GRIFFITHS,
Member of Congress.

JULY 18, 1957.

Mr. NORMAN P. MASON,
Commissioner, Federal Housing Administration, Washington, D. C.

DEAR MR. MASON: It is my understanding that you are seriously considering raising the basic interest rate on Government-backed home mortgage loans to 5¼ percent and that you are not going to put into effect the lower downpayment schedule authorized by the Housing Act of 1957.

In Detroit, the area which I represent, housing starts are down 55 to 60 percent. The president of the Detroit Builders Association informs me that after the House of Representatives passed H. R. 6659, the Housing Act of 1957, on May 9, 1957, their members started using FHA purchase agreements containing the following statement:

"FHA mortgage terms contemplated in this agreement are based on the new Housing Act of 1957 and whereas application for said mortgage cannot be processed until the law is put into force by the appropriate authorities. Therefore, sellers reserve the right to refund deposit hereunder and cancel this agreement if the above referred to law is not given full effect so that processing may proceed according to mortgage terms contemplated by purchaser in agreement within 10 days from date hereof."

If the lower downpayment schedules are not put into effect, it is estimated that three-fourths of these sales will go back.

May I suggest that you do not ignore Congress but take full advantage of the law Congress gave you to revive the building industry.

Sincerely yours,

MARTHA W. GRIFFITHS,
Member of Congress.

A More Adequate, Efficient, and Economical National Defense

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. BOLLING. Mr. Speaker, the following editorial from the July 6, 1957, issue of the Independence Examiner of Independence, Mo., discusses one of the many activities in the national interest in which Missouri's junior United States Senator, the Honorable STUART SYMINGTON, is currently engaged. Senator SYMINGTON's efforts to assure a more adequate, efficient, and economical national defense for our country are well known to all.

WILL PREVENT WASTE IN NATIONAL DEFENSE PROGRAM

Senator STUART SYMINGTON is working on legislation to bring the Cordiner report out of the Washington deep-freeze and put it into effect for the benefit of the American taxpayer and the Armed Forces. S. 2014 is planned to implement the report and strengthen the national defense, so critically hit by the cutback in appropriations. In the House, H. R. 7574 is being pushed for a similar purpose.

The current plight of national defense is pointed up by a few facts: In a single year the Air Force loses 4,000 trained pilots who go into civilian employment. It cost the Government $480 million to train them, and all that is lost. The latest weapons of technological defense stand idle and useless because the men who know how to operate them are getting out of uniform as soon as they can. Why? Low pay and poor benefits from an obsolete system of compensation in the Armed Forces.

Asked to head a committee to see what could be done about this situation, Ralph J. Cordiner, president of General Electric, produced an effective plan, worked out in detail. Senator SYMINGTON and many other leaders, civilian and military, believe that the plan will solve the problem.

Put to work by S. 2014, the Cordiner plan will save the taxpayers up to $5 billion a year for the next 5 years in military budget; it will increase the efficiency of national defense; it will cut down training accidents in the Armed Forces; and it will reduce the great bulk of personnel needed in national defense.

In modern technological warfare the Armed Forces need quality, not quantity, in personnel. Our national defense can be best operated by fewer but better trained men. Now the best men are taken by private industry and the Armed Forces are left without the technicians who are indispensable to defense.

The Cordiner plan would make it practical and reasonable for the ablest and best trained men to make their careers in the Armed Forces. It would stop the draining away of talent into private channels.

At present, two great wastes, manpower and money, are bleeding national defense. Senator SYMINGTON plans to stop them.

The public should be informed of the problem and of the effort to solve it. This is a measure that deserves support and that will repay the effort that is put into it.

Powerful Forces Churn Up Inflation

EXTENSION OF REMARKS
OF
HON. DAVID S. DENNISON, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. DENNISON. Mr. Speaker, the dilemma which faces us in the constant threat of inflation is clearly outlined in the following editorial which appeared in the Star-Beacon, one of the fine newspapers published in the 11th Ohio District which I have the honor to represent in Congress. The Star-Beacon is published at Ashtabula, Ohio and the editorial on inflation appeared in the issue of July 11, 1957.

POWERFUL FORCES CHURN UP INFLATION

Like the Russians, the threat of inflation is always with us. The battle between inflationary and deflationary forces is to the domestic front what the East-West struggle is abroad.

Right now the battle is raging afresh. The cost of living index has hit a new high again after a climb of many months. The steel industry has announced a price boost that will surely have spiraling effects throughout the economy.

President Eisenhower, anxious to avoid controls, has urged business not to hike prices unless necessary to get expansion money, and called on labor to relate demands for wage increases closely to advances in productivity.

Secretary of the Treasury George Humphrey has, of course, warmly defended the Government's policy of keeping a lid on money and credit as an essential weapon in this fight. The report of the Joint Congressional Economic Committee lends support to his position.

On the other side, certain leading Democrats, particularly some involved in Senator BYRD's inquiry into United States financial conditions, attack the "tight money" policy as costly and damaging to important segments of the economy. They stress the perils of deflation.

With inflationary pressures evidently mounting in spite of existing efforts to combat them, it would be surprising if the present tug-of-war on the issue should be resolved in favor of easier money.

But however the current phase works out, the conflict will go on indefinitely. Our tremendous economy is constantly churned by powerful forces which continuously threaten to become unmanageable. Inevitably in this time government must walk a high wire between the two perils.

Inescapably, too, there will be loud pleaders on both sides who will argue that we are approaching one peril or the other. We shall just have to keep our shirts on and hope that out of the turbulent air will emerge policies that somehow keep us traveling that delicate wire.

South Dakota Sun Dance

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 16, 1957

Mr. McGOVERN. Mr. Speaker, the sun dance is an ancient and sacred rite of the Sioux Indian, symbolic of their beliefs and willingness to sacrifice. Each year at Pine Ridge, S. Dak., thousands of people, Indians and whites alike, gather to view the beautiful yet awesome dancing spectacle. It has attracted attention the country over. Under leave to extend my remarks, I present the following article on the South Dakota sun dance as it was printed in the July 21 issue of the New York Times:

SOUTH DAKOTA SUN DANCE

(By Steve Feraca)

Banned for almost 50 years by the Government, the Sioux Indians' colorful sun dance, now revived, has its share of apparent incongruities.

To the casual spectator who expects to find a strictly primitive atmosphere on the reservation, the modern, plastic sunglasses worn by the war dancers come as something of a shock, as do the numerous hotdog and soft-drink stands surrounding the enclosure.

But the 5-day ceremonies themselves are authentic and are attended by thousands of representatives of Sioux tribes from North and South Dakota, together with Indians whose ancestors, of alien tribes, were once the Sioux's hated foes. Last summer's event boasted the largest attendance since the tribe revived the old ceremonies, and the crowds at this year's sun dance—July 31 through August 3—promise to be even bigger.

Sun dance time takes its name from the first ceremony held during the celebration, the traditional sun dance. Although all are members of some Christian church, most of the older Indians tenaciously cling to at least a few of the ancient beliefs and practices. The sun dancers themselves fit into this category and also many of the spectators.

ARDUOUS RITES

Formerly, this dance came to a climax with some of the participants offering to have their chest muscles pierced with a thong that was attached to the sacred pole. Thus a Sioux might offer a religious sacrifice and prove his fortitude as well. Although the practice was abandoned, the pole, a straight young cottonwood tree, remains the focal point of the dancing area, which consists of a circular, pine-covered bower about 150 feet in diameter, with an open center. The shaded circumference for the spectators is a very necessary shelter in the Dakota summer heat.

The sun dance pole is erected the day before the dancing actually begins and by the following day, more than 2,000 Indians have usually set up a tented camp. The Sioux no longer travel on horseback; they come in dilapidated cars, the sides fairly bulging with children, grandparents, dogs, camp equipment, and costumes for the dancers.

These costumes, incidentally, defy adequate description, no feather and bead bedecked outfit being exactly alike another. Every color in the spectrum is represented in the dancing arena, mirrors, and bright silver and steel bells adding to the array. The bells, worn by the dozen, are important; they help the dancer to keep time.

Both singers and dancers are tireless, the dancers necessarily more so. They are consistently cheated out of a rest because the groups of singers take turns with no more than a momentary pause.

RAINMAKING

"Make way for the horse dancer," sings out the announcer in his native tongue of Lakota. The dancer, hooded and mounted, begins to circle the dancing area. Many of the spectators believe that the horse dance is inevitably followed by heavy rain after its performance, and last year it was barely over before a severe storm sent everybody rushing for their tents.

A spectator at the Sioux festival cannot become bored or forget his surroundings for long. The Indian singers make this impossible, for as many as a dozen men, in conventional western wear, complete with cowboy hats, will be singing at the top of their lungs while beating on large bass drums. The drumming, combined with the piercing voices of the men and the falsetto of the women, can create a throbbing in the head of uninitiated listeners. The singers never get hoarse, but there is something of a trick to this. They chew a twig from a particular bush which tastes something like bitter mint candy, and evidently this cud activates the flow of saliva.

With the completion of the sun dance itself, the war dancing, or Omaha dancing, begins, with as many as 150 male dancers participating at one time, and about the same number of women and children dancing on the sidelines. This dancing comprises the main activity for the next 4 days, with most of the dancers boasting of 8 hours of fast prancing and stomping each day and a few more hours at night.

The dancers make the most of the last night; in fact, last year it was necessary to call police to clear the arena. The dancers readily complied and just as readily began stepping around again outside. Silence was finally obtained when the announcer called for attention, and all stood solemnly as the newly adopted Sioux national anthem was sung in the age-old way. The sun dance was officially over, and the Sioux dispersed the next morning visibly proud of their grandest get-together since the days of Sitting Bull and Crazy Horse. The sun-dance pole was left erect, its cloth decorations waving in the Dakota wind, a silent reminder of this happy occasion. A new one will replace it when this year's dance starts.

This annual all-Indian celebration is held at the ceremonial grounds on U. S. 18 just a mile east of the agency headquarters of Pine Ridge Reservation.

Pine Ridge can be easily reached by anyone traveling to the Black Hills. In fact, tourists driving to the Black Hills via the southern route on U. S. 18 will necessarily pass through Pine Ridge. From Chicago it is convenient to take U. S. 20, South Dakota Route 50, and then U. S. 18.

Another route for those traveling west from the vicinity of Sioux City would be U. S. 20 to Rushville, Nebr., then north on Nebraska Route 87 to Pine Ridge Town.

TO THE HILLS

Hot Springs, 75 miles northwest of the agency on U. S. 18, is appropriately called the gateway to the Black Hills. Only an hour and a half from the celebration site it abounds in reasonable hotels, motels, and restaurants. Pine Ridge Town has two clean motels with reasonable rates. Restaurants are small but serve good food.

For those who care to rough it in a tent, the campgrounds boast of excellent well water. Nearby Nebraska towns such as Rushville and Gordon have adequate tourist accommodations. All State and United States highways in the area are newly improved, enabling one to travel with ease to and from the dancing area.

Connecting Channels Between Great Lakes Key Link in St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. DAVID S. DENNISON, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 25, 1957

Mr. DENNISON. Mr. Speaker, of vital interest to the great Midwest section of our country is the second phase of the Great Lakes-St. Lawrence Seaway project, deepening the channels which connect the Great Lakes. The probable effect of this project on the economy of a large section of the Nation can only be imagined at this point. Certainly the opening of all the ports on the Great Lakes to large oceangoing ships will mean tremendous new developments in commerce and industry which will bring untold benefits to millions of Americans. A timely reminder of the importance of deepening the Great Lakes' connecting channels is contained in the following editorial from the Painesville Telegraph, published at Painesville, Ohio, one of the rapidly growing and developing cities in the 11th Ohio District which I have the honor to represent in Congress:

DEEPENING OF LAKES' CONNECTING LINKS

More than 125 years ago, the Erie Canal was opened to traffic, connecting the Atlantic seaboard and the upper Great Lakes.

This great aid to commerce stimulated settlement and development of the Great Lakes Basin. It provided a new trade route into the North American hinterland. It was a major factor in the economic growth of the Nation.

And only recently something happened that will have a tremendous impact upon the future economic development of the American middle west. Four great explosions in the channel opposite Amherstburg signaled that work had started on deepening the connecting waterways between the upper lakes.

The work will involve deepening channels in the Detroit, St. Clair, and St. Marys Rivers and the Straits of Makinac to a minimum depth of 27 feet. The cost will be approximately $140 million. The work is scheduled for completion in 1962.

Deepening the connecting links between the lakes is a vital part of the giant St. Lawrence seaway development. By 1958, if the work is kept on schedule, the principal part of the St. Lawrence route will be able to accommodate larger oceangoing cargo ships. By extending the St. Lawrence to all the upper lakes, every city and town in that area will become a potential harbor for world commerce.

Every additional inch of draft will permit 100 tons more cargo to be carried in lakes freighters. Addition of approximately 3 feet more between keels and channel beds will permit bigger ships and more rapid and more economical transportation of goods.

The story of the Great Lakes-St. Lawrence seaway is a fairly familiar one by this time to most people in northeastern Ohio, but it is worth repeating.

The time is here for communities to speed preparations to make the most of the day when there will be uninterrupted navigation between the heartland of America and Atlantic ports.

This area of the United States will experience greater trade and commerce. The seaway will be a tremendous impetus. It will open a new horizon for mid-America.

The Message of a Great American

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 25, 1957

Mr. MASON. Mr. Speaker, one of our present-day great Americans, one of the greatest authorities on constitutional problems we have in the Nation today, is Dean Clarence Manion, formerly dean of the Law School at Notre Dame University. Today Dean Manion operates what is known as the Manion Forum, a forum that discusses national problems, through regular weekly broadcasts every Sunday evening over the Mutual Broadcasting System.

These weekly broadcasts discuss national problems from a strictly American viewpoint, always keeping in mind what is best for America and the American people. The broadcasts are nonpartisan in every sense of the word. For that reason, and also from the standpoint of the caliber, the mental stature and character of Dean Manion himself,

these Sunday evening broadcasts are well worth hearing.

The following broadcast on the subject States Rights: Words Versus Deeds, given on Sunday, July 21, 1957, is an excellent sample of the type of broadcast put out by the Manion Forum and I include it as a part of my remarks for the edification and enlightenment of my colleagues:

STATES RIGHTS: WORDS VERSUS DEEDS

I have just had my first opportunity to read the full text of President Eisenhower's States' Rights speech to the conference of Governors at Williamsburg. Definitely, this is where I came in 4 years ago at Denver, Colo., when the President appointed me chairman of the new Commission on Intergovernmental Relations.

At that time, he described the new study commission to me and to the assembled newspapermen as his hope for restoring the constitutional integrity of the States of the Union.

As a brandnew President of the United States, he had recently visited the 1953 Governors Conference at Seattle, where he told his distinguished audience this: "I am here because of my indestructible conviction that, unless we preserve in this country the place of State government with the power of authority, the responsibilities and the revenues necessary to discharge these responsibilities, then we are not going to have America as we have known it. We will have some other form of government."

When the President repeated the substance of that statement in Denver, I replied with a fervent and sincere "Amen."

At Williamsburg, just a few weeks ago, President Eisenhower declared that he holds these convictions just as strongly now as he did then. The obvious question raises itself, what has the President done to activate these important convictions which he has held so strongly during the last 4 years?

Undoubtedly, the President of the United States is the most powerful person in the world. To a great extent, our present foreign policy is predicated upon the influence that its director, the President, can exercise upon governments all over the earth.

For better or worse, the history of the world since 1933 has turned upon the predilections of the men who, during that time, were Presidents of the United States.

If our President can influence important actions by the government of Japan, Germany, Jordan, Egypt, Israel, India, France or Pakistan, and we know from experience that he can and does, then certainly he should be able to do something about the governments in Montana, Mississippi, Maryland, and Maine.

As a matter of fact, the activity of the government of our American States is much more important to the stability and continuity of the United States than anything that is or may be done by governments in foreign lands.

President Eisenhower himself has admitted as much. When he was running for President in 1952, he said this in a speech at Des Moines, Iowa, "The Federal Government did not create the States of the republic. The States created the Federal Government. The creation should not supersede the creator. For, if the States lose their meaning, our entire system of government loses its meaning and the next step is the rise of the centralized national state in which the seeds of autocracy can take root and grow."

And so, in the President's own words, the campaign against autocracy begins at home, in the battle for the revival of states' rights. The President believed that in Des Moines, he believed it in Denver, and I am sure he believes it now. Then why hasn't he done something about it?

Back in the days when he was president of Columbia University (1949), Mr. Eisenhower said, "If we allow the constant drift toward central government to continue, ownership of property will gradually drift into that central government, and finally we shall have to have dictatorship as the only means of operating such a huge organization."

Nevertheless, what Mr. Eisenhower detected as a drift toward central government in 1949 has now, under President Eisenhower, become a veritable torrent.

REPRESENTATIVE MASON POINTS OF INCONSISTENCY

This strange variance between the President's words and deeds was the feature of a recent and truly remarkable speech in the House of Representatives by a distinguished member of the President's own party, the Honorable Noah Mason, of Illinois.

After reading some of the President's statements that I have just quoted, Congressman MASON said this: "In the face of his own words, President Eisenhower proceeded to ask Congress to create a new cabinet office to supervise the Nation's health, education, and welfare—and Congress was foolish enough to do so.

"Under the tenth article of the Bill of Rights, protection of the people's health, education, and welfare is reserved to the respective states of the Union. Therefore, the President's actions in that instance did not coincide with his words."

Congressman MASON cites other instances of difference between the President's words and deeds on the subject of States rights. I can and will give you some additional instances from my own personal experience.

At Williamsburg, the President recalled that, in 1953, he persuaded Congress to create the Commission on Intergovernmental Relations because he felt that the historic Federal-State relationship needed careful reexamination. He conceded that the Commission's study, "pointed the way to improvements in areas of mutual concern to the States and the Federal Government."

This is more on the subject of the Commission on Intergovernmental Relations than I have seen or heard from President Eisenhower since he removed me from the chairmanship of that commission in 1954.

The President told the governors at Williamsburg that a task force is now needed to designate a proper allocation of functions and revenues between the States and the Federal Government. This is precisely the assignment which was given to the Commission on Intergovernmental Relations 4 years ago.

The Commission made its report to the President in June of 1955. The report covered more than 300 printed pages. In its preparation, the Commission had the benefit of a dozen separate studies that were made for it by committees of experts on State and Federal impacts in such areas as highways, education, agriculture, welfare, and public health. Each of these studies, as well as the general report of the Commission, is available upon application to the Government Printing Office.

Of particular current interest is the report of the Commission's special committee on the subject of Federal responsibility in the field of education (a study committee report on Federal responsibility in the field of education). Here are some of the conclusions of that report:

"We have not been able to find a State which cannot afford to make more money available to its schools or which is economically unable to support an adequate school system. * * * The general conclusion is that Federal aid is not necessary either for current operating expenses for public schools or for capital expenditures for new school facilities. Local communities and States are able to supply both in accordance with the will of their citizens."

At Williamsburg, the President said he wanted a new task force. He made no reference to this existing task force report, when he told the governors that, States rights to the contrary notwithstanding, classroom shortages are so critical that Federal aid to school construction is indispensable. So much for the disparity between words, deeds, facts, and fancy.

Gathering dust in the President's office, along with the reports of the Commission on Intergovernmental Relations, are the 19 separate task force reports of the Hoover Commission, holding what is for the politicians the unpopular secret of how to save $5 billion a year in Federal expenditures.

What is needed in Washington now is not more commissions, findings, and recommendations, but a determined fearless will to save the taxpayers' money and reverse the deadly ever-accelerated drive toward a centralized monolithic autocracy.

FACTS ARE AVAILABLE, BUT IGNORED

All of the facts about Federal-State functions that the President pined for at Williamsburg have been carefully assembled, assorted and are being kept current by a score of competent research organizations such as the Council for State Governments, the Tax Foundation, and many others.

States rights have not been destroyed because of inconclusive studies or lack of adequate information. States rights have been and are still being destroyed by politicians, State and Federal, who have a special political interest in keeping the taxing, spending, and regulating authority as far away from the voter and taxpayer as possible.

Tax money that is spent in the same county where it is raised is seldom stolen or woefully wasted, because the taxpayers who have felt the pinch can and do make their own accurate calculations of responsibility for any malfeasance.

If the President is determined to eliminate what he called "the freight charges on money being hauled from the States to Washington and back," he can block that railroad track by an Executive order tomorrow morning.

Instead of increasing what is called Federal aid to the States and individuals from $3 billion to nearly $6 billion, as his administration did during the past 4 years, a President as seriously worried about the disappearance of the States as President Eisenhower undoubtedly is should have reversed what he has recognized as this dangerous drift to centralized dictatorship.

When I went to Washington as chairman of the new States Rights Commission in 1954, I found that some dedicated people in the new Eisenhower official family had taken the President at his word and were working intelligently and successfully on a plan to get the Federal Government out of the highway construction business, which it carries on under the euphemistic title of Federal aid to the States.

Their plan was simple, honest and entirely practical. It called for the repeal of the Federal gasoline tax and the reimposition of that tax, if desirable, by the States as State taxes. When Federal roads were needed in Federally owned areas or elsewhere, they would be built entirely with Federal funds, as is the case with battleships and post offices.

With the additional money thus available to them, the States could build more and better roads than they are getting now, and taxpayers would be saved the Washington freight charges that the President complained about.

The plan had the clearance of experienced national experts in the field of traffic and transportation. It was the pride and joy of the new Secretary of Commerce and was all ready to be born as a first installment in the Eisenhower States' rights revival.

Then, suddenly, an order came from the White House to destroy it and substitute a Federal highway spending program of unprecedented proportions. That is precisely what the administration finally produced, a multibillion dollar Federally directed highway construction plan with uncounted millions in freight charges all tucked out of sight in a trust fund, which is outside of and in addition to the largest peacetime budget in history.

What was the explanation to the dedicated States' righters who had spent 8 months formulating the most sensible States' rights highway program ever produced? Simply that the Eisenhower administration was in political trouble in 1953, and you don't get out of political trouble by making sense and saving the taxpayers' money.

This is a fair sample of what happens when proposals for economy, common sense and decentralization of Government hit the heavy layers of political and bureaucratic self-interest that have congealed in Washington during the past 25 years.

Under these circumstances, let us not be too hard on the States and local communities which keep their hands out for more and more Federal money—"freight charges" to the contrary notwithstanding.

When we can give a billion dollars to Tito and $15 billion to France, it is hard to sell self-denial in Alabama and Nevada. The governors probably thought about this while the President was spanking them at Williamsburg.

Perhaps this is the reason why their applause was polite but definitely restrained.

A Few Reserves in the War

EXTENSION OF REMARKS
OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 25, 1957

Mr. ABBITT. Mr. Speaker, much has been taking place in Washington, and in the South generally, in the past few days regarding the fight that so many of us are making to preserve a constitutional form of government in America. At times it seems as if the odds the people of the South are now facing are almost insurmountable. However, when we look back over the obstacles and problems overcome by our forefathers we realize that our cause is not hopeless. We must know that if we have the courage, the determination and the willingness to sacrifice, we can yet save our way of life and preserve constitutional government in America.

I realize that there are some leaders and politicians in Virginia who are willing to surrender without making an all-out effort to overcome our problems. Many of them have openly advocated the so-called North Carolina assignment plan and attempted to hoodwink the people of Virginia into believing that the North Carolina assignment plan not only would preserve segregation in our schools but had been approved by the courts. The truth of the matter is the courts have not approved the North Carolina plan and now it has been clearly demonstrated that the assignment plan not only recognizes the validity of the Supreme Court decision outlawing segregation but permits and expedites the integration of the races in the public schools.

It is saddening indeed to see our sister State, North Carolina, succumb to political pressure and through its assignment plan integrate its schools. I trust that the Virginia advocates of the assignment plan will no longer contend that it is the best way to preserve the schools of Virginia. I hope they will be honest enough to admit that the adoption of the assignment plan means the integration of the races and submission to the unlawful and horrible decision of May 17, 1954, of the Supreme Court of the United States of America.

Mr. Speaker, there appeared in the Richmond News Leader of Wednesday, July 24, 1957, an editorial entitled "A Few Reverses in the War." This editorial points out the problems we are facing; the reverses we have suffered; and the determination, which I am convinced the vast majority of our people have, to see this thing through to the bitter end convinced of the righteousness of our cause and believing that once the American people realize the problem, they may yet redeem constitutional government in America.

Mr. Kilpatrick has written an outstanding editorial on a matter close to his heart and I desire to publicly commend him for the great service he is rendering not only to the people of the Commonwealth of Virginia and the South but all the people of America.

The editorial is as follows:

A FEW REVERSES IN THE WAR

The day's news, let us face it squarely, is almost unbelievedly bad for those persons interested in the survival of the South and the preservation of the Constitution.

In Clinton, Tenn., a jury convicted seven defendants of conspiring to act in contempt of a Federal injunction.

In Texas, an appellate Federal court overruled Judge Hawley's decision in an integration case, and ordered Negro plaintiffs admitted to a Dallas school.

In Florida, another appellate Federal court reversed a district court and ordered race-mixing in Miami schools.

And in Charlotte, Greensboro, and Winston-Salem, N. C., pupil assignment boards directed the admission of 12 Negro pupils to previously all-white schools.

Each of these events is a blow, and each for a different reason.

The issue in Clinton far transcended the prosecution of individual named defendants. What was involved here was an injunction by a Federal judge, addressed to the entire countryside, fobidding "interference by word or deed" with his order directing integration of the Clinton High School. The defendants were not parties to the original integration proceeding; their acts of alleged contempt were not committed in the courtroom, but in places remote from the courtroom.

Had the defendants been acquitted, the power of Federal judges to proceed in this fashion in the field of race relations would have remained at least an open question; in a sense, such a verdict at Clinton would have been a rebuke to Federal courts. But with the conviction of seven defendants, the jury set in motion judicial machinery by which Judge Taylor's injunction may win higher court approval. And, who would be so foolish as to imagine that Earl Warren's Court would ever reverse the convictions?

Thus a precedent takes shape that will plague the South—and not only the South. Liberals who are well pleased by the Clinton verdict should contemplate parallel situations not nearly so much to their liking. Once the power of a Federal judge is upheld in the Clinton case, what will restrain judges from enjoining public interference "by word or deed" with any other decree—in strikes, for example, or in other controversies that provoke strong local feeling?

The Clinton trial ranks among the great trials of this century not for the petty punishments that may be meted out to seven obscure defendants, but for the sweeping aggrandizement of Federal judicial powers here upheld.

The appellate divisions in Texas and Florida are a part of the same pattern. In the former case, a district judge of rare independence of spirit has held, provisionally, that white citizens have rights no less than Negro citizens have rights; and weighing the right of white children to a tranquil educational experience against the right of Negro plaintiffs to be admitted where they were certain to be a source of friction, Judge Hawley refused to order integration. Because sociology has replaced law in this area of human relations, it was to be expected that Judge Hawley would be reversed, and he was. In the Florida case, a district judge who had not been completely brainwashed sought a reconsideration of the whole line of judicial opinion since May 17, 1954; he ruled that Negro plaintiffs, as a group, had no cause of action. The appellate court abruptly struck him down.

Distressing as these decisions may be, the news from North Carolina is in some ways a deeper blow. Until today it had been possible to say that eight Southern States had held the line absolutely. Now there are seven. With North Carolina's surrender to the Supreme Court's illegal act, only Virginia, South Carolina, Georgia, Florida, Alabama, Mississippi, and Louisiana remain in the fight.

Our friends to the south were motivated, they said defensively, by "a sincere desire to preserve the public schools of Charlotte and North Carolina." Let us credit them with this sincerity. They would preserve their schools and lose their society; they would not risk the closing of even 1 classroom, the temporary deprival of even 1 child's education, as a sacrifice toward maintaining State sovereignty. North Carolina has cracked; and, of course, there will be no stopping with the admission of 12 Negro pupils there; they are the vanguard of thousands whose petitions—now that the principle of race mixing has been accepted—North Carolina cannot deny.

Should Virginia despair? Should we quit, too?

By the eternal, No. In the end we may be defeated, but let us go down fighting, not apologizing. Let us marshal every political and legal weapon left in the arsenal; let us invoke the untouched powers of our State judges; let us keep hammering away at northern sympathies which may yet be attracted in the South's behalf. North Carolina is gone. Let us weep for North Carolina and fill the breach. The war is not yet lost.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Recent Foreign-Policy Address by Hon. Mike Mansfield, of Montana

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, July 26, 1957

Mr. JOHNSON of Texas. Mr. President, one of the outstanding speeches of this year was the address on foreign policy delivered recently on the floor of the Senate by the junior Senator from Montana [Mr. MANSFIELD].

It was a thoughtful, careful, and forceful analysis of the current situation. It is one which should be read by all Americans concerned about our position in world affairs.

The distinguished commentator Holmes Alexander devoted his column of July 24 to the speech. I ask unanimous consent that his column be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

SENATOR MANSFIELD SERVES NOTICE ON MAKERS OF FOREIGN POLICY

(By Holmes Alexander)

WASHINGTON, D. C., July 24.—Senator MIKE MANSFIELD, Democrat, of Montana, is a man of many virtues, but two of them are paramount. One is his hefty bank roll of personal integrity. It enables him to say what he likes with complete immunity from the character snipers. The second is his Mona Lisa smile. It permits him to murder the opposition with such good-natured aplomb that they hardly feel the deathblows.

All this happened in mid-July when MANSFIELD gave one of those extended foreign-policy speeches which he delivers twice or more each session and for which he is becoming justly celebrated. The strange part of the business was MIKE assaulted the Eisenhower administration with accusations that would have been highly censorable in a letter man.

And MIKE did it all with the sort of a smile that never shower his teeth and which lulled the critics with the efficacy of a siren's song. MIKE was anti-Ike, pro-Democrat, and pro-Senate, but he was so nice about it that almost nobody noticed.

To describe the President's foreign policy, the razor-minded Montanan used such phrases as "hodge-podge of sterile slogans and fumbling fears"; "words, words, words, yet little action"; "degeneration"; "ignorance"; "arbitrary arrogance"; "press agentry"; "delusion"; "propaganda."

Had this sort of refined billingsgate come from a different sort of man, the shuddering and the hand wringing in the critics' circle would have been a sight to behold. Senator MANSFIELD got by with saying things for which many stanch reactionaries and nationalists have been gibbetted. MANSFIELD proposed these policies:

Bring the boys home: "I believe a concerted effort must be made to reduce the size of official establishments overseas, both military and civilian. Not only are these establishments costly in a monetary sense, but they can and are building an undercurrent of resentment toward this country in many countries."

Abolish the knock-kneed policy: "I believe policy as designed by the executive department has reflected too heavily the fearful. * * * A policy that emphasizes fear and ignores this (American) spirit does not do justice to the people of the United States."

Cut out the crisis-crying: "(Fear) is the principal reason why the policies of the Nation are looked upon so often as essentially negative. * * * We may well ask ourselves whether or not that is the principal reason why, after the expenditure of $60 billion on foreign aid and hundreds of billions on defense, security still eludes us; why a sense of living on the edge of doom has not ceased to haunt the Nation."

Quit trying to buy friendship: "The leadership of the present generation (seems to have) sacrificed the greatness of this Nation on an altar of irresponsible fear. * * * Think back to the treaties of peace, to mutual security, to NATO, to the information programs, to the innumerable aid programs, the Middle East resolution, and even to the atomic-energy agency statute. * * * Was not the grim specter raised in justification of them all? * * * Indeed, has not that motivation, the motivation of fear, almost invariably * * * been made to swamp virtually every other consideration?"

Stop the giveaway: "The time has come, it seems to me, to establish a very close link between the destination of aid funds and the willingness of the recipients to contribute."

Get out of the arms mart: "The more arms are supplied to that Middle East region, the more instability is induced. * * * That is the formula the Soviet Union used. * * * I should very much like to see this country * * * alter it."

There is nothing whatever in the Mansfield address that a Democratic Senator should not say, and very little with which most Americans would not agree. But the idea that this was a nonpartisan speech, accentuating the positive and offering only advice and consent to the White House is poppycock.

MIKE MANSFIELD was not merely making a speech. He was, I think, serving notice that he and the Senate—and particularly the Democratic Members of the Senate—intended to make some foreign policies of their own.

Congressional Support of the President

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Friday, July 26, 1957

Mr. CURTIS. Mr. President, I ask unanimous consent, on behalf of the Senator from Kansas [Mr. SCHOEPPEL], to have printed in the RECORD a statement prepared by him, together with certain correspondence, on the subject of congressional support of the President.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR SCHOEPPEL

Mr. Thomas N. Schroth, executive editor of the Congressional Quarterly, wrote a letter to me on June 14 and sent a copy to every Member of the Congress. It refers to my remarks delivered on the floor of the United States Senate on June 13, 1957. These appear on pages 8046 through 8048 of the CONGRESSIONAL RECORD of that date.

My statement was prompted by a letter addressed to me by Mr. Schroth on May 14, 1957. I inserted it in the CONGRESSIONAL RECORD as a part of my remarks. Immediately after I left the Senate floor, I wrote to Mr. Schroth as follows:

JUNE 13, 1957.

Mr. THOMAS N. SCHROTH,
Executive Editor, Congressional Quarterly,
Washington, D. C.

DEAR MR. SCHROTH: On May 14, you sent me an advance copy of the study you prepared on the first interim measure of the Presidential support done by Congressional Quarterly for the sessions up to May 12.

I have examined this study with a great deal of care and I expressed my views regarding it on the floor of the United States Senate today.

Representative CRAMER, First District of Florida, on Tuesday, June 11, made a very penetrating analysis of your study which appears in the CONGRESSIONAL RECORD on page 7836. I am in complete accord with his views. Attached are copies of his statement as well as my remarks.

The Nation's press apparently relies on your statistical work for their appraisal of congressional activities involving support for President Eisenhower's program. This imposes a great responsibility.

In view of the deficiencies which Representative CRAMER and I have found in your recent study, I feel that the press is entitled to some explanation from you as to why you continue to publish material which suggests sweeping conclusions from meager and incomplete data.

I will await your comments with interest.

Sincerely,

ANDREW F. SCHOEPPEL.

Mr. Schroth's letter of June 14 was written before he received my letter of June 13. On June 18 I received a further communication from him, including a copy of his June 14 letter which had been sent to every Member of the Congress. So that all the Members of the Congress may be familiar with this entire correspondence, I am placing his letter of June 18 in the CONGRESSIONAL RECORD at this point:

CONGRESSIONAL QUARTERLY
NEWS FEATURES,
Washington, D. C., June 18, 1957.

Hon. ANDREW F. SCHOEPPEL,
Senate Office Building,
Washington, D. C.

DEAR SENATOR SCHOEPPEL: This material has been sent to your colleagues in the Senate and House.

Thank you for your letter of June 13, which I believe crossed my letter to you of June 14.

Sincerely yours,

THOMAS N. SCHROTH,
Executive Editor.

On June 20 I acknowledged his letter with the following communication:

JUNE 20, 1957.

Mr. THOMAS N. SCHROTH,
Executive Editor, Congressional Quarterly, Washington, D. C.

DEAR MR. SCHROTH: Thank you for your letter of June 18 which advises me that your letter of June 13 crossed my letter of June 14.

Your letter of June 14, which you sent to every Member of the Congress, obviously is not responsive to my letter of June 13.

I will await with interest your comments on the specific issues which I raised in my statement on the Senate floor as well as the statements made by Representative CRAMER which appeared in the CONGRESSIONAL RECORD on June 11.

With best wishes, I am,
Sincerely,

ANDREW F. SCHOEPPEL.

Mr. Schroth replied to my letter of June 20, as follows:

CONGRESSIONAL QUARTERLY
NEWS FEATURES,
Washington, D. C., June 27, 1957.

Hon. ANDREW F. SCHOEPPEL,
Senate Office Building,
Washington, D. C.

DEAR SENATOR SCHOEPPEL: In answer to your letter of June 20, may I take the liberty of enclosing a copy of a letter which I wrote to Mr. CURTIS of Missouri? This takes up most of the points raised by you and Mr. CRAMER.

I assume you saw the speech on the subject delivered by Mr. SIKES, of Florida (June 19 CONGRESSIONAL RECORD, p. A4857).

Sincerely yours,

THOMAS N. SCHROTH,
Executive Editor.

This letter fails to answer the points I raised in my letter of June 20.

Congressman CRAMER and I both correctly identified the rollcalls used in the Congressional Quarterly's so-called first interim measure of Presidential support. On June 26 Congressman CURTIS, of Missouri, corrected certain inaccuracies in his remarks of May 23, and inserted the letter he had received from Mr. Schroth in the CONGRESSIONAL RECORD. Mr. Schroth refers to his correspondence with Congressman CURTIS, of Missouri, as he apparently does not challenge any statement of fact contained in either my remarks or those of Congressman CRAMER.

Mr. Schroth, by implication in his letter of June 27, endorses the statements of Congressman SIKES, of Florida. The CONGRESSIONAL RECORD of June 19, on page A4858, refers to my remarks on the Senate floor on July 27, 1956. The Congressman from New York, Mr. DEROUNIAN, said:

"In the July 27 issue of the RECORD last year, on page 13754, in the remarks of Senator SCHOEPPEL, he introduced a letter from MARGARET CHASE SMITH, United States Senator from Maine, in which she is bemoaning the fact that the Congressional Quarterly has been unfair to her in its appraisal of her votes with the President. She says this: 'I was absent on 9 of the votes this year in the Congressional Quarterly analysis—and all 9 were marked as being against the President in spite of the manner in which I was announced.'"

The Congressman from Florida, Mr. SIKES, then said:

"Had the gentlelady filled out the questionnaire submitted to her by the Congressional Quarterly, she would have been recorded for or against on each of the votes in question."

Mr. Schroth knows that the Congresisonal Quarterly support scores do not reflect pairs or announced positions. They certainly are not based on replies to questionnaires, yet by referring to Congressman SIKES' statement, Mr. Schroth again attempts to confuse the issue.

I shall now comment on his letter of June 14. Mr. Schroth accuses me of "inaccurate and unfair attacks on Congressional Quarterly;" yet his letter of June 14 does not cite a single misstatement in my remarks. I refer my colleagues to the complete analysis of the Congressional Quarterly's statistical procedure which appeared in the CONGRESSIONAL RECORD of July 27, 1956, as well as to my statement of June 13, 1957.

Mr. Schroth states: "I believe that, if you knew of the false basis of the research material you have been handed, purporting to analyze Congressional Quarterly studies, you would not use that material."

On July 16, 1956, I read Raymond Moley's analysis of the Congressional Quarterly which appeared in Newsweek magazine. I believe that comments by a distinguished and experienced political reporter with the reputation enjoyed by Raymond Moley should be brought to the attention of the readers of the CONGRESSIONAL RECORD. I made certain comments referring to his column and included it in my remarks in the CONGRESSIONAL RECORD of July 16, 1956.

On July 17, 1956, I received a letter from Mr. Schroth in which he raised a number of points with respect to Congressional Quarterly procedures. I then undertook my own complete study of the Congressional Quarterly, in order to ascertain the true facts for myself. I have subscribed to the Congressional Quarterly for many years and still do. I had no difficulty in finding ample supporting data for Mr. Moley's criticisms of Congressional Quarterly's presentation of statistics in the material on file in my own office.

As a result of my own study, I cited numerous examples to show the consistent bias of the Congressional Quarterly in my remarks on the floor of the United States Senate on July 27, 1956.

Mr. Schroth, in his letter to me written a year ago and again in his letter of June 14, 1957, cites the number of newspapers who use the Congressional Quarterly. He has recently written three articles which appeared in the Christian Science Monitor. They describe the activities of the Congressional Quarterly.

While these articles were supposed to be a feature story in a distinguished newspaper, they were actually publicity material prepared by the Congressional Quarterly. This is shown by the fact that in the July 5 story, Mr. Schroth refers to a Congressional Quarterly feature as follows:

"Scheduled for publication early in May is the complete, official vote for President, Senator, and Representative in each of the Nation's 435 congressional districts."

Mr. Schroth could have at least changed the tense to indicate that this material had been published 2 months ago.

In the July 3 Christian Science Monitor article, Mr. Schroth said:

"The subscription list includes the White House, Congressmen from both parties and all segments of the parties, the Republican and Democratic National Committees, and the congressional campaign committees of both parties.

"Organizations subscribing to all or part of the services range from the National Association of Manufacturers to the AFL–CIO and include the National Association for Independent Business, the Cooperative League of the United States, Americans for Democratic Action, For America, free trade as well as high tariff advocates, and scores of other groups whose selective interests are dependent on the actions of Congress.

"Newspapers include the Christian Science Monitor, the Boston Herald and Traveler, the Boston Globe, all New York City newspapers, the two major Washington newspapers, and other papers in large and small cities all over the country.

"Magazine subscribers include all three major news weeklies and journals of opinion from both the left and right. Columnists who use the services include Roscoe Drummond, Walter Lippmann, David Lawrence, Arthur Krock, and Sylvia Porter.

"Such a variety of clients attests not only to the success of the concept behind CQ and Err, but also to the nonpartisanship and usefulness of the service."

As I have already indicated, my own office is a subscriber to the Congressional Quarterly. I am sure that many subscribers purchase it because, as Mr. Schroth himself said in his article of July 3:

"A graphic and significant example of CQ's service is the weekly publishing of every rollcall vote taken in the House and Senate for that week. Before 1945, when CQ was formed, it was virtually impossible for a reporter, an editor, or any interested person to put his hands readily on such a simple but important thing as a complete voting record of a Member of Congress, the vote of all Members on a particular item of legislation, or an individual's vote on a specific item."

I have never questioned its value as a ready source of information on the activities of Congress. I question how it interprets the statistical data for its features which appear in the press. Mr. Schroth's article in the Christian Science Monitor for July 5 says: "Newspaper clients also receive three news stories a week from CQ." These stories are usually printed with a CQ credit line and usually are not edited or changed by the press of the country. It is these stories which present an opportunity for bias and misinterpretation of data.

In his letter of June 14, 1957, Mr. Schroth states:

"Certainly our presidential support story of May 12, which I sent to you, did not flatter the Republicans. But it was prepared with the same objective disinterest in the results that our stories in past years have featured. It was simply based on the votes of the Members and not on any political viewpoint."

I maintain that no organization primarily concerned with objective disinterested analysis would attempt to measure the support accorded President Eisenhower's legislative program by a study of nine Senate rollcalls.

Frankly, I was shocked that Mr. Schroth, who professes such disinterest, would suggest that I should select figures on the basis of their political utility rather than on the basis of their objectivity. Mr. Schroth's letter said:

"Frankly, Senator, I am at a loss to understand why you accept figures which put the Republican record in a worse light than that revealed by Congressional Quarterly figures."

Again, he said:

"I do not understand why you accept an analysis of presidential support which worsens the record of the Republicans in preference to the Congressional Quarterly analysis which presents the objective facts."

Although, as chairman of the Senate Republican Campaign Committee, I have a strong desire to present the Republican record in the best possible light, I can assure my colleagues and Mr. Schroth that I will never present statistics which I know to be unfair because they support a political position. When I use statistics, I am interested in figures which reveal the truth. That is why I have challenged the objectivity of the Congressional Quarterly. Many editors who have used these support scores believed that they were based on sound statistical procedures. So did I, until Mr. Moley's statement forced me to make my own analysis. The Congressional Quarterly makes broad generalizations which are not supported by the data used in their so-called scores.

Mr. Schroth, after saying that the study of May 12, "was prepared with the same objective disinterest in the results that our stories in past years have featured," then admits that:

"The Congressional Quarterly interim story on Presidential support for the current session, issued as of May 12, was, as you say, timed 'to reach the press when President Eisenhower made his first television address.' We consider that good journalism and the scores of newspapers of all political points of view which used the story apparently agreed with us."

These statements are completely contradictory.

An objective analyst would have foregone the opportunity for sensationalism which, contrary to Mr. Schroth, is not good journalism, when he knew that there had been an insufficient number of rollcalls upon which to fairly appraise congressional support of President Eisenhower's program. When the Congressional Quarterly produces a support score based on a mixture of a few House and Senate rollcalls, it is engaging in sensationalism, and not in intensive coverage of Congress. There were only nine Senate rollcalls included in the first interim Congressional Quarterly rating of support for the President's legislative program.

It is obviously unfair to measure support in the other body by counting 14 rollcalls on a single appropriation bill. In fact, a member who happened to be absent on the one day when the House considered this bill, would automatically have his support score on 22 House votes reduced by 64 percent. According to the Congressional Quarterly standard, if he had voted for what they consider to be the President's program on every other rollcall, because of his absence on a single day, he could not have attained a support score higher than 36 percent. Likewise, a Member who voted for these particular amendments but who was opposed to the President's Mideast resolution, the corn bill, and all of the other major items, would end up with a support score of 64 percent. This is, of course, utter nonsense.

On July 12, 1957, the Congressional Quarterly's weekly report presented the second interim support scores. Once again House and Senate votes are lumped together, producing a headline that President Eisenhower received 65 percent interim support. There are only 34 House and 32 Senate votes included in this ranking. The 15 House votes on minor amendments to 2 appropriation bills still account for 44 percent of the total House score. The unfairness of including so many minor votes on two appropriation bills when there are so few other votes is exemplified in the second Congressional Quarterly support score.

The distinguished minority leader in the other body is shown as having supported President Eisenhower's program 62 percent of the time. This low support score was produced by 10 votes involving amendments to the 1 appropriation bill I have discussed before. They were, in fact, the only opposition votes recorded. A single day's absence when 3 rollcalls were taken on 1 issue contributed another 9 percent to the low support score. On every other rollcall the Congressional Quarterly shows the minority leader in the other body as having voted in support of President Eisenhower's program. It is a disservice to Congressional Quarterly subscribers who rely on it as an impartial statistical agency to report facts in this manner.

The Congressional Quarterly refers to itself as "the authoritative reference on Congress." Mr. Schroth's letter to me of June 14 shows that they cannot even correctly report the facts on a simply statistical table.

In my remarks on June 13, I included a study which I had made of the support accorded President Eisenhower's program during the 83d and 84th Congresses. I again insert this table at this point in my statement:

All Eisenhower rollcalls

Congress	Number of votes	Eisenhower position				Opposed to Eisenhower position			
		Republicans		Democrats		Democrats		Republicans	
		Votes cast	Percent	Votes cast	Percent	Votes cast	Percent	Votes cast	Percent
83d	220	7,525	64.7	4,114	35.3	4,701	74.3	1,630	25.7
84th	203	6,682	59.4	4,575	40.6	4,053	70.3	1,715	29.7
Total	423	14,207	62.1	8,689	37.9	8,754	72.4	3,345	27.6

An examination of this table shows that in the 83d Congress there were 7,525 votes cast by the Republicans for President Eisenhower's program. The Democrats cast 4,114 votes. In other words, there were 11,639 votes cast by members of the 2 parties in support of the President's program.

The Republicans were responsible for 64.7 percent of these pro-Eisenhower votes, the Democrats for 35.3 percent. The 2 percentage figures in my table total 100 percent of the pro-Eisenhower votes. My data was not arranged to show the percentage of support or opposition among Republicans and among Democrats. Such support figures could, however, be derived from my table, as it contained the actual votes cast for and against the program in both Congresses by the members of the two parties. In spite of the fact that my table was clearly labeled, Mr. Schroth's letter contains the following statement:

"Here are the facts: Congressional Quarterly's summary scores for the 83d Congress:

Republicans:
Senate: *Percent*
Support 72
Opposition 17
Democrats:
Senate: *Percent*
Support 41
Opposition 43

"Congressional Quarterly's summary scores for the 84th Congress:

Republicans:
Senate: *Percent*
Support 72
Opposition 16
Democrats:
Senate: *Percent*
Support 44
Opposition 38

"Not only does this show exactly the opposite of what you charge—the Congressional Quarterly figures show clearly that the Republicans gave greater support than the Democrats to the Presidents' program during the 83d and 84th Congresses—but our score of Republican support in both Congresses is greater than your scores of 64.7 percent for the 83d Congress and 59.4 percent for the 84th Congress."

No qualified analyst could possibly confuse the figures of 64.7 percent and 59.4 percent which appeared in my table as a measure of Republican support contrasted with Republican opposition.

In order to set the record straight, I am including at this point a second table, which includes the identical votes used in the table I presented on June 13, but arranged to show support and opposition scores:

All Eisenhower rollcalls

Congress	Number of rollcalls	Republican votes				Democrat votes			
		Support		Opposition		Support		Opposition	
		Number	Percent	Number	Percent	Number	Percent	Number	Percent
83d	220	7,525	82	1,630	18	4,114	47	4,701	53
84th	203	6,682	80	1,715	20	4,575	53	4,053	47
Total	423	14,207	81	3,345	19	8,689	50	8,754	50

An inspection of this table immediately shows that in the 83d Congress, the Republicans had a support score of 82 percent as contrasted with 72 percent shown by the Congressional Quarterly. In the 84th Congress, my table shows a support score of 80 percent as contrasted with 72 percent, shown by the Congressional Quarterly. What is even more significant, my table for the 83d Congress shows a Democratic opposition score of 53 percent, in contrast with 43 percent shown by the Congressional Quarterly. In the 84th Congress, my table shows an opposition score for the Democrats of 47 percent, as contrasted with 38 percent shown by the Congressional Quarterly. My Republican support and Democratic opposition scores are higher than those of the Congressional Quarterly.

So, once again, the Congressional Quarterly's statistics are biased against the Republicans. In spite of the fact that my tables were clearly labeled, Mr. Schroth attempts to mislead my colleagues into believing that he has shown the Republicans in a better light than I.

The differences between my table and the statements by the Congressional Quarterly lie in the fact that I am willing to submit the entire record, including all of the details, to public scrutiny. I do not expect anyone to accept summary figures because I say they are correct.

On August 17, 1956, I included in the Appendix of the CONGRESSIONAL RECORD, on page A6537, a tabulation of the votes cast by the Members of the two parties in the Senate for the entire 83d and 84th Congresses. Included

with the summary tables were the worksheets which accounted for every rollcall during these two Congresses. The Eisenhower position was indicated in each case. The votes cast on each rollcall were also shown. No one has challenged the accuracy of these figures.

Mr. Schroth, in his letter of June 14, said:

"In the Congressional Quarterly story, you had a record of support for the President's program of 69 percent. Taking your own statistics, which you say are much more reliable than ours, you have a support score of 67.5 percent."

I can assure Mr. Schroth that these tables were compiled without any reference to my own voting record. I was concerned with presenting the facts, not my personal feelings. I endeavored to determine to the best of my ability the Eisenhower position based on statements in hearings and on the floor of the United States Senate on each rollcall. I then tabulated the votes as they were compiled by the Secretary of the Senate. My own score was completely immaterial. Facts are facts.

In my remarks on June 13, I said that the methods of the Congressional Quarterly were flexible. I repeat this accusation. When the vote on the corn bill is included in the President's program in the other body, but not in the Senate, this is a flexible standard. I repeat that charge.

Mr. Schroth included with his letter, Ground Rules for CQ Presidential Support-Opposition. In referring to appropriations, it says:

"Appropriations: Generally, rollcalls on passage of appropriations bills are not included in this tabulation, since it is rarely possible to determine the President's position on the overall revision Congress almost invariably makes in the sums allowed. An exception to this rule is the foreign-aid appropriation, since the program, although recurring, is not permanent. Votes to cut or increase specific funds requested in the President's budget also are included. For example, in 1956 the Senate's vote to increase Air Force funds by $800 million was a clear challenge to the President's views on national defense (amendment increasing appropriation adopted, 48–40; Democrats, 43–3; Republicans, 5–37)."

Yet, in spite of these ground rules, 15 of the 34 House votes upon which the second interim Presidential support scores were based are rollcalls on amendments to appropriation bills. The bills as reported were quite different from the President's original budget request.

During the discussion of the Congressional Quarterly procedures in the other body, references were made to a statement prepared by the Senate Republican policy committee which referred to the Congressional Quarterly. In my remarks of July 27, 1956, I commented on Mr. Schroth's reference to a Congressional Quarterly statement by the Senate Republican policy committee in its memorandum No. 28 of July 21, 1955. So that the Members of the other body may be acquainted with all the facts on this subject, I ask unanimous consent to include my reference to this memorandum from my remarks of July 27, 1956, at this point in the CONGRESSIONAL RECORD. I said:

"Mr. Schroth next cited alleged Republican examples of use of their material to prove that the Republicans believed the Congressional Quarterly to be fair. He referred to the Senate Republican policy committee memo No. 28, of July 21, 1955.

"What Mr. Schroth is pointing to is a line on the second page of the memo which said: 'Survey shows Democrats lagging on President's program.'

"But Mr. Schroth conveniently did not cite the next two pages of the memo, which sharply criticized the statistical techniques employed by the Congressional Quarterly. I want to read pages 3 and 4 of this Senate Republican policy committee memo. It begins:

" 'WHO PROVIDES THE WINNING MARGINS?

" 'Congressional Quarterly makes some point that Democrats supplied the winning margin in 29 of the President's 33 victories in the Senate and all 18 of his 18 victories in the House. (CQ's test is whether Republican support alone was adequate to insure the President's victory in each case.)

" 'HOW VALID IS A COMPUTATION LIKE THIS?

" '1. With more Democrats than Republicans in Congress, some Democratic votes are needed to pass almost all bills (except in rare cases when unpaired absences may give Republicans a temporary majority—hardly possible on any major party issue). Why should these necessary Democratic voted be called a winning margin—implying Democratic support of the President and Republican opposition?

" '2. In the Senate many matters require two-thirds votes (treaties, vetoes). Both Democratic and Republican votes are needed to make up this two-thirds. Why should the Democratic votes be considered the winning margin? If enough Republicans had not voted with the President, the Democrats alone could not have carried the issue. Why not credit those Republicans with the winning margin?

" '3. Winning-margin statistics are loaded when there are 2, 3, or more votes on amendments to a single measure (as was the case on the Formosa resolution, the $20 tax cut, trade-agreements extension, and the mutual-security measure). Multiple votes like these give a false impression of the number of winning margins. The picture is further confused when some votes are for an amendment and against the bill or vice versa.

" '4. The absurdity of claims to winning margins is shown by the fact that 90 percent of the Democrats might vote against the President's proposal, but if 10 percent help 100 percent of the Republicans to pass the bill, this 10 percent would be considered a winning margin—that President Eisenhower owes all to the Democrats. For example, suppose 78 Members of the Senate are present and voting (40 Democrats and 38 Republicans) as often happens, Republicans alone, even if 100 percent voted in favor of the President's measure (indicating solid party support), could not enact it. The Democratic votes alone could do it if they voted solidly for the bill which would never be the case if Republicans were solidly lined up for it, too, as on a party issue. If 36 (or 90 percent) of the Democrats opposed the President and 4 joined with the 38 (100 percent) Republicans, the measure would pass 42 to 36, and it would be said that the Democrats furnished the winning margin, even though 90 percent of them opposed the President.

" 'Would it not be just as correct to say that in the same vote 4 Republicans who might have opposed the President, but did not do so, supplied the winning margin? Isn't the real interpretation of situations like this that it was not the picayune Democratic margin that supplied the victory, but the 100-percent solid Republican support?

" '5. These so-called winning margins merely reflect the fact that few measures in Congress are ever passed without the crossing of party lines. Does it give a true picture of party performance to use this routine practice to give winning-margin credits to either Republicans or Democrats? President Truman evidently did not think so when he lambasted the Republican 80th Congress which put the winning margin on many of his measures (and supplied the committee leadership and support of his measures as well).

" 'If tests of party support of the President are to be run, let's not run them ragged, but base them on fairer, more reliable yardsticks of party performance.' "

My criticism of Congressional Quarterly's procedures has produced some improvement in their methods. Weekly report No. 28, dated July 12, in presenting Eisenhower victories and defeats on pages 831 and 832 does not attribute winning margins to either Republicans or Democrats. This practice was one of the principal objections voiced by both Ray Moley and myself against the Congressional Quarterly last year.

I can readily understand why many of my colleagues as well as members of the press and political leaders have used Congressional Quarterly figures. The Congressional Quarterly, because of its convenience and the wealth of information which it contains, has built a position with the press of the Nation. Mr. Schroth in his "Christian Science Monitor" article of July 3 said:

"Congressional Quarterly and Editorial Research Reports together serve nearly 400 United States newspapers with a total circulation of more than 30 million. The two services merged last July."

This dependence on the Congressional Quarterly by the Nation's press imposes a tremendous responsibility on the editors of the Congressional Quarterly. In my opinion, they have not discharged it in a nonpartisan manner.

As my remarks amply demonstrate, there has been a consistent statistical bias against the Republican Party in Congressional Quarterly support scores, whenever such a procedure could be followed without obvious detection. This could only come to light by a thorough and detailed analysis, such as I have made.

I do not blame anyone for quoting Congressional Quarterly support figures. They have been used so often that many of my colleagues are justified in believing them to be objective, unbiased statistical data. I hope that in view of the facts that have been developed, all readers of the Congressional Quarterly will be cautious in quoting from its statistical data in the future.

Youth Festival of the International Union of Students

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, July 26, 1957

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared regarding the biennial youth festival of the International Union of Students, being held at the present time in Moscow.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

For several months now a small furor has been raging in certain circles concerning the biennial youth festival of the International Union of Students, being held at the present time in Moscow. National magazines have commented about the fact that the United States National Student Association has refused to send an official American delegation to the festival, and as recently as July 15, the Washington Post took the State Department to task editorially for discouring the few students who did make the trip on their own.

The Associated Press reported the departure of these students, and we shall undoubtedly be hearing more of the matter when they return. We have heard so much about the State Department action with regard to newsmen in China that some might consider this a refreshingly different issue to get excited about.

But before we become too excited about protests against the State Department, some of the facts of the situation should be made clear. The case that is made by those who would have American students attend is based on the assumption that a large American delegation might help to increase understanding between the two halves of the world, and that such understanding on the student level would lead to greater hopes for peace in the future, when these same students become the world's leaders.

But it is naive to suppose that the Russians, who will be putting on what the London Sunday Times calls the most spectacular of the 6 youth festivals sponsored by the 2 Communist-front organizations, the World Federation of Democratic Youth and the International Union of Students, would allow such a spectacle to produce any reactions other than those which the Kremlin expects. If it were possible that a large American delegation could have an effect upon Communist youth, then Moscow would not have sent literature advertising this festival to student-body presidents all over the country.

Those who have criticized the State Department attitude should realize that it is the same attitude that the most representative of American student groups, the United States National Student Association, has independently taken. The students in this organization have long understood the communistic purposes of large numbers in the International Union of Students, have continually refused to join it or attend its meetings, and have spearheaded efforts to expose the group for what it is. American students have aided in informing students of other countries that the IUS is not a group of representative scholars, but rather a tool for Communist propaganda. For Americans to officially attend a meeting of such an organization could be to repudiate the basic assumption that any student group should reflect the ideas of the students who compose it rather than of the government of the country in which it exists. American students, by their presence, might indicate to the rest of the world an acquiescence to past and present IUS policy.

The Americans who did attend will return shortly and bring with them tales of their experience. But it is to be hoped that in the future the attitude of American student leaders will prevail—an attitude that favors true cultural exchange between students, but on students' terms, and not in an atmosphere wherein everything has been meticulously planned by a government that for a few days will be carefully on its best behavior in order to impress visitors.

Hungarian students who have escaped to this country since the recent Hungarian uprising have told officers of the United States National Student Association that at the youth festival held in Budapest in 1949 those American students who were present were housed in special housing units, transported on special trains, and restricted in almost all of their movements. The only Hungarian students who were allowed to speak to Americans were those who had been previously cleared and approved by a Hungarian youth group. Americans were not allowed to speak to any Hungarian citizens or to visit Budapest unless they were accompanied by a specially appointed guide. Obviously, there was no contact that would be of benefit either to the Americans or the Hungarians involved.

River Basin Planning in Texas

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, July 26, 1957

Mr. JOHNSON of Texas. Mr. President, people who live in an area that has been subjected to heavy damage from uncontrolled floodwaters have a keen awareness of the need for basinwide planning to develop our water resources.

This awareness is demonstrated clearly in a recent editorial published in the Palestine (Tex.) Herald-Press, a newspaper based on an original publication which was established more than a century ago.

I ask unanimous consent that this editorial from the Palestine Herald-Press be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RIVER BASIN PLANNING

Like many other men in national politics, Senator LYNDON JOHNSON, of Texas, turns out a newsletter in which he explains his opinions on legislative matters.

The other day Senator JOHNSON mailed a newsletter in which he discussed the matter of water conservation in Texas.

"I know of nothing more basically important to Texas," he said, proposing surveys of all river basins in Texas, looking ahead to full basin development of the streams of the State.

"Recurrent floods are an economic drain that we cannot afford in Texas," he said, adding "the extent of our controls has been limited."

Then: "One fundamental reason is that a basinwide plan of improvement has not been completed on any Texas river."

All of this is true. This year's floods on Texas rivers caused millions of dollars worth of direct damages, and the loss figure runs into unknown amounts when certain intangibles are considered. For example, on the Trinity River here large numbers of livestock were drowned, and their value was part of the direct loss to this spring's record flood. But the same man whose livestock were drowned may have suffered still more by the fact that for months he was unable to use the land usually devoted to pasturing his stock.

And flood control is still only one phase of the problem.

Texas has an annual summertime water shortage that inhibits the economic growth of the State. This is a curable ailment—curable by dams that reduce floods while they store water.

As Senator JOHNSON of Texas says, the answer to the problem lies in basinwide planning.

Such planning now is being undertake on the Trinity River, probaly the most important undeveloped resource in Texas.

The Trinity carries enough water to take care of the needs of every town and city along its course; yet the Trinity's water now flows from the few lakes at its headwaters, unused, into the Gulf.

The Trinity offers Texas its only inland barge canal. This feasible project has been discussed for decades; yet this economic opportunity is still unrealized.

The Trinity floods lowlands with appalling regularity, preventing the economic use of millions of acres of the finest type of soil.

With proper planning the Trinity River can be converted from a damaging stream into a growth-sponsoring economic windfall. Such planning is being undertaken now, by the Trinity River Authority and by its unofficial counterpart, the Trinity Improvement Association.

These organizations are doing what they can, but they can't do it all. The Federal Government, in effect, has a prior claim on the development of the Trinity, for the Government many years ago surveyed the river regarding possible navigation.

The Trinity, its potential and its neglect, certainly must have been in Senator JOHNSON's mind when he spoke of basinwide surveys. We hope it was, and that the Trinity River, at long last, may be coming into its own.

The Professional Organization: Antidote to Bureaucracy

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, July 26, 1957

Mr. FULBRIGHT. Mr. President, Mr. Knox Banner, executive director of the Housing Authority of the City of Little Rock, Ark., and president of the National Association of Housing and Redevelopment Officials, delivered an address on July 9, 1957, on the subject of bureaucracy in Federal and local housing agencies.

His address is objective and discerning, and worthy of the attention of all persons interested in public housing. I would particularly like to call it to the attention of the Housing and Home Finance Agency and the Public Housing Administration.

I ask unanimous consent that the address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PROFESSIONAL ORGANIZATION: ANTIDOTE TO BUREAUCRACY

(Address delivered at the annual banquet, Pacific Northwest Regional Council, National Association of Housing and Redevelopment Officials, July 9, 1957, by Knox Banner, president, National Association of Housing and Redevelopment Officials)

Bureaucracy is a blessing and a curse.

This fact concerns you, because your life is touched every day by bureaucracy, and your work is directly and constantly affected by bureaucracy.

Bureaucracy is a blessing; because without it, no large organization, public or private, could hope to achieve a sustained effort. Bureaucracy is a curse, because the very characteristics which are necessary to make it work are also an invitation to many evils.

Bureaucracy has been variously described and defined. One definition says that bureaucracy is a general type of social organization, governmental or nongovernmental, characterized by a hierarchic organization, based on a systematic division of labor, im-

personality, devotion to routine, a strong sense of status and consequent respect for authority, and continuous service and low turnover among the members of the staff.

This definition contains the basic elements which can make bureaucracy a curse.

Before I proceed, let me emphasize again that bureaucracy does and must exist in every organization, private or public, employing more than a handful of persons. It need not be bad, but it generally is. While I could devote my entire talk to bureaucracy within local housing authorities, I shall direct my remarks primarily to familiar examples within the Federal-local relationships of the programs of low-rent housing and urban renewal. Also, let me suggest to you that my 17 years service with Federal agencies has qualified me to conclude that, as individuals, officials and employees of Federal agencies are honorable, intelligent, and sympathetic human beings. Within the framework of bureaucracy, their finest characteristics as individuals are often made subservient to certain fears, attitudes and tendencies.

And it is these which make bureaucracy a curse:

For instance, preoccupation with methods and procedures to the extent that the overall objective is lost sight of.

For instance, buckpassing and sympathetic impersonality.

"You can't do this because the auditors will take exception to it," or "I think it's a good idea, but I don't believe legal will approve," or "I thought it was all right, but the economist turned it down," or "It's a good idea, but 'they' won't approve it." Who "they" is I have never been quite sure of.

Before I proceed, let's take a look at a housing manager for a local housing authority who says to a tenant, "They said your rent would have to be $31." Who says local authorities don't have some of the bad elements of bureaucracy? Obviously, the manager should have participated or concurred in the rent computation and should have said, "We have figured your rent, and it is $31."

As I outline some more examples in the Federal-local relationship, let's not be too smug about our own operations at the local level. They can always be improved. I might say that in preparing this talk, I remembered the exhortation of St. Paul to examine Thyself.

To continue with the curse of bureaucracy:

For instance, a natural tendency to expand controls and functions, and, therefore personnel, sometimes referred to as empire building.

For instance, the tendency to meddle and interfere until a local problem becomes really acute, and then to say, "After all, this is a local program; you solve it."

As I use the term "meddle", I am well aware that definitions depend on one's point of view, and I am reminded of the story of the old lady on the front row in church. As the minister waxed eloquent in his condemnation of gambling and drinking, the little old lady endorsed his sermon in words that could be heard throughout the church. The minister then took up the sin of dancing and, again, received her strong vocal endorsement. As the sermon progressed, he eventually got down to condemning snuff-dipping. Whereupon, the little old lady promptly withdrew her support and said, "Now he's quit preaching and gone to meddling."

I think it might be well for us to remember this story whenever we are inclined to accuse the Federal agencies of meddling with our operations.

For instance, a complete lack of sympathetic understanding of political realities at the local level in a specific community.

I would like, at this point, to say that probably not one of us in this room can compare with Commissioner Slusser in political ability and understanding. His election as mayor of Akron for five terms is, I believe, an alltime record for that city and is a real achievement in any city. Also, I would like to pay tribute to Commissioner Slusser for his sincerity and interest and his vocal defense of the low-rent public housing program against those who attack us. Also, I am appreciative of the fact that in the session this afternoon, he, too, recognized some of the evils of bureaucracy which I have been discussing this evening. I would like to add that, regardless of Commissioner Slusser's political know-how, he does not understand the problems in my community as well as I do, or in your community as well as you do. However, the really significant thing is that it is not Commissioner Slusser who is failing to recognize these political realities at the local level, but is some subordinate in a regional office who has not had the local experience that Commissioner Slusser has had.

For instance, the fear of making mistakes. It has been demonstrated that it is better to accomplish nothing while issuing platitudes than to do a great deal and to make a few mistakes. Only in a time of crisis does the public become angry over inaction.

For instance, a tendency to encroach upon the responsibilities of local housing authorities. I recognize that this occurs most often when a local housing authority fails to assume its responsibilities fully. I also recognize that smaller local housing authorities need more guidance. On the other hand, there are still a number of decisions and responsibilities which should not be made for them by PHA, but should be reserved to the locality.

For instance, the lack of a sense of urgency. This urgency can be truly felt only at the local level, and it is impossible to convey it into the Federal bureaucracy. It has occurred to me that it might not be a bad idea to establish a quota for each regional office. Each pay period, so many sites would have to be approved, so many development programs processed and approved, so many annual contributions contracts executed, so many housing units put under construction. In any pay period in which the quota was not met, everyone in the regional office would suffer a corresponding reduction in pay. The same would hold true for the central office. When the quota was exceeded for the year, a bonus would be paid to all employees. This sound, business-like approach to bureaucracy might well develop a sense of urgency.

I am sure that you recognize that there is some humor in this suggestion of mine. However, I am quite willing to have applied to our local authority a quota and commission system. I think my interest and concern would help me make a reasonable quota, and I don't believe greed would cause us to overbuild or to undertake projects not worth while.

For instance, a tendency to transform suggestions and guides into regimentation. Here are some quite recent examples:

Low-rent-housing manual, section 405.1, May 1957, says in part: "Unless justification is submitted and a waiver obtained, the minimum gross rent for the average sized unit (two-bedroom) may not be established at an amount which is less than would be produced by applying whatever of the following two criteria results in the higher amount of rent." There follow two criteria which are good guides, but guides only.

The annual contributions contract says, "The PHA shall approve any schedule of rents which meet the requirements of the act and of this contract and which reasonably assure the financial solvency of the projects." The contract does not say that a local authority must set its minimum rent in an exact manner as prescribed by PHA.

Circular, May 3, 1957, admits that larger local authorities need to have special staff persons to work with problem families, but says we should ("To give some uniformity and to facilitate budget review") call them management aids or management assistants. When our problems vary so much from city to city, what is the advantage of uniform titles? Besides, the circular goes on to say that you must still operate within the previously established limitations on staffing. In other words, you need these employees, but you can't have them unless you fire the clerk-cashier who collects the rent.

Low rent housing manual, section 505.1, June 1957, specifies that the motor vehicle replacement cycle is 6 years or 60,000 miles, whichever occurs earlier. This is the minimum requirement to obtain PHA budget approval. You may be able, in your community, to achieve greater economy by trading every 3 years, but this would require administrative decision by PHA instead of a simple clerical review. And besides, if you did it, every other housing authority would want to do it whether it was more economical or not.

Incidentally, I believe that GSA, another Federal agency, has generally recommended trading cars every 3 years. GSA experience might better suggest when automotive equipment should be traded.

And now, for a few final examples of the curse of bureaucracy which concern me greatly:

For instance, fear of making decisions which might be wrong, or might become wrong through changing circumstances, and therefore, making as few decisions as possible.

For instance, fear of letting subordinates make decisions properly theirs or making them fearful to do so. "Let's call Washington."

For instance, fear of praising outstanding work of a housing authority for fear the housing authority might do something wrong someday.

For instance, fear of the auditors.

For instance, fear of the General Accounting Office.

Let me make it crystal clear that I respect the auditors, GAO representatives, and other Federal officials who visit us almost constantly. I also respect their right to examine our operations. I have no fear of them, because we adhere as closely as is humanly possible to the spirit and terms of our various contracts. Second, and especially important, we test our policies and major actions against an excellent sounding board—informed and objective local public opinion.

In spite of all these examples, I still contend that bureaucracy is, above all, a blessing.

It need not be a curse. It need not be a curse.

Remembering long-range objectives and maintaining a sense of direction are essentials to good bureaucracy.

Do you know in what direction you are heading? Do you know how important it is to know always in what direction you are heading?

A few weeks ago two young men left Fort Smith, Ark., on a motorcycle heading north into the Ozarks. The driver of the motorcycle was dressed in the usual uniform with a black leather jacket with an eagle on the back. His passenger riding behind had on a suit such as the one I am wearing. As they went higher into the hills and as it grew later in the day, the wind began to chill the passenger. They stopped the motorcycle and discussed what might be done to remedy the situation. It was finally decided that the man riding behind would take off his coat and reverse it, buttoning it in the back—like this. Whereupon, they proceeded on their way, with the passenger finding himself considerably more comfort-

able. A little later, the driver noticed that his cycle was accelerating up a grade without his giving it any more gas, and he sensed that something was wrong. He turned, and, sure enough, his passenger had disappeared. He wheeled his cycle back around, and there at the foot of the hill, he saw a crowd gathering at the crossroads. He raced back down the hill, wheeled to a stop, got off, and tried to push his way through the quickly gathering crowd. As he tried to push the natives aside, he asked one of them, "Is my friend all right? Is he going to live?" Whereupon, the native said, "Well, when we first come up to him, he seemed all right. He was sort of mumbling and seemed to make sense, but he ain't said a word since we turned his head back around."

I hope that each of you will always be headed in the right direction and that your friends will clearly recognize the way you are headed.

Now, what is the simple formula for lessening the curse of both local and Federal bureaucracy? First is membership and full participation in NAHRO.

I firmly believe that if all officials of bureaucracy, both Federal and local, belonged to NAHRO and participated fully, 90 percent of all Federal-local conflict would quickly disappear, without any sacrifice of principle and with far more productive results.

Second, and extremely important, is that our personal conduct—and here I refer primarily to the local officials—should and must be above reproach. Incidentally, a committee of NAHRO has just completed writing a code of ethics which will be presented to the membership at our national conference in October. Adoption of a code of ethics is not enough. Living up to the letter of such a code is not enough. Each of us must honestly and continuously strive to live up to the spirit of the high principles of such a code. To do so is an essential part of our professional organization. So this formula really boils down to full participation in NAHRO, balanced with proper performance of our local official duties.

I can think of no better recommendation for NAHRO than to say that NAHRO and NAHRO alone can serve to keep in proper view and in proper perspective the goals that we are seeking to achieve in the programs of low-rent public housing and slum clearance and urban renewal. I say this with a great deal of feeling, for these programs involve people. In the administration of these programs, however, there is a tendency for them to involve paper instead of people—letters, reports, development programs, brochures, memos, so that as planning and as operations progress, the people with whom we should be concerned tend to get lost under a snowstorm of paper—and it is only through NAHRO that we can endeavor to keep this paper where it belongs and in the amount it should be, so that we can see the people and recognize their needs. And in speaking of their needs, I am not simply referring to their need for better housing. I should like, if I may, to illustrate what I feel are their needs by telling you of a personal experience that occurred to me 9 years ago, involving 2 fine professional organizations.

I was living in Fort Worth, Tex. I was to attend a chapter meeting of the National Association of Housing Officials at 8 Monday evening. Dr. Porterfield, professor of sociology of Texas Christian University, was to speak on juvenile delinquency.

The week before, in the Public Housing Administration regional office where I then worked, I had been named as a member of a newly established training and personnel committee.

In Sunday's paper, I read of a dinner meeting to be held at 6 p. m., Monday, of the local National Office Management Association chapter. The program was to be a recorded talk by Dr. Earl Planty, director of personnel for Bauer and Black, now professor of management at the University of Illinois, on the subject of personnel needs and training.

I decided to attend both meetings.

I went from the office to the first meeting and enjoyed it very much. The most impressive thing to me was the fact that Dr. Planty emphasized repeatedly that salary and wages and working environment were not the main concern of workers. He said that they needed a sense of belonging, a sense of being liked and of liking, and public recognition and appreciation when deserved—a sense of belonging, a sense of being liked and of liking, and public recognition and appreciation when deserved.

I left this meeting and hurried to the NAHRO chapter meeting, some six blocks away—late as usual. I arrived to find Dr. Porterfield already talking on his subject of juvenile delinquency. As I came in at the back of the meeting room, I heard him say, "These children are not really bad; they are no different from other children except that they have no friends. What they need is a sense of belonging, a sense of being liked and liking, and public recognition, and appreciation when deserved."

I was impressed then, and I am now, with this universal need—the need that each and every one of use has to have a sense of belonging, a sense of being liked and liking, and public recognition and appreciation when deserved.

People who do not have these things are out of balance with society and are not happy. This is true whether we work for a local housing authority, a redevelopment agency, the Public Housing Administration, the Urban Renewal Administration, or live in a slum—and for all of us, wherever we may work, NAHRO can mean that we can do a more effective job more quickly in achieving the goal of a decent living environment for every American family.

The 10th Pennsylvania Volunteer Infantry

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Friday, July 26, 1957

Mr. MARTIN of Pennsylvania. Mr. President, 59 years ago, on July 31, 1898, the 10th Pennsylvania Volunteer Infantry, received its first test under enemy fire in the Philippines.

Fighting in a raging typhoon the Pennsylvania boys met and repulsed a superior force of Spanish regulars at Malate.

Each year that organization has held a reunion and this year will have its 58th annual reunion in Pittsburgh, August 3.

The 10th Pennsylvania Volunteers was the only eastern regiment to serve in the Philippines during the Spanish-American War and the Philippine Insurrection. It was the first organization under fire in the Philippines. The regiment originally had 921 officers and men, and there are 134 of these now living.

Mr. President, it should be remembered that every man who served in the Spanish-American War was a volunteer. It was the first war fought on foreign soil. The pay of the private was $13 a month, and it was paid in gold and silver.

The war cost less than $2 billion.

The soldier received no bonus, no adjusted compensation, no separation pay, and no vocational training at Government expense.

It was not until 20 years after the war that service pensions were provided for Spanish War veterans and no hospitalization was available until 24 years after the end of the war.

Mr. President, I ask unanimous consent that the roster of the living members of the 10th Pennsylvania Volunteers be printed in the Appendix of the RECORD.

There being no objection, the roster was ordered to be printed in the RECORD, as follows:

ROSTER OF THE 10TH PENNSYLVANIA VOLUNTEER INFANTRY, AS OF JULY 15, 1957—SERVED FROM APRIL 27, 1898, TO AUGUST 22, 1899, IN THE PHILIPPINES—58TH ANNUAL REUNION, AUGUST 3, 1957, PITTSBURGH, PA.

The box score as of July 15, 1957

	Living	Dead	AWOL	Total
Field and staff	1	21	0	22
Company A	16	94	1	111
Company B	9	101	1	111
Company C	20	92	0	112
Company D	22	88	3	113
Company E	13	100	1	114
Company H	16	94	1	111
Company I	13	100	0	113
Company K	24	89	1	114
Total	134	779	8	921

THE LIVING ROSTER

Veterans and date of birth

Regimental Noncommissioned Officer

Keffer, Prin. Mus. Frank M., 14437 Greenleaf Street, Sherman Oaks, Calif., January 10, 1875.

Safety on the Farm

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, July 26, 1957

Mr. JOHNSON of Texas. Mr. President, accidents on the farm are costly. Like most accidents, a large percentage of them could be prevented.

In Smith County, an important agricultural area in east Texas, 4–H Club boys and girls are taking a leading part in efforts to reduce farm accidents. Their work was described recently in an editorial in the Tyler Courier-Times-Telegraph.

I ask unanimous consent that this editorial from one of our most outstanding and forward-looking Texas newspapers be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SAFETY ON THE FARM

Safety makes sense.

This is good advice to anyone. And it is a fitting slogan indeed for National Farm Safety Week. This week, the 14th annual observance, is devoted to promoting practices that will reduce and eventually eliminate costly accidents on the farm.

Our Nation's farmers take quite a beating from accidents. On-the-farm accidents claim from 3,500 to 4,000 lives every year, National Safety Council figures show. That is more victims than any other one of our major industries.

In all, 12,000 to 15,000 persons who reside on farms lose their lives in accidents annually, including mishaps in the homes and on the highways.

One million or more people suffer injuries and accompanying disabilities annually on the farm.

What causes all these farm accidents?

Statistically, it breaks down this way:

Machinery 31.1 percent, drowning 12.9 percent, firearms 12.7 percent, falls 11 percent, animals 6.3 percent, burns 6.2 percent, blows 6 percent, electric current 3.2 percent, lightning 3.1 percent, and all others 7.5 percent.

Is the fact that machinery accounts for most farm deaths attributable to careless youths on tractors or other machines?

The answer is "No." Fifty-three percent of the deaths from farm machinery happen to persons more than 39 years of age; only 24 percent to persons under 20.

A safety expert at the University of Illinois says most accidents on the farm result from wrong attitudes toward safety by the farmers themselves. "Farmers must convince themselves that farming the right way is farming the safe, efficient way," says O. L. Hogsett of that university's college of agriculture.

Smith County Agent Ben Browning says many of the farm accidents in the east Texas area are attributable to fatigue. "Lots of our farmers stay on the job too long, and we get too tired to be alert," he says.

"In the old days, we had to stop to rest the horses or mules, and when we did we rested ourselves," Mr. Browning says. "Nowadays the tractor doesn't get tired and we sometimes don't realize how tired we are getting operating it."

He advises a midmorning and midafternoon break of several minutes for recuperation when operating a tractor.

Also, says the county agent, some pretty serious farm accidents occur when people take undue chances with livestock. "No large farm animal should be considered harmless," he said. "A person working around livestock should be in a position to protect himself at all times."

There are some 88,000 volunteers in local communities all over the Nation donating their time to farm safety programs regularly.

In Smith County the lead is taken by the more than 1,100 boys and girls who are members of the 4–H Clubs of the county. They engage regularly in farm safety projects. And, at the Smith County 4–H Club Camp at Camp Tyler, Monday through August 2, the 4–H members will have a session in one phase or another of farm safety every day.

The United States Bureau of Agricultural Economics figures that farm accidents cost each farmer an average of 20 days working time and $40 in hospital and medical expenses each year.

As is the case with automobile accidents, there is very little reason farm accidents cannot be eliminated almost completely. All it takes is thought, determination and good practices. The saving could be immense.

German-American Trade

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, July 26, 1957

Mr. WILEY. Mr. President, the miracle of West German recovery is the miracle of the free enterprise system at work.

German trade with the world has been based upon German initiative, imagination, and resourcefulness.

German sales have increased because they have evaluated foreign markets, and then have gone to work to supply those markets with what was wanted.

I was interested to read in the July 24 Wisconsin State Journal an article concerning plans for further expansion of German-American trade. I sent to the desk the text of this article and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GERMANS SEEK TRADE IN UNITED STATES—OFFICIAL CITES GAP IN IMPORTS-EXPORTS

The German people must seek new ways of closing the import-export gap between West Germany and the United States, Madison industrialists were told Tuesday.

Baron Friedrich von Lupin, new German consul general in Chicago, told a Wisconsin State Chamber of Commerce group that the European nation is attempting to increase its export trade to the United States by studying the American selling systems and advertising programs, and by working out agreements with American manufacturers.

AN ORDER

"This was one of my orders when I came to your country in November," he said in an informal luncheon talk at the Simon House.

"In some ways such trade would be beneficial to both countries," he said, pointing out that Germany can and does produce some goods for American firms which sell them as American products at a good profit.

"The St. Lawrence seaway," he said, "may open up more trade areas beyond the New York barriers."

TRADE DEFICIT

Last year West Germany imported $1 billion worth of goods from the United States, including weapons, and exported only one-half of that amount.

"We must close the gap by other means than your tourist trades and armed forces salaries, which also bring money into our country," he said.

"Germany is well ahead of other European nations in reconstruction and industrial production," he added. "The new common-market agreement with neighboring countries will do much to avert friction among European countries as well as pressure from Russia," he said.

MEETS GOVERNOR

Baron von Lupin was to meet with Gov. Vernon Thomson at 3 p. m. today, to meet University of Wisconsin officials in the morning, and to address the Downtown Rotary Club at the Park Hotel this noon.

Attending the Wisconsin State Chamber of Commerce luncheon Tuesday were:

Erwin Boll, Chicago, public-relations officer for the German consulate; Frank A. Hausheer, general manager of the State chamber; Robert Neal Smith, public-relations officer for the State chamber; I. W. Lackore, executive director of the Madison Chamber of Commerce;

Bruno A. Stein, executive vice president, Marschall Dairy Laboratory; F. S. Brandenburg, president, Democrat Printing Co.;

Carl G. Mayer, vice president for advertising, Oscar Mayer and Co.; William C. Sachtjen, president, Madison City Council; William A. Lunger, president, Ohio Chemical and Surgical Equipment Co.;

John T. Lunenschloss, sales engineer, Madison-Kipp Corp.; Vern G. Zeller, vice president for manufacturing and international operations, Ray-O-Vac Co.; and John R. Wrage, assistant vice president and purchasing manager, Gisholt Machine Co.

Veterans' Insurance

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, July 26, 1957

Mr. YARBOROUGH. Mr. President, our country owes homage to no more deserving group of people than the American veterans. Among them, the membership of the Disabled American Veterans merit particular esteem, for they have sacrificed above and beyond the call of duty. In a recent State convention in my State of Texas, the Texas DAV, among other things, studied legislation applicable to American veterans, and they have submitted three resolutions which call attention to their desire for amending current laws pertaining to veterans.

These resolutions are thoughtful products of a great organization, whose interest in protecting the rights of their fellow men is both genuine and honorable. I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION REQUESTING LEGISLATION TO AMEND PUBLIC LAW NO. 881, 84TH CONGRESS

Whereas in the passage of Public Law 881, 84th Congress, a small group of cases, including one we know of in Texas, was deprived of the automatic-insurance coverage contained in prior laws, where death occurred within the 120-day period following discharge, and which 120-day period was the period that the veteran had been given in which to apply for insurance on a permanent basis as provided for by law; and

Whereas the United States Congress did indicate in many ways that it was their intention not to cancel out or deprive any veteran of benefits under the indemnity insurance law or the national life insurance law; and

Whereas the Veterans' Administration later recognized the inadvertent defect in the law and tried to notify those veterans who had already been discharged that they must apply for the new insurance prior to January 1, 1957, we feel that this created confusion after many of these veterans had been given forms, DD Form 1, January 1953, 214–1, in which it specifically states "Free indemnity coverage provided during active service expires 120 days after separation"; and

Whereas under the law prior to January 1, 1957, where death occurred during the 120-day grace period, death benefits were paid to the beneficiaries, and which right we believe would have been preserved had the Members of Congress known that there would be a small number of cases that would be penalized: Therefore, be it

Resolved, That we hereby go on record requesting amendatory legislation to Public Law 881, 84th Congress, to include a savings clause to cover those cases discharged prior to January 1, 1957, but in which death resulted after that date, but within the 120-day period following discharge; and be it further

Resolved, That this resolution be presented to the national convention of the Disabled American Veterans at Buffalo, N. Y., in August 1957, requesting its adoption, and that copies be forwarded to the Honorable OLIN TEAGUE, chairman, Veterans' Affairs Committee, United States House of Representatives, and to our two Senators from the State of Texas, the Honorable LYNDON B. JOHNSON and the Honorable RALPH YARBOROUGH.

The foregoing resolution unanimously adopted this 30th day of June 1957.

HARRY BURGMAN,
Commander, Disabled American Veterans, Department of Texas.
H. V. ROYSTON,
Adjutant.

RESOLUTION REQUESTING LEGISLATION TO AMEND PUBLIC LAW 880, 84TH CONGRESS, TO PROVIDE FOR FULL FAITH AND CREDIT FOR PHYSICAL AND MENTAL EXAMINATION REPORTS AND RATINGS OF TOTAL DISABILITY BASED THEREON WHEN RECEIVED BY THE SOCIAL SECURITY ADMINISTRATION

Whereas in the amendments to the Social Security Act as contained in Public Law 880, 84th Congress, there was created disability insurance benefits after the age of 50 years and before the age of 65, and many service-connected disabled veterans under the present plan whereby benefits received from any other agency of the United States and which are based in whole or in part on physical and mental impairment, are deducted from the benefits of disability insurance social security; and

Whereas many disabled veterans desire to apply under the law to freeze their wage credit so that the amount of their entitlement will not depreciate later when they are in a position to secure such benefits; and

Whereas under the present practice of the Social Security Administration, they require the disabled veteran to go out and employ 3 physicians to furnish 3 reports and to supply medical evidence as proof of his total disability notwithstanding the fact the Veterans' Administration has already examined the veteran and has rated him totally disabled; and

Whereas we believe that this presents a rather absurd situation, and puts the disabled veteran to additional expense unnecessarily; and

Whereas we believe that there is basic grounds in this situation to emulate the full faith-and-credit clause of the Federal Constitution of the United States under which one State is bound to accept the judicial and official acts of another State; and

Whereas we believe that the official reports of the Veterans' Administration as an arm of the United States Government should be sufficient, and should be recognized by the Social Security Administration for the purpose set out in the premises, and that the Social Security Administration which now receives these reports or can receive them on form OAD–826 when signed by the veteran, and we believe that such Veterans' Administration reports and determinations of total disability should be by law held to be sufficient for the purpose of Social Security Administration in order to avoid duplication and confusion: Therefore be it

Resolved, That the Disabled American Veterans, Department of Texas, hereby go on record requesting amendatory legislation to Public Law 880, 84th Congress, to include and provide statutory authority for extending full faith and credit to the reports of examinations and findings of total disability as rendered by the Veterans' Administration in any case where the Social Security Administration entertains an application from a disabled veteran for disability benefits after the age of 50 years and before the age of 65, or there is an application filed to "freeze" the wage credit; and be it further

Resolved, That the Disabled American Veterans, Department of Texas, be, and is hereby, instructed to send the required copies of this resolution to our national convention in Buffalo, N. Y., in August 1957, and separate additional copies be sent by him to the Honorable OLIN TEAGUE, chairman, Veterans' Affairs Committee, United States House of Representatives, and to the Honorable LYNDON B. JOHNSON, and the Honorable RALPH YARBOROUGH.

The foregoing resolution unanimously adopted this 30th day of June 1957.

HARRY BURGMAN,
Commander, Disabled American Veterans, Department of Texas.
H. V. ROYSTON,
Adjutant.

RESOLUTION REQUESTING LEGISLATION TO AMEND PUBLIC LAW NO. 880, 84TH CONGRESS, TO PROVIDE THAT SERVICE CONNECTED DISABILITY COMPENSATION OR RETIRED OFFICERS PAY FOR DISABILITY SHALL NOT BE DEDUCTED FROM PAYMENTS OF BENEFITS UNDER DISABILITY INSURANCE

Whereas the Congress of the United States in Public Law 880, 84th Congress, approved August 1, 1956, by amendments to the social-security laws created a disability insurance benefit after the age of 55 years and before the age of 65 years, and it was provided that any such insurance benefits would have deducted from it any benefits based in whole or in part on physical or medical impairment, would be reduced by the amount paid by any agency of the United States; and

Whereas this places the totally disabled veteran in the position of being ineligible to receive such disability insurance benefits from social security for the reason that total disability compensation laws of the Veterans' Administration exceeds the total amount now payable through the Social Security Administration; and

Whereas it is our belief that the former members of our Armed Forces should not be penalized in this manner: Therefore be it

Resolved by the Department of Texas, Disabled American Veterans, in State convention assembled at Corpus Christi, Tex., June 28, 29, and 30, 1957, That we hereby go on record requesting amendatory legislation to Public Law 880, 84th Congress, to remove restrictions on dual benefits for the service-connected disabled veterans and/or their dependents so that their compensation payments will not be deducted from such social security payments as they may be, or hereafter become entitled, because of becoming totally disabled in social security-covered employment in a civilian capacity; and be it further

Resolved, That this resolution be presented by the delegates from the State of Texas to the national convention of the Disabled American Veterans at Buffalo, N. Y., in August 1957, and requesting its adoption as a mandate of that convention as part of the national legislative program; and be it further

Resolved, That the State adjutant as the secretary of this convention be and he is hereby instructed to prepare at once additional copies of this resolution on its adoption at this State convention, and that separate copies thereof be forwarded by him to the Honorable OLIN TEAGUE, chairman, Committee of Veterans' Affairs, United States House of Representatives, and that separate copies be forwarded to each of the two Senators from the State of Texas, the Honorable LYNDON B. JOHNSON, and the Honorable RALPH YARBOROUGH, and that a further copy be sent to each Member of the House of Representatives from the State of Texas.

The foregoing resolution unanimously adopted this 30th day of June 1957.

HARRY BURGMAN,
Commander.
H. V. ROYSTON,
Adjutant.

Israel Cargo Passes Suez

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, July 26, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial from yesterday's New York Herald Tribune entitled "Israel Cargo Passes Suez." I emphasize that it shows the Suez problem to be unresolved, there still being a failure of international control. As the New York Herald Tribune editorial points out:

Dictators, because of their ability to rewrite the laws of their own nations, often feel that they can also rewrite international law to suit their own purposes.

The Suez problem is an open problem. The United States has turned its face against the use of force, and I agree with that policy. Nevertheless, the problem demands our utmost in diplomatic efforts, inside and outside the United Nations, for its solution.

The important thing emphasized by the incident of the arrest of an Israeli citizen who happened to be a member of a crew of a particular ship which went through the canal is that the problem is open, and remains a festering sore in terms of world affairs and freedom of world trade.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ISRAEL CARGO PASSES SUEZ

Dictators, because of their ability to rewrite the laws of their own nations, often feel that they can also rewrite international law to suit their own purposes. The latest example of this is the passage through the Suez Canal of a Danish freighter, reportedly under charter to the Government of Israel, with a cargo of Burmese rice consigned to Haifa. On the one hand the Egyptian Government claims that although an armistice has been signed with Israel it is still at war with that country and therefore will not permit Israeli ships to pass through the canal. On the other hand it permits shipments destined for Israel to pass through the canal as long as they are consigned to individual importers on non-Israeli ships. This, according to an Egyptian spokesman, is normal procedure.

Of course, procedure affecting the Suez Canal has been anything but normal for more than a year. Even the Soviet Union found that out when, after encouraging Colonel Nasser to seize the canal in the Communist campaign to harass the Western democracies, they were suddenly asked to pay transit tolls in dollars instead of European currencies. And although the Egyptians are allowing the freighter with its Israeli cargo to use the canal, they arrested for no legitimate reason, an Israeli member of the crew who had shipped on to replace an injured seaman. The only charge was that he was taking photographs, as thousands of tourists have done during the last few decades.

This latest incident only points up once more the necessity for international control of the canal and implementation of the United Nations principle that operation of the canal should be insulated from the politics of any one country. Just because one shipload of rice has gone through the canal to Israel does not necessarily mean that there is any guaranty that the sanctity of international agreements will in any way be observed by the present government of Egypt. The canal should be open to all nations, without discrimination, and provision should be made for some sort of sanctions to prevent discrimination. Although Colonel Nasser professes to respect international agreements, he has yet, for instance, to make a move toward indemnifying the shareholders of the Suez Canal Co. as he promised to do more than a year ago at the then current quotations. The waterway is too important to the rest of the world to permit one-man control of it.

Trial by Jury

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Friday, July 26, 1957

Mr. LAUSCHE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Trial by Jury," published in a Cleveland, Ohio, newspaper of July 23, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRIAL BY JURY

The doctrine of trial by jury comes down to us from Runnymede. It is affirmed in article III, section 2 of our Constitution: "The trial of all crimes, except in cases of impeachment, shall be by jury" and in the sixth amendment: "In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial, by an impartial jury."

It is now proposed in the civil-rights bill which the Senate is debating that persons who interfere with the civil rights of others may be enjoined from doing so and may be punished for contempt of court, without a jury trial, if they fail to obey the order of the court.

This is one of the fundamental issues in the civil-rights debate. The Washington Evening Star, which has been a consistent supporter of civil-rights legislation, calls it the chief issue. In an editorial last week it said that the denial of trial by jury "is a radical and highly dangerous departure from one of our most prized traditions and fundamental rights."

President Eisenhower said at a recent press conference that it is "traditional" for Federal courts to enforce their orders by issuing contempt citations which are not subject to jury trial. In this the President was misinformed, as he was at the beginning of the debate, when he gave the impression that the bill dealt only with voting rights. It was later brought out that it dealt with all civil rights and would, in fact, confer authority on the President to use troops to enforce court orders dealing with school desegregation.

Supporters of the measure have cited 28 laws under which Congress has authorized contempt proceedings without jury trials. Senator O'MAHONEY, however, pointed out that these laws relate to orders issued by Federal commissions and regulatory bodies against corporations. None deals with individuals.

The subject is a complicated one, and is becoming more so by the minute, as a casual reading of the CONGRESSIONAL RECORD will show. A differentiation must be made between civil contempt, under which a court can jail a defendant without a jury trial until he complies with the court's order, and criminal contempt, which carries with it the right of trial by jury, under which the defendant is punished for offending the dignity of the court. Such questions are involved as to whether the defendant can be compelled to testify against himself and whether he can be convicted by a preponderance of the evidence or evidence beyond a reasonable doubt.

Ohio's Senator LAUSCHE stated the issue this way: "From my standpoint, we are dealing with constitutional rights, among them being the constitutional right to vote, the constitutional right to enjoy all the privileges enumerated by the Constitution, including the constitutional right to a trial by jury. Therefore, it is important that in the provision of one constitutional right we should not deny another citizen his constitutional right."

The practical argument in favor of the denial of trial by jury in civil-rights cases is that southern juries might not convict white persons accused of violating the civil rights of Negroes. But last week a jury acquitted James Hoffa of conspiring to spy on the Senate Racket Investigating Committee. Many people disagreed with the verdict, but there is no public clamor to abolish jury trials for labor leaders because this jury did not convict.

There is a good possibility that an effective voting rights bill can be enacted at this session of Congress if the pending measure is stripped of other powers and the right of trial by jury is preserved. The Senate has already made a sensible start toward rewriting the measure by voting to repeal a statute of Reconstruction days, authorizing the use of Federal troops to enforce court orders, which, for some strange reason, the bill was tied to.

Tightening of Credit Brings Net Gains

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. JUDD. Mr. Speaker, thoughtful Americans are properly concerned about rising interest rates and the increased cost of servicing the national debt. Overall, are these developments good or bad? Are they perhaps offset by favorable factors to which they contribute?

One of the best statements I have seen putting interest payments into proper perspective with the rest of the total picture of our economy, is by Dr. Arthur Upgren, distinguished economist and writer. Under leave to extend my remarks I include an article by him from the Minneapolis Star:

WHY HARD MONEY MERITS APPLAUSE—TREASURY'S NET BUDGET RECEIPTS ARE EIGHT TIMES THE INTEREST COST RISE

(By Arthur Upgren)

A month ago in his press interview to launch the Senate's inquiry into Eisenhower fiscal policies, Senator LYNDON B. JOHNSON charged that at present interest rates just the refinancing of the public debt will cost an added $4½ billion annually.

The higher cost for that part of the debt already refinanced at present higher interest rates he placed at $1.2 billion a year.

Anything that costs from $1.2 billion to $4.5 billion more a year certainly deserves looking into. That's just what the Senate Finance Committee under Chairman HARRY F. BYRD, has started doing.

What JOHNSON was complaining about was the hard money policy which prevails. The administration is fighting to keep inflation from souring the highest prosperity we have known.

If the Treasury pays out $1.2 billion more in interest on the national debt, that becomes income to those receiving it. That includes savings banks (which pay higher interest rates to depositors), holders of United States savings bonds who are getting more and it even includes some rich people—who thereby pay higher taxes back to the Treasury.

How is the Treasury itself doing on its own income? Is it taking in, without having hoisted tax rates, enough more money to pay the higher interest bill—$1.2 billion a year, or even the full $4.5 billion a year JOHNSON has calculated?

Here is the Treasury's recorded budget receipts and expenditures for the past few years. Because all taxes have to be paid somehow out of total national production, that is given in the first column (figures are

for fiscal years ending June 30 and in billions of dollars):

Year	Gross national product	Net budget receipts	Net budget expenditures	Deficit (−) or surplus (+)
1955	373	60.4	64.6	−4.2
1956	403	68.2	66.5	+1.6
1957	424	70.6	68.9	+1.7

This simple record for the last 3 years reveals that total gross national product (GNP) has gained $51 billion. That is due to the prosperous economy we have had.

Net budget receipts, as a result, have risen from $60.4 billion to $70.6 billion for a gain of $10.2 billion. This is more than eight times the rise in interest costs to the Treasury of which JOHNSON complains.

We can well give one vote of applause and thanks to JOHNSON and all Congress. In this 3-year period when interest charges have risen, the total expenditures paid for by the treasury and voted by Congress have risen from $64.6 billion to $68.9 billion. This makes an expense rise of $4.3 billion, inclusive of the rise in interest charges.

This was covered 2½ times over by the rise in tax receipts and in this period there was no increase in tax rates, higher prosperity brought in more money.

Now how have individuals and the working man fared in this same 3-year period?

All personal disposable (what you have left after taxes) incomes and personal interest income (the payments for interest) have been as follows (in billions of dollars):

Year	Personal disposable income	Gain	Personal interest	Gain
1955	271	+17	16.1	+1.2
1956	287	+16	17.4	+1.3
1957 (estimate)	305	+18	18.8	+1.4

Here we see that personal incomes, after taxes, are rising about 13 times as fast as interest payments.

Interest rates are rising fundamentally because business is using more capital wisely and to get more production. That is the only way the workers of the world ever got ahead. The workers then get more pay.

Tightening credit only means that we have to slow down the borrowing of money a little to avoid using so much that we get inflation, too. The worker should applaud the process.

Resolution on H. R. 8002 by Pennsylvania Institute of Certified Public Accountants

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD a resolution passed July 19, 1957, by the executive committee of the Pennsylvania Institute of Certified Public Accountants urging Congress to pass H. R. 8002, a bill to provide that appropriations are to be determined on an annual accrued expenditure basis.

The support given this important measure by the Pennsylvania accountants is gratifying and is but another indication of the widespread support for this legislation throughout the country.

The resolution follows:

Whereas H. R. 8002, known as the Federal budget and accounting bill, embodies the recommendations of the Hoover Commission to place appropriations for Federal Government agencies on an accrued expenditures basis; and

Whereas the proposed bill would limit appropriations to the amounts needed for goods and services to be delivered during the fiscal year for which the appropriation is made, thus providing a much more direct relation between expenditures and budget balance; and

Whereas the provisions of the proposed legislation would permit Congress to give closer scrutiny to the need for funds each year, thereby improving the control over Government spending; and

Whereas H. R. 8002 is supported by the President of the United States, the Comptroller General, the Director of the Budget, and has been endorsed by the American Institute of Certified Public Accountants; and

Whereas a companion measure to H. R. 8002, S. 434, was passed by the United States Senate on June 5, 1957: Now, therefore, be it

Resolved, That for these and other reasons the executive committee of the Pennsylvania Institute of Certified Public Accountants go on record as urging the Congress to give favorable consideration to H. R. 8002; and that the secretary of the institute be instructed to transmit copies of this resolution to the Members of Congress from Pennsylvania.

THOMAS H. CARROLL,
President.
F. WILLARD HEINTZELMAN,
Secretary.

Texas Future Farmers of America

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, July 26, 1957

Mr. YARBOROUGH. Mr. President, one of the most outstanding, courageous, and independent newspapers in my State of Texas, the Wichita Falls Times, paid editorial tribute last Monday to one of the most effective organizations of the youth of our country.

Texas Future Farmers of America ended their 29th annual State convention with a record of activity and accomplishments which is worthy of this commendable editorial. The discerning recognition by the Wichita Falls Times of the work of this organization is of such value that I request it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FUTURE FARMERS

Texas Future Farmers of America ended their 29th annual state convention Friday, with a total attendance of more than 3,000 youngsters, guests, and advisers present for the final session.

Election of officers for the coming year, recognition of achievements, and establishment of policy for the 1957–58 school year all were ably handled by the convention.

The boys also took time out to have fun, with a big fun night program, and to educate themsleves, with tours of Fort Worth stockyards, packing plants, and leather goods and boot factories in "cow town."

The convention was conducted in the same manner as a state convention of any adult organization. Adult FFA leaders were on hand strictly in an advisory capacity, and convention actions were initiated and completed entirely by delegates, each representing his chapter.

Competition for honors in the chapter, district, area, and state star farmer contests was fierce, and serious bids for State office by candidates did credit to any convention with their organization and conduct.

One might pause to look at a convention conducted by young people. With the vast amount of publicity being given these days to juvenile delinquency, any movement that helps to channel youthful exuberance into useful lines is, for that reason alone, worthwhile.

But these boys are doing a greater work than that—they are helping to lay the groundwork for the future of agriculture in the United States.

With the farmers declining in number each year, competition for agricultural markets will in the future become more heated. We in the United States are fortunate in that our future farmers are being taught the elements of this competition early in life.

As Josh Billings Said: "It Ain't So"

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 17, 1957

Mr. CANNON. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an editorial from the St. Louis Globe-Democrat and my reply:

[From the St. Louis Globe-Democrat]

INFLATION-BULGING FEDERAL BACKLOG—$70 BILLION IN FREE-FLOWING PIPELINES

In a shrewd and eloquent analysis of the abiding fiscal morass in Washington Government, Herbert Hoover told the American Society of Newspaper Editors one of the most dangerous causes is that Congress has lost control of the purse strings.

The habit of making advance appropriations covering future years has knocked Federal economy whopperjawed, sharply contributed to inflation, excessive Government spending and oppressive taxation.

Mr. Hoover estimated these advance appropriations over the years have heaped up $70 billion of unexpended balances in Federal pipelines.

This enormous sum represents appropriated money which has not been used but has not been returned to the Treasury. The balances exist mainly in defense and foreign aid agencies.

They can be expended at any time. They don't require further action by Congress. They can be spent in addition to the large budget allotments the departments get every year.

As an example, Congress appropriated approximately $12,500 million in 1953 for the Defense Department in the Korean war. Now—4 years later—the Pentagon is still spending this money.

The two Hoover Commissions on Federal Government recommended legislation to correct the situation. The key solution is a

bill to compel a yearly review by Congress of all fiscal needs and dealing. It would substitute an annual-accrual-expenditure budget for the current slack system of spending controls.

The Senate has unanimously passed such a measure, sponsored by Senators BYRD, of Virginia, and KENNEDY, of Massachusetts, both Democrats, and by Senator PAYNE, a Republican of Maine. It is eminently sound legislation, which will reestablish in Congress control of the Federal pocketbook, as the Constitution most clearly provided.

A similar proposal, House bill 8002, is before the lower Chamber. It would call for annual fiscal review and make all unexpended balances revert to the Treasury at end of the fiscal year.

If further need for such appropriations, or a part of them, was evident, Congress could reappropriate enough for the ensuing year.

President Eisenhower has warmly indorsed this reform, as has Secretary of the Treasury Humphrey. But the measure has been stalled, partly because, as Mr. Hoover says, it has no tear-jerking attachment and arouses small public interest.

The roadblock in the House has been thrown up by Representative JOHN TABER, of New York, ranking GOP member of the Appropriations Committee, and Missouri's own Representative CLARENCE CANNON, Appropriations Committee chairman.

Either they do not understand the significance of the move, or they are so dedicted to the status quo they oppose this obviously needed reform.

The size of Washington's pipeline balances is approximately as great as the present Brobdingnagian budget being fashioned on Capitol Hill. But it is tax money that can be spent in excess of budget allotments.

It is all too grimly clear how this system helps compound extravagant spending by Government, heaps higher the overall burden of taxes which at present have mounted—including Federal, State, and local taxes—to more than $110 billion a year.

No single category in Federal operation is so hazardous to the inflation potential as the stockpiling of these unused funds—which can be tossed into the spending hopper by agency heads whenever they wish.

This is fantastic fiscal stewardship. It is repugnant to the proper authority of Congress, to the Constitution's intent—and completely frustrating to sound monetary policy of Government.

House bill 8002 should be brought out of committee and passed.

The resultant savings in tax funds could well exceed the economies of $5 billion predicted for adoption of the entire Hoover report.

In response to this editorial, a proof of which was received from the editor, I called attention to the usual inaccuracies appearing in all this propaganda as follows:

HOUSE OF REPRESENTATIVES,
Washington, D. C., July 26, 1957.

EDITOR, ST. LOUIS GLOBE-DEMOCRAT:

I read your editorial page always with pleasure and profit, and I appreciate your kindly personal reference. But your editorial of July 25, $70 Billions in Free-Flowing Pipelines, is based on mistaken information.

The statement that $5 billion can be saved by the adoption of the Hoover Report is ridiculous. There are 50 men on the Committee on Appropriations, both Democrats and Republicans, representing all parts of the country. To say they would overlook an opportunity to save $5 billion is absurd. We called the Director of the Budget before us and asked him if this could be done. He wrote the budget and he should know. He would not say positively that it would save 1 single dollar much less $5 billion. And of course every man on the committee knew it would not. The Committee on Appropriations includes men who have been in Congress from 15 to 30 years and all of them, without exception, are convinced the Hoover plan would lose money instead of saving it.

When Congressman TABER went down to the White House last Monday and explained the bill, President Eisenhower told him he had not been fully informed on the bill and that the legislative side of it had never been explained to him. There is every reason to believe the President will not now urge the support of the bill.

The whole subject is misunderstood. There is hardly a statement in the editorial that is not conclusively refuted by the printed hearings and the explanations made in the CONGRESSIONAL RECORD on May 14, July 5, and July 19, none of which have been challenged or denied since they were printed. Am sending you this material by this mail.

It is to be regretted there is not space to take this subject item by item and show authoritatively the fallacy in each paragraph. Congress has not lost control of the purse strings. The $70 billion has not been taken out of the Treasury. It cannot be expended at any time. There is already an annual fiscal review. The Pentagon would still be spending the Korean war money regardless of what system was followed. The carryover balances would not be eliminated by the accrued expenditure system. The accrued expenditure budget requires the use of contract authority and once contract authority is voted, the Government is committed for all future years until completion and, of course, the Government had no choice but to pay. The plan was so wasteful that we discontinued it in 1951. And now the Hoover Commission plan is to go back to it. We have tried it under both Democratic and Republican administrations and both Republican and Democratic members have abandoned it.

The director of the budget said just the other day:

"I believe we should continue to follow the sound procedure of fully funding the procurement of all items necessary for the full operation of such major things as airplanes, tanks and ships, when the initial appropriation is made. We would lose budgetary control of these programs if we adopted a policy of partial funding for such items."

At the close of the Second World War I sponsored a bill which rescinded and saved $64 billion, the largest amount ever rescinded in the history of the United States. And I certainly would save $5 billion—or even one dollar—if it could be done by the Hoover Commission plan.

CLARENCE CANNON.

School Construction Assistance Act of 1957

SPEECH
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 1) to authorize Federal assistance to the States and local communities in financing an expanded program of school construction so as to eliminate the national shortage of classrooms.

The CHAIRMAN. The Chair recognizes the gentleman from West Virginia [Mr. BAILEY].

Mr. BAILEY. Mr. Chairman, I want to recall my earlier remarks to the Committee and remind you of what this amendment will do. It kills off all plans of a division of the funds that are to be distributed on the basis of need, and it precludes offering by the proponents of the so-called Powell amendment legislation that would restrict the use of these funds. It would throw into the already wealthy States who claim they do not need this money, additional money, when it ought to be going to those States in the Union that actually need it.

This is a national issue and not a State issue, as some would have us believe.

I would also again remind you of the satisfactory operation of Public Law 815. Unless this amendment is changed, it will kill the distribution of funds under that type of legislation.

Air Conditioning of Post Offices in Texas

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, July 26, 1957

Mr. YARBOROUGH. Mr. President, the good people who work in the post office of the largest city in my State of Texas are hot; they have good reason to be so, too. The post office at Houston, Tex., is not air conditioned, although funds were appropriated during the last Congress to do that job.

The Houston branch of the National Association of Postal Supervisors has submitted to me a resolution asking that their post office be air conditioned in accordance with the program established by the last Congress. Their resolution is well stated, the need for such air conditioning is adequately pointed out in their thoughtful and factual message, and I request unanimous consent that their resolution and accompanying temperature data be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the Congress of the United States appropriated several million dollars to the General Services Administration in the 1957 fiscal year for air conditioning of post offices and Federal buildings in certain areas of the United States; and

Whereas according to newspaper reports from Washington the main post office in Houston, Tex., was included in this appropriation in the amount of approximately $500,000; and

Whereas Franklin Station (Federal Office Building) was also included in the program; and

Whereas the crowded condition of all postal facilities in Houston, the unbearable heat, and high humidity make working conditions for all postal employees unbearable during the summer months; and

Whereas private industry in this area has proven conclusively the improved morale, efficiency, health, and other benefits justifies the expenditures that would be necessary to provide the improved working conditions through air conditioning; and

Whereas the excuse now used that Houston will be provided with new postal facilities in the near future does not justify further delay in providing these essential facilities for this office; and

Whereas the improvements in efficiency and morale of the employees, and the improved health conditions through the installation of the temporary air conditioning of the mailing section in the basement of this office is an outstanding example of the savings in manpower that could be effected by expanding or including air-conditioning facilities in other post-office areas, and would unquestionably amortize the cost of such necessary expenditures over a reasonable period of time; and

Whereas numerous other post offices throughout the State of Texas have been, or are in the process of being, provided with air-conditioning facilities, and to this date no action has been taken to provide these facilities for the Houston, Tex., Post Office: Therefore be it

Resolved, That the president or vice president of Branch 122, National Association of Postal Supervisors, be instructed to submit this resolution to Postmaster General Arthur E. Summerfield, requesting that he take immediate steps to provide all units of the Main Post Office, Franklin Station, and Parcel Post Station at Houston, Tex., with air-conditioning facilities, and urge acceleration of the present program of air conditioning of leased quarters; be it further

Resolved, That copies of this resolution be sent to Congressman Albert E. Thomas, Senators Lyndon B. Johnson and Ralph Yarborough, and to Mike Nave, president, NAPS.

Houston, Tex.

Poll Results

EXTENSION OF REMARKS
OF
HON. ROBERT J. CORBETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 4, 1957

Mr. CORBETT. Mr. Speaker, since my first term in Congress in 1939 I have regularly conducted polls of public thinking on vital national issues in my congressional district. The polls have been in the form of a printed questionnaire, requiring simple yes-and-no answers, mailed to registered voters in my district, regardless of political affiliation.

Total responses to the questionnaires have always been excellent. Because of the manner in which the polls are conducted, the tabulated results virtually constitute a referendum of the district and they have proved of enormous value to myself and, I hope, to my colleagues in the Congress.

My Congressional District is probably as representative and contains as many varied interest groups as any in the Nation. It has the wealthy, the poor, and the so-called middle class. It has a high concentration of labor, white-collar workers, small business, large industries, and some of the finest farmlands found anywhere. The district includes a thickly populated section of Pittsburgh, extends to the rural areas, and takes in many large and small residential towns in northern Allegheny County.

The percentage tabulation of the answers on the poll I have just recently conducted are included below without comment, along with the results of the poll I conducted at the beginning of the session.

I trust the results will prove as interesting and informative to all who study them as they are to me.

The polls follow:

POLL RESULTS, JANUARY 1957

1. Do you like the President's determined efforts to establish equal rights for Negroes? Yes, 72 percent; no, 28 percent.

2. Should we give permanent status to the Hungarian refugees? Yes, 38 percent; no, 62 percent.

3. Do you agree that we can admit a somewhat larger number of permanent immigrants? Yes, 32 percent; no, 68 percent.

4. Do you prefer a balanced budget to an income-tax reduction? Yes, 81 percent; no, 19 percent.

5. If a Treasury surplus develops would you prefer debt reduction to a cut in excise taxes? Yes, 81 percent, no, 19 percent.

6. Do you believe that the selection of congressional committee chairmen by seniority is very bad? Yes, 70 percent; no, 30 percent.

7. Would you oppose increasing postal rates? Yes, 33 percent; no, 67 percent.

8. Do you think we are spending too much money on national defense? Yes, 19 percent; no, 81 percent.

9. Do you think we are spending too much money on foreign aid? Yes, 78 percent; no, 22 percent.

10. Do you oppose the Federal Reserve Board's policy of restricting credit (so-called hard money program)? Yes, 28 percent; no, 72 percent.

11. Do you believe the voting age should be lowered to 18 years? Yes, 37 percent; no, 63 percent.

12. Should the Congress grant the President the powers he requests to deal with the problems of Egypt and Asia Minor (so-called Middle East)? Yes, 77 percent; no, 23 percent.

POLL RESULTS, JUNE 1957

1. Do you approve appropriating Federal funds for a public school construction program? Yes, 55 percent; no, 41 percent; no reply, 4 percent.

2. President Eisenhower has reduced his request for foreign aid to $3.9 billion. Do you think it would be wise to cut his request by as much as $1 billion more? Yes, 50 percent; no, 45 percent; no reply, 5 percent.

3. Do you feel that substantial cuts can safely be made in funds available to the armed services? Yes, 38 percent; no, 56 percent; no reply, 6 percent.

4. Do you favor the construction of the Allegheny River Reservoir, often called the Kinzua Dam? Yes, 53 percent; no, 36 percent; no reply, 11 percent.

5. Should such professional sports as baseball, football, basketball, and hockey be subject to the antitrust laws? Yes, 54 percent; no, 31 percent; no reply, 15 percent.

6. Congress will soon vote on statehood for Hawaii and Alaska. Would you vote "yes" or "no"? Yes, 86 percent; no, 9 percent; no reply, 5 percent.

7. The House committee has favorably reported a bill raising postage rates on all classes of mail about $500 million. How would you vote? Yes, 77 percent; no, 19 percent; no reply, 4 percent.

8. Do you believe that Government is more to blame for post-Korean war price increases than labor and management? Yes, 29 percent; no, 59 percent; no reply, 12 percent.

9. Are you generally satisfied with President Eisenhower's conduct of domestic affairs? Yes, 73 percent; no, 23 percent; no reply, 4 percent.

10. Are you generally satisfied with President Eisenhower's conduct of foreign affairs? Yes, 63 percent; no, 31 percent; no reply, 6 percent.

P. S.—I am endeavoring to answer all separate requests and comments accompanying the returned questionnaires. Because of the workload some may undoubtedly be overlooked. Consequently, if you do not receive a reply within the next 10 days to any such request, please inform me.

Surplus Food Distribution in the District of Columbia

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 9, 1957

Mrs. KNUTSON. Mr. Speaker, the project of distribution of surplus food in the District of Columbia is most commendable. I fully believe the abundance of food is a blessing—if it is properly used. We should consider ourselves fortunate that we are one of the few countries in history which has been so blessed with an abundance. I feel we should do everything possible to make use of our commodities domestically and for building democracies abroad.

Under leave to extend my remarks, I request permission to insert two articles, one from the Sunday Star and the other from the Evening Star, July 21 and 22, respectively:

[From the Sunday Star, Washington, D. C., of July 21, 1957]

YOUNG AND OLD LINE UP FOR FOOD AT BUSY DISTRICT SURPLUS CENTERS

(By Harry Bacas)

(First of two articles)

Two cards came in the mail the same day for Christopher Marsh and his sister, Mrs. Annie Warriner. The cards said:

"You have been certified eligible for surplus food. Please come to Our Lady of Perpetual Help Church, 1600 Morris Road SE., on July 19, 1957, between the hours of 9 a. m. and 3 p. m., to pick up your month's issue."

The cards were from the District Public Welfare Department. They were signed by John Olsavsky, manager of the Surplus Food Division. More than 300 similar cards were received by District residents that day.

Mrs. Warriner is 73 and has difficulty walking because of a bad knee. So she sent her brother to the church to pick up the food. Mr. Marsh is 62.

Since there were 2 cards, Mr. Marsh tucked 2 shopping bags under his arm at 9 Friday morning and walked slowly over to the church. It is only a block away from the little frame house which he and his sister rent at 2402 17th Street SE.

FIFTY PERSONS IN LINE

Mr. Marsh didn't know what the surplus food would be and neither did his sister. They only knew the cards were from the welfare department, which has paid Mrs. Warriner $60 a month for 8 years and Mr. Warriner $43 a month for 5 years.

At Our Lady of Perpetual Help Church, Mr. Marsh stood in line with about 50 other persons. They were at the door of the church recreation hall and the food distribution was about to begin.

Of the first 50 persons, 2 were white and the others colored. Mr. Marsh looked small. He is 5 feet, 1 inch, frail and wears glasses and a hearing aid.

When he reached the head of the line, he handed the two cards to Joseph Miller and A. L. Weaver, the supervisors of the food center. His name and his sister's name were checked off on a list. Mr. Miller told Mr. Marsh that next time he should bring a slip signed by his sister, authorizing him to pick up her food. This time it would be all right without the slip, Mr. Marsh was told.

HAS HEAVY LOAD

Then Mr. Marsh handed the 2 cards to 1 of the 4 men working among stacks of food bags and boxes. The workman, Robert H. Parker, put a 10-pound bag of flour, a 5-pound bay of yellow cornmeal, a 5-pound carton of cheese and a 5-pound box of milk powder in each of Mr. Marsh's shopping bags.

"That's 25 pounds each," Mr. Parker told him. "Can you carry it?"

"Yes, I can," Mr. Marsh said. "I have only a block to go."

On the way home he stopped several times to rest.

At home he carried the bags into the kitchen. Mrs. Warriner came into see what he had brought.

"I'll make cornbread with the cornmeal," she said. "I haven't used powdered milk in years, but I remember how to mix it." Printed on the outside of the box were instructions (1 cup of powder beaten into 1 quart of lukewarm water makes a quart of skim milk).

PLANS FOR FUTURE MEALS

"I'll use the cheese in spaghetti and macaroni and the flour can make more biscuits than we've been having."

She noticed there was no meat, or butter, or eggs in the bags. The bag of flour looked pretty big.

"It's all right if they don't give you too much of one thing—it wastes," she said. "You can't sit down and eat nothing but flour. But we're very grateful.

"Be thankful for small mercies, my mother always told us. This is a great country, isn't it?"

Mrs. Warriner and Mr. Marsh were born in the north of England. They came to Virginia with their parents shortly after 1900 and the family worked as domestics in Richmond. Mr. Marsh got a job in a tobacco factory.

Mrs. Warriner came to Washington in 1927 and had jobs in several hotels as a pantry worker.

WORKED ON SWAN BOAT

Mr. Marsh came to Washington several years later and worked as a house painter "until I got too nervous." He could "get up on the ladder but could hardly get down again." Then he worked at the Tidal Basin, cleaning the swan boat, and canoes, and rowboats.

Out of her $60 a month, Mrs. Warriner pays $30 to live in the little house where they have been for the last 26 years. Out of his $43 a month, Mr. Marsh pays $8. The owner, now blind, lives there with them. He pays the heat and utilities and all three chip in to buy food. The house badly needs a coat of paint.

A Welfare Department caseworker visits the house several times a year. "They pry into everything," Mrs. Warriner says. "They raised the dickens about my birds." She keeps several cages of canaries and parakeets. "They said I was selling them."

Before she went on relief, Mrs. Warriner used to make a little, by crocheting articles and selling them. She no longer does that. "If I sold a piece of crocheting, the welfare would just take it off my payments," she says.

MANY COME IN CARS

She watched as Mr. Marsh sifted some of the new flour into a bowl so she could make biscuits for lunch.

Back at the food center in the church, the crowd had grown to about 70 persons. There were about 30 cars and taxicabs parked outside. Some people were arriving on foot after a 10-block walk uphill from the main bus line on Nichols Avenue. Most, however, came by cab, in their own cars, or in friends' cars.

Some of the cars were older models. Several were shiny new ones.

The people were among the 300 and 400 persons who have been served each day since the District's surplus food program began early this month.

The program has replaced an earlier operation which for 4 months supplied free food orders to needy persons. Those orders could be turned in at any grocery store for whatever food the recipient wanted.

DISTRIBUTION CENTERS SHIFT

The new program works differently. It issues standard packages of surplus food supplied free by the Agriculture Department. Most of the recipients are persons already on the District relief rolls and most of them did not get in on the earlier program.

They get from 25 to 75 pounds of food, depending on the size of the family. The cards for the food are sent to them through the mail.

The distribution centers move from place to place each day or two to take care of the people in different sections of the city. The centers are located in churches or neighborhood settlement houses.

A reporter who spent 2 days observing the food distribution at one of the centers found that most of the recipients were ablebodied persons, clean, and neatly dressed. None of them looked hungry. As many came in groups of two or three as came singly. Most had cars or rides in cars.

Most of the recipients were women. Some brought children with them.

RECIPIENTS AID EACH OTHER

One woman brought her nearly blind, 40-year-old son to help him get his allotment for one.

One couple found their load too heavy to carry and telephoned for a cab. One woman did not have cab fare and borrowed a bus token from another woman to get home.

Perhaps a third of the recipients got the larger packages, 50 or 75 pounds of food.

One cab driver showed up on Friday to offer a free ride to anyone who couldn't carry his packages. The day before, a funeral director had given free lifts to several persons.

Most of the persons did not bring shopping bags. Workers gave them empty boxes or bags to carry their food.

"They didn't know how much they were getting," said Mr. Miller, the center supervisor. "Next time they'll come prepared."

[From the Washington Evening Star of July 22, 1957]

DISTRICT RELIEF CASES GET MOST SURPLUS FOOD

(Second of two articles)

The card 17-year-old Betty Thomas brought to the District Surplus Food Center in a Southeast church was marked for only one person's ration.

At the registration desk, she showed the card to Miss Elizabeth Curtis, a volunteer worker. Miss Curtis explained that only one unit of food would be issued because only one person in the family, Betty's grandmother, was on the District relief rolls.

One of the Welfare Department workmen, William A. Sharp, gave Betty a box filled with a 10-pound bag of flour, a 5-pound bag of cornmeal, a 5-pound box of cheese and a 5-pound box of milk powder.

"How will you carry it?" the man asked her. She said, "A friend brought me. The car's outside."

The friend drove her home, a distance of 6 miles, to a brick 2-story house at 4938 East Capitol Street. Miss Thomas lives with her two children, Cheryl, 2, and Wanda, 1; her mother, Mrs. Lillian E. Thomas; her grandmother, Mrs. Emma Lewis, and her great grandfather, the Reverend Edward J. Barnes.

Mr. Barnes, 81, retired from Government service 6 years ago. He still preaches occasionally at St. John's Baptist Church near the family's home. He gets $120 a month social security.

His daughter, Mrs. Lewis, has been a cripple since she was struck by a car 20 years ago. She is the only one in the family drawing public-assistance payments from the Welfare Department. She gets $50.63 a month.

Her daughter, Mrs. Thomas, is the only one in the family who works. She makes about $42 a week in a drycleaning plant. Her daughter, Betty, graduated from junior high school a year ago and has held one brief part-time job. Most of the time she is at home, taking care of her two daughters. The two little girls look plump and healthy.

PAYS THE BILLS

Mr. Barnes bought the house when it was new, 12 years ago. His monthly payments are $58. The others contribute $60 a month to him and he pays all the bills. Mrs. Thomas buys food on weekends and Mr. Barnes buys food during the week.

When the card came in the mail several days ago for Mrs. Lewis, she didn't know what she would receive. Like most recipients she hadn't expected it.

Betty Thomas opened the boxes on the kitchen table. "The children will like the milk," she said. "They drink a lot of it." She had to read the box to see how to mix it.

"Mother loves to make cakes and grandmother likes to make apple dumplings and pies, so we can use the flour." The cheese puzzled her. "I guess we could grill it or use it in eggs," she said.

"I'll eat it just like it is," her grandmother laughed. The cornmeal would go into cornbread, they agreed. "What else can you make with it?"

"They could give you a little meat," Mrs. Lewis said. "I thought maybe there would be butter, eggs, things like that. But this is fine. You thank them for me."

TWO TELEVISION SETS

The three-bedroom house is well furnished. There are 2 television sets—1 upstairs for Mrs. Lewis, who seldom gets downstairs—and 2 telephones. The family does not have a car.

Mr. Barnes was a streetsweeper when he came to Washington from Mississippi 47 years ago. When he retired from the Government, he was making about $80 a week as a helper in a photostat office. His $120-a-

month pension keeps him pretty well, he says.

So far, most of the people receiving food have been those already on the relief rolls.

The Welfare Department through last week had approved 7,865 families for the food issues. Of these, 7,173 came from the relief rolls, 713 were families not on relief, and 15 were certified by private welfare agencies.

About 2,800 families have actually received their food allotments. The centers operate 5 days a week, from 9 a. m. to 3 p. m. Eleven different centers will be used this month, 5 in churches and 6 in settlement houses or neighborhood centers.

VALUE PUT AT $750,000

The food comes from the Agriculture Department's stocks of surplus commodities. It is given free to the District and will amount to about $750,000 in value the first year. Each 25-pound package is valued at about $6 or $7.

It is costing the District $150,000 a year to administer the program, mainly in storage costs and salaries of the people who process the applications, send out the cards and issue the food.

The food grants are made to applicants above what they may receive in relief payments.

Persons already on relief rolls are being processed automatically. Many of them are surprised to receive the cards in the mail.

They far outnumber the nonrelief families who have been approved so far. Nonrelief applicants are eligible only if their income is not above a set of ceilings established by the city.

The monthly limits are—1 person, $95; 2, $135; 3, $175. Larger families are allowed $25 monthly income per person to qualify.

A study of the persons receiving the earlier emergency food orders showed that about 85 percent were colored. About 90 percent of those receiving the present surplus food allotments are colored, according to workers at the food centers.

The Welfare Department has divided the city according to census tracts and tried to find a suitable distribution center in each tract. By next month they hope to double the number of centers and keep each open perhaps 1 day instead of 2, before moving on to the next location.

Article by Col. John M. Virden, United States Air Force, Retired

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article written by Col. John M. Virden, United States Air Force, retired, which appeared in the Washington Daily News on July 26, 1957:

Twenty-five years ago this Sunday, on July 28, 1932, Washington came as near to seeing war in its streets as at any time in the city's century and a half of life.

For on that date tanks and horse cavalry from Fort Myer thundered down Pennsylvania Avenue on out to the shack town derisively called "Hooverville" on the Anacostia Flats, and there routed a bonus army of some 10,000 World War I veterans, along with some 700 women and 300 children.

This attacking force was commanded by Gen. Douglas MacArthur, Chief of Staff, of the United States Army, accompanied by a young major named Dwight D. Eisenhower. The actual commander of the armed tankers and horse soldiers was another young major, also destined for great things some 12 years later, George Patton, Jr., from the 3d Cavalry Regiment stationed at Fort Myer.

BLOODLESS

Tactically, it must be admitted the Army's attack on "Hooverville" was the most complete victory, and the most bloodless, in the long and honorable history of the Army. Not a shot was fired, nobody got clubbed nor even hit with a rock, and General MacArthur's ultimatum to "get out of Washington in 1 hour" was complied with, with nothing more than some audible grumbling.

The soldiers wearing gasmasks put the grimy tents and shacks of the bonus army to the torch. When darkness fell that hot July evening nothing remained of the pitiable bivouac of the bonus marchers save some smoking rubble.

But the bloodless battle did not end there. The bitter feelings it engendered on that tense day were to echo throughout the presidential campaign that fall that sent Gov. Franklin Delano Roosevelt to the White House. Most of the angry words were directed at Herbert Hoover, whose presidential popularity was already lower than any Chief Executive since James Buchanan.

But not a little of the hatred was directed at Secretary of War Patrick J. Hurley who had actually issued the orders to run the raggle-taggle and hungry bonus army out of Washington. Whatever hopes the colorful Oklahoman had of getting to the White House, and these were large hopes in the fertile head of Pat Hurley, they went up in the stinking smoke of burning "Hooverville."

Though a distinguished war veteran himself, Pat Hurley never could square himself with the then powerful American Legion, whose members were then as now, in bigtime politics up to their elbows.

Like most national crises the battle of the bonus just grew up from nothing.

ORGANIZER

Earlier in the spring of 1932, Walter W. Waters of Oregon, who must have been a sharp propagandist, organized a march on Washington in that State. He appealed to the disgruntled and jobless veterans to walk to Washington and demand that Congress authorize full payment of the adjusted compensation certificates which Congress had voted the veterans in 1924, over President Coolidge's veto. The certificates, which called for a dollar per day for each day of military service in World War I, and a buck and a quarter for overseas veterans, were not due until 1945.

Mr. Waters' followers, a few score at first, started walking to Washington carrying a sign reading "We are on our way from Oregon to get some cash in Washington."

Well, they did not have to walk very far; sympathetic motorists picked up most of the marchers and others simply crawled on freight trains and understanding trainmen looked the other way. Each town they rolled through others joined the Oregon group.

By the time Mr. Waters led his army into the Nation's Capital in late May disgruntled war veterans were converging here by the hundreds. In mid-June, when the Congress took up the bonus bill, the Washington Metropolitan Police, who were keeping a wary eye on this milling group, estimated the number at something over 15,000. Some newspapers set the figure as high as 20,000.

"GO EASY"

At first the police were encouraged to go easy on these unhappy and destitute veterans. Major Superintendent of Police, Pelham D. Glassford, a retired Army general, rode around town on his white motorcycle and kept in hourly contact with the bonus army spokesmen and with some very nervous people in the White House.

General Glassford was trusted by the bonus seekers and did much to ease some of their most pressing needs, for food and some kind of shelter. Most of the veterans and their camp followers were herded out to the Anacostia Flats and allowed to make-do with whatever materials they could lay hands on. And to scrounge whatever food they could find or buy. However, about a third of the total simply set up squatters sovereignty over some vacant buildings near the Capitol and others camped out near the Bureau of Engraving and Printing.

Not until after a tense Congress had voted down their petition for immediate payment of the 20-year adjusted compensation certificates, did the mob grow surly and threatening. Then Congress hurriedly lumped them $100,000 in travel money on which to go home, and adjourned.

A few, perhaps half, of the bonus army took their travel pay and headed home. But the die-hards and the obvious agitators stayed on and swore they were going to stay until the money was paid out to them.

TOUGH JOB

Police Superintendent Glassford kept up his missionary work with the veterans but his job got harder by the day. There were a couple of minor clashes between the cops and the vets in mid-July. But these did not amount to much, a few stones, a few lumps, and much bad language passed back and forth.

On the morning of July 28, however, General Glassford knew that the patience of his "blueclads" and the veterans was growing dangerously thin and that trouble might come at any time. This, too, was duly passed to 1600 Pennsylvania Avenue. Sure enough, that afternoon the lid blew off. The police moved in on the squatters around the Capitol and the veterans fought back with bricks and rocks and clubs. Reinforcements were called up by the outnumbered police and the downtown bonus marchers sent word to "Hooverville" across the Anacostia River to "Come over and help us." They came and the melee spread. Before the police got the situation in hand, one veteran had been killed and another so badly wounded that he later died.

President Hoover told Secretary Hurley to restore order. Which is a set of about as broad instructions as you can get. Mr. Hurley called in Chief of Staff MacArthur and handed him the most thankless job any soldier can possibly have—quelling and expelling a mob of his own citizens. Anything the soldier does is wrong in such cases. At the best he can only break even. At the worst he can lose his commission for brutality against unarmed civilians.

CHORE

But there wasn't much time to ponder the thanklessness of the chore; the angry veterans were still there and the police were still having their hands full. So Maj. George Patton led a company of tanks and squadron of mounted cavalry out of Fort Myer, sweeping everything before it, but without cocking a pistol or drawing a saber. In the van of this small contingent of Regulars rode General MacArthur and his staff officer, Major Eisenhower.

At "Hooverville" the Chief of Staff walked out alone and talked with the bonus army leaders. He told them they had exactly 1 hour to get going. They started packing up and when the hour was up they were on the march.

The only memorable remark that seems to have passed when General MacArthur delivered his 1-hour ultimatum was spoken by a veteran leader who was widely quoted as saying, "Well, by God, we can't fight the whole United States Army."

And with almost as many reporters as soldiers present that hot day a quarter cen-

tury ago, any spoken gems of historical significance would have doubtless been jotted down.

That evening one of the largest press associations started off its story with this intriguing lead, if accurate:

"Today Washington saw revolution in its own historic avenues."

Peace and Cooperation With Arab Neighbors

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article which appeared in the July 22, 1957, issue of Israel Digest:

PEACE AND COOPERATION WITH ARAB NEIGHBORS—PRIME MINISTER'S PRESS CONFERENCE ENCOMPASSES FOREIGN POLICY RANGE

"Peace and cooperation with our Arab neighbors remains our policy." "The only practical and just solution for the Arab refugees is to settle them in the underpopulated, naturally rich countries of Iraq and Syria." "I hope for the establishment of normal relations between Israel and Germany in the near future."

These were among the statements made by Prime Minister David Ben-Gurion at his first press conference open to all foreign correspondents in Israel. More than 60 representatives of the world press were present and the questions ranged over the whole field of Israel's foreign policy. The following is a selection from Mr. Ben-Gurion's replies.

PEACE WITH ARABS

Our long-term policy toward the Arabs is very simple: peace and cooperation with our neighbors, political, economic, and cultural. This was and this will remain our policy.

I wouldn't say it will come tomorrow, but I would never give up the hope that it may come at any time. I believe it is quite possible. It is necessary and it may come. I don't know when. If it depends on us, then it will be next year. We will say, "Lashanah Haba'ah Shalon."—"Next year peace."

I have been asked whether peace in the Middle East can be achieved only if the big powers made peace between themselves, or whether it can be achieved locally. It is a pertinent question. The cold war has certainly something to do with the troubles in the Middle East, and if the conflict between East and West didn't exist, it would be easier to have peace here.

But I don't think that it is impossible to achieve peace without a complete agreement between the great competing powers, between th East and the West, because I believe that some time—I don't know when, whether in my lifetime or not—the Arab peoples or their representatives will understand that they will not achieve real independence and will not be free from dependence on one of the two sides unless there is peace with Israel.

Just as the conflict between East and West increases the tension in the Middle East, so the tension in the Middle East feeds the conflict between East and West to a certain degree. It is quite possible to take it out of that conflict, and the peoples here should sit down and make peace without worrying about the relations between Moscow and Washington.

THE ARMISTICE AGREEMENT WITH EGYPT

The armistice agreement imposes obligations on both sides. It also accords them certain rights. What we refuse to accept is that we should be obligated to understake all the duties deriving from the agreement, while Egypt should be allowed to enjoy all the rights. You know that in 1951 there was a clear-cut decision by the Security Council that according to the armistice agreement there is no state of war between ourselves and Egypt, as they claimed, and that therefore Egypt has no right to blockade or interfere with our shipping in the Suez Canal.

Egypt refused to carry out that decision of the Security Council, although it is a member of the United Nations, and every member of the United Nations is under an obligation to carry out the decisions of the Security Council. They cannot have it both ways.

But we are ready to sit down and discuss peace—sitting with them then as two equal sides, in spite of the fact that we consider the armistice agreement as dead, nonexistent.

There is no armistice agreement between ourselves and Iraq, but if Iraq chose to sit down and discuss with us, we would do it. The same applies to Saudi Arabia.

THE INDEPENDENCE OF JORDAN AND LEBANON

Of course, we are interested as a free and democratic people that all our neighbors should be free and democratic, but it is not our policy to interfere in the internal politics of any other government. Although we ourselves are adherents of democracy and freedom—and we are ready to fight for it—we will not fight any other government which chooses to have another regime.

We are certainly interested in the independence of all the peoples in the Middle East, but we don't consider ourselves such a power as would assure this independence. For the time being—and I am afraid for a long time to come—we will be very busy with insuring our own independence. So far that is enough for us.

THE ARAB REFUGEE PROBLEM

I think there are now about 20 million refugees in different parts of the world, in Europe, Asia, India, Pakistan, Germany and Poland and in other countries and here.

How did this arise, this fact of refugees here? As you know, in November 29, 1947, a decision was taken by the U. N. about the partition of Palestine, as it was then called. While we didn't like that decision very much we accepted it.

The Arab governments said they would fight it, and the following day the fight began and six Jews coming from Haifa to Jerusalem were killed. The next day, on December 1, a general strike was called by the Arab higher committee, and the Arabs began fleeing from the parts which were assigned to Israel by the Assembly of the United Nations.

That began according to a preconceived plan by the Arab higher committee and the Mufti a few years ago—and that plan was published—to evacuate all the noncombatant Arabs from Palestine, old men, children, women, and others, and leave only combatant Arabs to finish the Jews here.

The Haganah told the Arab community: "You can stay where you are; you must only deliver your arms." The local Arab committee agreed, but somebody said, "no, we must refer to the higher Arab committee—which actually meant the Mufti. They sent a cable to the Mufti, and the Mufti sent a reply: "No, leave the town." The same thing happened in Tiberias and Safad, and during the last 2 days before the British evacuation in Jaffa.

And I understand the reason why. Because they knew that immediately the British left five Arab armies would march in. They were certain—and they had reason to be certain—that in 10 days or 2 weeks it would be finished, that they would take Tel Aviv and Haifa and Jerusalem in a fortnight.

They had five armies; they were well armed; some of them had British officers commanding them, in the Arab Legion, and we had only an underground defense. We had some rifles and some mortars, no tanks, no guns, no planes. So they had reason to be sure that they would finish us in a few weeks, and then they would bring them back not only to Jaffa and Safad but also to Tel Aviv and to the Jewish settlements and so on.

Well, it didn't go according to their plans and they were defeated. While the war was still going on—and the war was ended only on January 7, 1949—there were large numbers of Jewish refugees who came to this country, but the British authorities sent them to Cyprus and we had to bring them over.

There were 300,000 Jewish refugees from Europe, the remnant of 6 million Jews who were slaughtered by Hitler—we brought them here. Hundreds of thousands of Jewish refugees from Arab countries came over—and we settled them.

And it is our view that the only possible practical and just solution for the Arab refugees is to settle them in the underpopulated, naturally rich countries of Iraq and Syria, among their own people, under an Arab government, if really they want to settle the refugee question.

Unfortunately, for the present Arab rulers these hundreds of thousands of refugees don't exist as human beings. For them it is a political weapon, and they want with their help to destroy Israel. This is not going to happen.

But if they really care for the refugees and want to settle them where it is possible to settle them, Israel will be ready to assist by every means in her power. And she can do something, because we have experience in settling refugees, and there is plenty of land—free land and empty and fertile land and with abundance of water—in Iraq and Syria. This is our view about the real solution of the refugee problem.

THE BORDER SITUATION

I have been asked whether the recent Syrian attacks are the responsibility of Colonel Serraj (chief of the Syrian intelligence) or the Government or somebody higher. Well, I must confess my ignorance. I would like to think, although I am not sure, that it is the responsibility of the local commanders, but I couldn't say that I am certain that it is not the policy of the Government in Damascus or somebody higher-up.

So far I have no reason to be certain that it is a definite policy, because I see other manifestations which speak against that. I see that on the other parts of the border there is quiet, and so for the time being I prefer to assume that these are local incidents, but I must add immediately that I am not sure about that.

We have approached the Secretariat of the U. N. about the very worrying situation along the Gaza strip and also along the Syrian border, and we are still awaiting their action—or their nonaction, which is also quite possible.

Foreign Aid and Insecurity

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, recently the President and the

Secretary of State said that if there was a slash in appropriations for foreign aid it would endanger the security of the United States.

This, of course, is an old and familiar charge whenever the foreign-aid program is before the Congress. It is a statement that cannot be proved and is inherently misleading.

Dorothy Thompson in an article that appeared in the Evening Star on July 25 challenges the thesis laid down by the President and the Secretary of State. The article follows:

FOREIGN AID AND INSECURITY—OFFICIAL ARGUMENT THAT CUT IN FUNDS WOULD HARM UNITED STATES IS CHALLENGED

If the security of the United States is threatened by a slash in appropriations for foreign aid, as the President and Secretary Dulles say it is, then the county was insecure before the slash was made in the House of Representatives. Any great nation whose "security" (whatever that may mean) depends upon dependents has forfeited its freedom of action and therewith its basic security. Great states must depend upon themselves; upon their capacity to inspire prudence (if not fear) in nations that may wish them ill, and upon their capacity to attract friends for reasons of mutual interest. Interest is not a one-way street in which one partner or associate is always on the giving and another always on the receiving line.

The people of this country are presently greatly concerned about the American economic situation as it affects themselves—far more so than they are about the Russian purges. They are concerned about the steady, if slow, inflation with a resultant decline in purchasing power endured or feared by nearly every family. They believe (and correctly) that a chief contribution to inflation is Government spending and investment. They are therefore economy minded and the views of constituents are reflected by Congressmen.

The immense amount of American money poured out around the world—to friends to be aided and neutrals to be persuaded—has an inflationary effect on the economies that absorb it and to that extent does not win us uncritical friends. It also contributes to inflation at home. Whether given away in goods and services or in dollars, it creates an extra demand on American producers and tends to raise prices.

It also, together with universal military service, promotes and stabilizes full employment. That is its popular side. Foreign aid and other Government spending programs are popular with big industry, big labor, and big farmers, and, of course, the big bureaucracy, who receive the larger benefits. They are unpopular with small producers, the salaried middle class who have no escalator cost-of-living clauses in their contracts, and with the self-employed.

A sign of instability (and insecurity) is always lack of confidence in a government's promise to pay. A Government bond was once considered a "gilt edged" security, and the public would buy even if the interest rates were low. But today the Government is having a hard time marketing its bonds with either the banks or the public. It has had to raise the interest rate and increase the ultimate capital gains. Yet holders of bonds that have matured are not reinvesting the cash in new and more attractive Government bonds to anything like the extent anticipated.

Promises to pay in dollars some time in the future are attractive only if the dollar is stable—if next year or 5 years or 10 years from now one can expect a dollar to purchase approximately what it did at the time of investment. Today there is a flight from the dollar. People prefer to invest in equities, representing real things, or they are overbuying in anticipation of price raises, or they are contracting debts to be paid off in depreciated currency. Such public behavior is a perennial sign of inflation.

A runaway inflation such as afflicted Germany in the twenties is not at all predictable. (There were political reasons operating in Germany to encourage rather than check it.) But a creeping inflation is with us, and so, from the same causes, is creeping socialism.

Socialism is not being furthered by Socialist or Communist agitators but by anti-Socialists engaged in a crusade against the Reds at the expense of the American taxpayers, a large part of whose incomes and savings are socialized every quarter and by visible and invisible taxes on everything they buy. Whatever sector of the economy is in the hands of government or largely dependent on government is socialized. All armies, for instance, are Socialist.

The classical capitalist system of private investment and enterprise cannot continue to exist in the long run in competition with state capitalism, which however it may operate, is socialism. State capitalism is induced by war, preparation for war, immense military establishments, government-supported full employment, and universal social security. You pay your money and take your choice. In the long run, competition between states and individuals is always unequal.

Personally, we are convinced that the present trend toward more or less controlled but continual inflation and the socializing of ever-wider segments of the economy is irreversible. Inflation causes public concern, but deflation would cause revolt. If the faucet of Government spending is turned so low as to cause any serious degree of unemployment, the same Congressmen who want to check the stream will vote to turn it up.

Inadequacies of Naval Hospital Facilities in Long Beach Area

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. HOSMER. Mr. Speaker, I have before noted that almost one-seventh of all naval families live in the Long Beach-Los Angeles area. The proposed closing of the Corona Naval Hospital highlights the inadequacy of naval medical facilities in this important area. A hospital was authorized for construction adjacent to the port in 1950. It has not been pursued aggressively to the appropriations stage by the Bureau of Medicine and Surgery. As a consequence, naval personnel in the area have had to make a 90-mile round trip to Corona for treatment. With closing, the round trip to the next nearest naval hospital facility, at Camp Pendleton, will be some 140 miles.

The following editorial from the Long Beach Press Telegram points out why the need for hospital facilities in the port area cannot adequately be met by use of the hospital ship U. S. S. *Haven:*

HOSPITAL SHIP NOT ENOUGH

A Navy spokesman says that when the Corona Navy Hospital closes, 200 bed patients will be moved to the U. S. S. *Haven*, the hospital ship moored in Long Beach Harbor.

As of now, the hospital ship is on an in-commission, inactive status, and located here permanently.

But Representative SAUND, in whose congressional district the Corona hospital is located, makes this point:

"What if the ship were moved from the port to Formosa or somewhere else in the world in event of a national emergency? The Navy would then be closing the only hospital facilities in the Long Beach-Los Angeles Harbor area."

Representative SAUND's reasoning is sound. The Navy itself cannot say how it may have to assign its ships in the future; circumstances unknown beforehand may dictate that. But this is certain—a land-based facility is something that can't be ordered to sea.

Navy officials themselves have declared that the *Haven* is not suitable for caring for dependents. They have also affirmed long-standing plans for constructing a hospital here. This is confirmation of the need for such a facility.

It would seem only wise to have such a hospital under construction or definitely projected before eliminating the Corona facility.

Representative CRAIG HOSMER points out that unused Government property is available at Point Fermin; and there is a possibility that Long Beach might provide free land for the project. These matters should be explored before a decision is made to reduce badly needed hospital facilities in an area where so many members of the Armed Forces reside and work.

Good News from the London Disarmament Conference

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith submit a news article written by Rev. Edward A. Conway, S. J., assistant professor of political science at Creighton University, on disarmament:

OMAHA, NEBR.—The report from the London disarmament meeting that the United States would propose a ban on testing of intercontinental ballistic missiles as part of its partial first step toward disarmament was good news to the Rev. Edward A. Conway, S. J.

Father Conway, assistant professor of political science at Creighton University, here, said that it could mean his one-man crusade for a ban on missile-testing was beginning to pay off.

The Creighton professor, an expert on arms-control problems, began his crusade more than 2 years ago in speeches, lectures, letters to editors, and magazine and newspaper articles.

In a South Bend, Ind., address on May 10, 1955, he warned of the advent of the ocean-spanning missiles:

"People will then (in 1956 or 1957) know the truth of Mr. (Thomas K.) Finletter's warning (in Power and Policy) that 'the time of absolute Russian air atomic power and of hydrogen bombs carried mainly by big manned bombers will not last long.'

"They will know by then that intercontinental ballistic missiles with atomic and hydrogen warheads, able to speed from Moscow to Washington in 30 minutes, will be just around the corner."

Father Conway seconded Mr. Finletter's assertion that "it does seem that we now are talking about our last chance to control these weapons, the last chance that man will be given to prevent his own science for destruction from ending his civilization and himself."

"I consider it a psychological certainty," Father Conway predicted at South Bend, "that the peoples, once they do realize their predicament, will turn with a great rush in search of what Mr. [Thomas E.] Murray—ex-Atomic Energy Commissioner—called nondestructive solutions if only to save themselves from an international nervous breakdown."

After Commissioner Murray had revealed, on November 17, 1955, that the United States had invented "nuclear weapons capable of destroying all human life" (the fission-fusion-fission or "dirty" H-bomb) and it was reported 6 days later that the U. S. S. R. had duplicated the United States success, Father Conway, in a letter published in the New York Times of December 14, warned that the next step would be the use of H-bombs as warheads for ICBM's.

"These developments," he said, "have drastically telescoped the timetable for disarmament. As soon as [the Russians] successfully test an intercontinental ballistic missile they can defy any inspection system devised. They can simply hide them and their launching gear underground—to emerge at the push of a button. So, of course, could we. * * * This would be the ultimate impasse.

"Unless, therefore, the development of these missiles is halted by agreement before any are successfully tested—and unless an effective inspection system is already checking on compliance—the last hope for disarmament will have disappeared."

The United States disarmament negotiations did not mention missiles in the United Nations until 7 months later. During the last session of the U. N. Assembly, on July 18, 1956, Ambassador Henry Cabot Lodge warned:

"We cannot afford to let much more time go by. The long-range guided missile is already looming on the scene. When it becomes a standard weapon, no nation would have more than 15 minutes to get ready to defend itself and to hit back. * * * We must act before these deadly missiles are poised in hidden nests ready to strike—and before the problem of nuclear control becomes too difficult and unstable to handle."

While the great debate over a ban on H-bomb testing raged during the election campaign, Father Conway kept insisting that Ike and Adlai were wrangling about the wrong ban.

While a ban on H-bomb tests was important, he said, it was far more important to stop testing ICBM's without delay, because once they were successfully tested, mass-produced, and operationally deployed, the world would have arrived at the point of no return to any effective disarmament system.

In a letter to the Washington Post during the campaign Father Conway asked:

"Could it be that we are wasting precious time discussing a ban on further H-bomb tests? Is the question of such a moratorium really fundamental in the matter of the current arms race? Is it relevant to the present realities of that race? Can we and the world afford the months that would be required to reach agreement on an answer here at home, and then agreement with the Soviet Union? At this time, therefore, we should be asking both presidential candidates such questions as these:

How and how soon do you propose to act on the missile problem? Do you agree with Dean Duncan E. McDonald, Boston University physicist and reconnaissance expert, who testified last April 9 before the Senate Subcommittee on Disarmament that once ICBM's are operationally deployed, their detection will be technologically impossible?

Father Conway ended his letter on this portentous note:

"After consulting atomic scientists, missile experts, military strategists, and arms-control experts during a year devoted to intensive study of the arms race in all its aspects, I must solemnly warn that only an heroic and immediate effort, concentrated on this one problem of a missile-testing moratorium and enlisting the best minds of the whole world, can now save that world from the unbalancing terrors of a nuclear-missile stalemate, and win a few more years in which to work out a dependable disarmament program."

When his letter was finally published November 23—it had been swamped by an influx of letters on the Hungarian and Suez crises—it was answered by Senator STUART SYMINGTON, knowledgeable chairman of the Air Power Subcommittee of the Armed Services Committee.

Father Conway was encouraged by the Senator's acknowledgment that it is technically feasible to design a detection system (of missile testing) which would result in reasonable reliability even though the Senator doubted whether the detection could always be interpreted correctly.

The priest-professor was disappointed, however, when the new United States proposals of January 14, 1957 contained only vague references to international control of space objects—presumably missiles and earth satellite vehicles.

And when, after 4 months of the current London disarmament negotiations had passed, the United States still had not mentioned missiles, Father Conway returned to the charge.

In an article in the June 20 Catholic Messenger of Davenport, Iowa, which was promptly printed in the CONGRESSIONAL RECORD and in Commonweal magazine, he called the United States reticence most disturbing. "For," he wrote, "While the London negotiators haggle over their partial first steps, the missile-makers of Russia, Great Britain and the United States work steadily at their crash programs, achieving one breakthrough after another."

Now that it is reported that the United States will include a missile-testing ban as part of its partial first step at London, the skies are bluer for Father Conway here in Omaha.

His great hope is that the United States delegation will recapture and communicate to their opposites that sense of urgency Ambassador Lodge once evidenced when he declared:

"We cannot afford to let much more time go by * * * We must act before these deadly missiles are poised in hidden nests ready to strike."

Sudden United States Shift on Gas Case Told

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. MULTER. Mr. Speaker, a situation which, in my opinion, needs investigation by the Judiciary Committees, is recounted in the following article by Drew Pearson, which appeared in the Washington Post and Times Herald of July 26, 1957.

Many of us thought that the monopolistic empire of Sam Insull had long since been destroyed. Apparently only the symbol was destroyed. The tentacles continue to reach out in an effort to crush all honest competition.

Drew Pearson's column reads as follows:

SUDDEN UNITED STATES SHIFT ON GAS CASE TOLD

(By Drew Pearson)

One of the biggest antitrust suits planned by the Justice Department in years has been suddenly and mysteriously dropped.

It was to have been filed in United States District Court in Milwaukee July 8 against three important gas companies—American Natural Gas, Peoples Gas Light & Coke, and Northern Natural Gas.

The Justice Department had the bill of complaint drafted and a press release all ready to issue. But the press release was never issued. The bill of complaint was never filed.

Ex-Gov. Tom Dewey, counsel for Peoples Gas, is given credit by some for having the antitrust suit called off suddenly. Dewey is very close to Attorney General Brownell, who managed his campaign for President in 1944.

Dewey was out of the United States and not available for comment this week, but in the past he has told this column that he made it a practice never to intervene in matters affecting the Eisenhower administration in Washington.

Others attributed the sudden cancellation to the fact that an antitrust case of this kind would have focused attention upon the natural gas industry just at a time when the Eisenhower administration is trying to pass a new natural-gas bill exempting the industry from Federal regulation.

Regardless of who stopped the suit, here is the inside story of what happened:

Tennessee Gas Transmission had obtained from Canada the right to tap its vast gas reserves with a pipeline linking Canada to Texas. This two-way line could have used gas from the Gulf States when needed or gas from Canada when and where needed.

SECRET CONFERENCE

With natural gas in short supply in the northern United States, Canadian gas is highly coveted. Various companies have been eying the vast and largely undeveloped wealth of Canada. So when Tennessee Gas Transmission secured this concession, it ran into a secret monopoly move by the old Sam Insull holdings in Illinois, Indiana, and Wisconsin.

The Insull holdings are now represented by American Natural Gas, Peoples Gas Light & Coke, and Northern Natural. They serve Michigan, Wisconsin, Illinois, Minnesota, and Indiana.

These three companies held a confidential meeting with Gardner Simonds, head of Tennessee Gas Transmission, at the Chicago Club December 11 after he offered to sell them gas.

The three who participated in this closed-door conference were John Merriam of Northern Natural Gas, Ralph McIlvaine of American Natural Gas, and James Oates of Peoples Gas Light & Coke.

They took Simonds by surprise by demanding that he sell them three-quarters of the stock in the new pipeline from Canada to the Gulf of Mexico. Simonds emphatically said no.

After this abortive conference in Chicago the three executives of the old Insull empire

asked for another conference. This took place in the Carlton Hotel in Washington on January 3, at which time the three competitors asked Simonds how far he was willing to go in selling them stock in his new pipeline. He replied that he would give them 40 percent of the stock. They replied that they would take 75 percent or nothing.

The three Midwest utility executives then told Simonds he could take it or leave it. This was their final offer.

GOVERNORS GET SORE

Following this, various State utility commissions and Governors got into the act. The Wisconsin Public Service Commission was especially incensed, since Wisconsin is desperately hard up for gas. So was Senator ALEXANDER WILEY of Wisconsin. Gov. Vernon Thomson of Wisconsin also testified before the Federal Power Commission urging that the pipeline be built from Canada to the gulf.

As a result of indignation by Midwest Governors, the Justice Department prepared its antitrust suit against the three former Insull companies. Then at the last minute the suit was dropped.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 101. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10 *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

The Confederate Soldier—Our Southern Hero

EXTENSION OF REMARKS
OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, July 29, 1957

Mr. JOHNSTON of South Carolina. Mr. President, I have before me a copy of the July 18, 1957, issue of the Saluda County Sentinel, which is published in Saluda, S. C. This newspaper carries the address delivered by B. W. Crouch, at a reunion of Confederate veterans in 1937, in Saluda. The address, which is entitled "The Confederate Soldier—Our Southern Hero," pays tribute to the southern men and women who fought so gallantly for a strong local government. Those who read this speech will note that men and women fought and died in the 1860's for the very principles which today are being debated in the United States Senate.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CONFEDERATE SOLDIER—OUR SOUTHERN HERO

I am to speak this evening of a generation of men, who for the most part "have passed over the river and now rest under the shade of the trees" along with their great chiefs, Gen. Robert E. Lee and the incomparable Stonewall Jackson.

I shall not require much of your time for two reasons: First: It is unnecessary; second: No mere words, however prolix or eloquent can add to or distract from the glory of the Confederate soldier. He stands unique in all the annals of history. He is now, and ever will be, the South's hero.

He is the magnificent and unforgettable figure of the bloody confederate war. About him and around him there is pathos, romance, and tragedy.

He looms before us a gigantic and imposing figure as he passes in grand review on the romantic stage of war.

It is there that history places him just as he is, a cavalier and a fighter. More than that, history shows him a man ragged and poorly fed, but with the determination of a Cromwell and the patriotism of a Regulus. He never knew when he was whipped. It was only by attrition that he was at least worn out, "whipping" as Bill Arp said, those "whom he fought."

Through the eyes of history we look back upon him and find him winning victories with the odds against him sometimes from 5 to 1, and sometimes 10 to 1.

We hear the terrible rebel yell as our heroes dashed into the battle with awful fury on a hundred fields of blood and carnage. For them there was no fear of enemy shot and shell.

As was said by Viscount Wolsley, the once famous Adjutant General of the British Army. "No matter how doubtful at every point and for all time may have been the legality and the advisability of the war, that such men fought on any one side would, of itself, throw a halo of glory around the cause they fought for. Their character (as soldiers and patriots) can never fail to excite general admiration. Even those who were most bitterly opposed to them, even those who believed them to be utterly wrong in their conception of national duty, will readily admit their excellence as soldiers and their sincerity as patriots."

The South, as Cook tells us, did not draw the sword lightly but when it was drawn the scabbard was thrown away.

The struggle from the beginning was one of uneven nature. The North had a population of 19½ million, while the South had a white population of only about 8 million.

The southern soldier fought for the inherent and inalienable right of self-government which had been bred in the bone and dyed in the weaving. It was for this that their forefathers had fought in the revolution.

This principle for which the southern hero fought and suffered for 4 long years; for which tens of thousands of them gave their lives; and for which, when the war was over, they were stripped by the conqueror of everything but their honor and their glory, is today being lightly esteemed by their sons and their sons' sons.

I sometimes wonder what these soldiers—whom we this evening would honor by trying to recall their sacrifices, their sufferings and the hardships which were theirs in an effort to save man's most precious heritage—his liberty and his right to order his affairs in his own way so long as he did not trespass upon the rights of his fellow man—would say, could they stand among us and see the Federal Government, not only far overshadowing the States, but also managing the private business of individuals. How can we, the sons of these southern heroes, repudiate the principles for which they fought, bled, suffered and died, in exchange for a small handout from Federal authorities?

By so doing, are we not selling our birthright for a mess of pottage? If the principle for which the Confederate soldier fought—was right 75 years ago it is right now.

Who shall dare say that these principles are now or were then false? Yet today because of the crumbs that are falling into our laps from the Federal table we are willing not only that the rights of the States be absorbed by the Federal Government, but also we are courting Federal interference with the actions of individuals as touching their own private business.

Could the men, who followed Lee and Jackson and Longstreet and Early and Hampton, come back today and see what is going on, I am constrained to believe they would say with one accord, in thunderous tones, but with bleeding hearts, "O my degenerate sons, why have you turned your backs upon the principles that inspired your fathers on a hundred fields of battle and for which *so* many of us died?"

But we have digressed. We had just stated the great disparity in numbers between the North and South when the war began. Not only that, but the North had practically all the manufacturing plants, upon the output of which the Southern States were dependent. They also had in their possession the entire Federal Navy which enabled them to blockade the southern ports, while at the same time there was all of Europe from which they could draw unlimited supplies.

Notwithstanding all this, when the call came to the men of the South, it was responded to with tremendous enthusiasm.

What took place here in this section of ours was taking place all over the South, when the tocsin of war sounded. By the hundreds and thousands and tens of thousands—the very flower of the South—kissed their wives and sweethearts goodby and held mothers close in their embrace for a brief second, and then to the tune of Dixie, went to the front, full of enthusiasm, leaving their loved ones to the care of Him who never sleeps or slumbers.

In a little while the dead and wounded were being reported to the folks back home. In sorrow and silence, the mothers and sisters received the news, breathed a prayer, and went on with the struggle for life, while at the same time sending garments made with their own hands to those at the front. Was there ever such courage displayed by the women of any age? "Our women of the South during the Civil War," would be a theme that no orator or poet, no tongue or pen could properly treat.

I would to God that "the martial deeds and chivalrous feats, 'fit for song and story,' of our glorious southern heroes as well as of the unfailing fidelity of our southern heroines, that of the former illustrated on many a hard-fought field in this unequal contest for national independence and for States rights, could be deeply furrowed and embalmed in the memories of their sons and daughters of today. The treasure of their blood has enriched the verdant plains, hillsides and valleys of our country. May this blood ever be cherished and sanctified as the precious ransom of our liberties. In the future days of the Republic—if we do not forfeit our heritage—may these battlegrounds become so many Mecca-shrines to which our children's children will go to learn the lessons of patriotism, devotion, and virtue.

For us to attempt to follow "our southern hero" through all the various battles of that long four years' struggle would be impossible. Let us look at him just a moment in the famous Valley Campaign, under the greatest of all the southern generals, Stonewall Jackson.

His strides in this campaign were indeed colossal and his fighting qualities beyond compare. Here he marched with the speed of cavalry and struck the Federal forces blows quick and fast, that shattered, crushed and almost annihilated them.

Here with a force a little less than half of that of the three armies opposing him, he won three of the most brilliant victories recorded in the annals of time.

On old officer of the Grand Army of Napoleon said of it: "There was never a greater campaign than the campaign of the valley."

Following the Valley Campaign came the defenses around Richmond. We find General McClellan with 120,000 men, long files of cavalry and excellent artillery advancing up the Chickahominy to storm Richmond and to take the city by regular approaches.

We see the ragged soldiers of Jackson hurrying through the passes of the Blue Ridge to take part in the defense and to reinforce General Lee—60,000 Confederates to oppose 120,000 Yankees.

An eyewitness of the battle that ensued says of the southern soldiers: "Our shot tore their ranks wide open, and shattered

them asunder in a manner that was frightful to witness. They closed up at once and came on as steadily as English Regulars. When they got within 400 yards we ceased our case shot and opened on them with canister; such destruction I never witnessed. At each discharge of our guns great gaps were made in their ranks—indeed whole companies went down before that murderous fire. But they never flinched, they never stopped, but came right on never wavering, never halting, right through the woods, over the fence, through the field, right up to our guns, sweeping everything before them and capturing every piece."

In these glimpses we see "our southern hero" as a soldier.

And altho the flag of the Confederacy which he carried triumphantly through a hundred bloody battles, at last, went down in defeat there was never a stain upon it, and these men who bore it so bravely and so faithfully and who suffered unspeakably in defense of the principles for which they fought—will always be "our southern heroes."

May the God of battles comfort the few who still remain, and rest in peace the ashes of those who are gone.

The Situation in Algeria

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, July 29, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a number of articles and comments which recently appeared on the Algerian crisis. As a result of the recent request of 23 nations that the Algerian issue be placed on the United Nations agenda at the fall session, it is now almost certain that the United States will have to reconsider its position on this whole question.

It is also apparent that there are important new stirrings within France to readjust French attitudes on this question. M. Mendes-France, as reported in Le Monde of July 24, has made an appeal for the consideration of an Algerian solution within the framework of a North African community. Earlier M. Jules Moch, the French representative at the London disarmament talks, also sketched out his ideas for a scheme of double sovereignty in Algeria, which recognizes at least that the present political stalemate cannot be maintained.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the New Republic of July 29, 1957]

ALGERIA—INDEPENDENCE IS IN SIGHT

(By Denis Healey)

LONDON.—The impossible lasts longer in France than anywhere else in the world. None the less, it does now look as if the Algerian crisis will come to a head before the end of this year, and that somehow or other France will contrive to unload the crushing burden which this has imposed on her ever since she got rid of Indochina.

For at least 18 months Algeria has cost France more in men, money, moral standards, and diplomatic influence than in theory she should be able to bear, and at no moment has there been any sign that this colossal expenditure was likely to create the conditions for a settlement. On the contrary, such small grounds as once existed for hoping that some nationalist leaders might consider a compromise have now disappeared. And there are still half a million Frenchmen tied down in brutalizing repression of the Algerian people, and still billions of francs a day cascading into the bottomless pit.

Now the money is almost all gone. Her reserves exhausted, France is reduced to inflationary borrowing from her national bank. For the first time for some years, the cost of living has again begun to shoot up. The government has had to slash imports just at the moment it is asking the Assembly to ratify the common market which would open France permanently to free trade with the rest of Europe. Since America will not make France a new loan while she is carrying on the Algerian war, France is now looking to Western Germany for aid. But the West Germans, however much they may relish the irony of having their former victor in pawn, have valuable Asian and African markets to lose if they come to France's rescue.

The Mollet government fell last month because its supporters would not pay the cost of the Algerian war. The Bourges-Manoury government which succeeded it managed to impose some new financial sacrifices on the French people. This has done more than anything else to force the average Frenchman to consider whether the game is worth the candle. In particular, the new gasoline tax has hit precisely those lower-middle-class voters who normally provide the solid base for chauvinism in any country.

Also, for months now sections of the Catholic and Mendes-France intelligentsia have been protesting against the degradation of moral standards inseparable from such a full-scale colonial war—in particular against torture and the shooting of hostages. This essentially moral opposition was enormously reinforced a few weeks ago by the independent Conservative columnist, Raymond Aron, who published a brilliant pamphlet denying the basic political and economic assumptions on which France's Algerian policy has been based. Apart from the cultural and ethnic absurdity of pretending that the Arabs and Berbers are European Frenchmen, Aron pointed out that in a generation's time the Arabs will outnumber the French in Algeria by not 9 to 1, as at present but 18 to 1. In such a situation Algeria can only be a drain on the French economy if it is constitutionally linked with France. Thus France's wisest course would be to give Algeria its independence, and to resettle at home those French colons who were unable or unwilling to adjust themselves to living as a minority in an Arab state.

In the long run, this is probably the inevitable outcome of France's failure to face facts in time. But Aron would scarcely have risked publishing so drastic a diagnosis and prescription had he not felt that French opinion was at last ready for it. The fall of Mollett may have provided the catalyst. Only a Socialist Prime Minister could have persisted so long in a policy of force which was getting nowhere. Once he was out of office, a third of Mollet's party felt free to express themselves against his Algerian policy. Conversely, only a rightwing Prime Minister can afford to start negotiating a surrender.

De Gaulle has been approached more than once in the last few weeks, but, though not averse to this role, is demanding too abject a capitulation by the parliamentarians who rejected him 10 years ago. But it is conceivable that in the inevitable financial crisis next autumn Mendes-France, the other great political Ishmael, might be able to win the general over as a latterday Hindenburg. Mendes-France is certainly no Hitler; but it is impossible to ignore the danger that Algeria might mean for French democracy what Versailles meant for the Weimar Republic, particularly if several hundred thousand dispossessed colons pour into France as refugees hungry for revenge. For this reason if no other, France's allies must show great tact and caution in the next few months. There is nothing that some French politicians would like better than to make the Americans or the British scapegoats for their national humiliation.

[From the Tucson (Ariz.) Republic of July 14, 1957]

WHOSE BUSINESS?

French politicians are in an uproar over a speech which Senator JOHN KENNEDY, Democrat, of Massachusetts, made recently on the Algerian problem. Though Secretary of State Dulles rebuked KENNEDY officially, the speech has made a profound impression in Africa and throughout the Arab world. KENNEDY urges the State Department to stop supporting the French colonial war in Algeria and to work, instead, for Algerian independence.

The French think that such speeches made in the United States Senate amount to a gross intervention in internal French affairs. But is Algeria an internal French problem? Hardly. But for American military and economic support, the French would not be able to continue their war against the Algerian nationalists. In other words, the United States is already very deep in the intervention business in Algeria—on the request of the French Government. United States arms and United States money have been openly put on the side of French colonial rule.

United States public opinion has not only the right, but the duty to scrutinize carefully the foreign policy of the United States Government, particularly when this policy aids the suppression of a people's will for freedom and independence. By requesting and by relying on American support for its war against the Algerian nationalists, the French Government itself has made the Algerian problem an American foreign policy problem. And all American foreign policy problems, including the Algerian one, are the concern of American public opinion.

[From the Haverhill (Mass.) Gazette of July 12, 1957]

THE BLAST FROM KENNEDY

The United States belongs on the side of peoples struggling for independence of imperial rule.

An odd fact of modern history is that the United States is not clearly and consistently on the side of these people.

This odd fact was impressed on us several years ago by a spokesman for India during an interview at the United Nations. He said he could not understand an alliance with European imperialists by a nation that had itself fought for and won freedom from imperial rule. Neither could we understand it, nor have we ever been able to understand it.

This odd fact recently has been set forth most clearly and vigorously by Senator KENNEDY, who has introduced a resolution that urges the President and the Secretary of State to place the influence of the United States behind efforts for the independence of Algeria.

American policy on Algeria, as expressed through direct diplomatic contacts with France and through the United Nations, has been to uphold the French position.

One basis for this policy is the fact that Algeria is politically a part of metropolitan France. When Algeria has urged that its case for independence be considered by the United Nations, the United States has argued that the Algerian issue was a domestic rather than an international problem. Suppose, American diplomats have said in substance,

Texas should clamor for independence of the American Union so vigorously that Washington had to send troops into the State to put down terroristic resistance to Federal rule. The Texan situation, our diplomats have said, clearly would be a domestic problem and no concern of the U. N. Algeria, they have concluded, is in the same class.

KENNEDY effectively disposes of this diplomatic argument. Algeria, he points out, was taken by the French only a little more than a century ago. The southern desert area has been governed like a crown colony. The populous and fertile northern area was made legally a part of France in 1871, but native Algerians were not made citizens of France until 1947. Algerian citizenship in France, however, is not like that of the French. Only 75,000 African Algerians have full voting rights, says KENNEDY, and the 30 Algerian seats in the French Assembly are mostly filled by French politicians.

Thus KENNEDY brushes aside the frail political cobweb that binds Algeria to France and reveals the Algerian movement for independence as precisely comparable to other movements by colonial peoples against imperial rulers.

These movements deserve American sympathy and all the support Americans wisely can give them, because Americans themselves were once a colonial people fighting imperial rule.

But KENNEDY presents persuasive practical reasons for American support of the Algerian cause. They penetrate the substance of the policy that directs the United States to the side of France.

This policy is based on fear of Russia as a dreadful and dangerous aggressor. It has determined the American course since the end of World War II. It has persuaded the United States to build an anti-Russian alliance, especially in Western Europe. The United States naturally placed reliance principally on Britain and France as going concerns that most readily could resist Russian attack. Consequently, to assure Anglo-French fidelity to the alliance, the United States has tended to take the Anglo-French side in international dispute. The Suez affair was an exception to this rule. KENNEDY would make Algeria another exception.

He makes the point that the Algerian struggle is weakening the western alliance against Russia, because it weakens France. French resources and manpower are being dissipated in Algeria. Military equipment supplied to France for use in the defense of Western Europe is being used against Algerians.

He notes that France has been continually at war since 1939 and reasonably concludes that the debilitating Algerian struggle must be ended to "save the French nation as well as free Africa."

He sees the effectiveness of the Eisenhower doctrine in the Middle East impaired by American adherence to France in Algeria. He sees, too, the cause of communism encouraged by this adherence because it gives the Reds a chance to point to Americans as the ally of oppressors. The successful American struggle for independence, he reminds Americans, has long been a glorious example to suppressed and oppressed peoples, a sign of what they can accomplish. Taking the side of peoples struggling for freedom, therefore, he concludes, is in accord with the finest fulfillment of the American destiny.

In the long run, as the Indian spokesman said at the U. N., the United States will be stronger and greater and nobler by consistent support of popular struggles for freedom.

President Eisenhower gave the Kennedy resolution a brushoff. Secretary of State Dulles expressed horror at the thought of it. Practical diplomats everywhere, especially those schooled in the doctrine that American policy must be directed toward resisting an imminent attack by Russia, were grievously shocked.

After Kennedy delivered his speech in support of the resolution, one voice, that of Senator CHAVEZ, was repeatedly raised with this question: "What's wrong with this resolution?"

The answer is: There's nothing wrong with it. It is essentially right and sound.

It calls on the United States to do tardily what it should have done promptly and instinctively.

A common fault with diplomacy is that it is persistently practical. It grubs with tools of expediency in the swamps of reality. It needs at least now and then to be blasted from its morasses onto the solid ground of noble purpose under the blazing light of the burning idealism which welded into a mighty force for freedom the Nation for which it speaks.

That's what KENNEDY is trying to do.

[From the Quincy (Ill.) Herald-Whig of July 11, 1957]

UNPOPULAR, BUT TRUE

When Senator JACK KENNEDY of Massachusetts gave a speech in the Senate a few days ago in which he criticized French colonial policy, he stirred up a storm. KENNEDY blamed the French Government for causing strife in Algeria. In the long run, KENNEDY said, France would suffer from drain on her manpower and resources.

Discussion of liquidation of her African colonies is distasteful to France. The French, like the British, are unwilling to concede eventual loss of overseas possessions. France, continental Europe's first great champion of freedom, is trying to keep alive at least the framework of empire.

KENNEDY'S speech was undiplomatic. It brought quick statements from the State Department and the President, both seeking to salve the wound.

But Senator KENNEDY is right. This country has too long accepted a contradictory position. We are the champions of freedom. We point to Woodrow Wilson's philosophy of the right of self-determination of peoples. Yet we support the French in their colonial troubles.

There is, of course, a reason for our attitude. The solidarity of the West is currently of paramount importance. The French are as adamant in their views on colonialism as are the people of our own South on civil rights. And just as the South regards civil rights as a local matter so do the French consider their own conduct of colonial affairs strictly a matter for France to decide.

KENNEDY'S views represent the long-range, colonialism, even the rather mild variety practiced by France, cannot survive for long the general enlightenment of colonial people. Before many years have passed, there will be no more colonies. France will do well to prepare herself for that day.

It is not, of course, proper for the United States to intervene in the domestic affairs of an ally of such long standing as France. But we cannot logically support the theory or practice of exploitation of the people of one country by those of another.

[From the Birmingham (Ala.) News of July 7, 1957]

KENNEDY SAYS GOOD THINGS ON ALGERIA

Senator JOHN KENNEDY, of Massachusetts, spoke up vigorously in the Senate last week for a reevaluation of American policy toward France and Algeria. The French, as almost everyone knows, have been continuing a bitter, costly struggle trying to put down Algerian rebels. It has been argued monotonously that Algeria is part of France, not a colony, and that law and order must be restored.

The fact is that France cannot really ever restore law and order in Algeria. Far too many Algerians have a burning desire for absolute independence for the country ever to be kept peacefully as part of France.

Senator KENNEDY says that we have had our heads in the sand, that we have thought our more or less neutral attitude pleased both sides when in fact it has pleased neither. He called for American influence to be used to lead toward Algerian independence, through NATO, Tunisia and the Sultan of Morocco, and then through the U. N. if progress isn't made.

His call strikes us as reasonable.

[From the Boston Sunday Herald of July 21, 1957]

UNITED STATES INTERVENTION REQUIRED UNDER NATO

To the EDITOR OF THE HERALD:

I have been startled at the storm of criticism leveled at Senator KENNEDY'S speech on the Algerian situation.

Moderate in tone and content, KENNEDY'S proposal that the United States use its good offices through NATO, the UN, and elsewhere to find a solution which will recognize the independent personality of Algeria and end the present bloody stalemate has been damned both in France and by American officials as unwonted meddling in the internal affairs of France. Algeria, we are told, is a private French problem.

This, I submit, is patent nonsense. Every day we meddle in the internal life of France by NATO activities, military purchases, and subsidies of various sorts and no French Foreign Secretary has risen to demand an end to this type of interference. Indirectly, our military budget supports the French police action in Algeria, but neither the State Department nor the French have demanded that this intervention cease.

In other words, American intervention in the internal affairs of France and, specifically in the Algerian debacle, is constant and could only be terminated by the French breaking loose from NATO and other Franco-American commitments. The French therefore do not want nonintervention—they want selective nonintervention—nonintervention in some areas and not in others. And our very refusal to support the Algerians is itself a form of intervention, in the same way that a refusal to help a downing man is not a nuetral act, but a positive action detrimental to him.

Obviously neither Senator KENNEDY nor myself would want the United States to try to act in an old-fashioned imperialistic fashion by simply issuing orders to the French or taking over their jurisdiction, but this is quite a different thing from urging upon a government which has welcomed our aid that it take sensible steps toward ending a problem which affects not France alone, but her allies and the noncommitted peoples of the world as well.

In short, American intervention, either positive or negative—as for instance, our refusal to support the Franco-British-Israeli attack on Egypt last fall—is an enormous force in the contemporary world whether we like it or not.

We cannot escape from its reality and its obligations, and it seems to me that our task is to see that this great power is employed on behalf of those values we cherish. The State Department can nurse the illusion that nonintervention with respect to Algeria is a nice clean, antiseptic policy, but the Algerians hunted down with American helicopters will have no doubts that in fact we are nonintervening against them.

Senator KENNEDY'S remarks therefore seem to me a fine start toward the kind of understanding of our role in the modern world that we must have if we are going to sustain our tradition of liberty in this time of peril.

JOHN P. ROCHE,
Professor of Politics, Brandeis University.
WALTHAM.

Shoe on the Other Foot

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, July 29, 1957

Mr. ROBERTSON. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial from the Dickensonian, a weekly paper published in Clintwood, Va., by H. M. Sutherland.

Speaking from the viewpoint of a former news editor of the New York Times who decided that the way of life in southwest Virginia was more to his taste, Mr. Sutherland comments on the reaction of his former neighbors and associates in New York when they found themselves faced at home with the kind of civil-rights legislative proposal they have advocated so strongly for application to the Southern States.

This editorial, Mr. President, points up the desirability of such an amendment to the pending bill as will be offered by the Senator from Georgia [Mr. RUSSELL] to provide Federal aid for bringing about a more even distribution of the Negro population throughout the Nation. When our brethren in other parts of the country have sat where we have they may have a more tolerant attitude and be less inclined to deprive us of our right to trial by jury, and less eager to subject us once more to the kind of force legislation which was attempted after the War Between the States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OH, YEAH?

We note with more than a little glee that predicament in which some of our northern brethren find themselves as a result of their zeal in the cause of integrating the races in the South. Within the past few weeks this mixing of Negroes and whites has been brought home to them in a manner that they do not like even a little bit.

We are referring particularly to the big business tycoons of New York, and the crusading New York Times where we were once employed as a news editor. Judging by their reactions to certain developments in that great city, they seem to feel that integration of the races is a magnificent thing down South, but that it is a cat of another breed when it comes into their own backyard.

Now this is an election year in New York City, and there is quite a big vote in Harlem, all the way from 120th Street up to the Yankee Stadium. Mayor Bob Wagner, who is up for reelection, and the city council had an eye out for this block of votes and began t[illegible] pious phrases and speeches about the necessity of guaranteeing to all men the right to live wherever they please regardless of color, race, or religion.

They proposed a law to this effect, and when the city council took the measure up for consideration the deluge came. The bill would have made it possible for Negroes to rent apartments in the thousands of apartment buildings on Morningside Heights, Columbia Heights, Washington Heights and out toward Van Courtland Park. All told there are some 1,800,000 renting units in this area and landlords have been careful to keep the Negroes out of them.

This was too much for the landlords, the real-estate people, the mortgage market in Wall Street, and even the renters themselves. They gagged out loud, and the councilmen were deluged with letters and petitions until they were completely smothered. They immediately relegated this proposed law to a dusty pigeonhole from which it will not likely be removed for some time to come.

In the forefront of every campaign to bring equality in every way to the southern Negro, and the compulsory brotherhood of man, has stood the New York Times like a granite wall. But not this time, Horatio. Integration was fine for the schools in the South, but desegregation of dollars in the North was something else again.

The Times and the other opponents of the new rent laws, which would have fined landlords $500 for refusing to rent to a Negro, pointed out that should such a law be enacted property values would drop and mortgage money for new construction would flee to other cities. Furthermore, warned the Times, "the difficulties of enforcement are enormous, and intolerance might be aggravated instead of diminished. * * * Progress must be a matter of education and spiritual growth rather than a consequence of legislation."

Oh, yeah? Well, that's exactly what we have been saying here in the South in regard to desegregating our schools, but we want it to apply to our children and not to our dollars. All of which leads us to the inevitable conclusion that this entire movement to halt school segregation is nothing but a political move aimed at the Negroes both in the northern cities and in the South, so long as it does not disturb northern finances.

And another thing is taking place up there that is quite interesting from an educational viewpoint. A number of the professors at Columbia University have long been apostles in the cause of the Negro and of integrating the schools. And then they got them integrated with a bang. The school officials of New York brought Negro pupils from over in Harlem to Morningside Heights and put them in school with the children of the college professors.

This action was hailed with acclaim by the NAACP, Herbert Brownell, and others who had donned the shining armor of liberators of the Negroes from the sloughs of despond, but somehow it did not pan out as joyously predicted. The scholastic standards of the mixed schools were lowered to the point where these college professors began quietly to remove their children from the desegregated schools and place them in private schools. And we challenge them to deny it.

Inflation at Work

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, July 29, 1957

Mr. MARTIN of Pennsylvania. Mr. President, the Philadelphia Evening Bulletin has published a very good editorial entitled "Inflation at Work." I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INFLATION AT WORK

It used to be a truism that there was one safe place for widows' and orphans' funds, Government bonds.

But in Britain, they're beginning to wonder. What is safe when inflation starts rolling?

London got a jolt the other day when Britain's war loan 3½ percent bonds dropped to 67⅞, and 2½ percent consols, a standard investment for trust funds, slumped to 49½.

These slumps did not reflect any lack of confidence in the soundness of the treasury. They grew out of the effort of investors to switch their funds into equities, to get a higher income that would compensate for the decline in the purchasing power of the pound as a result of creeping inflation. But this knowledge is small comfort to the original investor.

London financial writers, as a result, are questioning the validity of old rules about investing trust funds in safe government bonds. One charity board member, in a letter to the Times, reported that his board had reluctantly decided that good trusteeship required it to sell all its government holdings and reinvest in stocks.

The same problem is reflected in the lower prices offered on United States Government bonds, although the decline has not gone nearly so far. Britain's case, however, offers evidence of the urgency of solving the problem of controlling inflation.

National Cowboy Hall of Fame

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Monday, July 29, 1957

Mr. MONRONEY. Mr. President, we in the Senate have given our blessing to the National Cowboy Hall of Fame and Museum, which citizens in 17 Western States are creating in Oklahoma City to recognize the role the West has played in enriching our American heritage. It is particularly fitting that this monument, built by private subscription, without Government funds, should be a national shrine honoring the outstanding pioneers who are symbolic of an important era in our Nation's growth.

I understand that the House Interior Committee has tabled various House bills, and will act on Senate Concurrent Resolution 32 on Wednesday of this week. The Oklahoma City Times has commented editorially upon Senate passage of the resolution to recognize the Hall of Fame as a fitting and valuable institution. I ask unanimous consent to have printed in the Appendix of the RECORD the editorial and also the site dedication prayer of Dr. G. Raymond Campbell, pastor of Westminster Presbyterian Chuch, Oklahoma City, on November 11, 1955.

There being no objection, the editorial and prayer were ordered to be printed in the RECORD, as follows:

[From the Oklahoma City Times of July 25, 1957]

WITHOUT FEDERAL FUNDS

Oklahoma and 16 other Western States appreciate the congressional recognition given the National Cowboy Hall of Fame in the making on a 37-acre tract at the edge of Oklahoma City.

No Federal funds to help build and equip the memorial and museum were asked, although Federal funds have been appropriated for less worthy enterprises. Congress simply gives its blessing to the 17 States which comprise a large part of the Nation's bread and meat baskets for providing, with private contributions, a memorial to the people of the Western States who have made an empire of production, and are building it bigger and stronger every year.

SITE DEDICATION PRAYER BY DR. G. RAYMOND CAMPBELL, PASTOR, WESTMINSTER PRESBYTERIAN CHURCH, OKLAHOMA CITY, OKLA.

O Thou God of the open plains, who never made a man you didn't love, we pray that You will hallow this place in the memory of men of the saddle, that the best of the past can be carried into the future.

If sometimes, someone should imagine, up here on this hill, that he has caught just a whiff of the smell of bacon frying over an open fire, or the bubble of coffee boiling over onto coals of the fire, or the creak of a tired saddle, and the evening lowing of cattle off in the distance, we'll thank you, Lord.

And if some still night when the moon is full, someone should think that he hears again the soft breath of a harmonica, or the sound of a man quietly humming to himself, then we'll believe, like those men who were riding herd 2,000 years ago, that the angels have come mighty close to earth again.

It is in the memory of the men who built this West, we ask You to dedicate this place. And, Lord, up there on the high range where the grass is always green and a man's horse never gets tired, we pray that the boys are happy with what we are doing here. Amen.

Tennessee Valley Authority

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, July 29, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I received from one of my constituents, the president of a bank in Clarksville, Tenn., and former president of the American Bankers Association, urging that the present program of the TVA be maintained. As one who is in position to observe and recognize the improvements, he points out the better way of life TVA has made possible for the people of the farms and towns in the area served by the TVA.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE FIRST NATIONAL BANK
OF CLARKSVILLE,
Clarksville, Tenn., May 24, 1957.

Hon. ESTES KEFAUVER,
Senate Office Building,
Washington, D. C.

DEAR SENATOR KEFAUVER: We want to go on record as unqualifiedly in favor of the operation of the Tennessee Valley Authority, the maintenance of the present program and the avenue open for future developments.

Out here in the country we have had an opportunity to observe, through travels and otherwise, how TVA has carried conveniences, comforts, and contributions to better ways of life in remote sections and in valleys and distant places where there is a deep sense of appreciation of the opportunity to enjoy these elements of deeper thinking, fresher viewpoints, and wider horizons. All of this has come to these people.

Then we see industrial improvements in our city, as well as elsewhere, resulting in more and better employment as well as constant income throughout the year.

We know there are a lot of folks who formerly drove trucks and performed tasks that were rather hard and difficult, with very modest pay, now enjoying good income, better houses and furnishings, and, unfortunately for some, driving bigger automobiles.

It has been right heartening to go into modest homes out in the rural areas and see refrigerators, electric stoves, deep freezes, washing machines, and various and sundry other equipment operated by electricity. Usually a big television aerial on top of the house.

There are a lot of other reasons why we are very earnest in our approval of TVA which could be outlined to you in an extensive manner if an opportunity presented.

Sincerely yours,

C. W. BAILEY, *President.*

Government Competition With Private Business

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 29, 1957

Mr. THYE. Mr. President, for many years I have taken a deep interest in the subject of Government competition with private business. As a member of the Appropriations Committee, as former chairman of the Senate Small Business Committee, and now as ranking minority member of that committee, I have always maintained that the Government should eliminate itself from any competition with private enterprise which is not an absolute necessity.

Since 1953, there has been steady progress throughout all Government agencies toward eliminating competition with private business. The Bureau of the Budget has assumed the responsibility of coordinating a vast program designed to take the Government out of commercial enterprises.

Without objection, I should like to have printed in the RECORD a letter from Mr. W. W. Marsh, executive secretary of the National Tire Dealers & Retreaders Association, Inc., of Washington, D. C. This letter demonstrates what can be done when Government agencies act constructively and in cooperation with private industry. It is my hope that many other instances such as this will come to our attention during the coming months.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NATIONAL TIRE DEALERS
AND RETREADERS ASSOCIATION, INC.,
Washington, D. C., July 24, 1957.

Hon. EDWARD J. THYE,
United States Senate, United States Senate Office Building, Washington, D. C.

DEAR SENATOR THYE: On June 15 you wrote me attaching a copy of your letter to the Assistant Secretary of Defense, Perkins McGuire, and his reply. This was in relation to retreading now done by the United States Army.

As indicated in my correspondence, there had been considerable work done on this over the past several years and most recently a survey which we prepared and submitted to the Department of Commerce and made a part of a file which was then sent to the Department of Defense. All of this has now come to a very satisfactory conclusion with approximately 60,000 tires to be distributed among independent retreaders who are basically small-business men and this, of course, will be a very wonderful thing. The Army expects to maintain its basic facilities on a greatly restricted basis but all in all we are establishing a pattern which will do much to enhance our defense position in time of national emergency. We have pledged our support to the Department of the Army and the Secretary of Defense in working out the problems that will develop as a result of this and since we are completely cognizant of the basic problems that exist there, we feel that we can be of considerable help and hope that we will have the opportunity to render this aid.

We are very grateful to you for your interest and for your assistance in this matter. This is just another of the many very wonderful things that you have done for small-business men across the Nation and we are deeply indebted to you.

Very truly yours,

W. W. MARSH,
Executive Secretary.

The South's Date With Destiny

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, July 29, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial entitled "We Keep a Date With Destiny," from the Savannah (Ga.) Morning News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE KEEP A DATE WITH DESTINY

The South today, more so than ever since our Founding Fathers first set foot on American soil, is keeping a date with destiny. Providence, with infinite wisdom, has decreed that we shall be the guardians of those tenets of living which we are proud to call Americanism. All the idealism, all the hopes, all the dreams which our forefathers brought to the country have been passed on to us in the Southland. It is our responsibility to see they are safeguarded.

Since the very beginning of this country there has been apparent a difference in the way in which the peoples of the various colonies viewed such subjects as civil rights, liberty, and equality.

In the beginning things were much nearer the same for all concerned. The English, the French, and the Dutch who were mainly responsible for the settling of this country viewed it simply as a smiling land, benevolent in all its aspects. They comprehended nothing of the rigors of a New England winter, or the terrific inroads which swampland fevers could make in the South. Consequently, when eager shiploads of colonists left the old country, it was no great matter of concern just where they landed.

Thus, the navigator of the *Mayflower* took a wrong look at the sun or maybe attended the broaching of one gin keg too many or ended up in Massachusetts instead of South Carolina, it didn't make too much difference.

But later, when the Indians had been pushed back, the land explored, and the colonists had learned to wrest a living of sorts from the new land, things took on a different pattern.

Yankee skippers brought in slaves. These people couldn't thrive in northern latitudes, but they found an ideal climate in the warm South. The northerners waxed fat on the slave trade—along with opium and other contraband goods—and built up a healthy economy on the basis of shipping and manufacturing. The South, on the other hand, found agriculture to its liking. The fecund land yielded abundantly of the tobacco, cotton, indigo, and foodstuffs which sold so well on foreign markets. The slaves which the Yankees had imported provided a perfect answer to the labor problem.

Both areas flourished, the North on industry and commerce, and the South on agriculture. From both came the sparks of rebellion which were fanned into the searing flames of the Revolutionary War. The embattled farmers of Concord fired the first shots, but it was in the South that the Declaration of Independence and the Constitution were inscribed in words that shall live forever. But, everything considered, ours was a common effort.

Then, liberty won, we drifted apart. New England and the rest of the manufacturing North were jealous of prerogatives in this field; we of the South were content with the ease, the culture, and the prosperity which our fruitful fields brought us. The downeasters and the Dixie people furnished the great bulk of the leadership which further formulated the ideas of the Constitution and forged a new concept of liberty—a concept which literally left the world gasping.

Then came discord. The North became jealous of the South because we began to find ourselves industrially and demanded our just place in the economic sun. The South in turn was fiercely protective of those advantages which Providence had granted. Most debate hinged on the immediate problem of slavery, but the difference in basic principle went much deeper. The North, for geographical and economic reasons were federalist, desirous of a strong central government. The South, for the same reasons was a stout proponent of the right of the various States to handle their own affairs.

These arguments eventually led to open conflict, a needless, cruel, and bloody war which in he end proved nothing except that the North could produce and find hands to use more of the sinews of war than could the South. At the end the South lay prostrate, a helpless victim of the revenge-bent North.

But, despite the ardors of the Reconstruction, our dreams did not die. Even in chains we fought on to preserve those constitutional principles and liberties for which our forefathers had died.

It has been a long fight. Almost a hundred years have passed since the guns of Fort Sumter boomed the death knell of national unity. But agonizing year by agonizing year, we have fought our painful way back to the point that economically we are now in about the same position as immediately before the unfortunate War Between the States.

And, if one be desirous of proof that history repeats itself, look at today's problems and those of the 1950's. Stripped of a few trappings, they are the same. The South stands today as always as the embattled champion of constitutional integrity, States rights, and the dignity of the individual. We are fighting again the moral battle of the sixties. For the War Between the States did not end at Appomattox. In effect, it started here.

And the South of today is keeping a date with destiny.

Liberty and License—A Vital Difference

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, July 29, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an outstanding column which was written by Mr. Holmes Alexander, one of America's most distinguished newspapermen. It is entitled "Liberty and License—A Vital Difference," and appeared in the July 26, 1957, issue of the Charleston (S. C.) News and Courier, one of the great newspapers in my State.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIBERTY AND LICENSE—A VITAL DIFFERENCE

(By Holmes Alexander)

WASHINGTON.—Forgive us our virtues when they carry us to extremes. The upright man becomes the bent-backward pietist. The dignified and eloquent statesman becomes the pompous and bombastic windmill. The kindly judge with tolerance for human frailty becomes the duped confederate of the thief, the traitor, the anarchist and the vandal who prey upon a law-abiding, long-suffering community.

This overextension of goodness seems to have happened to the Supreme Court since we commenced worshipping the graven image called "the common man." It is a political form of commandment breaking which the House Subcommittee on Revision of Laws is now investigating. Chairman EDWIN E. WILLIS, Democrat, Louisiana, is a thickset southern lawyer with streaky, stand-up hair and a penetrating manner of inquiry. He is beginning the probe—as all good chairmen should—with a preconviction that something is wrong and that his investigation will prove it.

Congressman WILLIS has already said for quotation that the Justices of the Supreme Court have been usurping the lawmaking and executive powers which properly belong to Congress and the President. How have the Justices done this? On the basis of the recent record, they have done it by their overconcern for the individual and their showoff hostility toward the rest of our American society.

The Willis subcommittee has begun by a study of the Supreme Court decision in the case of *Mallory* v. *United States*. This Mallory was picked up in the District of Columbia for a crime to which he confessed and for which he was then arraigned. Upon appeal, the Supreme Court released Mallory on the grounds that he was kept in the police station overnight before the arraignment and that he confessed to a crime without being properly and publicly told what it was.

What is the effect of this decision upon our police work and jurisprudence? United States attorney for the District of Columbia, Oliver Gasch, says that police officers, veterans as well as the rookies, are so confused that they hesitate to arrest even a red-handed criminal who makes a confession. His case will almost surely be tossed out of court if the confession seems to be ill timed.

It is conceivable, according to Gasch, that an orthodox confession made after arraignment could be nullified if the defendant appeared to be repeating one he had made beforehand. Gasch's boss, Assistant Attorney General Warren Olney III, of the criminal division, has described the Mallory decision as a boon to organized crime. It gives the kept lawyers and mouthpieces of gangland another gimmick with which to spring their clients. Congressman KENNETH B. KEATING, Republican, of New York, ranking minority member of the House Judiciary Committee, has a bill (H. R. 8600) to straighten out this absurd tangle. KEATING says:

"The bill that I am introducing would simply provide that any delay in arraigning an accused person such as Mallory, in and of itself, could not constitute grounds for keeping a confession out of evidence."

Study of the Mallory case is merely the first step of the WILLIS subcommittee in pursuing the alleged misrule of the Supreme Court. The path of inquiry now heads toward the Court's various rulings on the anti-subversive laws, FBI records, the Girard case, congressional investigations, and the use and misuse of the Bill of Rights.

Chairman WILLIS feels that this is an unprecedented task because never in history has the Court been so conspicuously stronger than either the Congress or the White House. It is no secret in town that President Eisenhower was just as furious over the Court's opening of the FBI files to defendants as any Congressman has been over other alleged usurpations.

Congressman WILLIS insists that he is not investigating the Court, merely the Court's decisions. But in trying to narrow the scope of his probe, he has, in my opinion, done just the reverse—he has broadened the scope to encompass not merely the Supreme Court but the nature of our American Government.

It appears to be that we have passed from our proper concern for the individual to an inordinate pride in ourselves as individual protectors. We have made a fetish of individualism until the pillars of society are neglected and in jeopardy.

Fallout of Another Kind Plagues Nation's Economy

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, July 29, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix RECORD an editorial from the Nashville Tennessean of July 18. This is an excellent article on the problem of inflation, and I think it deserves wide circulation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FALLOUT OF ANOTHER KIND PLAGUES NATION'S ECONOMY

There is a different kind of fallout plaguing the Nation these days and the new villain is the fallout of the value of the dollar, or if you prefer: inflation.

After a measure of stability during the last year of the Truman administration and

for 3 years of the Eisenhower administration, the slow spiral upward began. It has been an unwelcome visitor for some time, now, and some of the economic experts think it has moved in permanently. Some go so far as to say that within the next 25 years it will be 50 percent bigger than it is now.

Most recent boost in that direction was the $6-a-ton hike in the price of steel which will affect prices of everything from hairpins to battleships.

Before the last election and afterward, President Eisenhower had a lot to say on the subject. He talked fondly of the administration's anti-inflation policies, which have been of little help, and pleaded with business and labor to exercise "statesmanlike action" to help ease the trouble. His pleas fell on deaf ears.

For 9 months the cost of living has gone up each 30 days and the reports which used to be viewed with concern are now being accepted matter-of-factly. Defeatism about inflation is appearing on all sides within the administration. Since tight money and the classical methods haven't halted the spiral, the economic experts now are coming up with a much-repeated phrase: "inevitability of inflation."

Big business blames labor costs such as higher wage settlements for a major share of responsibility. Labor says "not us," and cites the Government's Bureau of Labor Statistics, which in a report said the index for unit labor costs was lower than the price index for every year before 1956, and that the index of nonlabor costs (profits, depreciation, and other nonlabor payments) was higher than the price for every year before 1956. In other words, says labor, it was profits, depreciation, and other nonlabor payments that got the benefits of the price increases since 1947.

And Senator ESTES KEFAUVER, who heads a Senate antitrust and monopoly subcommittee, leans in that direction. Senator KEFAUVER has announced a complete and thorough diagnosis to determine the cause of inflation.

One cause, the Senator believes, may lie in what he terms administered prices—that is that some concentrated and powerful industries like steel have the power to raise prices even when demand is falling, and do not hesitate to use that power.

Senator KEFAUVER feels that this produces a new kind of inflation, one in which prices are not influenced by the laws of supply and demand or by instruments of fiscal control, but by corporate intent.

Certainly the softness of the Eisenhower administration toward big business has created an atmosphere favorable to such bigness, where mergers are now matter of fact and other concessions are an accomplished fact.

While some of the blame can undoubtedly be laid at the door of big business it can also be said that big labor cannot shrug off its share of the blame for making smaller components of the economy victims of the fall-out villain.

No one likes the idea of price-wage controls to keep bigness in line. And even indirect controls sometimes are powerless as in the case of price solidarity of the steelmakers.

While the Eisenhower administration is floundering in the sea of despondency over the problem, at least Senator KEFAUVER aims at doing something. What he may accomplish is unknown at present, but the opportunity is surely there to shed light on what is happening, and if the case of administered prices is proved, to pave the way for changes in existing laws to enable the Government to move against such price solidarity as has been evident in the oil and steel industry. At the same time the Senator might look for evidence of administered wages and make it clear also to labor that antitrust legislation applies to all economic groups, not just business.

Integration in Education

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, July 29, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article which appeared in the Charleston (S. C.) News and Courier of July 28, 1957. It is entitled " 'Liberals' in Retreat From Integration," and it was written by Mr. W. D. Workman, Jr., one of the South's most distinguished and able newsmen.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"LIBERALS" IN RETREAT FROM INTEGRATION

(By W. D. Workman, Jr.)

COLUMBIA, July 27.—Northerner and southerner; liberal and conservative—all seem to be much closer to agreement on the problem of education if care is taken to use the proper terminology.

What the southerner frankly practices as "racial segregation" cannot be countenanced in the North, at least not publicly, but it seems quite acceptable to segregate children on a basis of socioeconomics considerations. The end result, of course, is same: Providing one's children with an educational environment most conducive to learning and least likely to erupt into the social or disciplinary discord which might logically be expected from enforced comingling of diverse groups.

TEACHERS CHIDED

Take as an example of the importance of words the case of Morningside Heights Public School of New York, to which Columbia University teachers have been accustomed to send their children. Recently, Editor Russell Maguire chided the "liberals" of the university with having forsaken their preachments of integration by withdrawing their children from the school as it became populated with Negro and Puerto Rican youngsters. Said Maguire in the June issue of the American Mercury:

"The great advance of integrated school which liberal Columbia has so long advocated has routed the Columbia liberals almost to a man."

But no, such admission comes from the university itself, when it was asked to comment on the American Mercury editorial Southerners may find both enlightenment and guidance in this reply from William C. Fels, associate provost of the university:

SET HIGH STANDARDS

"University faculty members set high educational standards for their children, as you would expect. The problem for them has not been caused by the students being Negroes or Puerto Ricans but by the socio-economic composition of the group and what this means in practical terms for the educational process. Some faculty members have withdrawn their children from the nearest public school and have sent them to private schools. Others have moved into the suburbs partly for educational reasons and partly also to get their children off the streets and for the obvious advantages of suburban living. On the other hand, many faculty children still attend the school. There is a parent-teached association in which faculty members take an active part in efforts to improve the school.

SUPPORTS SETTLEMENT

"The university lends support to a settlement house which has made strides toward the improvement of the community. It has participated in the construction of interracial cooperative housing in which may faculty members have purchased apartments. It recently opened a new athletic field where it will conduct a program for students of the university and youths of the community without regard to race, color, or creed. The implication of the editorial that the university and its faculty do not practice what they preach cannot, I think, be supported."

Columbia University seems to be learning now what southerners have known through generations—that, as of here and now, white groups and Negro groups have different socio-economic composition, and the effort to jam them together cannot help but impede learning. The current effort of New York school authorities to speed up that jamming process may bring additional enlightenment to the residents of the metropolis.

NEWSPAPERMAN SPEAKS

One resident, a newspaperman who dares not publish this sentiment in his own paper, already has been enlightened. Says he:

"It is, of course, an unconscionable outrage to uproot children from their own neighborhoods and move them into schools of an entirely different environment purely in the interest of sociological experimentation. The motivation is wholly political. Who can dispute that children are entitled to be educated in their own community and with their own neighbors in an environment compatible to their home upbringing. The average family makes real sacrifices for the privilege of living in a good neighborhood so that their children will enjoy the benefits of being educated in that environment.

"The board of education should adhere to its essential reason for being—the education of New York's children—rather than delving into sociological experimentation at the taxpayer's expense."

Senator Russell Is Due the Credit

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, July 29, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial, "Victory Is Partially Won," from the Atlanta, Ga., Journal. This editorial pays tribute to the great role which my distinguished senior colleague, Senator RICHARD B. RUSSELL, has played in protecting the constitutional rights of all American citizens from legislative abuse.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VICTORY IS PARTIALLY WON

The South's limited victory on civil rights—the adoption of a Senate amendment removing the vicious part III of the bill—can be attributed to the reasoned, legal approach which Senator RUSSELL and his cohorts have used in their dramatic, uphill battle.

Because of their expert maneuvering, the bill is now reduced to a measure for protecting voting rights. The broad court in-

junctive powers for enforcing all types of civil rights have been stricken.

The southerners are not through, however. They still believe, with justification, that a jury trial guaranty should be written into the legislation. And there is a chance that they will get that, too.

Certainly the verdict of the jury at Clinton, Tenn., has given the southern forces a good talking point. That decision was a forceful demonstration that juries are not governed by sectional prejudice, and that they have a respect for man's rights and the law.

The kind of debate which has characterized the civil-rights fight in the Senate has been good for the country. It has shown the people the importance of constitutional government. Emotional and prejudicial arguments have been noticeably absent.

Anyone who heard the civil-rights question debated by four Senators the other night on the television show, The Big Issue, must have been impressed with the temperate and judicious mannr in which both sides presented their arguments. It was typical of what has been going on in the United States Senate.

Senator RUSSELL is due a great deal of the credit for putting the issue on such a high plane. He has been joined by Senator TALMADGE and others.

Early this month the New York Times, in presenting Senator RUSSELL as its man in the news, described him as a leader of lost causes—a politicain who lived a life of quiet despair.

We suspect that portrait has been altered by the victory he has achieved in the Senate.

Hells Canyon High Dam

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, July 29, 1957

Mr. NEUBERGER. Mr. President, Mr. Byron C. Brinton, editor of the Record-Courier of Baker, Oreg., has studied resource development and water-storage problems in the Pacific Northwest with a student's zeal and thoroughness.

In the July 25, 1957, issue of the Record-Courier, Mr. Brinton published a documented reply to the letter on the Hells Canyon issue which was sent recently by the White House to Representative JACK WESTLAND, Republican of the State of Washington.

I think any impartial and neutral person who reads Mr. Brinton's editorial will realize that President Eisenhower was the victim of a good deal of misinformation about the facts when he sent his letter about Hells Canyon Dam to Representative WESTLAND. I feel that the other side should be presented, and for that reason I ask unanimous consent that the editorial from the July 25 issue of the Baker Record-Courier be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A REPLY TO MR. EISENHOWER

This newspaper has just received a copy of a letter by the President of the United States in which he attempts to explain why he personally ordered the defeat of the Hells Canyon high dam. The letter was distributed by air-mail special delivery by Congressman BUDGE, Republican, of Idaho, who is constantly in consort with the private electric company in this matter. Parts of the letter, which was released by Congressman WESTLAND, Republican, of Washington, were printed in the press Tuesday, even though BUDGE did not intend to reveal it until a release date of July 25—today.

The letter by the President of the United States, or attributed to him by the reproduction of his signature, carries so many inaccuracies that it must be answered, lest his high office tend to make the crime at Hells Canyon righteous.

The Eisenhower letter says: "Early in my first term I expressed the belief that the Nation must adhere to three fundamental policies: First, to develop, wisely use, and thus conserve our country's natural resources from generation to generation; second, to follow the historic pattern of permitting private and other non-Federal organizations to develop these resources under fair provisions of law, including restraints for proper conservation; and third, to treat resource development as a cooperative undertaking, a partnership. * * * Federal Government should build some projects, local government some, and private interests some. * * *"

The truth is, the historic pattern for 50 years from Teddy Roosevelt down to Senator McNary, and until Eisenhower, has been not to permit private organizations acquire great rivers for nondevelopment, as was done at Kettle Falls and Oxbow and other sites. Teddy Roosevelt said—and he was quoted by Gov. Tom Dewey to that effect only in recent years:

"Do not give up your waterpower for a promise of quick developments. We are poor citizens if we allow the things worth most to get into the hands of a few."

The truth is further: President Eisenhower cannot contend that the waste of 400,000 kilowatts of energy at Hells Canyon is conservation of a natural resource. Yet he has only to turn to the FPC hearing conclusion to ascertain that his commission acknowledged the superiority of the high dam in power and flood control and other values but granted the license as Eisenhower policy and not as conservation.

The truth is further: President Eisenhower has not seen and will not see the Federal Government starting any major hydroelectric project so long as he is President. Yet he has defended the use of public tax money through quick writeoff schemes to finance partial development private projects at the same sites for which he contends there is no tax money for the people to build conservation projects for themselves. And he has added his blessings to partnership schemes such as the Coon-Cordon bill for John Day site on the Columbia which offered utilities the big public dams at two bits on the dollar and even tax insured their contract right to "all the power" even against such hazards as an act of God and an atomic attack.

The truth is: President Eisenhower—if he ever starts a public project—will start a project so costly, so involved in problems that his private utility friends do not want it.

The Eisenhower letter says: "In its Hells Canyon decision, the bipartisan FPC acted unanimously in granting a license to the Idaho Power Co."

The truth is: President Eisenhower knows that it is dishonest to imply that the FPC which made the Hells Canyon decision is bipartisan and impartial. Let him deny these facts: Member Kuykendall was named by Ike as chairman of the commission in 1953, a man known to be opposed to Hells Canyon and a man whose appointment caused a utility agent 2 days later to write privately that the low dam license had been assured. Member Digby was an Eisenhower campaigner named in July of 1953. Member Stueck was a Republican named by Ike in June of 1954. Member Connole was an Independent named by Ike in April of 1955. Member Draper was named by President Hoover. These are the men who—with Ike and McKay—gave away Hells Canyon in July of 1955. Yet Mr. Eisenhower has the nerve in his letter of July 19 to tell the American people FPC, 100 percent the choice of the electric companies and the product of Republican appointments, is bipartisan and impartial.

The letter further says: "Construction work on 2 of the 3 dams comprising the licensed development is well underway."

The truth is: This newspaper hereby extends a personal invitation to Mr. Eisenhower to visit Snake River dam sites so we can personally ask him at both Oxbow and low Hells Canyon whether he is not deliberately misleading the American people when he says two projects are "Well underway."

The letter further says "Production of electrical energy urgently needed in Idaho and throughout the Northwest power pool, is scheduled to begin in September 1958."

The truth is: This newspaper has twice checked by correspondence with Bonneville Power Administration and that agency has declined to confirm any provision for any low-dam power into its system at all; and we had asked them pointblank how and when the Brownlee power was being programed and at what rates.

The truth is: Mr. Eisenhower cannot and will not reveal when, how much and at what rates low-dam power will be received into the Columbia River power system operated by Bonneville to augment its shortage of low-cost power.

We challenge Mr. Eisenhower to categorically and honestly produce the cost figure at which Ipco power will be offered on a firm basis at Baker, at Tacoma, at Spokane, at Portland, or in Idaho. Before it is too late Mr. Eisenhower should explain how Ipco power will be made available to the consumers of the Pacific Northwest and the industries crying for power at less than 3 mills which would have been produced by the high dam. If Mr. Eisenhower has any facts to base his low-dam power statement, he should produce them now.

The truth is: Mr. Eisenhower is guilty of the crudest doubletalk when he says the "production of electrical energy is urgently needed" to justify a low-dam scheme in which his Government agency has deliberately written into the license conditions which permit the delay in low-dam construction for as much as 9 years, if not forever.

The truth is: Mr. Eisenhower knows he has permitted Ipco to build its dams at its own pace and deliberately allowed it to ignore the "urgent need" for electrical energy in other parts of the region.

We further challenge Mr. Eisenhower to publicly state why he has no engineer representing the public stationed at Brownlee work to see that standards are carried out on this earth-fill dam.

The letter states: "The Idaho Power Co. * * * will also produce substantial benefits for taxpayers * * * taxes which the company will pay."

The truth is: Ipco pays no taxes it does not collect from consumers because its rates are regulated to include taxes—unlike a private enterprise business. In fact a private electric company is the poorest form of tax collector because its capital service charge in all cases is about equal to the taxes its collects. Mr. Eisenhower knows that this amounts to a taxpayer taking $1 out of one pocket and putting only 50 cents back in the other. The fact that an electric utility

is a giant monopoly collecting much money does not mean that this is a benefit to taxpayers.

The letter states: "S. 555 (the Hells Canyon bill) would apparently commit the American taxpayer to expenditures approaching or perhaps exceeding six-tenths of a billion dollars * * * the Federal budget is already under severe pressure."

The truth is: Mr. Eisenhower deliberately implies that Hells Canyon Dam would cost $600 million. This is deliberately the propaganda taken directly from Ipco. Mr. Eisenhower did not itemize the propaganda figure to show where the Bureau of Reclamation engineers at Denver who use a $350 million cost are wrong.

Furthermore, if the budget is under such pressure and cannot invest public funds at the greatest dam site in the world (85 percent payable from power revenues) how can Mr. Eisenhower justify the statement in his next paragraph in which he wrote: "The Ipco development will permit the Federal Government to devote more of its financial resources to other developments which are clearly beyond the capabilities of non-Federal interests alone." At poor dam sites? At the dregs that are left? In Canada?

President Eisenhower may not agree, but Teddy Roosevelt had the exact word for this giveaway of the valuable resource assets and the retention of the liability jobs which are beyond the capabilities of private electric company coupon clippers. Said Teddy Roosevelt, as quoted above: "We are poor citizens if we allow the things worth most to get into the hands of a few."

We respectfully address this open reply to the President of the United States in answer to a biased political private utility document ascribed to Mr. Eisenhower and dated July 19 from the White House.

Bayonets Once Ruled South

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, July 29, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an outstanding editorial from the July 26, 1957, Charleston, (S. C.) News and Courier, an outstanding newspaper in my State. It is entitled "Reconstruction Story a Reminder That Bayonets Once Ruled South."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"RECONSTRUCTION" STORY A REMINDER THAT BAYONETS ONCE RULED SOUTH

Until recently "reconstruction" was something many white northerners had never even heard of, and few knew much about it. Hardly a white southerner, however, has grown up without a working knowledge of the Federal occupation of this region. Many heard eyewitness accounts of it from their grandfathers.

The civil-rights debate has given new meaning to reconstruction. For example, in its July 26 issue U. S. News & World Report, a magazine with great and growing national prestige, discussed it in an article captioned, "When Federal Bayonets Did Rule the South." The news may be disconcerting to the general public.

For 10 years (1866–76), the magazine reminds its readers, northern troops occupied the Southern States as conquered provinces. Pictures of Negro mobs and legislatures accompany the story.

In Washington, the Senate has struck out phrasing of a bill that would have authorized the President again to send Federal troops into the South to enforce Federal laws about race. While this action comes as welcome relief it does not remove danger that history may be repeated.

To recall that history, U. S. News & World Report says:

"The 14th and 15th amendments to the Constitution, relating to race relations, were adopted by a vote of Southern States that were under military occupation. There was no alternative to approval. The States could not obtain readmission to the Union until they adopted the 14th amendment.

"This period of Federal rule produced strange scenes.

"Federal agents moved through the South preaching to the Negroes hatred of their former masters, organizing them into masses of voters whom they marched to the polls. A large share of southern whites were disenfranchised.

"With the support of Federal bayonets, unscrupulous whites from the North used the Negroes to take over the government of the Southern States. Negroes, carpetbaggers and a scattering of their southern sympathizers called scalawags filled the legislatures, took over the State, county and city offices.

"They decided who could and who couldn't vote, decreed what the law would be, rewrote State constitutions as they saw fit.

"Few Americans today are informed about the period."

Anyone who has studied history in high school knows why few Americans are familiar with Reconstruction. School textbooks give only a vague picture of the torture to which the South was put.

As Claude G. Bowers wrote in the preface to the Tragic Era, "even historians have shrunk from showing us the torture chambers."

The reluctance of the textbook authors to picture an ugly episode of American history is one reason the civil rights bill has progressed to the present point. Accurate, informative articles, like the one in U. S. News & World Report, ought to be must reading in classrooms throughout the country.

Whitworth Stokes

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, July 29, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Nashville Banner, in tribute to my good friend, Whitworth Stokes, of Nashville. He was a fine lawyer. He expressed himself well and he contributed much to the understanding of political issue. Mr. Stokes was able, courageous, and always interested in civic and public affairs. I know that he will be greatly missed in his community.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHITWORTH STOKES

The sudden death of James Whitworth (Whit) Stokes came as a shock to this community where he was widely known both as an attorney and a leader in cultural fields. Mr. Stokes, who comes from a long line of lawyers, had attained a high place in the legal field. And he obtained his degree in law the hard way—by working at night while he attended Cumberland University.

The age of 48 is not actually young in years, but Whit Stokes, as he was known to so many, had a quality of continuing youth about him, largely because of his bright friendliness, a quick, clever mind, and a wide concern for others. His life was one that the community will not soon forget.

Depression—The Only Cure?

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. HIESTAND. Mr. Speaker, I am one of those who holds the conviction that we can, if we will, hold the inflation and check the cost of living. In my judgment, the alternative—depression—is disaster.

David Lawrence expresses it so well in his editorial in the U. S. News & World Report of July 12, 1957, that under unanimous consent I am having it reproduced in the RECORD:

The national economy is traveling along at a reckless pace.

Labor costs rise, and then industrial prices rise.

As industrial prices rise, the cost of what the farmer buys—equipment and everything else—goes up. So the price of what the farmer sells must also go up. And the Government pays a subsidy to maintain a certain level of prices to the farmer.

As the costs of food and its distribution are increased to the consumer, the escalator clauses of labor-management agreements—based on a rise in the cost of living—call for proportionate increases in wages. Other rises in wages—not tied to the cost of living—are also written into labor contracts to take effect automatically on fixed dates in the future, irrespective of the economic conditions prevailing at the time.

As the wage and price spiral continues, the purchasing power of the dollar steadily goes down. More and more dollars are then needed to buy the same quantities of goods.

It's a case of the dog chasing his tail.

It's the same old story that has plagued nations from time immemorial.

Centuries ago, to meet inflation, governments began to devalue their monetary units and to engage in juggling tricks to pay off national debts.

Today the people are cheated in a different way. Millions and millions of persons with fixed incomes—pensions and insurance funds—are the victims as their dollars steadily depreciate through the persistent rise in prices acquiesced in by government.

A savings bond bought a few years ago and put aside to pay for a child's college education buys less and less as the time approaches for college entrance.

Too many people lately have vented their indignation at Federal spending—as if this were the sole cause. It is only one of several causes.

One reason, of course, for today's inflation is past wars and defense preparations against the next war. The dangerous men in the Kremlin are the real culprits.

But there are other causes which are well within our control.

More than six decades ago Federal laws were passed to prohibit corporations from forming monopolies or fixing prices. These statutes have been rigidly enforced.

Today, however, the biggest single influence in the fixing of prices—national labor unions—goes unrestrained. Agreements are made nowadays on an industry-wide basis. No law exists against industry-wide bargaining. Yet it is an obvious device to fix prices. It's a concerted action within industry after industry that directly affects the cost of goods in interstate commerce. Employers are helpless to fight wage demands. They usually capitulate rather than face the high cost of a strike.

So with Government acquiescence—or negligence—an economic power unparalleled is wielded by a few union leaders who control our economic destiny.

The management of a big company today must calculate in advance how high its prices can be permitted to go without meeting sales resistance.

Sometimes management does guess wrong—or rather it has no choice. Businessmen know that a price rise can mean diminished demand and buyers' resistance. But they must move prices upward just the same and be content with a smaller volume of sales in order to make any profit or to hold losses at a minimum.

When buyers' resistance comes, recession comes, too, and then depression.

We sometimes call the incipient stages readjustment or correction. But the truth is that, in our uncontrolled economy, recession or depression is emerging as the only cure. Evidently there has to be a severe decline of some kind before prices and wages can be held static while waiting for economic recovery.

What is the alternative? Nobody wants wage and price control by Government. Everybody favors a free economy.

The President has been appealing repeatedly to labor and management to exercise self-restraint. But such appeals are not effective because there are so many factors operative at the same time.

Productivity of labor, for instance, has not risen commensurate with the rise in wages. Statesmanship in labor is missing. Leadership of the big unions, for the most part, thinks only in terms of vote-getting in union campaigns. The labor leaders know the facts, but the demand constantly is for higher and higher wages, irrespective of the Nation's capacity to absorb the higher prices forced by the wage increases. Taxation limits profits, but nothing limits wage demands.

It is a dangerous cycle in which we are living today. Congress lacks the courage to expose excesses. Everybody seems to be waiting for the inevitable depression, with its waves of unemployment.

What a painful way to learn the lessons of economic self-discipline.

The Value of Unlimited Debate

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, July 29, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Unlimited Debate," from the July 23, 1957, issue of the Macon, Ga., News. Not only does this editorial make a forceful argument for continuation of freedom of debate in the United States Senate, but also it is a deserved tribute to Georgia's distinguished and beloved senior Senator, Hon. RICHARD B. RUSSELL, and it merits the reading of every Member of the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNLIMITED DEBATE

As a result of Senator RICHARD R. RUSSELL'S penetrating and detailed analysis of the proposed civil rights bill, many of those who unthinkingly advocated it without reservation all over the country are having second thoughts.

Senator RUSSELL has pointed out to them and to the rest of the Nation the dangers which are hidden in the involved wording and in the changes to be made in previous laws.

President Eisenhower himself has admitted that he hadn't read the fine print in the measure drawn up by United States Attorney General Brownell.

The detailed discussion of the proposed legislation by Senator RUSSELL has been in the finest tradition of democracy and he has performed a distinct service to the Nation by spelling out, dotting the i's and crossing the t's, what the bill does and what it does not do.

And it was all done under the unlimited debate tradition and rule of the United States Senate which some would eliminate.

Had there been a limitation on full and free discussion of all proposed national laws, it is not at all certain that the American people could have had the benefit of such a valuable study of the civil rights bill, and comprehensive discussion, as Senator RUSSELL has given.

Civil Rights

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, July 29, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an outstanding editorial from the July 26, 1957, issue of the State, Columbia, S. C., one of the great newspapers in my State. It is entitled "Only for Votes."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ONLY FOR VOTES

Some people have consistently insisted the present administration has been one big giveaway program, and currently practically everyone on radio and TV has some sort of giveaway jackpot program. Supposedly such something-for-nothing programs are popular.

The South would be glad to sponsor a giveaway program of its own right now. It would like to give the so-called civil-rights bill back to the individual who concocted the administration measure, but no one has yet discovered who in the Justice Department pieced together the cleverly-written monstrosity. Even the bill's stanchest supporters appear to be more confused than a Communist would be with friends he could trust. The South also wishes someone would give away a little information about who wants what, and why they want it, in the rights bill.

Apparently practically no one in the House knew the troop-use provision had been cunningly sneaked into section 3, for the Senate unanimously voted to repeal the rusty old Reconstruction statute which would have authorized use of Federal troops to force integrated schools. Both party lines got all fouled up somewhere in the process.

President Eisenhower, a man of unquestioned integrity, said publicly on two occasions he wanted no authority to use troops, yet the administration bill carried a provision which reaffirmed the President's right to do precisely that. The President further said he was chiefly interested in assuring voting rights.

Senator KNOWLAND, leading the bipartisan group pushing the bill, has twice said he and the President wanted "all the bill" and then KNOWLAND himself sponsored an amendment to repeal the troop-use statute. He also voted for his amendment, and the following day again called for passage of the original measure. Someone, or everyone, is confused.

All sorts of people favoring the vicious original bill will shout from the housetops about guarding individual liberties, yet they know the bill as passed by the House would deny jury trials to people just suspected of planning to do wrong, and would have one branch of Government prosecuting another—with taxpayers having to pay the bill for both prosecution and defense. This would be fine for the bureaucrats, a group that would undoubtedly multiply should the measure become law. We taxpayers—every 7 of us—already have 1 bureaucrat on our tax-bent backs, and that seems a heavy enough burden to bear.

Even the section relating to the right to vote is a complete farce so far as South Carolina is concerned. Registration clerks all over the State now, as for years past, have been registering hundreds of Negroes just as routinely as they have other applicants. The bill would not help them one bit, for they already enjoy the right the bill will allegedly guarantee.

The southern Negroes supposedly are to be the chief beneficiaries of the rights bill, but it simply won't work that way. Already the Negroes of the South have been called upon to contribute vast sums of money to organizations fighting for rights, but little if any of the money has been spent in the South. The bill shows much more promise of helping some northern politicians than assurance that Negroes will be helped, for the measure has created great areas of bad feelings.

It is a pity—a great and tragic pity—that some few politicians have placed such a premium on their own careers.

An Ambassador Is Born

EXTENSION OF REMARKS

OF

HON. JOSEPH S. CLARK

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, July 29, 1957

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "An Ambassador Is Born," which was published in the Washington Post of yesterday, July 28. The article reveals some of the testimony heard before the Senate Foreign Relations Committee with respect to the qualifications of our Ambassador to Ceylon—a colloquy which I find very revealing, and an indication of the existence of a sad situation in our diplomatic corps,

where it appears that persons utterly without qualification are being appointed to high diplomatic posts, merely because they made large contributions to the Republican campaign fund.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN AMBASSADOR IS BORN

The short and poignant ordeal of Maxwell H. Gluck before the Senate Foreign Relations Committee is chronicled below. Gluck, head of the 140-unit Darling Stores chain, was nominated by President Eisenhower on June 26 to be United States Ambassador to Ceylon. The 57-year-old Ohio businessman breeds very fine horses at his Lexington, Ky., farm, and also maintains a residence in New York City. He appeared before a closed session of the Senate committee on July 2. Excerpts from the transcript follow:

"Senator J. W. FULBRIGHT, Democrat, of Arkansas. How much did you contribute to the Republican Party in the 1956 election?

"Mr. GLUCK. Well, I wouldn't know off hand, but I made a contribution.

"Senator FULBRIGHT. Well, how much?

"Mr. GLUCK. Let's see, I would say, all in all, $20,000 or $30,000. [The Senate Subcommittee on Privileges and Elections' report lists $26,500.]

"Senator FULBRIGHT. How much did you contribute in 1952?

"Mr. GLUCK. Well, not as much: I would not remember, but a fair amount.

"Senator FULBRIGHT. Well, you are a businessman, you pay attention to your money. * * * You can guess now about how much.

"Mr. GLUCK. Offhand, I would say around $10,000.

"Senator FULBRIGHT. If you contributed $30,000, don't you think Ceylon is a rather remote post for that? The one who went to Belgium [J. Clifford Folger, Washington investment banker] only contributed $11,000.

"Mr. GLUCK. I don't think that I want to admit that is the principal reason.

"Senator FULBRIGHT. What do you think is the principal reason?

"Mr. GLUCK. Well, my interest in trying to find something in government life that I would like to do.

"Senator FULBRIGHT. What are the problems in Ceylon you think you can deal with?

"Mr. GLUCK. One of the problems are the people there. I believe I can—I think I can establish, unless we—again, unless I run into something that I have not run into before—a good relationship and good feeling toward the United States.

"Senator FULBRIGHT. Did you notice that recent report of the committee, sent by the United Nations on Hungary?

"Mr. GLUCK. No, I did not.

"Senator FULBRIGHT. You have not read that in the newspapers?

"Mr. GLUCK. I don't remember the report.

"Senator FULBRIGHT. Did you notice who was on that committee that made that report? (Ceylon was 1 of the 5 countries represented).

"Mr. GLUCK. No, sir.

"Senator FULBRIGHT. Do you know our Ambassador to India? (Ellsworth Bunker, former head of the American Red Cross).

"Mr. GLUCK. I know John Sherman Cooper, the previous ambassador.

"Senator FULBRIGHT. Do you know who the Prime Minister of India is? (Jawaharlal Nehru).

"Mr. GLUCK. Yes, but I can't pronounce his name.

"Senator FULBRIGHT. Do you know who the Prime Minister of Ceylon is? (Solomon Bandaranaike).

"Mr. GLUCK. His name is a bit unfamiliar now, I cannot call it off. But I have obtained from Ambassador Crowe (Philip K. Crowe, the previous ambassador to Ceylon) a list of all the important people there, and I went over them with him. I have a synopsis of all the people, both Americans, ambassadors, and officials from other countries. And I have from him also a sort of little biography or history of them, with what his opinion is of them."

Gluck was excused, the committee conferred and voted. Republican Senators ALEXANDER WILEY, Wisconsin, and H. ALEXANDER SMITH, New Jersey, with proxies from HOMER E. CAPEHART, Indiana, and GEORGE D. AIKEN, Vermont, balloted in favor; FULBRIGHT against. Chairman THEODORE F. GREEN, Democrat, of Rhode Island, only other Senator present, did not vote. Next day Gluck was confirmed by the Senate, without debate. He is reported now conferring on his duties and will depart for his post in Colombo in September.

Highway Safety

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, July 29, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article on traffic safety written by Miss Margaret Shannon, and printed in the July 21, 1957, issue of the Atlanta (Ga.) Journal.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW SMART A DRIVER ARE YOU?—SPLIT-SECOND ACTION CAN BE DIFFERENCE BETWEEN LIFE OR DEATH FOR MOTORIST

(By Margaret Shannon)

Accidents will happen, and when they do, there may be a decisive moment before the crash that can spell the difference between life and death.

You may not be able to avoid a wreck, but the move you make in that moment may lessen the extent of injuries sustained by you, passengers in your car, and maybe even the occupants of the other vehicle.

Seven accident siuations were presented to three Georgia experts on safe driving, and their advice asked on what to do. And each was asked then to pose a problem himself and suggest a solution.

The panel of experts included William N. Cox, Jr., professor of industrial and safety engineering at Georgia Tech.; Col. W. C. Dominy, director of the Georgia Department of Public Safety; and Traffic Lt. J. T. Marler of the Atlanta Police Department.

Try your hand at the answers and see how your driving knowledge stacks up with the experts.

Problem No. 1: You are driving on a winding, narrow highway at night. The lights of an approaching car blind you, and you feel your car hit the road shoulder on the right. You cut back to the left and, when you can see again, realize that you have overshot a curve to the right while blinded.

What can you do?

The experts advise: Don't brake suddenly. You are going fast and you may make the car turn over if you do. Keep your foot off the accelerator, and don't disengage the clutch. Then, if time, brake gradually, and if you don't make the curve and turn over, you still have a better chance of emerging alive.

Colonel Dominy says: "It's better to turn over at a slow speed than a fast one."

Problem No. 2: It's a highway in open country, but the traffic is heavy. A speeding tractor-trailer pulls alongside you to pass, and the car behind it pulls up close to your rear bumper. An oncoming car does not slow down, so the truckdriver whips to the right, the trailer lashing at you.

How do you come out alive?

The experts advise: Pull to the right on the shoulder as far as possible. Hold the steering wheel tight to retain control of your car. If you have to go off the road that beats letting the trailer smash you. Arguing with one of them is like arguing with a freight train.

Lieutenant Marler says: "If you have to choose between the trailer and the car behind, choose the crash from the rear."

Problem No. 3: This time it's a city version of the passing-on-a-hill problem. There are cars parked on both sides of the street. Suddenly a reckless driver whips from behind a slow-moving car coming toward you. There's not room for him to squeeze between. A smashup is inevitable.

What's to be done?

The experts advise: If there's no escape because of the parked cars, do all you can to slow down or stop. In head-on collisions the car that has ceased movement sometimes is damaged less.

Colonel Dominy says: "The faster two vehicles are going, the greater the impact in a head-on crash. Any slowing down by either car will lessen the impact."

Problem No. 4: You've read about it a thousand times and at last it happens to you. You're going up a hill. Almost to the crest, you see a car coming toward you and realize in horror that another car is passing it. Passing on a hill. Car No. 2 is headed straight toward you. The road shoulder is of moderate width and there's a deep ditch and a pasture fence beyond it.

What's your best bet?

The experts advise: You have two alternatives—a head-on crash or taking to the ditch. Take to the ditch. Anything is preferable to a head-on crash at high speed.

Lieutenant Marler adds: "The ditch may afford some cushion. Crash-injury research has shown that sometimes just a 2- or 3-inch cushion may be sufficient for survival. Just a little give would help, and maybe the dirt in the ditch would give a little."

Problem No. 5: You come up rather fast to a traffic light just as it changes, and a car on the cross street jumps the light—he peeps and starts on yellow instead of waiting for green. So you jam on your brakes. In your rearview mirror, you see that the car behind you is going to smash into yours.

Are you helpless?

The experts advise: It's better to take the crash from the car behind than to hit the light-jumper broadside. But brace yourself and yell a warning to any passengers in your car. A rear-end collision often causes jerks that injure the neck or the spine.

Professor Cox says: "You should approach any intersection cautiously enough to look out for irresponsible drivers. Then you'd never get into a spot like this."

Problem No. 6: It's raining, but not enough to impede vision. So you're clipping along at a fast, though within-the-speed-limit rate. Suddenly the pavement surface changes from secure to slippery and your car begins to slide crazily. Luckily there's no other traffic.

But how do you get your car back under control?

The experts advise: Stay away from the brakes and the clutch. If you brake, the car will go into a spin. Turn with the slide. For example, if the rear end of your car is sliding to the left, turn to the left.

Professor Cox says: "Speed limits are maximums and not the safe limits for all conditions. People should make allowances for a wet pavement."

Problem No. 7: As you are driving along a city street, a little boy darts from between parked cars, directly into your path. There's not time to swerve or to stop because you are right on him.

Is there anything at all you can do?

The experts advise: You're going to jump on the brakes. That's the way anybody would react. Anything you can do to decrease your speed may cut the blow a little and be the margin between life and death.

Lieutenant Marler says: "Good drivers look underneath parked automobiles for little feet. You can drive down a street and if you have normal powers of observation, you can see them."

Now the experts take over.

Colonel Dominy's problem: It's a dry day. Road conditions are good. You are driving down the highway at 60 miles per hour, a car suddenly comes barreling out of a side road without stopping right in front of you.

Is this the end?

His solution: "This sort of situation causes a good many deaths and accidents in Georgia. Your chance of survival depends on your vigor and alertness. I'd rather risk turning over than hitting the car.

"Remember that today there is no such thing as pleasure driving. Its strictly business and you've got to pay attention to it."

Professor Cox's problem: About to make a left turn, you have stopped on a highway to let an oncoming car by. In your rearview mirror you see a car bearing down on you with the driver apparently unaware that you are stopped.

Are you a sitting duck?

His solution: Don't rush into your left turn. Both cars may hit you. Go off the road to the right, or, if you have time, just light out down the road. Even if your car is hit from behind, the crash won't be as bad if you're moving. Any time you sit still on a busy highway it's dangerous.

For a left turn, it would be better to pull off on the shoulder and wait for traffic to clear or go down the highway, turn around and come back and make a right turn instead. It may be more trouble, but it may save your life.

Lieutenant Marler's problem: Going home from work in the afternoon rush on the expressway, you lean over to turn the radio on and your car seems to wobble out of control. There are cars to your right and a fence to your left and you're going 50 miles per hour.

Does this mean disaster?

His solution: It probably does. You should remember that the slightest tilt or turn of the wheel at 50 miles per hour is much more than at a lower speed. Things happen fast at 50 miles per hour. Your best bet is the fence.

But the thing to do is not to get yourself into a situation like this. It's so unnecessary. When you're traveling the expressways, remember it's city traffic at high speed and don't let any little distractions interfere with what you're doing. Forget the radio or the briefcase that slides off the seat, and let that cigarette go unlighted.

Though all these situations seem unavoidable as far as you are concerned, they need not be, the experts say.

What you need to practice is defensive driving. It means just what it says—you drive so that you protect yourself from the other fellow.

It means analyzing traffic conditions at any given moment and foreseeing possible emergencies—and avoiding them.

Letter From Chairman of Stephen Foster Memorial Commission

SPEECH
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. SIKES. Mr. Speaker, on July 22, 1957, in a speech before the House of Representatives, I opposed the newly imposed censorship by major radio and TV networks against certain musical compositions. These censorship measures were made at the request of certain minority pressure groups.

The music and history of Stephen Foster is being perpetuated in a shrine known as the Stephen Foster Memorial at White Springs, Fla., on the banks of the famous Suwannee River. This shrine is an indication of the great respect afforded the composer's works by music lovers all over the world.

To further establish that injustice is being imposed by the radio and TV networks, I would like to submit a letter from Mr. Earl Brown, chairman, Stephen Foster Memorial Commission, an organization established by an act of the Florida Legislature.

The letter follows:

STEPHEN FOSTER
MEMORIAL COMMISSION,
White Springs, Fla., July 24, 1957.

Hon. ROBERT L. F. SIKES,
House of Representatives,
Washington, D. C.

DEAR BOB: I am pleased to note in the morning press your support of our position in regard to Florida's State song and other of the Stephen Foster compositions, which are in the process of being permanently disfigured by an unofficial network committee.

As you well know, it was by legislative enactment that the State of Florida adopted Way Down Upon the Swanee River as the Florida State song; and in a similar manner My Old Kentucky Home was adopted as the State song of Kentucky. But the importance of Foster as a composer and the durability of his songs goes far beyond the confines of the United States, as it is the most universally loved and used music of the world today, and has been for the past 100 years. These lyrics, as originally composed, were the basis on which Foster was elected to the hall of fame, the only composer ever having been accorded this high honor.

The memorial we are building to Foster, on the banks of the Suwannee, has tremendous public approval, primarily by people from all sections of this Nation, as well as Canada and a number of foreign countries.

At this memorial we maintain a register for visitors, who can sign or not, as they may elect. Following the signature column is one for remarks; and of the million four hundred plus people who have signed this register, not a single objection was raised as to the words of the music, the memorial, or the composer. In fact, all remarks are most complimentary and as they must be brief, the majority of remarks follow these trends:

"The most wonderful thing we have visited in the South."

"A great contribution by Florida to American history with Foster's folklore music."

"Beautiful and reverent."

"Our fourth visit and we are coming again."

And early this year when the President's wife visited the memorial she stated: "This is wonderful; I am going to bring my grandchildren to see it when school is over."

There is absolutely nothing in the music of Foster that is in any way derogatory to the colored race; in fact, this greatest collection of American folklore music contributes to the important place occupied by Negroes in the development of this Nation.

All visitors hear the music of Foster when they visit the memorial. And as long as I am chairman of this memorial commission, all renditions of Foster's music, and he composed some 200 plus, will be in the original lyrics, as composed by Foster and not desecrated by some committee who have so easily fallen under some minority group, more concerned with showing their authority than they are with the preservation of this great music which is part of America's history. To my mind this music is the greatest living documentation of the important part played by the Negro in the development of the South.

I also call your attention to the fact that Stephen Collins Foster was born and reared in Pittsburgh and that these songs today, as they have for the past hundred years, contribute to musical programs throughout the world. Never before, by any person or group, has public expression been given to anything of an objectionable nature in connection with same. As one Florida journalist editorializes, "If carried to its ultimate conclusion, this order we suppose will sooner or later demand the rewriting of the Star Spangled Banner, on the grounds that the pacifists might object."

Your continued effort in behalf of retaining the Foster compositions as written and used for a hundred years, will be deeply appreciated by we of the Foster Memorial Commission who are seeking to preserve this greatest collection of this American folklore for posterity.

Sincerely yours,

EARL W. BROWN, *Chairman,*
Stephen Foster Memorial Commission.

Americans Work Fewer Hours for Shoes

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. MARSHALL. Mr. Speaker, one of the interesting publications which we receive regularly is Facts and Figures on Footwear, published annually by the National Shoe Manufacturers Association.

Since shoes are one of the most common items of wear, they are also one index to the American standard of living. One of the tables in this publication shows that Americans work fewer hours to pay for the shoes they wear than workers in the same trades anywhere in the world.

Under leave to extend my remarks, I ask that this table be included in the RECORD:

Hours worked for a pair of shoes

	United States	U.S.S.R.	France	England	Sweden
Phone operator	6	110	25	11	17
Carpenter	2½	110	22	11	17
Coal miner	4	65	25	9	17
Store clerk	6	110	25	11	16
Bus driver	5	110	22	11	16
Policeman	4	65	22	11	11
Teacher	4	110	25	7¼	16

Americans can be proud that they work fewer hours for the shoes they wear than workers in the same trade in any other country on the face of the earth. The above chart is by the courtesy of the New York Journal-American and the Boot and Shoe Recorder.

Political Trickery Against Independent Enterprise

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. PATMAN. Mr. Speaker, the National Association of Retail Druggists' Journal of July 15, 1957, contained an interesting message to its 40,000 readers by its executive secretary, John W. Dargavel.

The National Association of Retail Druggists is composed of independent businessmen—small, medium sized, and large—but they are all independents, and most of them are small. It is an outstanding organization in its efforts to be of assistance to independent business and small business in particular. It is always on the right side on questions affecting the national interest and the interest of independent business.

Mr. Dargavel is recognized as one of the best friends of small business in the entire Nation. In addition, he is an outstanding American and is always working in the direction of making our country greater by promoting and encouraging the private-enterprise system.

His message is as follows:

A MESSAGE FROM THE EXECUTIVE SECRETARY: POLITICAL TRICKERY AGAINST INDEPENDENT ENTERPRISE

Dispatches from Washington, D. C., advise me that every bill introduced to help the system of small business will be left to die in the 85th Congress. The story as it has been passed along to me (and it comes from a reliable source) relates that the leaders of the Senate have been pressured by the White House to stall action on proposals for the relief of independent enterprise until a survey has been made by the Federal Reserve Board.

I quote as follows a report from Washington, D. C.:

"The effect of the program manipulated by the White House is that the bankers will conduct the survey on the problems of small business in America."

It is downright arrogant stupidity to conclude that the independent retailers, the owners of small factories, etc., should be bypassed in the selection of the personnel to conduct the proposed survey to be directed by the Federal Reserve Board. You may be sure that strong protests will be leveled against the program "manipulated by the White House."

Furthermore the proposed survey is ridiculous since the needs of the system of small business are known to the members of the House Select Committee To Conduct a Study and Investigation of the Problems of Small Business and the Senate Select Committee on Small Business. Hence it is obvious that the proposed survey belongs to the category of political trickery.

Republican and Democratic candidates alike in the national election campaigns of 1956 shouted long and loud about the desperate plight of small business firms, and they made ironclad promises to leave nothing undone to help insure the survival of independent enterprise in America. Then, after the political oratory ceased and the votes were counted, the majority of the victorious candidates seemed to make haste to forget the pledges they made to strive in behalf of independent enterprise. One of the examples in sharp focus is the evasive tactics used to dodge action on relief from the overload of taxes levied on small business firms.

Now it is argued that to extend assistance to small business firms would result in more inflation. Ignored are the billions wasted in giveaways to foreign nations, such as global vaudeville shows, crusades for culture overseas, ad infinitum. The truth is that the major generator of inflation is the unrestrained profligate expenditures of the Federal Government.

The independent druggists must join in a drive to make it clear to the politicians that the owners of small business firms refuse to be shunted to a corner as though they are expendable. Moreover, the Members of Congress must be made to understand that they will be held to the promises they voiced in support of independent enterprise in the campaigns of 1956.

Cordially,

J. W. DARGAVEL,
Executive Secretary.

The Children Be Damned

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. BAILEY. Mr. Speaker, the following editorial which appeared in the Washington Post, Saturday, July 27, expresses in a few well chosen words the opinion of the general public concerning the defeat of H. R. 1:

THE CHILDREN BE DAMNED

Well, it was just like taking candy away from kids. Those who wanted to kill Federal aid to school construction adopted the strategem of burdening it with an amendment that made its death inevitable. Their amendment had a pious sound. It provided that no Federal funds should be allotted to schools in districts where segregation is maintained. They now have the dubious satisfaction of knowing that they have barred segregation from schools that are not going to be built.

There have been honest doubts among some legislators about the degree of Federal control that might stem from Federal aid. But the issue was not met on this basis. It was evaded through a cynical maneuver which is no salve for anyone's conscience.

President Eisenhower and some of his party's leaders on Capitol Hill, lamentably, party's principal leaders in the House, Representative CHARLES HALLECK and Representative LESLIE ARENDS, voted in favor of the legislation, the President encouraged defeat of a measure that differed only in degree from the measure which, over and over again in the course of the 1956 campaign, he had pledged himself to promote. Two of his party's principal leaders in the House, Representative CHARLES HALLECK and Representative LESLIE ARENDS, voted in favor of the antisegregation rider and then voted to kill the bill. So, incidentally, did the new author of the Powell amendment, Representative STUYVESANT WAINWRIGHT—thus demonstrating clearly the maneuver.

The consequences of this recorded indifference to public education will be felt not only by the children deprived of decent classrooms but by the whole country. Who can call this a "victory"?

The Family-Size Farm

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. MARSHALL. Mr. Speaker, a letter to the editor appearing in the Cokato (Minn.) Enterprise of July 11, 1957, so forcefully states the case for the family farm that I want to call it to the attention of the Congress.

Margaret Terning, author of the letter, has a firsthand knowledge of the problems facing the operators of family-sized farms and her indictment of present agricultural policies speaks for itself.

Her letter clearly points out that the family-sized farm is not merely a means of livelihood but a way of life worth preserving and fostering.

DEAR INTERESTED OBSERVER: It so happens that I was the person that asked Secretary of Agriculture, Ezra Benson, the question I quote, "How is the farmer to meet his obligations in the face of lower farm prices and rising costs?"

His answer "Seek other employment" is not the solution to this agricultural mess we are in.

We as farmers have no intention of working elsewhere in connection with our farming activities. Too many farmers are doing just this sort of thing to keep their heads above water and bridge the "Benson gap."

It shouldn't be necessary for farmers to take jobs away from their city cousins.

To reduce agricultural population will not reduce the production of any certain commodities. It simply means that some big operator will buy it and push that farm family off the farm to seek other employment. He will then run the same amount of acres plus his own and with modern equipment and scientific farming the yield will be larger. This is a proven fact.

Of the $5 billion set aside for the agricultural budget the farmer received less than $1 billion. This isn't a very big subsidy compared to that of other big businesses and industry.

We should bow our heads in shame when we mention surplus. When the United States has fed all the hungry and starving people of other countries and 30 million underfed in the United States, then, and only then, if there is some left over should we utter the word "surplus."

It doesn't do any good to send bullets alone—they need food too—the difference between life and death for many.

Poorly managed farms have never and never will create a surplus. Just because a farm is small is no sign it is poorly managed and inefficient.

Most small farmers practice thrift, efficiency, and management to the highest degree—I know, I grew up on one.

Figures show that the largeest subsidy checks have been written to large-farm operators such as presidents of railroads and large industries who are supposed to know efficiency.

According to the Department of agriculture, farm population has declined in the past 45 years from 32 million to 22 million, with the greatest reduction in the last few years. Forty percent of the boys born on the farm must find city jobs.

In the past 25 years 1,600,000 family farms have disappeared. Only 13 percent of the total population of the United States are farmers.

The large specialized farmer has no use for a small town because he buys his feed, fuel, and supplies in large quantities at such a low figure that the small-business man cannot supply him. When it comes time for him to sell the finished product he sells to a contracted market eliminating the small town completely.

Summing it all up in a nutshell—when the family-size farm is eliminated the small communities such as Cokato must go too. This isn't what our forefathers fought and died for.

Let us all join hands and fight this thing together—keeping the family-size farm and rural communities.

After all this is the heart of America—the land of opportunity for the poor and humble.

To me an unsigned editorial is like a check without funds.

Yours truly,

MARGARET TERNING.

Europe's Common Market and NATO

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, July 29, 1957

Mr. NEUBERGER. Mr. President, while our immediate attention in the field of international affairs has been focused on such problems as the disarmament negotiations and the crises in the Near East and north Africa, developments have been taking place elsewhere which may have far greater long-range significance for the future course of history. These are the steps which have been taken in Europe this summer toward the establishment of a common economic market and a common atomic power agency. In joining prior, existing European institutions such as the Schuman plan coal and steel authority and the Council of Europe, these new steps should go far toward recreating an integrated European society from the nationalistic fragments of the past few centuries.

These developments have been widely hailed in our own press and public comments as being in fulfillment of American policies and best interests. More thoughtful commentators, however, are pointing out that whether this is so still remains to be seen.

Adlai Stevenson recently said at Oxford University, "Some Europeans regard the brighter prospects for the greater integration of Europe not so much as a means of strengthening our transatlantic alliance, but of escaping from it." The European institutions we hail still apply only to little Europe, excluding the democracies of Great Britain, Denmark, Norway, and Sweden. For the future of the Atlantic community, which includes these free democracies as well as Canada and the United States, they may create either grave new problems or brilliant new opportunities. As we cheer these new steps toward union in Western Europe, let us also recognize that their future course between these two alternatives poses, in the form identified by Adlai Stevenson, an important new challenge for American policy.

I ask unanimous consent to have printed in the Appendix of the RECORD, Mr. President, a good review of this question, entitled "Europe's Common Market and NATO," from the magazine Freedom and Union for July-August 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EUROPE'S COMMON MARKET AND NATO

(By Waverley Root)

PARIS.—Almost unperceived by the general public, a struggle of immense importance for the future of the free world has been engaged among the statesmen of Europe—a struggle for the possession of the soul of their common market. Not long ago the foreign ministers of the six nations[1] which negotiated this economic union met in Rome to sign, in an atmosphere of jubilation, the treaties which establish it and Euratom, the agreement for the development of nuclear energy.

In the nations of the Atlantic community, the tendency has been to regard this achievement with rather undiscriminating satisfaction as a forward step in international cooperation which, since it has occurred within the group of states of the Atlantic partnership, means automatically a strengthening of ties for their whole community. A more searching inspection of the present status and future possibilities of the common market does not bear out the assumption that this necessarily results. It could mean that, but, on the other hand, it could mean just the opposite.

"Some Europeans," Adlai E. Stevenson said at Oxford University on May 24, "regard the brighter prospects for the greater integration of Europe not so much as a means of strengthening our transatlantic alliance, but of escaping from it. I see nothing wicked about the idea of a third force, but it does seem a little foolish. There is not such a margin of strength on our side of the Iron Curtain that we can afford to split up."

About the same time a devoted "European," Belgium's Paul-Henri Spaak, was telling the press, on the occasion of his entry into office as Secretary General of NATO, "For me, a strong Europe will be a good partner for the Atlantic alliance." Thus he seemed to be saying, perhaps ambiguously and certainly cautiously, that there was no conflict between European union in the common market and European participation in the Atlantic community.

[1] Belgium, France, Italy, Luxembourg, Netherlands and West Germany.

The fact is that the exact role which common market Europe is to play remains to be determined by the tug and pull of cross-purposes which is now going on. It is not yet clear whether the common market will evolve into a European grouping which will become a rival to the Atlantic community, with a tendency to secession, or a potent partner in it.

One of the several different ways in which the opposing conceptions of common market Europe can be described was presented not long ago in the influential Paris morning paper, Figaro, in an article called Making Europe, by France's elder statesman and former Ambassador, André François-Poncet.

"At the present time," he wrote, "two conceptions of Europe are confronting each other. They may be summed up in the words cooperation and integration. The cooperators remain attached to he principle of national sovereignty. * * * The formula to which they remain faithful is that of coalitions, of alliances. * * * The integralists * * * desire the formation of a supranational legislative and executive power, arising from direct election by the people, through universal suffrage, of a European parliament and government. * * * It is only under the form which they desire to give it that a federal Europe would take on an aspect entirely new and would appear as a revolutionary phenomenon, really changing the face of the world." He concluded: "It is not to be doubted that the supranationalists are the true Europeans."

It seems not to be doubted, in addition, that they are the exclusive Europeans—the Europeans, that is, who, under the guise of a somewhat spurious supranationality, are really moving, toward not a broader internationalism, but a new shared nationalism. They are willing to accept so-called supranationalism for their limited group; but it is on terms which in practice prevent other nations from joining them and tend therefore to establish a little Europe, instead of taking a step toward a broader union.

For some proponents of this Little Europe, its organization as that third force which Adlai Stevenson thought "a little foolish" is clearly a conscious aim. They see the individual countries of Europe as helpless between the two great non-European powers, the United States and the Soviet Union. They seek to restore to Europe the strength that was once hers by uniting her separate nations, into one super-nation which will be able to deal on more or less equal terms with the two giants. Their point of view obviously implies a splitting away from the Atlantic Community, or at least a split within it.

Other proponents of this six-power Europe may not concede that it is incompatible with full partnership in the Atlantic Alliance, holding that a multiple-nation unit as well as a number of single-nation units can remain within NATO, in spirit as well as in form. But it appears to many observers that such a development will automatically tend to divorce Little Europe from the Atlantic Community, by excluding from future membership in, or cooperation with, the common market other nations devoted to the broader Atlantic Alliance—and first of all, Britain.

The exclusive aspects of the coal-steel community, whose complete governmental machinery of executive, legislative, and judiciary is to be extended to the common market and Euratom, has kept Britain from belonging to that organization as a full-fledged member, though she has cooperated with it closely. In the same way, it was planned that it should cooperate with the common market through the device of a free trade zone to which both the common market countries and Britain should belong—to be followed presumably by other nations, particularly those of the sterling bloc. But to many Britons it appears already that the provisions of the treaties signed at Rome

include some which threaten to drive a wedge between the United Kingdom and the British Commonwealth, making its cooperation in a free trade zone extremely difficult.

Faced with the possibility of the constitution of a little Europe from which they would be frozen out, the British have countered with their grand design. Thus while the struggle to determine the direction which a Europe partially united in the common market will take can be envisaged as a conflict between limited supranationalism and unlimited confederationism; it can also be regarded as a struggle between the concepts of a little Europe and the grand design. And from still another point of view, it emerges as a rivalry between a possible future Europe which will be independent of NATO and a possible future Europe which will be integrated with NATO.

The British grand design might seem a logical suggestion even if there were no struggle to determine the future nature of common-market Europe. There are at present half a dozen major European groupings, each with its own bureaucracy, and several of them with more or less well developed governmental organisms. Their interests and functions overlap and often the same men represent their governments in several of these organizations and find themselves discussing much the same problems one week under the aegis, say, of the Organization for European Economic Cooperation and the next week at the Council of Europe. It would be an obvious economy of effort if these existing bits and pieces of international government were united under one statutory roof.

The little Europeans also agree on the advantage of such a union. They would like to produce a tighter Europe, presenting not only a common customs front to the rest of the world, but also a common general economic front, and even a common political front. To this end they might bring together purely European organizations, but they would not go outside the borders of Europe. Where the British differ from them is that their grand design includes NATO and envisages a tighter union of Europe and the United States and Canada.

A Europe tailored to the grand design would remain an inseparable part of the Atlantic community. A Europe inspired by the concept of the "little Europeans" might conceivably put an end to the efficacy of the Atlantic Alliance. For if a third force Europe were to develop, it would derive its own parcel of force only by subtracting it from the two reservoirs of force now in existence, the Soviet Union and its satellites on one hand, the United States and its partners in NATO on the other.

BRITAIN ALARMED

This prospect is particularly alarming to Britain, but not to Britain alone. If Britain is barred from cooperation with the common market, by the imposition as the price of entry of conditions which it is unable to accept, it will find itself shut out from a market to which its competitor in many fields, Germany, will have free access. This is by no means an unpleasant prospect for Germany, whose "little European" derive strength from it.

France and Great Britain are in disagreement on at least two major factors in the common market free trade zone scheme—the inclusion in it of French overseas territories, to which Britain objects, and the possibility of granting to British agriculture the same privileges won by French agriculture, to which France objects. Only Italy, a faithful follower of United States and Atlantic unity policies, can be counted upon for wholehearted opposition to "little Europeanism."

The possibility of being frozen out of Europe economically is alarming primarily to Britain alone. Other possibilities which seem implicit in the development of a third force little Europe may alarm the whole Atlantic community and the entire world.

At the present moment the effort to prevent an eventual suicidal resort to the atomic bomb is taking the form of an initial attempt to restrict the spread of atomic weapons. It is difficult enough to arrive at agreement to spike the nuclear arm among the three existing atomic powers; its acquirement by new nations would increase the difficulties. French delegate Jules Moch, representing the continental nation which is closest to achieving production of atomic weapons, has already warned the London disarmament conference that if the present atomic powers fail to agree on stopping further tests, France will go ahead with the development of the bomb.

This declaration takes on added significance against the background of various reports that France and Germany, the latter bound by treaty to eschew atomic weapons for herself, have considered plans for joint development of atomic weapons, and that the Krupp interests plan a plant for the development of atomic energy for peaceful purposes, one of whose necessary byproducts will be plutonium, an ingredient of atomic bombs. It is in fact difficult to conceive of a third force Europe failing to arm itself with atomic weapons. In an atomic world, what meaning could the word "force" have for a group without them?

TIME AN IMPORTANT FACTOR

In the contest which is now going on between those whose policies seem destined to create a little Europe, excluding probably even Britain, and those who want to create a common market capable of indefinite expansion, an important factor seems to be timing. Certain experts of the Organization for European Economic Cooperation devoted to the extension of international cooperation are at this moment working feverishly to harmonize the common-market treaties with the plan for a free-trade zone, in the hope of reaching an agreement which Britain can sign simultaneously with the ratification of the common-market treaties. This may insolve some modifications of those treaties. Ratification would then become an explicit recognition of the character of common-market Europe as open to expansion.

The little Europeans, on the contrary, are arguing that the question of modifying the terms of the common-market agreement should not be raised before its ratification. To do so, they argue, might imperil the chances of acceptance of an understanding which was originally achieved only with great difficulty.

It is true that drafting the common-market treaties was a long and arduous process. But the thesis of the little Europeans may be a trifle disingenuous. For what the OEEC negotiators who are pressing for quick agreement on the statute for a free trade zone attached to the common market fear most is precisely that, if ratification occurs before agreement is reached, the treaties will be frozen in their present form. Future changes—and consequently future expansion—will become all but impossible.

The common-market treaties will, in the almost unanimous opinion of observers, be ratified this year. But what will the six parliaments be ratifying? Will they be voting for an open-ended economic organization, internationally minded and seeking further expansion in cooperation with the Atlantic community? Or will they be voting for a restricted political group which would seem necessarily destined, whether all its supporters are aware of that fact or not, to move in the direction of a third force little Europe, possibly detached from the Atlantic community? What kind of Europe is common-market Europe to be? That is the issue which is being fought out now, and whatever the decision, it is impossible not to agree with a further observation which Mr. Spaak made at his press conference: "If the parliaments ratify the common market and Euratom, 1957 will be a decisive year for Europe."

Mit Simms

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD two editorials from Arizona papers commenting upon the life and contribution of the late Honorable Mit Simms. Mit Simms was one of the pioneers of Arizona and was a member of the Arizona Constitutional Convention of 1910. Mr. Simms died at the age of 84, while a member of the Arizona Corporation Commission. During the greater part of his life Mit Simms was one of the public officials of Arizona either at the county or State level. For his service to the well-being of the State that he loved so much, the people of Arizona will always be grateful. The editorials follow:

[From the Phoenix Gazette of July 24, 1957]

LONG PUBLIC SERVICE

Mit Simms, who died on Monday just a month short of his 84th birthday, had a political career that spanned the period of Arizona statehood to date. As Graham County's representative at the Arizona Constitutional Convention in 1910, he helped draft the State's basic law. Only two of the convention group now survive.

Mr. Simms came to Arizona in 1898, when many of the conditions of pioneer days existed. He entered ranching in Graham County, served as county recorder, and then became the second man to hold the office of State treasurer. He had also been secretary of state.

But his best-known public service came late in life. In 1948, he was elected to the State corporation commission and had served on that body ever since. He was a veteran of its political storms as control changed hands on the three-member group, responsible only to the provisions of the constitution.

His death ends a long and faithful public service to a State which has changed greatly since he sat among its founding fathers.

[From the Arizona Republic of July 24, 1957]

PIONEER POLITICIAN

The death of Mit Simms severs one of Arizona's few remaining personal ties with the days when Arizona became a State. Mr. Simms was 1 of the 3 surviving members of the Arizona constitutional convention of 1910.

Mr. Simms, who came to Arizona from Alabama in 1898, not only was a pioneer rancher and farmer, but devoted a great part of his life to public office. He became the second State treasurer of Arizona and has been almost continually in one public office or another since that day.

In his last public office, he was a member of the State corporation commission, to which he originally was elected in 1948.

The men who devoted so many years of their life to public office in the days since

Arizona became a State are due considerable credit for the great and fine community that has developed in this southwest desert. Mit Simms deserves to be numbered in this group.

The International Geophysical Year

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 29, 1957

Mr. THYE. Mr. President, the International Geophysical Year commenced July 1. I read an article over the weekend by Dr. Laurence M. Gould. Dr. Gould is president of Carleton College, is a member of the Executive Committee of the United States National Committee for the International Geophysical Year, chairman of the subcommittee on Antarctica, and director of the United States International Geophysical Year Antarctica program.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the American Scholar, summer 1957]

The International Geophysical Year

(By Laurence M. Gould)

Man's most ambitious program in international scientific cooperation begins July 1, 1957, and will continue through December 31, 1958. Destined to be a great landmark in the history of science, this program is known as the International Geophysical Year (IGY).

Geophysics has had a long period of incubation. Since the time of his earliest speculations about his world, man has been measuring the earth, recording data about its climate, its oceans, and other geophysical phenomena; yet even now, in the middle of the 20th century, our records in all fields of geophysics are fragmentary and local. The various fields are so intermeshed that no single discipline can advance indefinitely. All, in turn, are dependent upon the tools developed by the physicist and the engineer. Except for the electronic instrumentation now available, the present effort could not even have been considered. But now our total knowledge in geophysics, combined with advances in related fields and the availability of new tools, insures the success of the IGY.

Geophysics is the application of the tools of physics to the study of the earth and its atmosphere. All of man's major activities are inextricably bound up with the geophysical sciences. To a large extent they are the determining factors in such fields as agriculture, transportation, and communication of all sorts. Because of his ever-increasing mobility, man must know more and more about his environment; safety on land, sea, and in the air depends upon better forecasting of the weather, better knowledge of usable radio frequencies, and better knowledge of the upper air for transportation and guided-missile flight.

Geophysics presents quite different problems from those of the laboratory sciences. The nuclear physicist can go into his laboratory and perform experiments at will, but in geophysics the laboratory is the world itself. Nature performs the experiments; man makes the observations. Because all geophysical phenomena are related in one way or another to solar activity, the interval 1957–58 was selected for the IGY, as solar activity will be near the top of its 11-year cycle at that time.

The present international effort was anticipated by the first polar year in 1882–83 and the second polar year in 1932–33. Both of these involved but a few nations and were restricted to the north-polar region; yet the results of the first gave us our first definitive data about the aurora and the basis for all subsequent research. During the second, studies of the ionosphere by newly developed techniques gave rise to communications data that have been estimated to have a value in the hundreds of millions of dollars.

During the forthcoming IGY more than 5,000 scientists from 56 countries will be observing the same phenomena from stations all over the world. An important result should be the greatest breakthrough to date in a fundamental understanding of such major phenomena as ionospheric activity and atmospheric circulation.

The IGY is under the direct sponsorship of the International Council of Scientific Unions (ICSU), the chief continuing international scientific organization. In 1952, the council established the Comité Spécial de l'Année Géophysique Internationale (CSAGI) to plan and carry out the IGY program.

Each of the 56 nations participating in the IGY has an adhering body appointed to carry out its program. In the United States the total effort is supported in three ways. The National Academy of Sciences is the agency responsible for planning and directing the total scientific program. The National Science Foundation, as the fiscal agent, has assumed the responsibility for securing Federal appropriations to finance the program. The Department of Defense is supplying logistic support for the expeditions to Antarctica and the launching mechanisms for rockets and the earth satellite vehicle.

As the United States adhering body to ICSU, the National Academy of Science established the United States National Committee under the chairmanship of Dr. Joseph Kaplan. This Committee is a group of distinguished geophysicists who, in turn, are assisted by panels of experts in each of the disciplines. Some three hundred experts from private and public institutions are involved.

Answers to many questions of both theoretical and practical importance will be sought during the IGY. What is the relationship between long-range radio transmission and sun spots and solar flares? Is the earth's climate changing? Where do cosmic rays come from? These are but samples of the kinds of questions inherent in the IGY.

The particular geophysical phenomena to be studied by way of finding answers are aurora and air glow, cosmic rays, geomagnetism, glaciology, ionospheric physics, longitude and latitude, meteorology, oceanography, seismology, gravity, and solar activity.

Atmospheric studies will be greatly extended beyond all previous records by the programs in rocketry and satellites. At least 600 rockets and 6 small earth-circling satellites with highly specialized instruments will be launched.

The earth satellite program is the most dramatic and most publicized aspect of the whole IGY. The mere announcement of the program gave rise to much speculation about man being on the threshold of space flight. Such speculations have little relation to present realities. The earth satellite will really be an extension of rocketry exploration and has been aptly described as a "long playing rocket."

Each of the six satellites will have special instruments which will tele-radio back to earth new and important data about such phenomena as the density of the outer atmosphere, the fluctuations and intensities of cosmic rays, fluctuations of the earth's magnetic fields, more accurate measurements of longitude and latitude, and so on.

During the IGY a great variety of surface observations will be carried out on a continuing basis. In addition, 3 to 5 regular world days will be set aside each month for certain more difficult and specialized observations. Likewise, 10-day intervals of highly concentrated meteorological observations following the summer and winter solstices and the spring and fall equinoxes will be scheduled as World Meteorological Intervals.

A number of world archive and datum centers will be established to organize and make available to scientists all over the world as promptly as possible the data acquired as the results of the IGY measurements and observations.

The total scientific program is of such magnitude and complexity that only a few major relationships can be pointed out in this brief account. Each special field is characterized by its global nature and its relationship to solar activity, for solar radiation in electromagnetic and particle form is the major source of energy for the earth's atmosphere and is responsible for all types of life.

The fields of meteorology, oceanography, and glaciology have very special interrelationships, for they involve the earth's store of water. Water exists in the atmosphere as vapor; in frozen form as glaciers, snow, and ice sheets; and in water as rivers, lakes, seas, and the oceans. There is a continuous process of interchange among these depositories, and all of them are related to the circulation of the atmosphere and the heat budget of the earth.

The atmosphere provides the ingredients of oxygen and moisture which sustain life. It further makes that life possible by shielding us from dangerous cosmic radiations and solar radiations that might be lethal. But no other property of the atmosphere is quite as important as its motion. In a windless world the tropics would become intolerably hot and the rest of the earth unbearably cold. The life of the planet as we know it depends upon the distribution of heat and moisture by wind. The atmosphere is the working fluid of a great heat engine driven by the sun that picks up heat in the tropics and discharges it in the polar regions. Between latitudes 38° north and 38° south the earth receives more radiation than it keeps. Beyond these latitudes there is a deficit with the resulting major exchange of air masses. There is still much that is not known about the manner in which this exchange takes place.

Oceanography is second only to the atmosphere in conditioning weather and climate. For the first time in man's history we shall be able to make simultaneous measurements of the fluctuations in sea level all over the world. This is the most effective means of studying the weather of the oceans. We know that the major movement of the oceans is roughly like that of the atmosphere. The cold waters from the polar regions move slowly along the ocean bottoms toward the lower latitudes, where they rise, become warm, and then proceed from the tropics polarward. Within this general circulation there are all sorts of ramifications yet to be studied. Surprisingly little is known about the deep currents of the oceans.

One of the intriguing problems in oceanography and meterorology relates to the content of carbon dioxide in the atmosphere. Carbon dioxide is one of the atmosphere's principal ingredients which enables it to retain solar heat for the earth. It is the normal result of combustion. If we continue to burn up our fossil fuels of coal, oil, and gas at the present rate, within 50 to 75 years the amount of carbon dioxide in the atmosphere may be doubled. Should this happen, mag-

nolias might bloom in Greenland again. But there are some unknown factors which would alter such a situation. We do not know how rapidly carbon dioxide is absorbed by the oceans and by the various masses of glacial ice. Measurements will be made during the IGY.

During the great ice age, glaciers covered more than 30 percent of the surface of the earth. Even today they cover more than 10 percent of it. Our studies in glaciology will give us our first world views of the variation of glaciers. This will reveal much about past climates and help us to develop a yardstick for long-range forecasts in the future, for glaciers are very sensitive indicators of climatic changes.

The ionosphere, geomagnetism, cosmic rays, and the aurora are so related that a study of one involve a study of the rest. All have direct relations to solar activity and radio blackouts.

The ionosphere is the rarified ionized part of the atmosphere from 50 to 250 miles above the surface of the earth. In somewhat the same way a mirror reflects light, the ionosphere reflects radio waves making possible radio telephony and navigation and long-range radio communication. One expert has stated that the long-time equivalent value of the ionosphere is in excess of $10 billion.

While most of the earth's magnetic field originates in the solid core of the earth, the major variations and fluctuations stem from electric currents in the ionosphere.

The earth's atmosphere is constantly bombarded by electrically charged particles from outer space, most of which are believed to be protons. The high-speed particles produce cosmic rays while the relatively slow-speed particles produce (1) onospheric storms, (2) magnetic storms, and (3) the aurora, the luinous trace of the charged particles where they are funneled into the earth's atmosphere over the magentic poles.

While observations in many geophysical fields will yield new data about the sun, special attention will be devoted to the study of solar flares, coronal activity, and sun spots.

Values for longitude and latitude are much less accurate than is generally assumed. Even today we do not know within a matter of several hundred feet how far apart the continents are or where certain islands may be. More precise determinations of longitude and latitude will be made at 20 IGY stations around the world. Such more exact data have immediate practical application in the use of guided missiles whether for purposes of destruction or for purposes of transportation.

Most IGY programs will be carried out at long established stations or at new ones in easily accessible regions. Antarctica presents special problems because of its inhospitable climate and its inaccessibility. The logistic support for our farflung Antarctic IGY activities provided by the Department of Defense is even now one of the greatest achievements in the history of polar exploration. Under the able leadership of Rear Adm. George Dufek, the commanding officer of Task Force 43, Operations Deep Freeze No. 1 (1955–56) and No. 2 (1956–57) have successfully established our six scientific bases, including one to be operated jointly with New Zealand, in addition to the naval operational base at McMurdo Sound. Byrd Station at 80° south, 120° west, and the Amundsen-Scott Station at the South Pole are the first permanent inland or winter stations ever established in Antarctica.

In addition to the United States, the following countries plan to have stations on the continent or on islands near it: Argentina, Australia, Belgium, Chile, France, Great Britain, Japan, New Zealand, Norway, South Africa and Soviet Russia. There will be a total of some 54 stations in the overall Antarctic program. While the problems of carrying out the observations in the International Geophysical Year in Antarctica are formidable, yet the results will be of major importance because it is the largest unoccupied area of the globe. Most fields of geophysics now demand for completeness specific data that are available only from observations on the polar continent.

Special studies in magnetism are possible because of the location of the magnetic and geomagnetic poles on the Antarctic continent. Only on Antarctica can the aurora australis be fully observed.

Solar radiation is assumed to be the principal agent in breaking up atoms to form the ionosphere. Our base at the South Pole will discover what happens to the ionosphere when there is no direct solar radiation for 6 months. Does it thin out almost to the point of disappearance? Does it descend much below 50 miles above the surface of the earth?

The magnetic field of the earth is the chief instrument for analyzing cosmic rays. The rays are bent in such a way that the low-energy rays can only enter in high latitudes near the magnetic poles. The connections between solar effects and cosmic rays are more conspicuous for low-energy rays than for others. Observations in the far south and the far north may therefore reveal new fundamental facts on the origin of cosmic rays.

The hub of the atmospheric circulation for the Southern Hemisphere is located on Antarctica, but whether or not it coincides with the South Geographic Pole is but one of many meteorological questions that await solution. The Antarctica icecap is the world's greatest cold weather factor; but whether the great masses of cold air which form there play an active part in the general atmospheric circulation of the earth or whether they are largely sealed off from the rest of the atmosphere is not known.

More than half a century ago Simpson, a meteorologist on the first Scott expedition, pointed out that from time to time great pressure waves or surges of air spread out from what is now the general neighborhood of Byrd Station. Whether Simpson's assumptions are valid we still do not know, though later meteorologists have shown that some polar outbreaks of air can completely disrupt midlatitude circulation.

So fundamental are the relationships believed to be between Antarctic atmospheric circulation and that of the rest of the world that three meridional chains of stations are being established between the South and the North Poles. One roughly parallels the meridians of 70° to 80° west, one follows 10° east, and a third parallels 140° east. Precise, carefully synchronized observations can thus be made which should give us definitive data on the interchange of air masses between the tropics and the polar regions.

A unique phase of the glaciological program in Antarctica will be measurements of the thickness of the great icecap. Inasmuch as an estimated 90 percent of the world's land ice is on Antarctica, the thickness of the ice and changes in its volume are not merely matters of interest to the glaciologist alone. The return of but a few feet of thickness of ice as melt water to the oceans would have serious effects in many places; and if all the ice were melted into the sea, its level would rise from 150 to 200 feet. All the world's seaports and much of its most densely populated areas would be submerged. Great changes in volume of Antarctic ice have occurred in the past and such changes may occur again, but they will not do so with catastrophic speed.

Arctic ice masses have been melting at such a rapid rate during the 20th century that if the rate continues to the end of the century, ships will easily navigate the now ice-clogged Arctic Ocean. Whether similar melting conditions obtain in Antarctica now, we do not know, although looking back over a long period of time we find evidence that the Antarctic icecap was at one time at least 1,000 feet thicker than now.

The IGY is a good example of a new approach to world unity. The geophysicist is inevitably a truly international scientist. All considerations other than purely scientific ones are omitted. For instance, the complicated matter of claims in Antarctica is forgotten as the United States, Soviet Russia, Britain, France and eight other nations cooperate in the first comprehensive exploration ever made of this single polar continent. In similar fashion the satellites to be launched as part of the United States' IGY program will orbit around the earth without regard to any nation's rights to air space above territories, and no questions will be raised.

California Would Pay Out, Not Receive, Federal Aid

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 29, 1957

Mr. SCUDDER. Mr. Speaker, last week, when the Federal-aid school bill was before the House of Representatives, I voted against this bill because I did not feel that it met the proper requirements and the allocations under the provisions of the law were not set forth as I believe they should be.

I do not feel that the statistics gathered regarding the need for construction were based on the need that might exist 3 years from now. I have introduced a bill, H. R. 8885, which would return to various States of the Union 1 percent of the income and corporate taxes paid by each State for a period of 3 years, at which date such requirements would cease to exist. I feel this bill would meet the requirements of most States.

To give you some idea of the thinking of the people of California, I herewith quote an editorial from the Petaluma Argus-Courier, dated Thursday, July 18, 1957:

CALIFORNIA WOULD PAY OUT, NOT RECEIVE, FEDERAL AID

Instead of getting Federal aid, California would have to pay for some 441 schoolrooms in other States if H. R. 1, currently at issue in Washington, is not killed in the House of Representatives, S. J. Arnold, general manager of the California Taxpayers' Association, pointed out the other day.

H. R. 1 proposes to start a $300-million-a-year program of Federal aid for school construction. The bill, as amended, would cost California about $29,430,000 the first year, to get back the $16,211,000 it would allot to California. The difference—$13,200,000—is equal to the cost of 441 classrooms at $30,000 per classroom, he said. Many of the States that would benefit have said they prefer to take care of their own school-construction work.

"California has the biggest school-housing problem and is doing the most to meet the problem of any State in the Nation," Arnold declared. "We are already meeting our school-housing problems without the controls, redtape, and unnecessary costs which must inevitably go with sending money to Washington and then getting part of it back as Federal aid.

"Unless the people of California and the other States get up in arms against this proposal for school construction, the public schools of this country are likely to find themselves saddled with one more unnecessary program of Federal aid—and all the rules and regulations that accompany Federal money."

Strong talk to the Members of Congress is called for now, if the threat of Federal control of school construction under H. R. 1 is to be averted.

Preserving Democracy on the Battlefields Is Not Sufficient To Insure It to All of Our Citizens at Home

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mrs. GRANAHAN. Mr. Speaker, I have been deeply disturbed by the actions which have been occurring to weaken and water down and destroy the effectiveness of the civil-rights bill. I sincerely believe it is time for some blunt speaking. The House has overwhelmingly passed this bill, in the expectation that it could be used to further protect the right of all citizens. The House must stand fast on this and assure final enactment of a bill which really has meaning—not a shadow bill with no substance.

Earlier this year, I was impressed by the combined action of representatives of many veterans' groups in Philadelphia in joining in a demand for meaningful civil-rights legislation. The meeting was arranged by the veterans' committee of the Philadelphia branch of the National Association for the Advancement of Colored People. Participating were representatives of American Legion posts, Veterans of Foreign War posts, and of the Jewish War Veterans.

It was the consensus of this group of veterans that the freedoms inherent in the democracy for which we have fought are just as applicable to our brothers in the South as they are to us in the North.

The group deplored what it termed "the wave of terror and lawlessness which prevents large numbers of our fellow Americans from enjoying even the most basic civil rights," and urged enactment of legislation along the lines of the pending civil-rights bill.

I was advised by Mr. Ernest H. Fleming, chairman of the veterans committee of the Philadelphia branch, NAACP, who sent this information to me, that:

We take this position because of our convictions which sustained us on the battlefields where we have fought to preserve democracy for all Americans regardless of race, religion, or national origin.

Mr. Fleming added:

Recent events, as well as those in the past, have demonstrated to us that preserving democracy on the battlefields is not sufficient to insure it to all of our citizens at home. It remains, therefore, for you to help win the final victory of freedom for the individual American by seeing to it that effective civil-rights legislation is enacted at this session of Congress.

Mr. Speaker, I am pleased to present for inclusion in the CONGRESSIONAL RECORD, for the attention of Members of both Houses, and in the hope it may have the effect of helping to bring into focus the necessity of effective civil-rights legislation as warranted by the sacrifice of veterans of all races in defending our constitutional freedoms, the full list of those who participated in the Veterans' Harmony Conference at Philadelphia earlier this year at which this position was taken. The list is as follows:

CONFEREES ATTENDING VETERANS' HARMONY CONFERENCE SPONSORED BY VETERANS' COMMITTEE, PHILADELPHIA BRANCH, NAACP

NAACP OFFICIALS

Clarence Mitchell, director, Washington bureau; Dr. Harry J. Greene, president, Philaedlphia branch; Charles A. Shorter, executive secretary, Philadelphia branch.

VETERANS' COMMITTEE

Ed. R. Harris, I. Max Martin, Eugene W. Jones, Harold L. Pilgrim, John R. E. Searles, Harvey N. Schmidt, Ernest H. Fleming, chairman.

SECOND ARMY ADVISORY COMMITTEE

Lt. Col. De Haven Hinkson, USAR (retired).

AMERICAN LEGION POSTS

Charles W. Polk, commander, Cornish, No. 292; Frank Guess, Cornish, No. 292; Clifford C. Richards, W. Hopkins, No. 881; Carl D. Waller, Crispus Attucks, No. 151; Lewis Tayale, Crispus Attucks, No. 151.

JEWISH WAR VETERANS

Benjamin Brown, commander, Cutler-Lang Post.

VETERANS OF FOREIGN WARS POSTS

Joseph R. Acey, Shipp, No. 42; Patrick Coleman, Shipp, No. 42; Stanley Collins, Shipp, No. 42; Fred Sassett, Shipp, No. 42; Isaac Saunders, Shipp, No. 42; Franklin Tucker, Slowe, No. 3090; Francis Morris, Slowe, No. 3090; Alfred F. Howard, Slowe, No. 3090; Wadell Lawhorne, Slowe, No. 3090; James McDaniels, Slowe, No. 3090.

Equal Rights for Women

EXTENSION OF REMARKS
OF
HON. JAMES P. S. DEVEREUX
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. DEVEREUX. Mr. Speaker, in his message to Congress on January 16, 1957—House Document No. 16—President Eisenhower stated:

The platforms of both major parties have advocated an amendment to the Constitution to insure equal rights for women. I believe that the Congress should make certain that women are not denied equal rights with men.

Mrs. ST. GEORGE, the Representative from New York, has introduced House Joint Resolution 127, which is now pending before a subcommittee of the House Judiciary Committee, which would do as Mr. Eisenhower recommended.

This proposal is well known to most of the Members of this House, and is similar to legislation which has been introduced in the Congress since 1923, following the adoption of the equal-suffrage amendment to the Constitution of the United States.

A number of nationwide organizations are working for its adoption, including among others: National Women's Party, National Federation of Business and Professional Women's Clubs, and the General Federation of Women's Clubs.

I recommend the enactment of this legislation to all of my colleagues in the House.

The Retirement of Fred W. Blaisdell, Executive Director of the Better Government Association of Chicago

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. COLLIER. Mr. Speaker, I noted the other day with regret that Fred W. Blaisdell is retiring after 19 years as executive director of the Better Government Association of Chicago. My regret is that the people of Chicago are losing the full-time services of an able and conscientious man who has guarded the public's interest and welfare. On the other hand I am happy that Mr. Blaisdell, after a lifetime of service can at last retire and devote some of his time to his own enjoyment.

Fred Blaisdell is one of those unusual persons who has given of himself and his means without stint or murmur over a long period of years.

Without regard to party affiliation, Mr. Blaisdell and his committee helped screen candidates for public office to determine their qualifications for the offices they sought in the best interests of the citizenry.

Mr. Blaisdell, at the age of 76, is finally retiring from active public life. But even in retirement he has promised to continue as a consultant to the Better Government Association and will in this way continue to serve his fellow citizens ably and well.

To his many other well-wishers, I would like to add my voice to extend congratulations for a job well done, and a hope for a long and continuously fruitful life.

I take this opportunity to place in the RECORD of the Congress the following editorial from the Chicago Daily News on Mr. Blaisdell's retirement:

At 76, and after 19 years as executive director of the Better Government Association of Chicago, Fred W. Blaisdell is leaving that post. He will remain as a consultant while his successor, George E. Mahin, takes over the reins.

An earnest student of the theory and practice of democratic government in all its ramifications, Mr. Blaisdell's work and influence has been enormously instructive and beneficial. Such services rarely receive the public applause that they deserve, and we are glad to seize the occasion to say a hearty, "Well done!" to Mr. Blaisdell.

President's Power Policy

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks I would like to insert in the RECORD at this point a letter from the President.

This letter is in answer to an inquiry from myself to the Chief Executive regarding his views on Hells Canyon Dam and resource development.

I am a member of the Interior and Insular Affairs Committee of the House which has again rejected the bill which would put $500 million of the taxpayers money into a project which has been rejected by Congresses controlled by both parties since its inception 10 years ago.

I believe the President's letter sets forth the Eisenhower administration's power and resource development program in clear, logical terms—devoid of political byplay—a straightforward presentation of the programs and policies adopted and followed by the present administration.

Text of the letter is as follows:

THE WHITE HOUSE,
Washington, July 19, 1957.

The Honorable JACK WESTLAND,
House of Representatives,
Washington, D. C.

DEAR JACK: Your July 9 letter gives me an opportunity to explain my position on the Hells Canyon project and on all other water resource developments.

Early in my first term I expressed the belief that the Nation must adhere to three fundamental policies: first, to develop, wisely use, and thus conserve our country's natural resources from generation to generation; second, to follow the historic pattern of permitting private and other non-Federal organizations to develop these resources under fair provisions of law, including restraints for proper conservation; and third, to treat resource development as a cooperative undertaking—a partnership in which the participation of private citizens and State and local governments is as necessary as Federal participation. In other words, I believe the job to be done is so great that the Federal Government should build some projects, local governments some, and private interests some, and that there should be joint effort on still other projects. As you know, a number of projects in the Pacific Northwest, as well as in other parts of the Nation, are being constructed in accordance with these policies.

I am more convinced than ever that these policies are sound.

In its Hells Canyon decision, the bipartisan Federal Power Commission acted unanimously in granting a license to the Idaho Power Co. on the basis of a finding that the facilities to be provided constituted the best plan for comprehensive development of that reach of the Snake River. This action of the Commission has been upheld by the Supreme Court. Construction work on 2 of the 3 dams comprising the licensed development is well underway. Production of electrical energy urgently needed in Idaho and throughout the Northwest power pool, is scheduled to begin in September 1958. It would be unfortunate indeed, particularly at this stage of the development, if the Congress should negate the license and authorize the alternate development contemplated in S. 555.

The Idaho Power Co. development will not only quickly provide much-needed power at no Federal cost but will also produce substantial benefits for taxpayers throughout the Nation in the form of Federal, State, and local taxes which the company will pay during the period of its license. By contrast, the S. 555 development could not possibly help to meet prospective increased power requirements for at least 5 or 6 years, even under the most optimistic construction schedules. Furthermore, S. 555 would apparently commit the American taxpayer to expenditures approaching or perhaps exceeding six-tenths of a billion dollars at a time when the Federal budget is already under severe pressure.

Obviously, the Nation cannot and should not finance all water resource developments with Federal funds. The Idaho Power Co. development will permit the Federal Government to devote more of its financial resources to other developments which are clearly beyond the capabilities of non-Federal interests alone. By contrast, the proposed S. 555 development, involving sizable Federal appropriations, would require the postponement of many worthwhile projects in all sections of the country, including the Pacific Northwest.

With respect to your inquiry concerning comparative data on certain features of the respective developments, I have asked the Secretary of the Interior to furnish you these technical details.

I am firmly convinced that in the long run the Idaho Power Co. development will provide benefits to the people of the Pacific Northwest and the Nation as a whole commensurate with those which might reasonably be anticipated from the development contemplated in S. 555. It is inconceivable to me that serious consideration is being given in some quarters to stopping this development, depriving the Northwest of power which is badly needed now, and throwing an additional burden on the already heavily burdened taxpayers of the Nation.

With warm regards,

Sincerely,

DWIGHT D. EISENHOWER.

Some Forgotten Civil Rights

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. FORRESTER. Mr. Speaker, as I have many times heretofore pointed out, Georgia has been the beneficiary of the exodus of splendid white citizens from the North and East, these citizens coming South of their own volition, beginning life anew, and becoming part and parcel of us.

One of those that came South is Hon. E. W. Mathews, publisher of the Cordele Dispatch, a daily newspaper published in the fine little city of Cordele, Ga., in the district which I have the honor to represent. Mr. Mathews refers to himself as a reconstructed Yankee, but the community which he so proudly and efficiently serves thinks of him as a great American and a fine Georgian.

In the July 19, 1957, issue of the Cordele Dispatch, an editorial by Mr. Mathews appears, reading as follows:

As a former resident of the North who has, as the saying goes, become a reconstructed Yankee, the present civil-rights bill pending in the United States Senate is of vital interest to me as well as it is to the people who have lived in the South all of their natural lives.

First of all, why does not the Senate of the United States add an amendment to this bill which will bar all welfare benefits to any woman, black or white, who bears more than 1 illegitimate child?

We believe that the civil-rights laws should cover cases of illegitimate children, as well as the right to vote, and the right to integrate the schools.

If such an amendment were made to the civil-rights bill, there would be a considerable drop in the relief roles of our county, our State, and our Nation.

Then, too, if our United States Senate is so bent on equal rights, why is not something done to give equal rights to the American Indian, who was the original owner of this great Nation of ours?

The American Indian was listed as a savage at the time of the discovery of America some 465 years ago. Now 465 years later, after being pushed and shoved from one section of the country to another, he has no more rights than he had at the time slavery was first introduced into the United States.

The American Indian was robbed of his land, he was killed, in many cases without reason, and he still has no recognition as a citizen of the United States.

Many American Indians fought valiantly in the last two world conflicts and they must still be herded off to a reservation to live in poverty, and still not have the right to vote.

The bringing of Negro slaves to this country was started by Yankees, and we mean New England traders, some time around 150 years ago. He has had the right to vote after being freed in 1865. Some 700 or 800 Negroes in Crisp County are registered voters.

The Negro in Crisp County has equal or better schools now than do many of our white children. The Negro has the benefits of social security and of welfare.

In addition, in the South the Negro has the friendship of white men who will feed and clothe him when he is broke and hungry.

In many cases in the South Negroes too old to work still live on the farms of the white man for whom they formerly worked. They draw welfare aid and in addition the white man gives them free housing, takes care of their doctor bills, and helps feed them—and in case of death, helps bury them.

We do not believe that any northern Senator can show as many cases of help to old Negroes by the citizens of his State, as can any one of the Southern States.

We believe the American Indian is long past receiving his proper recognition, and we think that if a civil rights bill in any form is to be passed, it should include the original American, the Indian.

Mr. Speaker, it is quite evident that Mr. Mathews feels that the taxpayers of this country have some civil rights, including the right not to be taxed to pay the premiums and rewards for illegitimate child bearing. The ill-considered legislation providing welfare benefits for illegitimate children has certainly been the inspiration for certain females, and notably of the colored race, and no one can dispute that, to make illegitimate motherhood a way of life. Gathered statistics prove the truth of this assertion beyond controversy. However, if anyone doubts the truth of that asser-

tion, all he will have to do to discover the truth is simply to investigate the situation in the District of Columbia.

Mr. Mathews finds it hard to understand that great clamor concerning the rights of the colored race, and the complete indifference of the same do-gooders to the plight of the American Indian. I think, however, that Mr. Mathews simply raises that question in order to highlight it. Mr. Mathews thoroughly understands that the Communists, fellow travelers, and pinkoes have been unable to convince the Indians that they truly are of an inferior race and that they must fight for an equality that has not been earned, and that the equality must be legislated, instead of a matter of fact. One who feels in his heart that he is equal does not become insulted even though he thinks that he might have been ignored. An equal thinks that he has as much to give as he would receive from association with other races. Only the one who knows that he has nothing whatsoever to import for the uplift of another fights for the right of association with others, knowing that his association is unwelcome.

Mr. Speaker, we are immensely proud of those Yankees who came down and settled with us. They have come to our congressional district by the hundreds, and I do not know of a one who has not been satisfied with our conditions, our traditions, our philosophies, and who is not completely loyal to the United States. It would seem that the South could not possibly be bad, when we have the complete approval of all those Yankees who have cast their lot with us.

Second-Class Citizens

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. BETTS. Mr. Speaker, the Advertiser-Tribune, of Tiffin, Ohio, is a typical representative newspaper in a typical small rural Midwestern American city. In view of the current activities in Congress concerning public power, I feel that the following editorial from that newspaper is timely and at the same time represents the thinking of that community on this vital issue:

SECOND-CLASS CITIZENS

Massachusetts has no major river basins. It gets its electric power from fuel plants, rather than hydroelectric installations. But, up to June 30, 1955, Massachusetts taxpayers had put up nearly $226 million for multipurpose river-basin projects.

How can this be? The answer is that the projects were built by Government in other States, and partly financed with Massachusetts money. And what is true of Massachusetts is true throughout the country. About 20 percent of the power users of this country get power from Government plants. The remaining 80 percent get it from independent utility companies, and they help subsidize the power bills of the 20 percent.

They do that in various ways. Socialized power is wholly free of Federal taxes. It is also either wholly free of local taxes or pays relatively small sums in lieu thereof. The socialized power projects get all manner of special privileges from the Government, at the expense of the general taxpayers. To make this sorry matter worse, socialized Federal power is sold under a preference clause, which gives first rights to public bodies, municipalities, co-ops, public power districts, et cetera, which also usually pay little or nothing in taxes. Customers of the independent utilities can have only what is left, if any. So they become second-class citizens in this, except when it comes to paying the taxes.

Socialism sure is expensive, both in money and in liberty.

Do American People Have a Culture Which Unites Them Into a Nation?

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. ROGERS of Texas. Mr. Speaker, I rise today to call the attention of the House to an editorial that appeared in the Amarillo (Tex.) Globe-Times on Tuesday, July 2, 1957. This editorial pays deserved tribute to our colleague, the Honorable FRANCIS E. WALTER, of Pennsylvania. It expresses in concise terms the feeling of so many of our people on the controversial subject of immigration:

DO AMERICAN PEOPLE HAVE A CULTURE WHICH UNITES THEM INTO A NATION?

With a spearhead that is undoubtedly communistic, carried by their fellow travelers, congressional liberals and spokesmen for the so-called ethic minority groups, the assault on America's immigration system is increasing in intensity every month.

Representative FRANCIS E. WALTER of Pennsylvania, is credited with staving off a last-minute rush to the passage deadline in the Congress last year. On the last day of the session, Senators ARTHUR WATKINS and EVERETT DIRKSEN, in an unprecedented move, appended to a routine bill a series of amendments which would have demolished the national origins quota system and opened the floodgates for practical demolishment of present immigration policy.

The amendments were rushed through the Senate without customary hearings and without committee reports. They were sent to House, where the wheels had been greased to slip them by in the final rush before adjournment. However, the amendments were sent over after the House Judiciary Committee had held its last meeting of the session, and as chairman of the House Immigration Subcommittee, Representative WALTER headed off adoption of the amendments even as the clock was ticking off the last moments of the House session.

These amendments, which have again been introduced in the present Congress, contain provisions which would open every valve the Walter-McCarran Act furnishes for controlling the number and caliber of aliens gaining admission to our shores. If the provisions of these amendments are adopted, the net result will be (1) destruction of our national origins immigration system which gears the flow of immigration for maximum assimilation and for the preservation of our cultural integrity; (2) increase of total annual immigration from around 230,000 to well in excess of 600,000; and (3) emasculation of the chief screening and security safeguards of the present flow.

The national origins controversy boils down to this: Is there such a thing as the United States? Do the American people have a culture which unites them as a nation? If we are to judge by results, the answer to these questions has to be "Yes."

"There is something about America which has made it great and strong, and which has made it and kept it free, although—in my opinion—it has nothing to do with race or superiority or inferiority. Rather, it is a matter of basic ideology, cultural attitudes, of a common heritage," WALTER says. "That we are a 'nation of immigrants' is indeed a part of that heritage, but the emphasis in that phrase is on the word 'nation.' We are 'immigrants' who have fused into one people, with one national loyalty—to the United States of America.

"This country can continue in its great traditions only if its citizens understand and believe in them. New citizens, therefore, must be brought in by a pattern and in degrees which will allow them to become a true part of American life. Immigration which contradicts this pattern or which exceeds those degrees is a disservice to the immigrant and our society alike."

Congress Should Act Immediately on Pending Amendments to the Railroad Retirement Act Designed To Liberalize Benefits

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. VAN ZANDT. Mr. Speaker, thousands of railroaders both active and retired, together with their families, have their eyes focused on Congress hoping and praying that favorable action will be taken before adjournment on railroad retirement legislation now pending before the House committee and the Committee on Ways and Means. These railroaders and their families are the victims of a 52-cent dollar as they struggle to exist on the present scale of retirement benefits.

The following editorial from the July 27, 1957, issue of Labor is a timely appeal to Congress for immediate action on railroad retirement legislation:

ACT NOW ON FULL PENSION PROGRAM

Members of Congress and this newspaper are being showered with letters and resolutions urging prompt passage of measures backed by the Standard Railroad Labor Organizations for amending the Railroad Retirement Act and Unemployment Insurance Act. The letters and resolutions come not only from individuals and groups who are under railroad retirement, but also from many who are under the social security and civil-service retirement systems.

Why are millions of men and women so keenly interested in this legislation? So far as railroaders are concerned, they have a double reason: First, H. R. 4353 and H. R.

4354—identical bills introduced months ago by Congressmen HARRIS, Democrat of Arkansas, and WOLVERTON, Republican of New Jersey—would boost all rail retirement benefits by 10 percent, provide other needed improvements, and raise the railroad retirement tax to make the pension increases possible. Also, the measures would bring badly needed improvements in railroad unemployment insurance benefits and the conditions under which they are paid.

Second, to offset the pension tax increase, a companion bill, H. R. 5551, introduced by Congressman MCCARTHY, Democrat of Minnesota, would exempt from the Federal income tax money rail employes pay in retirement taxes. It also would grant the same kind of exemption to employes under the social security and civil-service retirement systems.

In other words, it would end the unjust tax on a tax which millions of people under the three big pension programs now are forced to pay. No wonder all of them are vitally interested in the McCarthy bill.

It has a special importance to railroad workers, because that bill is an essential and integral part of their whole pension program in Congress. If the McCarthy bill does not pass, the entire program will be jeopardized. Why that is true is clear from the following facts.

Last year, the rail unions offered Congress a well-balanced legislative program asking for a 15-percent increase in retirement benefits, plus the means to pay for it. Congress cut the benefit boost to 10 percent, and postponed the paying problem. As a result, since then the Railroad Retirement Board has not been adding the amounts necessary to the reserve fund.

Even if no further, and sorely needed, pension improvements had been asked this year, it would be necessary for Congress to provide more revenue for the railroad retirement fund. Congress promised to do that, as President Eisenhower pointed out when he signed last year's railroad retirement amendment bill.

To assure long-range soundness of the fund, an increase in the retirement tax on both rail employees and employers is essential. Both, in theory, pay the tax equally, but actually that is far from true.

Every dollar of retirement tax paid by a railroad cuts 52 cents off its income tax. Thus, in effect, the railroad pays a retirement tax of only 48 cents. In contrast, a rail employee pays the full dollar retirement tax and then pays an income tax on that dollar. It works the same under social security. Under the civil service retirement system, Uncle Sam is the employer, but the employees still pay the tax on tax.

The only way to give the employees under the three great pension systems ever partial equality with their employers is to end the tax on a tax. That is, cease income-taxing the money which the employees have already paid out in retirement taxes, and which the employees never saw, because it was withheld from their wages.

In the rich men's tax bill of 1954, Congress granted relief to stockholders, on the ground that they were being double-taxed by levies on both dividends and corporation profits. Now Congress has before it what, in comparison, might be called a poor men's tax bill. It would end double taxes on millions of railroaders and other workers. Do they deserve less consideration than wealthy stockholders?

The McCarthy tax offset bill is in the hands of the House Ways and Means Committee. That powerful group holds the key to the whole rail pension and benefit improvement program. The time is growing short and the Senate is tied up in the civil-rights bill battle. The House should be passing the Harris-Wolverton and the McCarthy bills so they will be ready for Senate action. The House can't do that until it gets the green light from the Ways and Means Committee.

This is not a partisan problem. It is a question of simple justice. Railroaders are not asking any Congressman or Senator whether he is a Republican or Democrat. They are asking him: Are you for ending the tax on a tax and thus clearing the way for improvements in our pensions?

Aiding Disabled Veterans

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. ROBERTS. Mr. Speaker, I have recently introduced legislation that would, if enacted into law, provide substantial relief to a number of service veterans who are eligible to receive non-service-connected disability pensions. This legislation would allow these disabled veterans to receive full pension payments even though they may also be benefiting from retirement under civil service, social security, or railroad retirement acts.

At present, a qualified veteran may receive his non-service-connected pension only if he is not already receiving benefits from civil service, railroad retirement, or social security in excess of certain stipulated amounts. For a single veteran, that figure is $1,400 a year; for a married veteran, it is $2,700 a year. If these figures are exceeded, the disability pension aid is discontinued.

Mr. Speaker, it is my contention that it is unfair to penalize these veterans by not allowing them to receive the small disability pension just because they are recipients of the retirement benefits they have earned. These veterans often have greater expenses than any other class of veterans, and the funds involved are not large. At present, the average retiree under social security receives $63.09 a month. The average railroad retiree gets $130 a month and the average retiree covered under Civil Service Act receives about $111 monthly. And these, may I point out, are nationwide average figures; in some States, the figures are much lower.

In a number of cases, my legislation will not be applicable since the pension moneys received from 1 of the 3 retirements I have mentioned will not be sufficient to restrict the veteran from receiving both his retirement benefits and the non-service-connected disability pension. Relief will be felt, however, by those whose retirement payments exceed the low figures of $1,400 or $2,700 a year, as the case may be.

My bills, designated H. R. 8846, H. R. 8847, and H. R. 8848, would amend the Civil Service Retirement Act, the Social Security Act, and the Railroad Retirement Acts whereby pensions and annuities under each of these acts would not be considered as income in determining non-service-connected disability pensions for veterans.

I feel these bills would protect certain disabled veterans from being at the mercy of economic forces acting upon them through the years of retirement, protection which I believe is deserved.

Disaster Areas in Arkansas

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. TRIMBLE. Mr. Speaker, we have a problem in Arkansas comparable to that in other States. Our problem is to keep a fine and sturdy segment of our business and agricultural population from going completely broke. For 5 successive years we have been hit by forces beyond our control. First 4 years of searing drought, followed by a year of devastating floods. Able and willing bankers in the area have made loans to the limit. Unless we can get the law changed to put some teeth into already existing laws, which a thoughtful people have asked Congress to pass to help in cases of disaster, many areas will be destitute.

One of the best expositions of the problem and the cure is the following editorial from the Southwest American, Fort Smith, Ark., by my friend, C. F. Byrns, the editor:

OFF THE RECORD
(By C. F. Byrns)

The Federal Farmers Home Administration is sending Dale Smith, assistant to the administrator, to Arkansas in the next few days to look into the need for disaster loans to farmers severely hurt by the recent floods.

FHA officials have said this week that only 10 loans have been made for a total of $15,000, only 24 applications have been made in the 21 disaster counties, and 71 inquiries have been received from farmers who did not make application.

The operation of the FHA in this situation has been brought to light through the efforts of Representative JIM TRIMBLE. State Senator J. O. Porter, of Mulberry, and Luther H. King, of Clarksville, large farm operator in Johnson County. Representative BROOKS HAYS joined in presenting the problem to the House Agriculture Committee last Monday.

The committee was considering a bill offered by Representative TRIMBLE which would require the FHA to postpone for a year repayment of crop-production loans, and to authorize loans to pay off existing indebtedness as well as to meet current needs, with a repayment period up to 7 years.

In the hearing it was stated by Representative WILLIAM S. HILL, Republican, of Colorado, that the Trimble bill contains nothing that cannot be done now by the FHA.

The whole thing seems to boil down to this: The Department of Agriculture, headed by Secretary Ezra T. Benson, could do without any new law the things the Trimble bill proposes. But it has not done anything to liberalize the loan regulations, and is opposing the Trimble bill, which would permit help that is badly needed by many small farmers who are in serious money trouble.

There's no point in blaming the State or county representatives of FHA. They are doing what the regulations require. The

road block is in the Office of the Secretary of Agriculture.

The figures given by FHA officials on loans and applications to date pretty well establish the point that the Arkansas people made in their testimony in behalf of the Trimble bill.

When 71 inquiries about loans were sent to the State office by farmers who wanted help, and no applications for loans were filed the reason obviously was that they knew it would do no good to make application under existing regulations of the department. They didn't fail to file applications because they didn't need the loans. They didn't file because they had learned it was useless.

Ten loans totaling $15,000 is sufficient evidence that the FHA is doing almost nothing to meet the situation which is truly critical for many farmers who have exhausted their credit, most of them through no fault of their own.

Present regulations require that crop loans be repaid at the end of the crop year. That kind of loan is of little value to a farmer who already has his 1957 crop mortgaged, either to the FHA or a private lender. The Trimble bill is designed to extend the time of payment of existing FHA loans for at least another year, and to permit loans of longer duration which will permit the borrower to get back on his feet. It should be passed. But time is running out in Congress, and the United States Department of Agriculture is opposing his effort.

Loyalty Into Defiance

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following editorial from the Nashville Tennessean. In my opinion, this editorial gives a true picture of how our Attorney General's Court loyalty has turned into quick defiance:

BROWNELL'S COURT LOYALTY TURNS INTO QUICK DEFIANCE

A few days ago in Federal district court in Bowling Green, Ky., an agent of the FBI refused to turn over to the defense records of information in an important case.

He did this in spite of the judge's order to the contrary, in line with a recent decision of the Supreme Court that an accused man is entitled to see the information on which he is accused. Furthermore, he did it on instructions from his superior, the Attorney General of the United States, Mr. Herbert Brownell.

Now this is strange, since Mr. Brownell until recently has been among the foremost defenders of the Court of last resort.

The leading article in the July issue of the American Bar Association Journal bears the Attorney General's name, and urges full obedience to the Supreme Court as the "symbol of orderly, stable, and just government."

Going further in the same article, Mr. Brownell quotes Abraham Lincoln to the effect that "whoever resists the final decision of the highest judicial tribunal, aims a deadly blow to our whole republican system of government—a blow, which if successful, would place our rights and liberties at the mercy of passion, anarchy, and violence."

In the abstract it thus appears, that the Nation's chief legal officer is 100 percent loyal to the principles laid down by Lincoln. Whenever the High Court agrees with him, as it has done on many occasions, it is a noble institution which can only be assailed at the Nation's peril.

In his law journal contribution he was moved to these conclusions:

"As attorneys and officers of the Court, we have an important stake in the independence of the Court and a greater duty to it. The Court relies on us for assistance. We must give it our support by our own example. We must do everything possible to preserve its reputation. We can stir fuller recognition of the Court's distinguished role in our Government, in our history, and in our development as a leader among nations."

Hardly had these patriotic words gone into print, however, before he gave the Court defiance, rather than support by orders to disobey its clear ruling on the use of secret testimony in certain cases. He is revolted by the idea that secret FBI files, which he himself has used for political purposes, should be made available as a matter of justice to some defendants.

Lofty principles are easy to enunciate or transcribe as they apply to the Supreme Court, but putting them into practice is something else again when they affect a subagency of the Department of Justice.

If the Court relied greatly on Mr. Brownell for assistance by reason of his special position of trust, it would be in a bad way indeed.

Elmer Lewis: A Real Public Servant

SPEECH
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. GATHINGS. Mr. Speaker, on arriving in Washington for the first time as a fledgling Member of the House, one of the first recollections I had was that of a visit to the House Document Room where I met Elmer Lewis. He was cheerful then, as he has consistently been since that time, whenever any occasion arose to ask his assistance—which was frequently.

It was a genuine pleasure to have known and to associate with Elmer Lewis. He was not just another House official. He was zealously attentive to his duties. He rendered superb services to this House and its Members for more than a quarter of a century. He was not just efficient—he excelled. He mastered his job from the very beginning. He had a memory that indelibly impressed on his mind the passage of an act or the issuance of any official report. If favorable action was taken on a proposal, Elmer Lewis knew it, recalled it instantly, and could locate the document with dispatch. For the many years I dealt with him, not once did I ask for information with respect to legislation that I failed to obtain. He enjoyed his work; he made friends readily. His life and services are exemplary to all of those with whom he worked and served. He was a real—a true public servant.

I was saddened at the news of the passing of Elmer Lewis. He leaves a place in our hearts and minds that is difficult to fill. To his loved ones I would like to convey my deepest sympathy.

Senior Citizens Claim Attention

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. CHAMBERLAIN. Mr. Speaker, I have been increasingly troubled by the problems being encountered by the senior citizens of my district who are writing to me about their serious financial circumstances due to the inadequacy of social security and other pension systems covering present-day needs, and the difficulty in obtaining employment after they have reached a certain age.

As the Members of Congress are aware, these problems are being felt by more and more of our older people as medical science expands our life expectancy rate and in view of the trend of Government, industry, and business to encourage earlier retirement. It is a situation which we are going to have to find a solution.

I was very much interested in the editorial in the Flint Journal of July 26, outlining the basic problem, offering some encouragement as to what is being done about it, and calling attention to the program which is underway in Flint, Mich., to integrate activities designed to help our elderly citizens. It is a pleasure to include this editorial in the CONGRESSIONAL RECORD:

SENIOR CITIZENS CLAIM ATTENTION

The population of Americans over 65 is increasing at twice the rate of the overall population rise.

That fact is giving rise to serious consideration in many quarters of the peculiar problems which have arisen in connection with it.

This newspaper is receiving an increasing number of letters from oldsters who complain that increasing taxes and the increased cost of living constitute a serious problem for them.

The incomes of many of these older people are fixed. Some of them retired with what they believed was enough money to last all their lives. Others own real estate from which they receive some income, but rising taxes and the higher cost of food and clothing, medical care, and hospitalization make that income insufficient. Others rely on social security or annuities or pensions, all of which are regarded as insufficient for them to live comfortably.

The economic is only one facet of this many-sided problem.

Many oldsters resent deeply the fact that they are no longer considered productive citizens. Forced to retire because of age, they feel they can still make a valuable contribution to society, but are deprived of the opportunity to do so.

But help is on the way from several quarters.

As evidence of that is an article and accompanying editorial in the July 27 Journal of the American Medical Association. With the increase in the number of older

persons, there is developing the problem of "how to create a proper climate for senior citizens to grow with their age rather than stagnate in a tremendously expensive wait for death," the editorial states.

"Since medical science is largely responsible for this increased longevity, physicians everywhere must bear much of the burden of also prolonging man's span of vigor. It is a mammoth task, calling for action and planning in many fields besides medicine," it continues.

Some time ago, the AMA appointed a committee on aging, which soon will publish guides for State and county medical societies to help them organize with allied medical and lay groups in meeting the specific needs of older people in their own areas.

The committee has agreed that retirement should not be based arbitrarily on chronological age, but that employment in all age brackets should be a matter of proper assignment of skills.

The committee is drafting a physical examination form which will help companies and physicians evaluate a person's particular capabilities. It also is trying to devise an AQ (aging quotient) test based on physiological and psychological factors. Such a test, it is hoped, would help an employer decide whether a man should retire or be moved to a less demanding job.

"There is little doubt," the article states, "from a medical standpoint, that when men have their occupations taken away, many of them become lost—experiencing a distinct deterioration of personality, a marked depression, and a great acceleration in the aging process.

"Lack of work, even when there is a pension, almost always presents a severe problem in economics, as well, to the elderly. At a time when his medical needs normally are the greatest, the earning power of the oldster is at its lowest. Multiplied by the millions, it is this factor—more than any other—which challenges the entire community in ever corner of the Nation."

Many community projects, including housing developments, planned recreation, and medical-care facilities are being set up throughout the country. In Chicago, a commission on senior citizens is making headway toward better health, reduced transit fares, specially designed public housing, expanded recreational facilities, and a more enlightened retirement policy by business and industry.

Flint is in the vanguard of this relatively new program. We have here a community planning committee for senior citizens, a subdivision of the Council of Social Agencies. Recently a fulltime coordinator was hired with the Junior League of Flint financing the program for the first year. The activities of various groups who sponsor programs designed for older citizens—the unions, Mott Foundation, churches, community schools, etc.—thus will be better integrated.

It is a very worthy cause, and one which merits the understanding and support of the entire community.

Why So Little Action on the Hoover Commission Recommendations?

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. BASS of New Hampshire. Mr. Speaker, under leave to extend my remarks, I include two recent editorials from the Claremont Daily Eagle of Claremont, N. H., with regard to the recommendations of the second Hoover Commission. As cosponsor of H. R. 8002, and 4 other major recommendations, I hope the House will act favorably on this measure before adjournment.

The editorials follows:

RECORD OF INACTION

Barring a last-minute surge of unexpected activity, the first session of the 85th Congress will adjourn with a shameful record of inaction on the recommendations of the second Hoover Commission.

Grassroots pressure for thrift in government was unprecedented during most of this session. Despite this citizen mandate, the congressional committees that must initiate the actions needed to put the Commission's legislative proposals into effect haven't evidently offered to hold hearings on 80 percent of the more than 170 pending bills.

Instead, for a variety of reasons ranging from lack of political courage to belief in paternalistic government, the economy drive has been restricted to nibbling at appropriation requests.

This approach ignored the plainest of facts—that it is impossible to cut the cost of Government significantly unless the size and scope of Federal activity is reduced.

The task forces of the second Hoover Commission not only documented the accuracy of this age-old truth but pointed out literally hundreds of ways and places to reduce the size and cost of government without impairing our national security or eliminating truly essential Federal programs or services.

Instead of leaping at this magnificant opportunity, the 85th Congress has virtually ignored it. Worse yet, it has taken at least a dozen actions that are in direct conflict with Commission proposals.

An examination of the legislative history of the law that established the second Hoover Commission reveals that it had unanimous, bipartisan, House and Senate support.

The Commission has failed miserably to recognize and discharge its moral obligation to evaluate the Commission's proposals; to translate those having merit into dollar savings, and thereby expedite the achievement of long-overdue debt and tax reduction.

The great danger of the prevailing congressional attitude does not lie in the possibility that the Commission's proposals will go down the legislative drain. The real danger is that no review of government—such as that made by the Hoover Commission—will again be made.

THE HOOVER REFORMS

Last week, in these columns, we endorsed a suggestion of Edward Sherman, regional director of the Citizens Committee for the Hoover Report, that Congress might devote some of its time to cutting Federal spending by approving some of the recommendations which the report proposes.

A note from Congressman PERKINS BASS, agreeing that adoption of further Hoover Commission recommendations is a positive and responsible approach to budget cutting, points out that his "Your Congressman Reports" article of May 16 stressed the need also. For the benefit of Daily Eagle readers who may have missed this issue, we're glad to repeat the pertinent paragraphs:

"With this conviction in mind, I am introducing this week 5 bills which would implement what I believe to be the 5 most important legislative recommendations of the Hoover Commission not yet enacted. They speak for themselves.

"1. A bill to establish as a matter of policy that the Federal Government shall not engage in business-type operations which compete with private enterprise, unless it can be demonstrated clearly that such a Government enterprise is necessary to carry out legally established national programs.

"2. A bill to require that the Federal budget be presented to Congress in such a way that expenditures can more effectively be controlled and understood on a year-to-year basis.

"3. A bill to prevent waste of badly needed military storage space by making it easier for military services to use each other's vacant storage space rather than building unneeded duplicate facilities.

"4. A bill to permit more businesslike distribution and disposal of surplus Government property so that the Government will receive the best possible return.

"5. A bill to eliminate waste and duplication in the supply, storage, management, and distribution of nonmilitary supplies in the military services by creating a civilian-managed agency in the Defense Department to administer common supply and service activities."

Concededly, Congressman Bass is doing his best to get action on these vital measures. But the same, apparently, is not true of the majority of his colleagues.

Under date of June 7, Washington Report has this to say on the same subject:

"Despite what Representative CLARENCE CANNON describes as 'one of the most persistent campaigns ever waged,' the 85th Congress has virtually ignored nationwide citizen demands for action on the Government reorganization proposals of the second Hoover Commission.

"A total of 145 bills that would carry out 58 specific recommendations have been introduced and referred to 16 committees.

"But with 5 months of the session already gone, here is the dismal CONGRESSIONAL RECORD on these bipartisan measures:

"Not a single Hoover Commission bill has become law.

"Only three bills have passed either the House or Senate.

"Hearings have been held on only six measures.

"No additional hearings are scheduled.

"Most of these measures go to the root of the Federal spending problem Congress has been grappling with. * * * But the House and Senate Appropriations Committees * * * are powerless to take advantage of these additional savings opportunities unless and until the legislative committees face up to their responsibility. So far they have not done so.

"Congress can demonstrate the sincerity of its economy drive and give its Appropriations Committees a helping hand by acting favorably on these bipartisan proposals between now and adjourment."

How about it, Congressman?

How about it, Congress?

A Bill To Provide for the Preparation of the Budget on an Annual Accrued Expenditure Basis

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. FASCELL. Mr. Speaker, H. R. 8002, providing for preparation of the budget on an annual accrued expediture basis is receiving countrywide support from many people. Despite attempts to ridicule the proposal and ex-

aggerate its alleged defects, many people, as has the Miami Daily News, have put the issue properly:

This reform is so simple, so needful, so important, why should there be any opposition to it?

The editorial of the Miami Daily News which follows gives some of the cogent reasons why H. R. 8002 should be supported by Members of the House:

TIME CITIZENS TOLD CONGRESS: CONTROL FEDERAL PURSESTRINGS

Very few Americans like to pay high taxes—particularly when they read of sensational waste by foreigners of United States foreign aid.

Too many Americans are not informed that they pay high taxes, in part at least, because of unsensational waste in American government.

That is the target of the Hoover Commission.

Last weekend, Representative ROGERS, of West Palm Beach, anounced that the House Rules Committee will permit his Senate-passed Hoover Commission bill, H. R. 8002, to come before the House during the coming week.

Everyone should be for this bill, because it will:

First, strengthen congressional control of Federal expenditures by requiring careful annual review of all spending projects.

Second, end the stockpiling of unspent carryover funds which have passed beyond congressional review.

Why is this important? Here are two examples why they are cited by the Citizens Committee for the Hoover Report:

For fiscal year 1952–53 Congress appropriated $12.5 billion for guns, tanks, other military hardware in Korea. The war ended within a month of the new budget year. Years later, in May 1957, the Army was still spending the remainder of the $12.5 billion without any further congressional review.

In 1951, the Navy contracted to buy 528 fighter planes. By 1955, only 52 planes had been delivered, the design was declared unsatisfactory, and the contract was canceled. By then, however, $172 million had been spent to little effect. Much of this money could have been saved by yearly review.

Would annual congressional review be dangerous to defense of this country?

The best answer to that is that the reform has been supported by the President, the Secretary of the Treasury, the Budget Director, the Comptroller General, all Members of the Senate, many Members of the House, and scores of thousands of private citizens.

Will H. R. 8002 really stop raids on the Treasury?

Secretary of Treasury Humphrey says:

"This change in accounting should provide an excellent basis for improvement in control over actual costs of operations and programs. * * * It should reduce the vast carryover of appropriation balances. * * * Any means by which we can bring this carryover of appropriations under better scrutiny and review is a step in the right direction."

Will suppliers lose faith in Government contracts? Comptroller General Campbell says:

"The determination of appropriations on the annual accrued expenditure basis * * * is in no way detrimental to the interests of contractors. They would be paid for performance just as they are now; the only difference being that such payments would be made out of funds appropriated by Congress for that year and not out of funds appropriated in some past year."

This reform is so simple, so needful, so important, why should there be any opposition to it?

"Empire builders" among the Federal agencies resent the change in the old way of doing things. There is strong opposition to H. R. 8002 by these Federal agencies, and this has been communicated to some Members of the House itself.

It's time that Congress acted to show the overambitious bureaucrats the side door. This would be the most effective way of doing just that.

It's time citizens told Congress to control Federal purse strings.

The Federal School-Aid Bill

SPEECH
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 1) to authorize Federal assistance to the States and local communities in financing an expanded program of school construction so as to eliminate the national shortage of classrooms.

Mr. WALTER. Mr. Chairman, the Federal school aid bill has met a deserved fate, and I think it would be well to emphasize the terrible dilemma which that legislation presented for all of us who are concerned with fulfilling the Nation's educational needs and at the same time with preserving the sound financial principles of government.

The bill, which would have provided more than a billion dollars supposedly for construction of new school facilities was not in the form that met the above stated test. Although the proponents of the school-aid bill sought to conceal the true situation, the fact is that only 7 of all the 48 States of the country require any additional Federal funds for construction of new schools and classrooms. The other 41 already have enough money to eliminate their classroom shortages during the next 5 years—money provided previously by Congress or made available by the States themselves.

The recent Report 489 by the Committee on Education and Labor, which contains these statistics, points out that 1 group of 22 States "has only to continue building schools at the same rate they are now doing it to eliminate all known shortages, with their own money, by the time this legislation is supposed to expire." Yet in spite of this record, the report notes, the supporters of this legislation proposed to make available to those States the grand total of $699 million.

Nineteen other States, the report said, which have "little or no need for additional classrooms, will nonethelesss find themselves entitled to share in the Federal handout of well over $1 billion in the next 5 years." To put it another way, the report continued:

These States, whose current requirements amount to slightly more than 6 percent of the shortage of 159,000 (classrooms) relied on to pass this crisis legislation, will get more than half the Federal money it provides.

Despite the fact that my own State of Pennsylvania has replaced all unsatisfactory facilities and supplied enough schools for excess enrollments it would nonetheless have had available over $135 million.

I have been a vigorous champion of Federal aid to schools when this has been genuinely required by our social responsibilities, as is proved by my votes for assistance to impacted areas. There have been occasions when Federal aid was essential to prevent severe handicaps to education from developing in one area or another. But the legislation which was defeated last Thursday would have done nothing more than create a gigantic pork-barrel fund at the unrestricted disposal of the Health, Welfare, and Education Department which would have been able to employ it for purposes having nothing to do with aid to education.

We may expect recommendations for Federal school aid to come before us again in the future. It is my sincere hope that on this next occasion the legislation will be directed toward real need.

Panama Canal: Tonnage Record in 1957

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. THOMPSON of Texas. Mr. Speaker, in connection with recent statements of mine concerning operations of the Panama Canal, the attention of the Congress is invited to the record-breaking 8,848 transits during the fiscal year 1957, as reported in a newsstory published in the July 28, 1957, issue of the Chicago Sunday Tribune.

Under leave to extend, I quote the indicated newsstory:

PANAMA CANAL SETS TONNAGE RECORD IN 1957

BALBOA, C. Z., July 27.—The tonnage of cargo moving through the Panama Canal in the fiscal year that ended June 30, was about double the yearly average in the 10 years preceding World War II.

The cargo for the year amounted to more than 50 million tons, the Panama Canal Company disclosed. The volume exceeded the previous record by more than 4 million tons. Records also were set on transits of ocean-going commercial vessels of more than 300 tons, and on tolls collected.

The fiscal year 1957 was the sixth consecutive year in which commercial traffic reached a high. Before that, during the depression and war years, and thereafter, commercial business had failed consistently to reach its previous high of 1929. The 1929 mark was first topped in the fiscal year 1952.

RECORD 36 PERCENT HIGHER

Last year's record was 8,579 ships, a figure about 36 percent higher than the 1929 high of 6,289.

Besides last year's commercial transits, there were 269 transits of oceangoing United States Government ships, making a total of 8,848 locked through the waterway. There were also a number of small coasters, yachts and similar craft.

The total in tolls for the 1957 fiscal year bettered collections during 1956 by about $2,200,000. This figure is made up of $39,653,712 collected from commercial users,

plus $1,140,116 in toll credits from transiting Government shipping.

EXPECT 200,000TH SHIP

Of the 50,624,373 cargo tonnage moving through the waterway during the fiscal year 1957, all but 922,173 tons was handled in commercial vessels.

With continued heavy traffic, the canal approaches another milestone—the passage of the 200,000th oceangoing ship. At present traffic levels, it is expected the 200,000th ship will show up before the end of this calendar year.

The New Class

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. PORTER. Mr. Speaker, some men emerge from communism dazed and jolted, not aware of the implications of their renunciation, whatever the incident leading thereto. Not so with Milovan Djilas, whose book will be published in the United States by Frederick A. Praeger on August 12. The name of the book is The New Class and here are excerpts which appeared in the New York Times on July 26, 1957:

Although the Communist revolution may start with the most idealistic concepts, calling for wonderful heroism and gigantic effort, it sows the greatest and the most permanent illusions.

The Communist revolution cannot attain a single one of the ideals named as its motivating force. However, Communist revolution has brought about a measure of industrial civilization to vast areas of Europe and Asia. In this way, material bases have actually been created for a future freer society. Thus, while bringing about the most complete despotism, the Communist revolution has also created the basis for the abolition of despotism.

But even if Communist aims per se were unreal, the Communists, as distinct from earlier revolutionaries, were fully realistic in creating those things that were possible. They carried it out in the only way possible—by imposing their absolute totalitarian authority. Theirs was the first revolution in history in which the revolutionaries not only remained on the political scene after victory but, in the most practical sense, built social relationships completely contrary to those in which they believed and which they promised.

Marx's concrete forecasts proved inaccurate. To an even greater degree, the same can be said for Lenin's expectations that a free or classless society would be created with the aid of the dictatorship.

OWNERSHIP IS DEFINED

Ownership is nothing other than the right of profit and control. If one defines class benefits by this right, the Communist states have seen, in the final analysis, the origin of a new form of ownership or of a new ruling and exploiting class.

In contrast to earlier revolutions, the Communist revolution, conducted in the name of doing away with classes, has resulted in the most complete authority of any single new class. Everything else is sham and an illusion.

The roots of the new class were implanted in a special party of the Bolshevik type.

Trotsky noted that in prerevolutionary professional revolutionaries was the origin of the future Stalinist bureaucrat. What he did not detect was the beginning of a new class of owners and exploiters.

The new class may be said to be made up of those who have special privileges and economic preference because of the administrative monopoly they hold.

After Lenin and Stalin came what had to come, namely mediocrity in the form of collective leadership. And also there came the apparently sincere, kindhearted, nonintellectual "man of the people"—Nikita Khrushchev.

The new class itself is tired of dogmatic purges and training sessions. It would like to live quietly. It must protect itself even from its own authorized leader now that it has been adequately strengthened.

The heroic era of communism is past. The epoch of its great leaders has ended. The epoch of practical men has set in. The new class has been created. It is at the height of its power and wealth, but it is without new ideas. It has nothing more to tell the people.

The use, enjoyment and distribution of property is the privilege of the Communist Party and the party's top men.

Party members feel that authority, that control over property, brings with it the privileges of this world. Consequently, unscrupulous ambition, duplicity, toadyism, and jealousy inevitably must increase. Careerism and an ever-expanding bureaucracy are the incurable diseases of communism.

Just as under Stalin, the new Khrushchev regime, in executing its so-called liberalization policy, is extending the Socialist ownership of the new class. Decentralization in the economy does not mean a change in ownership, but only gives greater rights to the lower strata of the bureaucracy or of the new class.

The new class instinctively feels that national goods are, in fact, its property and that even the terms Socialist, social, and state property denote a general legal fiction. The new class also thinks that any breach of its totalitarian authority might imperil its ownership.

DEMANDS FOR FREEDOM

Every real demand for freedom in communism, the kind of demand that hits at the substance of communism, boils down to a demand for bringing material and property relations into accord with what the law provides.

The type of ownership and exploitation which the new class creates by using its authority and its administrative privileges is such that even the class itself must deny it.

This makes the legal position of the new class uncertain and is also the source of the new class' biggest internal difficulties. The contradiction discloses the disharmony between words and actions:

While promising to abolish social differences the new theme by acquiring the products of the Nations' workshops and granting privileges to its adherents. It must proclaim loudly its dogma that it is fulfilling its historical mission of final liberation of mankind from every misery and calamity while it acts in exactly the opposite way.

This is a class whose power over men is the complete known to history. For this reason it is a class with very limited views which are false and unsafe. Closely ingrown and in complete authority, the new class must unrealistically evaluate its own role and that of the people around it.

While the new class accomplished one of its greatest successes in the revolution, its methods of control is one of the most shameful pages in human history. Men will marvel at the grandoise ventures it accomplished, and will be ashamed of the means it used to accomplish them.

Progress of the Federal Highway Program

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. CRAMER. Mr. Speaker, recently it was my privilege to address the national convention of the National Association of County Officials in Atlanta, Ga. At that time I prepared for these officials, as part of my address, a summation and up-to-date report on the progress of the national highway program throughout the United States and after the first year of operation. As a member of the Public Works Committee of the House I was very pleased with the rapid execution of the program. The convention received the information well and were very interested in the facts and figures provided. For the information of the other Members of the House I would like to include that portion of my remarks and point out the exceptional progress of what, I believe, is one of the more important pieces of legislation enacted by Congress in recent years.

The largest public-works project in the entire history of the world was approved by Congress and signed by the President of the United States on July 29, 1956. Since that time, the impact of the program on the folks at home and in every community across the Nation has been felt. Thirteen years from now we will realize the full benefits of this program but, at the outset, let me point out that this program is one in which local control is intended, under the act, to be paramount. The States make the surveys, prepare the plans and specifications, acquire the rights-of-way, award the contracts, approve the construction, and maintain the highways when built. The Federal Government does not dictate to any State actual location of a highway between previously determined and agreed interstate intermediate points. No other plan of Federal participation has exhibited such an awareness by statute and practice of the rights of the communities and the States.

I would like to point out the prompt action taken by the administration to get this highway program underway. Only 13 days after passage of the bill standards for improvements of the Interstate System were adopted by the highway departments of the States. Authorizations totaling $3.7 billion have been apportioned to the States. As required by the act, $1.125 billion for the fiscal year 1957 were apportioned immediately upon approval of the act. Authorization of $2.550 billion for the fiscal year 1958 was apportioned to the States on August 1. These apportionments include a total of $2.7 billion for the Interstate System.

* * * * *

The first contract for construction on the Interstate System using funds authorized by the 1956 act was awarded by the Missouri State Highway Department on August 2, only slightly more than 1 month after enactment of the legislation. The project provided for 2.6 miles of divided highway on U. S. 66 between Lebanon and Hazelgreen, Mo. This shows the expedition with which this program got underway.

In the 11 months through June of 1957 * * * a total of some $3,352,192,860 of contracts have been completed in construction or modernization of interstate, primary, secondary and other assistance projects. The

Federal Government participation in this total amount is $2,209,949,317.

The interstate portion of this work includes obligation of funds in the amount of $1,729,670,946 in 689 separate projects. The final interstate program is one in which 90 percent of all cities over 50,000 population in this country will be directly connected. It is interesting to note, however, that Secretary Weeks pointed out in recent hearings that this program is not a stagnant one—it is today alive and expanding into the future. He testified before a congressional committee that some 12,500 additional miles of construction in addition to the 41,000 miles of interstate highways were requested to be added in expansion of this program and the Senate Public Works Committee has reported a bill adding 7,000 miles and 5 years of financing to the system.

Before going further into development of the program, we might glance at some of the problems of the impact of this program presented—at least these are the answers based on experience to questions we all had concerning the program at its outset, as presented to the Senate committee.

It now appears that shortages of materials will pose little problem; the capacity of the contractors of this country is fully adequate; existing highway construction ability can be expanded within 5 years to carry out 4 times the construction capacity of today; the availability of material and equipment has improved; cost of materials and equipment show a slight increase but this is largely offset by efficient operation.

This record is encouraging and forebodes no holdup in the authorized program of construction and completion in 13 years.

I personally wish to comment upon the study relating to the maximum desirable dimensions and weights for vehicles operated on the Federal-aid systems. The Bureau of Public Roads is cooperating with the American Association of State Highway Officials, the Department of Defense, the Highway Research Board of the National Academy of Sciences and industry in the construction and operation of a test road in Illinois. The surfacing will be placed, instrumentation installed, and test traffic started this year.

It is expected that this test road will provide a wealth of data from which sound recommendations can be made to Congress.

A parallel factor of the safety program concerns the marking of the interstate highways. Associations which established and administer the United States numbered system, recognize the need for establishing a convenient and satisfactory method of route marking of the interstate system for the convenience of the traveling public. Since all of these highways will be State highways and operated by the departments, the route numbering committee is presently engaged in working out a method of route number assignment for the entire network of interstate highways. It has been demonstrated that high speed, high density expressways require exceptional and special signing in order properly to direct and inform the traveling public.

I cannot stress too strongly at this point the absolute necessity today of close and continued cooperation between the planning units of city, county, State, and Federal government. This is essential for the orderly development, not only of the highways themselves, but adjacent areas and facilities that fully come within your domain. You must make your zoning and future development plans available to highway officials. An obvious example of such need would be one where you have planned future industrial area in your county and have zoned for that purpose. To provide access ways to such an area the State must know of your plans. Otherwise costly and inconvenient revision of plans or actual reconstruction would be demanded.

You must at all times, because of your close liaison with the people and knowledge of the future of your community, keep State and Federal agencies advised of the interests and needs of the local areas you represent. This will become even more important as future primary and secondary roads are planned to feed in and out of the interstate systems. I am sure that you will find an interested and willing consultant both in your State departments and in the Bureau of Public Roads of the Federal Government. Close cooperation means good planning, and good planning means a healthy, economy-minded community.

One of the early problems in building any road is the acquisition of rights-of-way. I think it was my experience in county government and the State legislature that brought that vital phase of development to my mind and prompted me to introduce a bill in the House that became section 110 of the National Highway Act. My bill provided for the first time, advance purchase of rights-of-way, using Federal funds on a matching basis. Through application of this feature of the bill the States and the counties can purchase property, ahead of urban and suburban development and before land prices increase between the planning stage and time for actual construction. In my home State of Florida the savings by this feature alone it is estimated to about $40 million.

I urge full implementation of this advance purchase feature of the bill on each county commissioner here today. Many States are using much of their money for this purpose while "tooling up" for the program.

There is still another new feature of right-of-way acquisition provided in section 110 that authorizes Federal condemnation when requested by the State. Requests by the States to the Secretary of Commerce to acquire right-of-way on the Interstate System, to a large extent, will be determined by inadequacy of State laws. Progress is being made, however, in remedial legislation being introduced at State levels. The Bureau of Public Roads has made surveys of the right-of-way organizations, policies, procedures, and laws of the various State highway departments which indicate that all but 13 States can acquire right-of-way without delay. To date, only one request has been received for Federal acquisition of right-of-way on the Interstate System.

* * * * *

I know you are concerned with labor cost in your immediate areat resulting from inclusion of the Davis-Bacon prevailing-rate-of-wage provision in the 1956 act. Latest studies show the State highway departments developed wage rates within their specific classifications in their respective States. All but a very few have seen fit to do that job. As a result of the work which they have done in their respective States the Labor Department has been helped immeasurably in developing these predetermined wages. I would say that in probably 90 percent or 96 percent of the cases that the wage rates predetermined by the Department of Labor had been almost the exact figures which were developed by the State highway departments. The State submits the wage determination to the Department of Labor and little difficuly has developed.

One of the great problems facing States and countries today is the lack of engineers for the planning design and supervision of the new projects. This fact is brought home to me because the need is reported greatest in Florida, my home, and in Texas and Mississippi. In 1956 only 4,220 civil engineers were graduated—it is estimated that this year's class will include 5,300. The need is for 10,000 to 12,000 today. The reason for this lack is obviously because young graduates do not seek the lower wage levels of public service. * * *

Some States have begun programs of training mathematically capable high-school students to do the figuring and work on the drawing boards and thus to release engineers for critical work. But the primary method of relief has been the adoption of modern miracles that, based on a study by the Bureau of Public Roads, permit more engineering per engineer.

Use of the modern electric computer has been called by Bertram D. Tallemy, Director of the Bureau of Public Roads, as important as the Air Force break of the sound barrier. Thousands, yes millions of hours have been saved. Millions of dollars in direct and indirect savings will accrue from its use. Today's engineer can compute earth removal figures for 100 miles of roadway in 1 week with use of the computer that would have taken 30 weeks by older methods—1 engineer used to take 5 to 8 hours to come to conclusions from 1 hour of traffic studies. Today, using the computer, his decision is made in 40 seconds. A firm that took 3 to 5 weeks working out stress problems on bridges now gets an answer in 1 hour.

There are many amazing instances of savings told about the electronic wizards. Once a machine stopped and reported a problem was impossible. The amazed engineers working on the Milwaukee Stadium Exchange rechecked their figures on a planned cloverleaf. Just a few missed decimal points were found but the machine was right, and while saving thousands of dollars, the machine also had pointed out that if the first figures had been used the driver instead of coming off the so-called cloverleaf would have been circling and circling without end.

On another occasion when data was put into the computor the doggone genius came up with the question, "Where is 128 feet of that road?" Mouth agape officials naturally started to look. It all turned out that a surveying crew had stopped for lunch leaving one man in the truck with the instruments. Since the other fellows wound up the lunch hour pitching horseshoes he moved the truck under a shady tree. The crew returned and continued the survey, but from the new location, just 128 feet from where they had stopped. Needless to say there were red faces but more important, again, thousands of dollars and time had been saved.

I have discussed the use of the computor to indicate that ways and means are being found to solve the problems of this tremendous multi-billion-dollar project. In similar ways we will solve the community problems that face us in the growth of the highways of our country.

Briefly, what is the progress being made on some of the other new provisions of the 1956 act? As to toll facilities many miles have become a part of the system upon request of the Toll Road Authority and the integration of many more miles is under consideration. Some problems concerning Federal participation in approaches to toll facilities have arisen and are being met by providing alternate nontoll approaches, used for these needed ingress and egress roads. A thorough study as to the extent, if any, of reimbursement for toll facilities or portions is underway pursuant to section 114 and a report is due January 1958. Safety studies are well underway, as stated before, and reports to Congress are due March 1, 1959. These are a few examples of the new provisions.

The only iminent legislation this session, in addition to increasing mileage, which in the Senate approved bill would amount to 7,000 miles, is for the regulation of billboards along the interstate system. A bill has been reported out by the Senate committee which gives States that adopt reasonable regulations through legislation of the use of bill-

boards that accomplishes the purpose of safety and beauty to the satisfaction of the Bureau of Public Roads a bonus of one-quarter of 1 percent. Additional Federal funds provided would amount to an approximate total of $62.5 million. Although this legislation has been reported by the Senate, no hearings have been held on the House side and it is obvious that further consideration is merited.

One of the most beneficial effects of the 1956 act is that it provides a basis upon which local and State governments can make long range plans, knowing with relative certainty that Congress is going to go through with the program. This is particularly true when Congress went so far as to provide for a continuing authorization and appropriation, not requiring annual approval as do most other public-works programs. In effect, Congress earmarked the revenue from road users for the road program—and for 14 years. I cannot foresee any Congress repudiating this long range implied agreement.

Let me repeat myself for the benefit of emphasis. We have set forth—and properly so—on the greatest program of cooperative, and I emphasize cooperative, public-works effort ever known. It will require the greatest engineering, planning, financing, and cooperation between county, State, and the Federal Government ever contemplated. It is our job to meet this challenge for the sake of national defense, the growth of our communities, the welfare of our children and the lives of some 4,000 people that will be saved through better highways. I know we can meet that challenge.

Federal Aid for School Construction

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 29, 1957

Mr. SMITH of Kansas. Mr. Speaker, we are told that the Federal aid for school construction bill is dead for this session of the Congress. It would seem from indications that this issue will again be brought up at the next session of Congress. The attached editorial points out most constructively the efforts that are being made by the professional educators. It would seem that the National Education Association is beginning to adopt the same tactics and principles of the big labor bosses. They get their dues and the right is reserved to the bosses as to how the money is to be spent. The rank and file member has little or no say in regard to these matters. I enclose herewith an editorial written by the editor of the Oberlin Herald, Mr. E. R. Woodward. I commend its constructive thoughts to my colleagues.

[From the Oberlin (Kans.) Herald]

When local teachers return to the classroom in a few weeks, they will have a new demand upon them.

The National Education Association has doubled its annual dues, from $5 to $10. We hope teachers and school boards—some boards pay part or even all of a teacher's NEA dues—give a thought before they pay.

The new NEA budget, approved at the recent meeting in Philadelphia, calls for a 100-percent increase in spending—to $7 million. Included is $677,200 for Federal relations—lobbying, no less.

The Federal relations budget is up more than 500 percent.

NEA officials say that only 10 percent of that Federal relations budget is for lobbying. The rest is for building grassroots support for Federal school building aid.

The NEA knows what it is doing. They have already sold Washington. But grassroots support is practically nil. No part of the Eisenhower program is boosted less. Congress would likely O. K. some sort of Federal program if there were any sort of public support.

There isn't, and the NEA is now out to gain that support, to show the public of the sad plight of our schools.

Education is a local problem. Granting that some communities are pressed for more space and better facilities, we think that such problems belong at home. Add them together and they don't add to a national problem.

Many rapidly growing cities have complex school building diculties. Conceding the NEA's point that a place like Los Angeles has had to add since World War II more school buildings than have ever been built in a metropolis even so large as Milwaukee, it is also true that that influx gives Los Angeles the means to build such buildings.

There is even excellent reason to believe that building in the past decade has surpassed enrollment increases.

A school's tax structure is already deceiving. It taxes in its own district. It gets tax money from the county and from the State also. In an oblique way, for lunch programs, for example, it already gets some Federal aid.

That's complicated enough. We hope teachers and school boards will agree.

Last year about 90 percent of Decatur County's 86 teachers held NEA membership. The percentage will be less this year for the simple reason that many who begrudged $5 will balk at $10. We assume it is commendable for a teacher to want to belong to a professional organization and to assume his share of the costs of gaining social stature and securing economic equilibrium. To throw in an extra amount to promote something that stifles initiative and independence—characteristics that we assume the NEA favors as being mentioned in a classroom—is repugnant to our heritage, to fairness, and to majority opinion.

GI Conditions in Europe

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 29, 1957

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith a report by the distinguished editor of the Charleston News and Courier, Thomas R. Waring, on occasion of a very thorough visit to many of our American military bases in Europe. Mr. Waring traveled to Europe under the sponsorship of the Southern Association of Nieman Fellows as it will be noted from the article. His is a very excellent representation of conditions with the military abroad.

VISITOR TO EUROPEAN BASES FINDS GI RELATIONS GOOD

(EDITOR'S NOTE.—What are we doing to make United States troops and their families ambassadors of good will overseas? The author, who is editor of the Charleston, S. C., News and Courier, is just back from Spain, France, Germany, and England, where he studied relations of American troops in Europe under a grant from the Southern Association of Nieman Fellows, a regional alumni group of winners of Nieman journalistic scholarships at Harvard.)

(By Thomas R. Waring)

American troops in Europe now enjoy good relations with civilian neighbors. This was not altogether true last year.

Many times I heard these statements during a 7-week tour of Army camps and Air Force bases in France, Germany, and England. While military authorities dislike to reveal exact figures on troop strength, I estimate there must be nearly 350,000 military people and 175,000 wives and children in the European theater. The bulk of them are in the three countries listed.

In Spain, the fourth country I visited, there are scarcely 2,000 airmen and almost no other United States military forces at present. When the three big air bases and their satellites are completed within a few months, troops will pour in to man them. Authorities are preparing to see that community relations stay good. They intend to profit by mistakes elsewhere in cultivating good will in Spain.

A series of crimes, as well as a variety of other tensions, hurt reputations of Americans in the Armed Forces. A few caused trouble for the great majority of decent, orderly young men. These men have no control over some of the conditions that cause civilian complaints, such as noisy jet airplanes and scarcity of modern housing.

Much of the furor over crimes last summer had died down by the time I arrived this spring. United States military and diplomatic officials are striving harder than ever to hold down incidents in the future. They work in friendly cooperation wtih local authorities.

An elaborate public-relations program, long carried on piecemeal in the field, but now better coordinated, has begun to pay off. That is the opinion of scores of United States and foreign spokesmen whom I interviewed.

Commanders are bearing down hard to make their men behave while off duty. Before troops leave the United States they receive briefings on their new stations and hints about customs of the country. Training in how to get along with foreign populations continues overseas, indeed, it never stops.

For most servicemen this is the first trip abroad. For a great many, enlistment brought the first absence from home. Actually, these are mostly teenagers, or men barely out of their teens. They come from the same age group that sometimes turns out juvenile delinquents at home.

Even military discipline and elaborate recreation program do not prevent bad boys from misbehaving. But the percentage of crime, several military legal and police officers told me, is smaller than average in the United States or in the host country.

Statistics to prove this point are not available, nor would they have much meaning. It is all but impossible to weigh the elements of age, dislocation from home, and similar points. But men who deal daily with those problems have a good grasp of their jobs. They feel no shame for the general behavior of United States troops abroad.

Gen. H. I. Hodes, commanding the United States Army in Europe, with headquarters in Heidelberg, summed it up this way:

"The finest commodity we have over here is the average American soldier. Whenever I feel frustrated, I go out among the soldiers and come back refreshed."

Convincing citizens of host countries—few of whom have personal contact with United States troops—of American virtues is part of the public-relations job undertaken on instructions from Washington. It is to con-

vince the free nations that Americans are decent, as well as rich and strong.

The whole effort ties in with President Eisenhower's people-to-people program, inaugurated last fall. This program uses many avenues to cultivate friendship abroad. Good relations for our troops is an important phase of it. To combine a couple of cliches, each soldier and airman is supposed to be an ambassador of good will for the American way of life.

It's an assignment GI Joe didn't seek. It's also a job for which he may not be well equipped. Some think that Americans worry too much anyway about what foreigners think about us. Under their breath, some of the very men carrying out the good will program mutter that our country is having to furnish more than its share of good will.

Though most servicemen frankly say, when asked, that they'd like nothing better than to go back home, many take advantage of chances for foreign travel. The Armed Forces encourage them to make better use of their time than hanging around bistros, pubs, and their German equivalent, the gasthaus, or chasing local girls.

Sometimes it's the other way around. Especially in such resorts as Pigalle in Paris and Munich's Goethestrasse, girls chase the GI's.

Even in civilian clothes, which the majority prefer off duty, it's usually easy to spot GI's by their haircuts and their dress. Sometimes they blend in with civilian tourists. In some countries, United States military dollars total much more than sums spent by civilian United States tourists—six times as much, for example, in the United Kingdom.

GI pay and Government funds spent locally for supplies add up to big business. By European standards, United States troops are rich. Many own automobiles. They spend freely on local girls. This pleases the girls. Many of them marry GI's—at the rate of more than 250 a month in England alone. Local young men are not so pleased by GI rivals. Nor are parents when, instead of marriage, an occasional illegitimate child shows up. Everybody understands that large numbers of healthy young males, freed of home restraints, are likely to demoralize a community to some degree. But not everybody agrees on what amount is reasonable.

Not all servicemen, of course, are unattached. Thousands of them bring their wives and children. They and their dependents often live in villages built for them on or near military reservations.

Some of these villages—especially in Germany—are extremely comfortable, even luxurious. Others may consist of trailers, temporary housing or mediocre apartments. These villages are known as Little Americas. One of them in Germany contains about 20,000 residents. The post exchange and the commissary supply the comforts of home.

Other service families—notably in the United Kingdom—live "on the economy." This is the phrase that military people use to mean renting quarters and dwelling among the natives. Sometimes Americans crowd already skimpy housing and run up the rents.

And sometimes they feel they are being gouged by foreign civilians. Often they commute 15 to 25 miles running up their own living costs and cooling their ardor for the land where they are stationed.

Whether to mix among the permanent residents is a never ending question. Some observers believe that reluctant ambassadors of good will wouldn't do our country much good. Others feel they should be made to circulate and win friends, whether they understand or like the foreigners.

GI's call Germans Krauts—an old name that seems to have lost the unfriendly meaning of World Wars I and II. In Britain, the word bloke—common man's term for chap—has become an adjective. "Where'd you get that bloke car" or "The bloke police broke up the fight" are common expressions. When I asked an air policeman whether he was running down the British in this way, he replied, "Certainly not, I married a bloke."

With so many automobiles owned by Americans on the highways—both the big ones from Detroit and the little ones bought overseas—traffic hazards are bound to increase. Accidents are by far the chief reason for a serviceman's getting into trouble with the law.

Damage claims, license squabbles, high cost of operation and a feeling that the foreign cop or court usually rules against an American driver do not improve tempers on either side. American authorities, however, seem agreed that European courts on the whole are fair, and that our men's civil rights are amply protected.

About that jet noise. People living near a jet air base complain with good reason about the racket. Commanders try to aim takeoffs away from habitations. In a crowded country it is usually hard, often impossible not to zoom over somebody's house. The best a commander can do in some cases is to invite the countryside in for open house and explain why jets are needed to guard against attack.

Thousands of Europeans work for Uncle Sam. Loss of those jobs and the money spent by and for the troops would remove vast sums from nations struggling for prosperity. Foreign commercial people recognize this fact. But that doesn't stop private citizens from complaining and the press from occasional jibes.

On the surface, at least, tension seems to fluctuate with political news. When the Suez crisis was hottest, French and British citizens made no secret of their anger over United States refusal to support the fight on Nasser. Servicemen heard torrents of abuse as though they personally were responsible for United States foreign policy.

When Russian tanks were shooting Hungarians, however, many a German who complained about "too many Americans" began to revise his opinion. West Germans who had hoped to get along with the Communists in the expectation of reunion with East Germany had fresh evidence of cruelties behind the Iron Curtain. They appreciated the Americans all the more as a shield against Russia.

Besides curbing disorderly troops, United States military authorities are also taking positive steps to cultivate good relations. These include concerts, charity for orphans, and entertainments of many sorts for press, politicians, and public. They lend heavy equipment to help town improvements.

They seek out friendships with representative citizens and clubs. They set up community councils to help iron out local difficulties. They encourage their men to learn and speak the language. They foster a good-neighbor policy. They try not to look like occupying troops.

With traditional adaptability many American servicemen are falling in with this program. So are their wives. The wives improvise housekeeping in strange surroundings. Some send their children to local schools, though our Government provides free American schools in many areas. If you ask them how they like it here—wherever "here" may be—most likely they will say, "We like it fine."

Mrs. William F. Winters, formerly of New Jersey, and lately of California, lives in an Air Force trailer at Dreux Airbase, 75 miles from Paris.

"I'm prejudiced," she said. "I love the French." Her trailer is 1 of 300 that serve as housing at Dreux. Many other families live in French villages.

Mrs. R. L. Hirt, of Houston, summed it up like this: "People are either adaptable or they're not adaptable." She was one of a group making decorations for a party in the noncommissioned officers' club. All but one of the wives I questioned there seemed satisfied, though none had housing that really met American standards.

One wife said, frankly, she didn't like France. She preferred Germans. If a poll could be taken, it might well turn out that Germany is the most popular place for American troops.

Bartenders, fellow passengers on trains and planes, local newspaper editors, public officials, businessmen, lords, ladies, Judy O'Gradies, and dozens of other foreigners I met confirmed generally good relations with American troops.

Some expressed the opinion that American boys are less mature than their European counterparts. Several commented that many Americans don't know how to drink in a civilized manner.

Often these foreigners were frank in discussing their likes and dislikes. They seemed friendly and good humored in their remarks. Nobody I questioned could remember the last time he saw a sign saying "Yankee go home." They seemed startled when I asked.

Coal for Florida by River Slightly More Than ACI's Possibility

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Coal for Florida by River Slightly More Than ACI's Possibility," which appeared in the July 24, 1957, issue of the Madisonville Messenger, of Madisonville, Ky.:

"There are three alternative routes by which coal may be carried to Florida, all of which could be used.

"First there is all-rail shipment from the southern coalfields into the peninsula.

"Second, there is shipment to the tidewater facilities at Hampton Roads and then by sea to the Florida area.

"Finally, there is the possibility of river shipment down the Ohio and Mississippi.

"In addition to a splendid network of railroads, Florida is naturally endowed with deepwater ports and rivers which lend themselves well to the possibilities of water movement for coal."

We are quoting from the July 19 edition of ACI Bulletin, a weekly publication of Appalachian Coals, Inc., the big Cincinnati coal marketing agency. The bulletin was discussing the July 17 meeting in Miami, called for the purpose of "exploring further the use of coal in Florida electric utility plants." Present were "representatives from coal producing groups, Florida utilities, and the southeastern railroads serving Florida."

The thing which intrigued the Messsenger in all this learned discussion about Florida markets for Kentucky coal, with accent on Sunshine State utilities, was use of the word "possibility" in the phrase:

"Finally, there is the possibility of river shipment down the Ohio and Mississippi."

Now the widely used American College Dictionary, which is widely relied upon in

newspaper offices, tells us that possibility is the state or fact of being possible. Possible or feasible or practicable refer to that which may come about or take place without prevention by serious obstacles.

That which is possible is something in the future, something that is naturally able, or even likely, to happen, other things being equal.

So far as coal for Florida's utilities is concerned, not only is shipment down the Ohio and Mississippi and across the Gulf of Mexico possible or feasible or practicable—it is being done today, and everybody in Western Kentucky knows it. They know it in Cincinnati, too, but they aren't too enthusiastic about giving publicity to it.

The reason is plain to see. West Kentucky Coal Co. and its subsidiary, Nashville Coal, Inc., are already engaged in delivering coal from our area to Tampa Power & Light, the fuel being barged down the Ohio and Mississippi in huge river barges towed by the towboat Mark Eastin. At a transfer dock south of New Orelans, the coal is shifted to oceangoing barges for the gulf crossing, and so to Tampa, where the power people are said to be quite pleased with their decision to shift from oil to coal.

By no means do we wish to appear sarcastic about this matter of coal for Florida utilities. We have discussed it a number of times, have carried news stories, photographs and editorials about the progress being made on the project over the past 3 years or so, and we have wondered, too, why the railroads have not unbended to the point of making it possible to ship coal to Florida by rail.

Anyway, here's to the Florida coal market, and to the possibilities that exist therein. The fact that the market was discovered over our way is a source of gratification to those who know it—and a lot of people do.

Washington Report by Congressman Bruce Alger, of Texas

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following: My newsletter report to constituents for last week.

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

JULY 27, 1957.—The postal-pay-increase bill gave an early and argumentative start to a controversial week of legislation. A discharge petition signed by the necessary 218 Members forced immediate consideration of the bill. A discharge petition generally is the avenue for forcing committee action on pigeonholed legislation. This particular discharge petition was most unusual since in effect it by-passed the Postal Committee, which normally writes the legislation, and the Rules Committee, which assigns the rule for floor procedure. All petitions upset parliamentary procedure, and this particular one upset even more, thus displeasing many Members. Members generally approve the long-evolved House rules of procedure since there are on the whole good reasons for the procedures, and at the least a recognizance that rules are particularly necessary for orderly conduct in the explosive area of controversy in Government. So, too, courtesy is quite important as an aid in maintaining reason over emotion. Thus the postal pay bill got off to a bad start. Then we learned the petition was for a $1,500 to $1,800 flat increase for all postal workers, although cost of living was up 4.6 percent since the last pay boost. This irresponsibility further alarmed Members. However, the pay bill had been compromised in committee at a flat increase of $546 per postal worker. And that was the bill before us.

Postal workers should have a pay increase, it seems to me, with the cost of living increasing, and I voted for a 5 percent and then a 7½ percent increase. I voted, also, for an escalator provision, granting automatic pay raises as cost of living rises. These provisions were defeated. Then the vote came on the flat $546 per worker. I voted against this because it defeats the whole idea of pay commensurate with duties and skills (by flat increase janitors get 19 percent increase, some clerks 13 percent, others less). It passed by 379 to 38.

Conclusions: (1) Postal-union pressure is terrific and many Members capitulate; (2) this is irresponsible legislation and the causes should be eliminated (discharge petition and flat increase provisions); (3) the inflationary character of this legislation is considerable, as all civil-service personnel now have a pattern, resulting in staggering Government payroll increases; (4) knuckling under to pressure may end up hurting those you intend to help (the postal workers, if no pay increase, should the President veto the raise as expected); (5) a 5-percent or 7½-percent increase could have passed; and (6) there are inequities in national wage-scale imposition: That is, inequities between localities and between city-rural living. For myself, I intend to act responsibly at all times, not politically—and thereby really help my constituents, including postal workers.

The Federal aid to school construction bill is dead, by a vote of 208 to 203, and a close fight it was, although its demise appears closer than it really was. The bill provided $1½ billion for Federal aid to States over 5 years, a compromise between the administration's request for $1.3 billion and the Democrats' $3.6 billion. The debate and vote was not party line and was excellent for that reason. The Education Committee presented two opposite viewpoints and contradictory figures in the report accompanying the bill. A long debate ended in numerout amendments when the dramatic vote on "strike the enacting clause" precipitated its defeat. Normally the vote is on final passage after all amendments considered have been approved or rejected. The measure of House disapproval can be seen then in this precipitous move to defeat the bill before hearing it out. The Powell amendment to deny Federal funds to segregated schools had added to the disapproval of some. I took the floor and endeavored to present my district's and State's viewpoint with documented facts: (1) the schools are being built (pupil-teacher and pupil-classroom figures, plus expenditures year-by-year); (2) it is a local and State responsibility, not Federal (there is no national interest greater than parents' interest in their children's education; (3) Federal aid means Federal control (the bill has 37 pages describing regulations States must accept to get the money); (4) the stipulated Federal construction wage scale would violate our State law, and is another example of Federal control; (5) the Texas State government is opposed to Federal aid and such a resolution was sent to each Texas House and Senate Member of Congress.

Possibly the President has said it best of all, and I quoted him in addressing the House: "Federal aid in a form that tends to lead to Federal control of our schools could cripple education for freedom. In no form can it ever approach the mighty effectiveness of an aroused people. As aroused people, we can do this job at the local and State level; otherwise, we will lose freedom of education, jeopardizing our children's and the Nation's future, a result certainly not sought by a majority of grassroot Americans."

The Army Alert to Proper Manpower Utilization

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 29, 1957

Mr. RIVERS. Mr. Speaker, recently I was amazed to read in the RECORD the opinion of one of the Members of the House that the Department of Defense is inept in the classification, assignment, training, and utilization of the civilian skills of its inducted military manpower. The hoary observation was made that brutal, uneducated sergeants and drillmasters, despite their lack of formal education, still delight in assigning college-trained men to the garbage dump. I daresay that same catcall was first leveled by the private soldiers in Caesar's legions against the Roman noncoms. The further serious charge was made in the RECORD of May 14, 1957 that "our whole concept of military training still reflects the methods of the last century. It has not caught up with World War I, not to mention World War II, or the nuclear age."

These charges were not made by a member of the Armed Services Committee nor by one with recent personal experience with our Armed Forces. I am a member of the House Armed Services Committee and do not recall these charges being referred to the committee before they appeared in the RECORD for all the world to see. The charges are, of course, undocumented. It is obvious, however, that the genesis of them is the worm's eye view of a formally educated gentlemen recently exposed to the rigors of military life. It is simply not fair to denounce publicly the entire Department of Defense and impugn the motives of everyone in authority down to the duty sergeants because of individual cases reported by constituents which may or may not be a legitimate basis for complaint.

I have had long and happy years of experience with our Armed Forces. I have seen our servicemen and servicewomen at work in many places and frequently under trying circumstances. I cannot agree that our Armed Forces personnel management predates World War I in its theory and application. On the contrary, I know great strides have been made over the years. Current service personnel management policy and practice compare favorably with most civilian industries. Only the rates of compensation have not kept abreast with those outside the military service. It can be safely stated that because of

progressive and enlightened personnel management policies and procedures, the Services are presently performing their missions with fewer people in relation to the job to be done than ever before.

I have always thought the Army had to work hardest at personnel management. A soldier's life, or service as a soldier, is acknowledged not to be a bed of roses and so constant attention must be given to personnel management and morale. I asked the Adjutant General of the Army to give a report on what that service has done, is doing, and plans to do in the future with regard to the classification and utilization of its enlisted personnel. I have been furnished a most excellent report and wish to insert it in the RECORD:

ADJUTANT GENERAL'S REPORT

The Army has devoted a great deal of time and effort over the years to developing and executing a sound and realistic program for selection, classification, training, assignment, and other aspects of military personnel management. No one phase of the overall management of the Army has received greater attention during the recent years of major war and uncertain peace than has personnel management. The problems of personnel management are among the most difficult the Army has to face. The importance of the human relations aspect of management has long been recognized in industry, in Government, and in the Armed Forces.

In the Army, as in the other military services, extensive research has been and is now being conducted into the selection, classification, testing, training, and utilization of Army personnel. These studies have been quite widely publicized in the press and national magazines.

Historically, it is of greatest significance that the methods for classification and placement of Army enlisted personnel developed during World War I became the basis for industrial personnel systems which came into use in American industry during the period of the 1920's. Army research in the mental testing field stimulated a tremendous development of psychological tests in both industry and education. It was the success of the Army Alpha and Army Beta tests used on millions of World War I recruits which proved the value of group mental tests for industrial and educational selection purposes.

When war again threatened in the late thirties, the War Department anticipated a second great mobilization of the Nation's manpower. Several years before our actual entry into the war, steps were taken to develop the means for effective identification and use of personnel. A staff of specialists was called together in the Office of The Adjutant General to perform the needed work. Fortunately, with the experience of the earlier mobilization in mind, it was possible to envisage in broad outline the problems that would be encountered. New developments in psychological testing, in interviewing techniques, in evaluation of physical capacity, and in design of personnel records systems which had taken place in industry could be studied and adopted for military use.

The basic patterns of the systems conceived during World War I had been further extended and refined. Recent ideas from the field of industrial personnel management were adapted for Army application. Thus, the personnel management system of World War II represented an evolution of the best military and civilian thinking in the personnel management field. As a matter of fact much of the planning of the World War II procedures was accomplished by civilian personnel experts who were commissioned for this purpose.

The Army developed a personnel management system which permits the best possible selection and assignment of its manpower resources. The most important aspect of the whole system is embodied in the accurate inventorying of each man's skills, knowledges, and capacities upon entrance into the Army. Once this is done successfully, it is then easier to place him into the job which most fully utilizes his capabilities and which at the same time most fully meets the needs of the service.

The utilization of each man begins immediately upon his entry in the Army. Each man is completely evaluated—his skills, knowledges, and abilities noted and analyzed—and his subsequent utilization planned.

Each man is tested, interviewed, and selected for training. The training a man receives is based on both his capabilities and the Army's needs. The Army has need only for the particular skills it requires to perform its mission; therefore, many skilled men who enter the Army must be retrained to fill Army job requirements. Unlike the single mental test of World War II, a group of classification tests is used to determine what assignments are most suitable for each man. These tests measure various basic aptitudes. The test scores are grouped into aptitude areas which represent the basic abilities required to succeed in a specified group of Army jobs. For example, a man who has a combined above-average score on an arithmetic, a mechanical aptitude, and a shop mechanics test can be expected to be reasonably successful as a machinist, artillery mechanic, or in several similar jobs.

After being tested, each person is interviewed to obtain and record his education, civilian occupation, languages spoken, test scores, leadership qualifications, physical capabilities, hobbies, sports, and other data to aid in placing him in the proper job. Following this interview the soldier is assigned to basic combat military training which is given to all incoming personnel to enable the man to protect himself and perform as a soldier, if at some later time, regardless of his military job, he finds himself in a combat situation.

Evaluation, however, does not stop during the basic military training period. Rather, it continues throughout the weeks a man is learning how to become a soldier. The trainee is assigned to the school or training activity. Upon completion of the training he is awarded the military occupational specialty. Upon completion of basic military and specialized training some soldiers are sent to further technical or advanced training; however, the majority are assigned to regular units where they are further trained in the mission of the unit, and are assigned to specific duties.

Ever mindful of the importance of effective manpower utilization, the Army has not been satisfied merely to develop systems and programs at the departmental level without providing specifically for carrying them out in the field. Recognizing that in the final analysis, personnel management is the job of every commander and noncommissioned officer right down the line, this subject has been made part of the curriculum of every Army service school. Also, the program at West Point includes specific instruction in the theory and practice of manpower management. This instruction has been adapted to the level of students at each school and ranges from principles of supervision, record maintenance, and other elementary aspects in the courses for enlisted personnel to the more theoretical aspects at such advanced schools as the Command and General Staff College. The field is approached from the national point of view and particularly in terms of mobilization in the course given senior officers at the Industrial College of the Armed Forces which is attended by selected officers of the Army, Navy, Air Force, and Marine Corps.

In the years during and since World War II, teams of officers have been used to inspect personnel operations in the field and to assist and advise field commanders on methods for performing the personnel management functions for which they are responsible.

These teams provide continuing surveillance of the many separate activities which make up the total personnel management system of the Army. As indicated previously, these teams of officers which conduct this surveillance report their findings to the Department of the Army for information and necessary corrective action. It is largely on this basis that the need for revisions and specific improvements in personnel management procedures is determined. In the conduct of their work the members of the personnel management teams make it routine practice to query officers and men to sound out their reactions to the Army. Thus, is is possible for the Department to have the benefit of grassroots reaction.

As a means of insuring that adequate attention is focused on critcal personnel management activities, special programs have been set up to bring these activities to the attention of field commanders. These programs are set forth in specific regulations and directives and are subjected to special monitoring by the Department of the Army. They fall generally in the area of personnel utilization.

Under the Army's scientific and professional program, highly skilled personnel are identified and their qualifications recorded and forwarded to the Adjutant General. If they meet the standards for selection under the program, they are assigned to jobs commensurate with their training and experience. Personnel selected under this program are qualified in fields of civil-mechanical engineering, chemical engineering, electronics, physical sciences, biological sciences, and social sciences.

Other persons entering the Army who possess technical or specialized civilian skills for which a military requirement exists are so classified upon entry into the service. Such persons are assigned to duty in accordance with their specialized skills on completion of basic training without further training in their specialties.

Through these and similar programs, the Army insures that the majority of individuals possessing civilian training and experience are being utilized to the fullest extent compatible with Army requirements. Such programs not only reduce the requirements of the Army, but they bring about better soldier morale and sense of purpose by placing him in a job where he feels he can be of greatest service.

Where mal-utilization is alleged, the charge must be fairly evaluated in terms of the following controlling factors:

1. Few civilians entering the Army have any training, skills, or education which will qualify them for combat type jobs. Therefore, since combat jobs represent such a large share of the Army's strength, a large number of men entering the Army must be trained and assigned to military jobs which are unrelated to their civilian backgrounds.

2. The Army must accept the people it receives when it receives them. Its needs, however, vary from day to day and week to week. The person received today will be classified and trained within the limitations of the Army's known requirements at that time.

Success in the assignment and utilization of men is dependent upon many factors. Aside from the classification personnel, the most important factor is speed. The decision of assignment must be made fast—

the organizations and units cannot wait, for their mission goes on. Each man entering the Army must be programed for a job the Army will have vacant at some future time.

The Army's ability to use specialized civilian training is limited by its mission. Many times, however, assignments of highly skilled and trained technical personnel to combat-type jobs may appear wasteful when actually there is underlying justification for such assignment. The leadership, aggressiveness, and high intelligence demonstrated in civilian life by these college and other highly trained personnel render it entirely appropriate that they be assigned to positions in the combat arms which require these same admirable qualities. This is particularly true when there is no immediate requirement for the specific qualifications of these individuals.

Lest the impression be given that the Army personnel managers think only in terms of today without an eye for the future, a brief reference is made to a few of the latest developments and plans for the further improvement of the Army personnel management system.

One of the most difficult problems faced by the Army is the distribution of personnel. The difficulty of distributing enlisted personnel so as to balance availables with requirements is the basic cause of misutilization. It is necessary to establish current requirements and to project future requirements against which personnel must be allocated. In order to solve the vast problems of record keeping, transmittal of timely information and the making of thousands of decisions armywide involved in accomplishing the function of personnel assignments, new systems are being planned which will utilize the latest scientific developments in communications equipment and automatic data processing equipment. Ultimately, the application of equipment of this kind will make possible practically instantaneous transmission of all the information on the basis of which the best assignment of the individual can be made.

In the near future, installation of the first phase of a new distribution system will make possible assignment of all Army enlisted personnel from a central location on a basis which will take into account full and complete information about the qualifications and background of every individual. Adoption of this major departure from past methods should be a great step forward in the march toward the ultimate in personnel management—the placement of the man in the job he is best qualified to do when and where he is needed.

Another major development in the personnel management system of the Army is the use to be made shortly of job proficiency tests which will be used to measure occupational capacity and provide an objective basis for assignment and promotion determination. These tests are being developed now for implementation in the near future. Ultimately, such tests will be available for all military occupational specialties. The use of these tests will be tied into the recently developed occupational classification structure. The tests will be of inestimable value in aiding the Army to put each man in the right job. The tests will naturally assist in more accurate classification of enlisted personnel.

In order to provide for more complete and accurate personnel record maintenance, the Army has recently developed a new and simplified method of keeping personnel records. By this method all records pertaining to the individual are kept in a single jacket which is transmitted automatically every time the man has a change of station. After the man leaves the service, the jacket is sent to a central records depository where all the information about the individual's service is readily available in a single place for any purpose which may arise. In order to improve morale the Army has devised a system for rotation of troops between the United States and oversea stations whereby entire organizations are retained intact.

In summary, the Army is concerned with the proper utilization of its personnel. It presently has an effective system for personnel management and is ever mindful of the need for improvements which will reflect modern trends.

The Hanks Family, of Bowling Green, Ky.

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. NATCHER. Mr. Speaker, our forefathers built and handed down to us a free, peaceful, and prosperous America. That kind of America was not built or kept by men of little faith. It was built by men of courage and daring who had confidence in themselves and were willing to risk their lives for freedom.

This spirit prevailed in the generations of Americans who fought and died to keep this country free. Beginning in the bloodstained snows of Valley Forge and continuing up San Juan Hill, the Argonne Forest, the slopes of Mount Suribachi, and ashore to Inchon we find sacrifices made to keep this Repbulic free, independent, and indivisable.

Today we live in the greatest country in the world. A country that has passed through the peaks and valleys of strength and weakness. One that is today an active participant in the development of supersonic speed, guided missiles and atomic weapons. A country that realizes the day of the huge build-up for war has passed, and that we can no longer wait until we are pushed into war to begin building our strength. A country that knows full well the threat to our cities and people is many times greater today than during World War II. One realizes that the world cannot exist on a half-free, half-slave basis.

In order to remain free we must be ever vigilant and fully prepared for sudden attack. Our schools, colleges, libraries, laboratories, and factories must continue to develop the necessary knowledge and skills which will make this country strong both in the arts of peace and the arts of war. In order to survive we must remain strong spiritually, economically, and militarily. In order to sustain the spirit which has made America great, patriotism must be practiced as a religion.

We will continue to live in the greatest country in the world if we have courage, faith, and the spirit to fight for and serve our country in time of peace and in time of peril. Understand and appreciate the hardships and sacrifices made by our forefathers in establishing a free, peaceful, and prosperous country. Be cognizant of the duties and responsibilities of an American citizen. American citizenship is one of the most sought after privileges. This fact is verified by the thousands who apply for citizenship papers each year and the millions more who are denied entry into this country. Citizenship in the country which is the recognized leader of the free world entails serious obligations which must be ever foremost in our minds.

Mr. Speaker, there lives in my home town a family by the name of Hanks. This family believes that this country was built by men of courage and they further believe that service to our country in time of war and in time of peace is an honor and a privilege. They understand the duties and responsibilities of an American citizen. To give you a better understanding of just what I mean, I include herewith an article written by my friend, Herb Wallace, of the Park City Daily News, of Bowling Green, Ky, on July 23, 1957, about this particular family:

Some may join the Navy to see the world, but members of the Hanks family of Bowling Green have been doing their touring with the Army and Air Force for the past forty-odd years.

Four years in the military service were enough for most of us, but the Hanks family already has given Uncle Sam about 75 years of service, with more duty ahead.

Retired Lt. Col. Alger Hanks, who completed about 38 years in the Army in 1949, has 2 sons who are making a career in the Air Force, and 3 other sons, who already have put in service with the military and returned to civilian life.

T. Sgt. Joe Hanks, visiting his parents here while on leave from his Air Force station in France, already has put up 20 years in the Army and Air Force and hopes to return to the United States in about a year to finish out his 30-year tour on home soil.

Joe, who played football at Bowling Green High, before entering service at Fort Knox in 1937, is a former Daily News carrier. He was in the office the other day renewing his subscription to the Daily News to keep up with happenings in his hometown.

Not yet 39, Joe has seen quite a bit of the world during his 20 years of service, and the travel and chow appear to be agreeing with him (we'd guess he weighs in the neighborhood of 275–300). A few of the places Joe has been include Korea, Japan, France, Germany, Luxembourg, Greece, England, Newfoundland, Labrador, and Greenland, for a total of 8½ years of foreign duty.

Joe's youngest brother, Gene Paul Hanks, is a staff sergeant in the Air Force now stationed at Seward Air Base, Tenn. He already has 6 years toward the 30-year mark.

An older brother, Jack Hanks, retired from the Army because of disability from wounds suffered in World War II after 6 years of duty. Two other brothers, now civilians, both put up time for the military. Billy Hanks served in the Air Force during World War II, and George M. Hanks served for 2 years during the Korean conflict.

To round out the military family, one Hanks girl married into the Army and the other married an ex-GI.

Although retired from active duty, Col. Hanks still is connected with the military as a civilian employee in the Western State College military department. He formerly served as an Army instructor of the western ROTC after moving here in 1932. He previously had served as an instructor in ROTC at University of Kentucky and as a Kentucky National Guard instructor.

A communications specialist, Colonel Hanks is active in the local civil defense unit.

Press on Alaska-Hawaii Statehood

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. BURNS of Hawaii. Mr. Speaker, Alaska-Hawaii statehood has greater support throughout the length and breadth of the United States than any other measure before the Congress. Continuing evidence of this support is demonstrated in many areas and by many means.

For the information of the Members, I include for printing in the RECORD an article from the St. Louis Post-Dispatch which shows the position of the press from widely scattered sections of the country:

PRESS ON ALASKA-HAWAII STATEHOOD

Hartford (Conn.) Times: "Both Alaska and Hawaii deserve statehood. They are important factors in our national economy and should be allowed their just place in our political life."

The Los Angeles Examiner: "Prolonged injustice has attended our national handling of this matter.

"The consequence has been that the condition of second-class American citizenship has been imposed upon the people of these flourishing and vital Territories, a rank injustice to them and a grave discredit to the American people as a whole."

St. Petersburg (Fla.) Times: "Alaska, where thousands of American citizens are carving out the future of a last frontier, has been administered almost like a colony for 89 years. The citizens of the Territory have shown their desire for true self-government by electing two 'senators' and a 'representative' to press the statehood case before Congress."

Macon (Ga.) News: "The Alaska Statehood Committee says that disenfranchised American citizens in Alaska are living in a status almost identical to that endured by American colonists prior to the Revolution. They pay taxes but are unable to vote for the President or Governor. They supply members of the Armed Forces but are without voting representation in the Congress. In other words, it is the old story of taxation without representation."

Salina (Kans.) Journal: "The overriding issue is whether peoples who are willy-nilly irrevocably tied to the destiny of the United States should not be entitled to a voice in directing that destiny."

Louisville Courier-Journal: "If Alaska does not acquire statehood at the hands of this Congress, something will have gone out of the old American fealty to the brave, the bold, and the resolute."

Boston Herald: "It's time that the fine promises of election became something more than shameful campaign oratory. The knocking has grown so loud that America cannot afford to listen with a deaf and partisan ear."

Duluth (Minn.) Herald: "Both parties have pledged their support of statehood for the two territories. It will always be possible for someone to imagine a disadvantage to one party, the other, or both, in the addition of four members to the Senate.

"We can survive control of the Senate by one party or the other, since that is the normal state of affairs. We cannot be so calm about anything which causes disillusionment as to the common honesty of two vital partners in government, our major parties."

Portland (Maine) Press-Journal: "There may be other issues in Alaska, but the one that counts is statehood. Alaskans have clearly demonstrated their capacity for statehood. Statehood appears to be a question not of whether but of when. And that goes for Hawaii, too."

Great Falls (Mont.) Tribune: "The Tribune favors admission of Alaska to statehood without further delay. This, we believe, is also the desire of a substantial majority of Montanans. Montana legislative sessions have on more than one occasion passed resolutions urging Federal enactment of Alaskan statehood. Our present Montana representation in the United States Senate and House can be counted on to give active support to the Alaskan petitioners."

Claremont (N. H.) Eagle: "There are few good reasons for continued refusal to admit these territories to the Union of States and to grant them full representation. Here's hoping that the incoming 85th Congress may have the honor of conferring the statehood so long and so unjustly denied."

New York Times: "Governor Gruening and many others have repeatedly pointed to the discrimination under which Alaska suffers in respect to two of its vital interests: transportation and the salmon fisheries. Achievement of statehood would end the special-interest exploitation that keeps shipping costs unduly high and that deprives the Territory of control over its dwindling salmon catch. Even more important, it would give to a vigorous body of Americans—over 160,000 of them—the right to that full participation in our democracy that has been denied them far too long."

Cincinnati Post: "Like President Eisenhower, we favor statehood for both Alaska and Hawaii."

Charlotte (N. C.) Observer: "Alaska has all the qualifications of statehood. The argument about remoteness has been disposed of by modern transportation and communication. The chief remaining objection is political, which ought not to be valid."

Pittsburg Telegraph: "Inaction and indecision, delay and procrastination have too long kept Alaska and Hawaii out of the American Union and their people in a second-class American citizenship, and the remedy of this injustice should be high on the schedule of the new Congress."

Portland (Oreg.) Journal: "The loyal residents of these two Territories are conscripted without representation. They pay for Federal-aid highways, but do not get them. They are bound by legal and commercial fetters. They have more than served their apprenticeship and should become full-fledged American citizens."

Grafton (W. Va.) Sentinel: "There should be no further delay in adding them to the roster of States."

Mitchell (S. Dak.) Republic: "If the American people could vote on the question of statehood for Alaska and Hawaii, we believe that the proposition would receive overwhelming approval.

"The ruling consideration in this matter should be the fact that America would be better off with Alaska and Hawaii in the Union and that the citizens of those Territories have richly earned and are rightly entitled to membership in the American family of States."

San Antonio (Tex.) Light: "Alaska and Hawaii in the Union will give military and economic strength to the Nation, enhance American prestige throughout the world, and attest the solidarity of all our people."

News-Virginian, Waynesboro, Va.: "The preponderant majority of average citizens favors statehood for Alaska now. But statehood remains a political football in Congress. Effective lobbying, appalling ignorance, and selfish disinterest and a desire to maintain a status quo in the Congress—these are the real impediments.

"Every tenet of American democracy calls for granting statehood to Alaska, the last of our frontiers. Now is the time to speak courageously for freedom, liberty, and man's individual dignity.

"Such action would breathe new virility into our national scene and greatly expand the average man's confidence in the Congress he elects."

Nashville Banner: "Surely by now the majority sentiment for Alaskan statehood is self-evident: the justice of it, the desirability of it as a practical tie with the Union of which it is a part, and the importance of it in view of Alaska's essential relation to national and hemispheric security. Resting on its merits, the case has sufficient justification to press to swift consummation."

The Late Kenneth Roberts, Historical Novelist

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. McINTIRE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following editorial from the Bangor (Maine) Daily News of July 24, 1957, eulogizing the late Kenneth Roberts:

KENNETH ROBERTS

In the death this week of Kenneth Roberts, Maine has lost perhaps its greatest historical novelist.

Certainly the State has lost one of its most distinguished and dedicated friends.

Despite his great success as a writer and the almost countless honors that came his way, including a special Pulitzer award, Roberts never forgot his native State of Maine, or spared any effort to help encourage its progress.

After launching his career as a writer, Roberts left an editorial job on a national magazine in New York and returned to the scene of his birth at Kennebunkport. It remained his home until he died at 71.

It was former President Theodore Roosevelt who encouraged Roberts to write his first historical novel about New England. As he did research on that project it was Roberts' observation that only then did he "get a sort of broad picture of what has gone on in Maine and New England in the old days."

Roberts wrote of historical Maine and New England not only with understanding but with integrity and accuracy that won him national fame. Few authors did more research to prove historical details.

Once, telling about his novel, Northwest Passage, he revealed that it required 3 years of the hardest kind of research "for the reader to understand in 2 days."

Roberts was more than a historian. There was nothing dry or stodgy about his books. They were human, realistic. They dealth with the people involved in those historic times; the relation of a single event to a war; to the Nation; and to the people themselves.

To read a Roberts' novel was an adventure that lingered long after the book was put aside. History came to life from the very force of his descriptive pen.

Perhaps Roberts summed up his work best when he commented on one of his pop-

ular books Rabble in Arms. For a month he labored day and night to finish the last portions of the book. Often he fell asleep over the manuscript. Commenting on it he said:

"You have a feeling you've done something when you've done a historical novel."

Rightfully, Maine is famous for its rocks and men.

Portsmouth Naval Shipyard Development Association Seeks Additional Information From Navy Department on Disestablishment of Electrical Fittings Inventory Control Division at Portsmouth Naval Shipyard

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter from John I. Hale, Jr., secretary of the Portsmouth Naval Shipyard Development Association, and questions directed to the Secretary of Navy on the disestablishment of the Electrical Fittings Inventory Control Division at the Portsmouth Naval Shipyard:

PORTSMOUTH NAVAL SHIPYARD
DEVELOPMENT ASSOCIATION,
Portsmouth, N. H., July 27, 1957.

THE NEW ENGLAND CONGRESSIONAL DELEGATION,
Washington, D. C.

LADIES AND GENTLEMEN: The meeting of July 26 between Members of the New England congressional delegation and the Secretary of the Navy did not provide satisfactory answers from the Navy to several questions asked with regard to the disestablishment of the Electrical Fittings Inventory Control Division at the Portsmouth Naval Shipyard.

We are forwarding these questions herewith and respectfully request that you obtain more specific answers to them from either the Department of the Navy or the Department of Defense before the Navy takes final action to implement the disestablishment.

We appreciate the excellent cooperation and courtesy shown our delegation by you and your staff. We will keep our people informed of the vigorous campaign you are waging to prevent the damage which will be done to New England small business and the Portsmouth Naval Shipyard if the Navy transfers EFICD's functions from Portsmouth to Mechanicsburg.

Yours very sincerely,
JOHN I. HALE, JR., *Secretary.*

PORTSMOUTH NAVAL SHIPYARD DEVELOPMENT ASSOCIATION—QUESTIONS NOT SATISFACTORILY ANSWERED AT THE MEETING OF JULY 26, 1957, BETWEEN THE NEW ENGLAND CONGRESSIONAL DELEGATION AND THE SECRETARY OF THE NAVY

1. The Navy conceded that the Electrical Fittings Inventory Control Division is the most economically operated of the five "Fleet Technical" Supply Demand Control Points based upon the ratio of cost of operation to system sales. This ratio at Portsmouth for fiscal 1956 was 4.4. This same ratio at the Ships Parts Control Center, Mechanicsburg, Pa., was 9.3. The Navy announced that 5,000 of the 5,200 items now controlled by Portsmouth will be transferred to Mechanicsburg. Is it genuine economy to disestablish the most economically operated activity in this group and transfer its work to a less efficient activity? Navy answers to this question were vague.

2. The Navy stated that this transfer will result in a 10-percent increase in the dollar volume of procurement at Mechanicsburg. It was further stated that this increase in workload would be accomplished without an increase in personnel, and that in fact a decrease in Mechanisburg personnel might be necessary next year. How is it possible for Mechanicsburg to take over Portsmouth's work and not increase their personnel?

3. The Navy stated that this disestablishment will save $320,000 in fiscal 1958 and $600,000 a year thereafter. How is it possible for the Navy to save $600,000 a year by disestablishing an activity with an annual operation cost less than this amount? Navy answers to this question were also vague.

4. With regard to the effect of the disestablishment on New England manufacturers the Navy contended that the geographical location of the procurement activity with respect to the geographical location of the manufacturer is not a controlling factor in the award of contracts, and that therefore New England manufacturers would not be adversely affected by the transfer of Portsmouth's functions to Mechanicsburg. It was then pointed out by members of the congressional delegation that experience proved otherwise—e. g., the decline of the New England textile industry commenced with the removal of the Army clothing purchasing office from the New England area; the transfer of the Torpedo Station from Newport, R. I., to Forest Park, Ill., resulted in the loss of millions of dollars to New England manufacturers. Furthermore, although only 11 percent of the electrical manufacturers capable of making Portsmouth's electrical fittings are located in New England, these 11 percent receive 50 percent of the dollar value of contracts awarded by Portsmouth. If the Navy's contention were correct they would be receiving only 11 percent of the total. The Secretary of the Navy's final reply to this point was that he would delay action by not more than 2 days in order to obtain additional assurance from his staff that the economy of New England would not be adversely affected.

5. It was pointed out that 13 of the 16 supply demand control points are presently located within a 175-mile radius of Philadelphia. The Navy was asked if the transfer of Portsmouth's functions into this area was consistent with the Defense Department's policy of decentralization for national security purposes. No satisfactory reply was received.

Gerry Murphy's Mother Writes to Mr. Dulles

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. PORTER. Mr. Speaker, we still do not have details as to what happened to Gerry Murphy, my constituent who dissappeared in the Dominican Republic last December. The overwhelming evidence indicates that he was ordered killed by Generalissimo Trujillo but we have not found his body and his parents still hope for more explicit word about their beloved son. Gerry's mother sent me a copy of the letter she recently wrote to the Secretary of State. Gerry came from a fine American home and his mother's letter is worth the attention of every Member.

The letter is as follows:

EUGENE, OREG., *July 23, 1957.*

JOHN FOSTER DULLES,
Secretary of State,
Washington, D. C.

DEAR MR. DULLES: I feel a great urge to write to you this morning about the fate of our son, Gerald Murphy, who is presumed dead in the Dominican Republic. Will you please use the powers of your office in finding out the truth in this matter.

As a parent, you can understand the strain we have been under for over 7 months, not knowing whether he is dead or a prisoner. There have been no satisfactory answers from the Dominican Republic, your Department has made that public.

To us, our only son is so precious. We know his heart and thinking, on a deep level, as he lived closely with us for 21 years on a North Dakota farm and in Eugene. Whereas the stories from those that knew him only a few months or from newsmen who had only reports and some evidence to go on is much of the case as it stands now.

We know the real pressure for truth and answers from the Dominican Government must come from your Department of our own Government. Won't you please take a personal interest in our boy?

We don't know the details of his implication either, but we know that his boyhood and young manhood was of the best American tradition. I feel such international intrigue as he is alleged to be in was beyond him.

Please let us feel one American boy's life is really of deep concern to our State Department. We realize you are very busy with worldwide problems but our world is only many of us, like Gerry.

Very sincerely and very hopefully,
MRS. LESTER G. MURPHY
(Gerry's mother).

Heroes of the Loyal Opposition

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Heroes of the Loyal Opposition," which appeared in the July 14, 1957, issue of the Messenger and Inquirer, of Owensboro, Ky.:

HEROES OF THE LOYAL OPPOSITION

By coincidence, recent events have dramatized the great division among those who have been dedicating their lives to our security in the postwar era. Two of these men stand out as heroes of the loyal opposition, though for the moment disgraced or eclipsed. They have suffered for their views, that the rest of us may be the safer.

Col. John C. Nickerson, Jr., much decorated artillery commander for combat in World War II, persuaded a general court-martial of his dedication to national security when he publicized classified information in an effort to save the control of the

intermediate 1,500 missile for the Army. He was given a light sentence after pleading guilty to technical charges, which, however, permits him to remain in the service.

Thomas G. Murray, who was refused reappointment to the Atomic Energy Commission for a second 7-year term though powerful Democrats in Congress pleaded for him, was immediately engaged as a consultant to the Joint Congressional Atomic Energy Committee. There, he will be able to continue the controversy with Lewis L. Strauss, Chairman of the Commission, over the best way to achieve the security of the Nation in the atomic age.

Nickerson and Murray simply dramatize today a disagreement which not only has divided some of our own highest military authorities. (Gen. Matthew B. Ridgway failed of reappointment as Army Chief of Staff in the same controversy.) Nickerson put it in words when he testified in his own behalf at his court-martial. It is based in the belief that advocates of the theory that modern war can be won by atomic bombardment alone have oversold the public, the press, Congress, and defense officials, and thereby have exposed the country to real danger.

In the case of war, even if our Air Force was completely successful, Soviet ground forces could overrun Europe, Asia, and Africa unless we had ground forces equipped with modern weapons, and this Nickerson warned might lead to total defeat. This is where he and Murray find common ground. For Murray warns that he must have "tens of thousands of small atomic weapons for ground forces and that to stop testing and producing them would be disastrous for the United States.

Here is an honest difference of opinion that concerns every one of us more deeply than any other question today. In London, the President's representative is negotiating to stop testing and producing nuclear weapons. Some men closest to the problem think that would open the way for the Soviet Union to break out in a series of small wars which we would not be able to stop for lack of these same small nuclear weapons. We have enough of the big nuclear bombs to deter the enemy from starting a major war, but city-busters would not deter small wars, such as Korea and Indochina. Small nuclear weapons would make up for the overwhelming manpower advantage of the Communists.

Murray's engagement as a consultant to the congressional committee that must pass on these matters will at least put that viewpoint in the balance at the service of Congress. Nickerson's also deserves to be heard in the same powerful quarters. The gulf between their thinking and the administration's can mean life or death. They cannot be lightly disregarded.

Address by Wilson Compton at the Commencement Exercises at Salem College

---

EXTENSION OF REMARKS

OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 29, 1957

Mr. BAILEY. Mr. Speaker, the following address was delivered by Mr. Wilson Compton, president, Council for Financial Aid to Education, during the commencement exercises at Salem College, Salem, W. Va., on June 5, 1957. I was present and heard this excellent speech, and I believe the thoughts he expressed are an inspiration and challenge to all age groups.

NEW TRAILS AND OLD PATHS—THE CHANGING AND THE UNCHANGING

(Address by Wilson Compton)

Over one of the marble doorways of the Library of Congress in the National Capitol are carved these words: "He builds too low who builds beneath the stars." These words greet those who enter, and they follow those who leave, this great storehouse of the world's knowledge. There is no mightier challenge to young men and young women for whom graduation from college means the commencement of lives of their own choosing, their own planning, their own making. So I address this thought to you of the class of 1957 as you leave the security of this college campus and assume the custody of your own lives—many of you for the first time.

Do not content yourselves with the common if you are capable of the uncommon. Do not merely follow the crowd or fear to be different. Conserve your talents but do not let them go to rust. Reach for the stars even though you may have nothing to show for it except a bit of stardust on your fingertips. Try, and if you fail, try again. There really is no failure unless you stop trying. So you have been taught. So I trust you will live.

At no time in our national history has there been a greater need or a greater opportunity for builders—builders of structures and communities, yes—and also builders of faith and hope, of industry and loyalty, of brotherhood and peace, of integrity and morality in affairs personal, national, and international; men and women who are strong enough to carry their own burdens and good enough to help carry the burdens of others who are not so strong.

You will recall from your reading of history the story of Pythagoras, the philosopher and teacher of ancient Greece, a forerunner long ago of our modern science and technology. These were his words to his students 2,500 years ago:

"Seek therefore to find out what and how the world is made that you may learn a better way of life."

Then a few centuries later in nearby Palestine came a young man from Galilee, a carpenter's son, another teacher, who said to the multitudes who listened to him:

"Seek ye first the Kingdom of God."

Today men continue without ceasing the effort exhorted by the ancient philosophers to unravel the mysteries of the universe; and around the world men still listen to the voice of Him who centuries ago said:

"Love God; and love thy neighbor."

Two weeks ago in New York's largest auditorium—the Madison Square Garden—I listened to a young college man from North Carolina, the most powerful evangelist of his generation, preach the simple Christian gospel to a packed, attentive, and responsive audience of 20,000. Yes, the Man of Galilee, as surely as the man of science, walks amongst us today, pointing the road to what Pythagoras called a "better way of life."

THE CHRISTIAN COLLEGE

This is the historic reason for the Christian college, like this honored institution which for more than a half century has contributed to the stream of American life. It is a unity of science and religion, of teaching and study devoted to a search for truth in a scientific age, in a world of marching technology to give opportunity to build to young men and young women who "seek first the Kingdom of God." I too am a graduate of such a college and I am honored today to be the guest of another.

It is customary, I know, in commencement speeches for the invited elders to counsel, caution, and exhort the graduating class, to confess the inadequacies of the older generation, which already are visible enough, and to challenge the younger generation to make good these deficiencies; or to expound the flowing opportunities and achievements of our modern age. I too have made such speeches. But I wish today to make a different kind of speech, to share with you a simple perspective of some old paths amongst the new trails which science is blazing around the world.

I want you to be proud of the college from which you are graduating and of the important place which it has made for itself in American higher education; and I want you, as you leave this campus, to leave it with a determination in the coming years when you can, and as you can, to help it to help others as it has helped you. You have been, just as I have been, the beneficiary of a college education at less than cost. You, or your families, to be sure, have paid a considerable part of the cost. Benefactors of this college—some living, some dead—have paid the rest. Colleges always have needed money; and if they are any good, they always will. Colleges do not grow by themselves. They are built by people who believe in them.

THE INDIVIDUAL MIND

I am glad too to meet this graduating class and its friends on a college campus where interest in religion as a part of higher education is not a mere attitude of neutrality; where dynamic science is a living objective and where the search for truth is guided by dedicated men and women who seek to be good teachers even more than great scholars. My college days are now receding into the mists of nearly a half century. But I well recall because I can never forget the inspired teaching of great teachers which helped me too as a college student to master the problems which so often bewilder young people, to bridge the intellectual gap between science and religion, to look with faith as well as awe into the recesses of the universe, and to learn that it is ideas not things which control our lives; that things are a means not an end, and that the good life is the life of service, the life of the "good neighbor."

When, as eventually you will, you reach the point where retrospect and prospect are intermingled and perhaps indistinguishable, I suspect that you too in your minds will divide the teachers of your youth into the three classes into which my own memory devides them: First, those whom you have forgotten; second, those whom you have forgiven; and third, those whom you will never forget because what they taught, what they lived, and the ideas which they held before their students are engraved in your minds and hearts. The purpose of education is power—individual power. Education is a road to knowledge. But even more, education is a road to wisdom and to self-discipline. It is a road which, once you reach it, you will continue to travel as long as you live. In the world's greatest book it is written: "He that ruleth his own spirit is greater than he that taketh a city."

In this company of Salem College I may speak gracefully of these matters because I well know the zeal of this institution and its share of great teaching and great teachers. How fortunate you are you will understand as you learn to look back at your college days in the framework of your life experience. You will find that Salem College too had its "Mr. Chips." And you will not soon forget the stimulating ideas of the college professor whom Carl Becker calls the "man who thinks otherwise."

Education—learning how to think—is an adventure not of the memory but of the mind. This is the heart of liberal education—liberal, as the dictionary defines it, "worthy of or befitting a free man." Emerson was proclaiming what he called the infinitude

of the private man when he said "Society itself never advances. Society develops only as man himself improves."

FREEDOM THE GREATEST SAFETY VALVE

One of the most significant forces at work in our national life is the accelerating trend toward conformity. Perhaps I should call it an inertia rather than a force. It is at least a great and a growing hazard. Some call it anti-intellectualism. But it is more than that. It is for example the source of the derogatory, present-day phrase egg-head applied to a person who for reasons of his own has some theory of his own which is different from the prevailing reasons and theories of his neighbors. The youth stage of this movement is a cult of conformity. Among teen-agers in New York City of late, for example, it has been notoriously popular to be all atwitter about Elvis Presley or, if not about him, about some other myth. The adult stage is marked by mediocrity—as illustrated by The Man in the Grey Flannel Suit—unable or at least unwilling to be different simply because it is not in style.

This movement comes in part from the trends of legislation and government which gradually over the years have been substituting objectives of general welfare and security for objectives of individual opportunity and initiative; and regulation by law for the discipline of responsible individual choice; in part also from fears of wars, anxiety about survival, continuing monetary inflation against which by himself no individual can protect himself.

These, to be sure, are a natural and perhaps an unavoidable byproduct of our mass production, which is the only practical way we yet know of securing the benefits of the great advances in science and technology. They are responsible, to be sure, for our higher standards of living as measured by goods and services. They are nevertheless pressures toward conformity; and conformity ultimately means mediocrity; and mediocrity ultimately means stagnation.

Our colleges and universities themselves should be kept as free as possible from these pressures. These institutions have become and they should continue to be our greatest sources of new ideas, new knowledge, and innovation. In classroom and laboratory they should encourage free inquiry, experiment, originality, inventiveness—what the scholars call widening the horizons of knowledge. Where all people think alike, no one thinks very much. Our economy—in fact, our historic American way of life—has been based more on differences than on sameness, on originality than on imitation, on something new than on something old.

It is more important to keep the spirit and the habit of free inquiry alive and alert in our colleges than in any other of our institutions. If we allow ourselves and our higher educational institutions to be pushed into an era of conformity, we will ultimately produce nothing more and nothing less than a wasteland of the mind. Whether we understand, believe in, and nurture an environment sympathetic to the creative mind is one of the crucial problems of our generation. On its outcome depends largely the future not only of our education but of our country. Always there must be room for faith of, and in, the individual, an orbit for conflict of ideas, a space for the nonconformist. What happens to American education will eventually happen to America.

No one knows better than the heads of our industrial and business enterprises the significance of keeping open the door of encouragement to new ideas, however unorthodox or nonconformist. Had it not been for someone's fantastic or preposterous ideas somewhere along the line there would, for example, never have been a modern department store as we now know it, nor a telephone, nor an automobile industry, nor commercial aviation, nor electronics, nor even the lowly zipper. Think of the so-called cranks, crackpots, and fuzzyheads back of inventions which are now commonplace. The radical of yesterday is often the conservative of tomorrow.

There is, of course, no place in education for so-called freedom which is, in fact, a masquerade for dishonest teaching or a subterfuge for subversion. But honest academic freedom in its colleges and universities is a great safety valve of a free society, its greatest long-time safeguard against mediocrity, stagnation, and the fantasies and deceits of socialism. Freedom may be dangerous, but it is the safest thing we have.

THE LIBERAL ARTS COLLEGE IN AMERICA

The keystone in the structure of our higher education is, and I think always will be, the independent liberal arts college. One of the most significant educational events in recent years is the frank appeal recently by Harvard University for $82.5 million of new funds, not for the university itself but for Harvard College on the ground that this prestige-heavy university, with its half billion dollars in assets, will never be any better than the little Harvard College which 320 years ago was founded in the New England wilderness for the education of preachers and, up to the time of the American Revolution, could print its entire curriculum of studies on 2 small pages. Even in this age of rampant technology this is eloquent testimony to the importance in American life of liberal education. All colleges were small once—even Harvard.

Three-fourths of our liberal arts colleges today are church related; 400 of them Protestant and more than 200 Catholic. The Christian colleges and the universities built around them are not merely places to which thousands of young men and women may go for a few years of instruction and study. They are a part of the "promise of American life." They are the chief stewards of the Nation's religious culture and they have been the sources of much of its inventive genius. The churches need the colleges even more than the colleges need the churches. There can be no freedom without law; nor law without morality; nor morality without faith; nor faith without religion. Nor can there be any of these without understanding; nor understanding without education. A structure is no stronger, or safer, or more secure than its foundations.

THE CHANGING AND THE UNCHANGING

If we owe great economic gains to our formidable science and technology we owe even more to their spiritual and moral foundations. No one is really uneasy about our technology, about our ability to make and sell things. But who is not uneasy about our way of life and about the hideous forces of disintegration adrift in the world. It is the validity of the moral order at all which today is being challenged. It is on the moral and not the technological ramparts that we must stand the most diligent watch; and this responsibility must be shared heavily by our colleges and universities.

Were Galileo to return to a modern college campus to a classroom in physics, such as you will have in your new science building on this campus, he would be told no doubt that we have now found in the radium atom a particle—the so-called alpha particle—in which is a concentration of energy 400 million times as great as the energy in a particle of water in the form of the steam which runs our factories, our railroads, and our ships. Galileo would be merely confused.

Were Lavoisier with his simple test tubes to visit a modern chemistry laboratory he would perhaps be told about our newly discovered large molecules and their constituent alpha amino acids, capable of at least 100,000 billion billion combinations each with its own chemical traits. He no doubt would be baffled.

Gregor Mendel, the great Austrian biologist, with his meager experimental plots in the courtyard of an Augustinian monastery—if he were to come to one of our plant science laboratories and see its modern marvels of genetics—would be bewildered.

But would Socrates, Aristotle, and Spinoza lose their way in a modern classroom in philosophy, ethics, or religion? or Isaiah in the General Assembly of the United Nations? or Amos in a collective bargaining labor contract negotiation? or Moses—if he joined an American college faculty today—would he have to revise the Ten Commandments, the textbook which he brought down with him from the mountain top? I think not.

There are many things which change and for these science is the road to truth. There are also many things which do not change and for these it is the Kingdom of God which is the "Lamp to our feet and the light to our path." It was of these things that Jesus spoke when he said, "On this rock will I build."

You too can build. You have the great tools of science to help you. You have the wisdom of the ages to guide you. As you plan the life which you wish to build I trust that you will keep your feet on the ground and your eyes on the stars, and that as you build you will build not on shifting sands but on the Rock of Ages.

The Mutual Assistance Appropriations Bill

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 24, 1957

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a release that I gave to the press on Saturday last.

The release follows:

Congressman JOHN W. McCORMACK (Democrat, Massachusetts), House majority leader, said today that "Unless President Eisenhower shows firmness and direct activity with his own party, the mutual assistance appropriation bill will be reduced a considerable amount, probably anywhere up to several hundreds of millions of dollars below the amount finally agreed on the authorization bill.

"It is apparent to me," Congressman McCORMACK said, "that the authorization bill will be much nearer the House-bill figure than the Senate bill. The information I have received is that there is a big shift in Senate sentiment since the authorization bill passed that body.

"This feeling is due to the various shifts that the President has taken on a number of his own recommendations, such as the budget message; the ordered reduction in the Army appropriations while the defense appropriations bill was in conference; the fact that no one really knew where he stood on the school construction bill, which was defeated as a result of the overwhelming vote against it by his own party; and the secret letters to department heads constituting an order to 'freeze' expenditures for this fiscal year.

"This is the time when we must have unity and strength, for that is the only language which the Communists respect. Weak leadership on the part of the President is not helpful. He has failed or refused on a

number of occasions to come to grips with his own party."

Congressman McCORMACK further said: "If President Eisenhower expects to get a mutual assistance appropriation bill which will effectively combat communism, he should at once call a bipartisan meeting of the leaders of both parties and, in particular, he should openly and actively work among his own party, because that is where the strongest opposition exists.

"As one who favors effective foreign assistance measures and appropriations, I clearly see that such leadership is necessary. The President cannot vacillate and take chances on this bill. If necessary, he should be willing to fight with the members of his own party and cooperate more effectively with the leadership of the Democratic Party."

The Massachusetts Higher Education Loan Plan

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 29, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting and enlightening article on the issue of a long-needed program for higher education that appeared in the magazine Industry for July 1957, the official spokesman for industry in Massachusetts, published monthly by the Associated Industries of Massachusetts, 200 Berkeley Street, Boston, Mass.

The article follows:

THE MASSACHUSETTS HIGHER EDUCATION LOAN PLAN

(Thanks to a group of far-sighted industrialists, business leaders, bankers, and educators, the Massachusetts Higher Education Assistance Corporation has now been formed, and will provide a new concept of financial aid to the college student. Purpose is to help fill the gap between family income and college education expenses.)

(By Elmer O. Cappers, president, Norfolk County Trust Co., and president, Massachusetts Higher Education Assistance Corp.)

This year at graduation time the price tag which the business world puts on a college education was as startling as usual—the starting salaries offered this year's graduates ranging from a low of about $4,500 to highs sometimes exceeding $6,500.

The level of these salaries is very definitely a symptom of the Nation's tremendous need for college-trained people and the concurrent heavy demand on our colleges to turn out an ever increasing number of them. The complexities of our modern world, both in science and in our economic system, call for those extra years of education, and it is to our college graduates of today that we look for our leaders and administrators of tomorrow.

As we are all aware, the growing demands on our colleges have put them under the heavy burden of enlarging their physical plants, of financing faculty expansions, of finding ways to meet sharply increased annual budgets.

Much the same problem of costs faces the college-age youth and his parents.

How can families finance the rising costs of sending a boy or girl to college?

There are scholarship funds, of course. There are student loan funds administered by the colleges. There are student job programs.

All of these help, but they fall far short of meeting the total needs of today. And many, many incomes are stretched to the breaking point in carrying the burden of college educations for sons and daughters.

It is to help fill this gap between family income and college education expenses, that a pioneering new organization has been created in this State. The Massachusetts Higher Education Assistance Corp., brought into being by the combined efforts of the business community, banks, and educational institutions, has come forward with a new concept of financial aid to the college student.

The concept is simply that a mature student should be able to borrow, on his own responsibility and from regular banking sources, a substantial part of his needs, and be committed to repay the loan over a period of years after he has begun to earn a living.

It is a concept which takes full cognizance of the business world's need for more trained manpower, of the fact that the lifetime earning power of a college education is worth something like $150,000 to the individual. And it fosters the invaluable quality of self-reliance in college students who take on part of the financial responsibility for their educations.

The Higher Education Loan Plan—significantly, its initials spell HELP—was launched only this past March.

Already nearly 300 students from Massachusetts have had an assist on their college financing problems through loans negotiated under the plan.

The loans are made by Massachusetts commercial banks participating in the plan, processed by them much in the way they handle any personal loan. But there is one important difference: The student's application goes to the Massachusetts Higher Education Assistance Corp. for approval.

And this approval means that up to 80 percent of the loan is guaranteed by the corporation—a guaranty which makes possible the loan without endorsers, with interest at lower than usual rates and unparalleled repayment terms.

The guaranty is backed by the funds of the corporation, contributed by business corporations, charitable trusts, and individuals, after the organization was created by special act of the legislature last year.

With the great expansion of corporate giving, both managements and stockholders are concerned over the efficiency with which their contributed dollars are put to work.

Measured by any standard, the Massachusetts Higher Education Assistance Corp. ranks very near the top, if not the top itself. For the corporation makes $1 of its capital put to work $12.50 bank-loan dollars.

This fact is one of the strongest selling points in the corporation's current move to increase its capital with further subscriptions from business firms—especially those firms which annually look to the colleges for trained manpower.

So challenging is the Massachusetts Higher Education Loan Plan, in fact, that it is attracting nationwide attention. Interested groups are moving to set up similar organizations in their own States. Right now, in New York, businessmen, State officials, and educators are busy completing the formation of a higher education assistance corporation authorized by a special act of the legislature approved this past April.

Here in New England it has been suggested that the Massachusetts corporation, which now serves students from Massachusetts only, should be empowered to extend its activities to the other five States in the region.

According to Paul Talbot, of the United Business Service (Paul T. Babson, president), the HELP plan indicates Massachusetts continues to live up to its tradition of pioneering in the fields of both education and finance, for the purpose of giving assistance to college students and parents. It is no giveaway affair, he emphasizes, but does provide assistance in a very real and practical way.

The comment of Willard Kiplinger in a recent issue of his Washington letter is, "Here's a plan that is working."

The HELP plan is working through the team effort of Massachusetts banks, educational institutions, mostly, but not exclusively, all over the country, and the Massachusetts Higher Education Assistance Corp.

While not all of the 171 commercial banks in the State have yet negotiated their first HELP loan, every week brings evidence of increasingly widespread participation. Most of the Boston area banks have each made numerous loans under the plan, and numerous banks throughout the State are processing applications now.

The processing of an application by the bank goes something like this:

First approach to the bank is made by the student himself. He must be a resident of Massachusetts, who has completed at least the freshman year at an approved institution in any State in the Union. His application authorizes the bank to check, in confidence, his record in college, his education program, progress and prospects, his indebtedness to the institution, if any, and any opinion of the student as a credit risk.

When the institution has supplied this information and the bank has passed judgement on the application, MHEAC comes into the picture.

The corporation receives from the bank the request for approval of the loan which automatically guarantees 80 percent of the amount.

It is this guaranty that is the key to the HELP program's success. The guaranty enables banks to make their credit resources available to students at much lower than usual rates of interest, currently 4½ percent, and for much longer terms than have ever before been available.

All loans are made payable 6 months after graduation. For this year's seniors that means December 1957, but for the sophomores who got HELP loans this spring, the due date is December 1960.

In actual practice the loans are renewed at due date for another term of 3 years, so the student borrower will make repayment in 36 equal monthly installments following graduation.

The loan limit is $500 in any one year after the freshman term, or a total of $1,500 for 3 years.

And more and more families are discovering that this sum, even with its limits, can spell the difference in financing a college education.

Each of the plan's three-man team—banks, educational institutions, and MHEAC—has an essential role in the HELP operation. First in importance, however, are the commercial banks of the State. Through the initiative and leadership of the Massachusetts Bankers Association, the banks gave their sponsorship to the special legislative act of 1956 which established MHEAC. Since then they have shared in all the important decisions giving form and substance to the loan plan.

Participation of the banks has meant administration and processing of loans by hundreds of able and experienced professionals. In most cases, students and families deal with their local banks where they are known and where they can get almost instantaneous action.

There has been wholehearted cooperation as well from the educational institutions in promptly furnishing the required information about student applicants for loans. To

date the majority of them are Massachusetts and New England institutions, but there is an increasing number from outside the region.

The third member of the team, the corporation itself, is able to discharge its function only in accordance with the size of the guaranty fund. That fund, subscribed by the business community, charitable trusts and philanthropic individuals, stands in back of the loans made by the banks. The loans now number in the hundreds, will soon move into the thousands, and in the years ahead will without question reach a total dollar amount in seven figures.

Current goal for the guaranty fund is $500,000, toward which an excellent start has been made. Contributions in amounts ranging from $100 to $10,000 have been received from industrial corporations, hotel and insurance corporations, from power and gas utility companies, from chainstores, charitable trusts and individuals.

Since the industries of Massachusetts are the chief users of graduates in higher education, the corporation must of necessity look to them for a large part of its augmented guaranty fund. The corporation considers also that labor unions may properly be asked to contribute to the support of its loan plan, since many of its members will inevitably be among those aided by its operation.

The Associated Industries of Massachusetts, by unanimous vote of its executive committee, has endorsed the HELP program. Two members of the committee, Joseph P. Spang, Jr., and Charles F. Adams, are also directors and members of the corporation's finance committee, of which A. M. Sonnabend, Hotel Corporation of America president, is chairman. The State council of the CIO has also endorsed HELP.

With wise forethought, the legislation establishing the corporation included a provision making it legal for all corporations to contribute, and the Internal Revenue Service has ruled that contributions to the corporation are deductible for income-tax purposes.

The problem of how best to assist present-day talented youth to finance their college education is not peculiar to Massachusetts. On the contrary, it is nationwide. That is why the Massachusetts plan, as it is called, is the subject of much discussion on the part of educators and bankers throughout the East. Among the former is Dr. Charles F. Phillips, president of Bates College in Maine, and chairman of the education committee of the New England Council, regional research and development organization.

Writing in the May issue of the Bulletin of the Association of American Colleges, on Meeting the Cost of a College Education Without Federal Aid, Dr. Phillips concludes with the following paragraph:

"At this writing, the Massachusetts plan is just beginning to make loans, and its success or failure lies in the future. But if it works, it may establish a pattern which can be copied by other areas as a solution to the problem of helping able students of limited means to get a college education. If it does not succeed, it may be necessary to use State funds to create a similar bank-loan-guaranteeing organization, but the private approach should be given a thorough trial. If it fails, I predict it will be because people fail the plan, rather than because the plan itself is unsound."

Officers of the Massachusetts Higher Education Assistance Corp. are: Elmer O. Cappers, president; Mrs. Wilma A. Kerby-Miller, vice president; George H. Seal, vice president; Roger L. Currant, treasurer; David B. H. Martin, clerk; Abraham M. Sonnabend, chairman, finance committee; and Dudley Harmon, executive director.

Directors of the corporation comprise Charles F. Adams, president, Raytheon Manufacturing Co.; Hildreth Auer, president, Malden Trust Co.; Raymond H. Blanchard, president, Hood Rubber Co.; Benjamin H. Bowden, president, County Bank & Trust Co.; Dr. Robert R. R. Brooks, dean, Williams College; Howard J. Cadwell, president, Western Massachusetts Electric Co.; Elmer O. Cappers, president, Norfolk County Trust Co.; Charles A. Coolidge, Esq., Ropes, Gray, Best, Coolidge, & Rugg; Roger L. Currant, president, the Fall River National Bank; Very Rev. William A. Donaghy, S. J., president, College of the Holy Cross; Roland A. Erickson, president, Guaranty Bank & Trust Co.; Hon. Foster Furcolo, Governor, Commonwealth of Massachusetts; Dr. Harold B. Gores, superintendent of schools, Newton.

Also AIM president, Kurtz M. Hanson, president of Champion-International Co.; Hon. Christian A. Herter, Governor, Commonwealth of Massachusetts, 1953–56; Richard S. Holden, president, Northampton National Bank; Andrew B. Holmstrom, vice president, Norton Co.; Ernest A. Johnson, Massachusetts commissioner of labor and industries; Thomas M. Joyce, attorney; Mrs. Wilma A. Kirby-Miller, dean of instruction, Radcliffe College; Ralph Lowell, president, Boston Safe Deposit & Trust Co.; Dr. Martin J. Lydon, president, Lowell Technological Institute; Bruce H. MacLeod, president, Union Trust Co.; Dr. J. Paul Mather, president, University of Massachusetts; John U. Monro, director of financial aid, Harvard College; David R. Pokross, Peabody, Brown, Rowley & Storey; Arthur G. Rotch, secretary-treasurer, Committee of the Permanent Charity Fund, Inc.; Howard L. Rubendall, headmaster, Mount Hermon School; Dr. Abram L. Sachar, president, Brandeis University; George H. Seal, vice president, C. H. Sprague & Son Co.; Norman T. Shepherd, vice president, Haverhill National Bank; Bryant E. Smith, president, Liberty Mutual Insurance Co.; Abraham M. Sonnabend, president, Hotel Corporation of America; Joseph P. Sprang, Jr., chairman, the Gillette Co.; Stanley F. Teele, dean, Harvard Business School; and Edward R. Tufts, executive secretary, Massachusetts Bankers Association.

As this issue of Industry goes to press we are advised that the corporation has elected an additional three new directors. Two of them representing organized labor in Massachusetts are Francis E. Lavigne, director of education, Massachusetts Federation of Labor, and William F. Maloon, United Steelworkers of America. The third director is Anthony Julian, United States Attorney for the district of Massachusetts. They are all of Boston.

United Nations Anniversary

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "United Nations Anniversary," which appeared in the Breckinridge County Herald-News, of Hardinsburg, Ky.:

UNITED NATIONS ANNIVERSARY

The United Nations recently observed its 12th anniversary—on June 26. Interestingly, there was no celebrating in New York, or in many of the civilized countries of the world.

Despite the fact that the New York Times proclaims with zest that the miracle of the United Nations is that it has lived so long, and is still so vigorous and so formidable, we believe this sentiment is a minority viewpoint, not shared by the majority of Senators and Congressmen in Washington, or of newspaper editors in the United States.

The United Nations is good at passing resolutions, and has achieved success in certain fields. However, as a world body to keep peace, which was the original purpose in forming the United Nations, the U. N. is a flop.

We do not make this statement simply because the United Nations was unable to do anything to help recently when Hungary was brutally assaulted and conquered again, again by Russian troops. Nor do we make the statement because the United Nations let the United States do practically all the fighting in Korea. And, it must be admitted that the United Nations could not have stopped the recent war in Egypt had not the United States taken a strong hand opposing it and had not Russia threatened to send volunteers to fight the British and French.

The police force—such as it is which is controlled by the United Nations, is not much of a world police force. U. N. soldiers may walk up and down the demilitarized line between Egypt and Israel, but there is no real fear of the United Nations police force in the minds of the leaders of Communist countries (the aggressor countries) today. Until such time as the United Nations has a genuine and effective police force, utilizing the latest instruments of war, it will remain fundamentally a debating society—which is what it is today.

Fundamental Investors Slashing Its Holdings of Transportation Common Stocks

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. HILL. Mr. Speaker, an interesting article in the New York Herald Tribune of July 24, 1957, is attached concerning the attitude of one of the largest common-stock funds on airline stocks in disposing of most of their holdings.

This article is worth reading and giving careful consideration as it indicates the necessity of readjusting passenger and freight rates in their relationship to railroads, trucking, and air freight.

The article follows:

INVESTMENT COMPANIES—FUNDAMENTAL FUND SLASHES HOLDINGS IN AIRLINE AND RAIL COMMON STOCKS

(By Charles Brophy)

Fundamental Investors, Inc., the Nation's second largest common-stock fund and fourth largest mutual fund, disclosed yesterday that it was continuing a program of slashing its holdings of transportation common stocks.

In the quarter ended June 30, the $400 million investment company eliminated its holdings of any airline stock by the sale of 30,000 United Air Lines, Inc., common shares. Earlier, the fund had sold out its position in American Airlines' stock.

The fund in the last quarter cut its holdings of railroad common stocks from 6.5 percent of assets to 5 percent. It sold out its holdings of 42,000 Northern Pacific Railway common shares and 17,000 Western Pacific shares, and cut its share holdings of Santa Fe Railroad by 37,000 shares to 75,000, and its holdings of Illinois Central by 13,000 to 35,000.

RAIL ACTION NEW

While the movement out of airline stocks has been a program of some duration, the easing out of rail stocks was new to the fund this year.

The management apparently is taking into account the pressure of increased operating costs, the time lag before rates are adjusted, and the loss of profitable traffic to the air-freight and trucking industries.

The outlook of airlines seemingly is that it is a growth industry in passenger and freight hauling, but an industry under regulation faced with the constant question of new and more expensive equipment.

Reductions in portfolio also included the holdings in Deere & Co., Louisiana Land & Exploration, and Zenith Radio.

On the other hand, the fund's purchases of securities, covering a wide spectrum of industries, is indicative of the belief most mutual-fund managements now have that extreme selectivity is necessary.

NEW COMMITMENT

Fundamental made one new commitment—in American-Marietta—and added to its holdings, other than through rights, stock dividends or splits, of American Broadcasting-Paramount, Armco Steel, Avon Products, Chesapeake & Ohio Railway, Commercial Credit, Container Corp, Dresser Industries, Du Pont, Firestone Tire, Florida Power, General Motors, Gillette, Goodyear Tire, Gulf Oil, Hilton Hotels, Rayonier, Shamrock Oil, Texas Co., Trane Co., Union Bag-Camp Paper, and West Penn Electric.

In the quarter ended June 30 the fund's total net assets went up from $369,865,774 to $406,555,415, while share value increased 7.9 percent, from $15.67 to $16.91.

For the quarter, investors bought $10,828,950 in new shares, while other investors cashed in $3,729,706. Gross income amounted to $3,697,415, and net, to $3,083,181. Realized profits totaled $1,758,484, while unrealized profits went up by $27,706,768.

The fund management told shareholders that the crosscurrents in business are "not discouraging when examined in the light of high consumer demand, continued heavy spending by Federal, State, and local governments and sustained outlays by industry for expansion and modernization."

A Combat-Ready Reserve

EXTENSION OF REMARKS

OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 29, 1957

Mr. McGOVERN. Mr. Speaker, in spite of inadequate facilities and lack of public support, the National Guard of the United States constitutes the most powerful reserve land force in the free world. The security of our entire defense system is dependent to a considerable extent upon the capabilities of the guard and the Reserve. Unfortunately, we have not given as much attention and support as we should have to building a truly effective combat-ready reserve force.

One of the obstacles that hinders the establishment of such a reserve force is the confusion and rivalry that exists between the National Guard and the Army Reserve. It has been suggested by Mr. William V. Kennedy, a National Guard officer and student of military affairs, that our Reserve efficiency would be greatly strengthened if the National Guard were given the task of organizing and training large combat formations while the Army Reserve trained the technical and administrative units.

Mr. Kennedy pays a deserved tribute to our guardsmen when he observes:

The great majority of National Guard officers are dedicated men who have made a career of Reserve affairs. * * * They are capable of discerning between what is possible with a unit of the Regular Army and a unit of part-time citizen soldiers.

I believe that the Members of Congress will find it well worth their while to read Mr. Kennedy's article, entitled "A Combat-Ready Reserve," which appears in the July–August 1957 issue of the magazine Ordnance. Mr. Kennedy's excellent article is included in full as follows:

A COMBAT-READY RESERVE

(By William V. Kennedy)

(Mr. Kennedy is former executive editor of the Pennsylvania Guardsman magazine and an officer of the 104th Cavalry Regiment, Pennsylvania National Guard.)

Thirty-seven United States National Guard and Army Reserve divisions constitute the largest organized land-power Reserve in the Western Alliance. Upon the ability of those divisions to expand and fight depends the ability of the United States Army to meet "brush fire" emergencies and the survival of the free world in total war.

The 10 Infantry divisions of the Army Reserve are undermanned and underequipped. The 6 Armored and 21 Infantry divisions of the National Guard are somewhat better off, but still far short of the desired goal. Hundreds of units of both the Guard and the Army Reserve train in inadequate, poorly heated, and poorly lit armories. Both organizations are plagued by an excessive rate of personnel turnover.

The chaos into which the Middle East was plunged by the withdrawal of the British garrison from Suez demonstrates the continuing need for large bodies of troops as an indispensable adjunct to our mighty air and sea power. However, even large bodies of Regulars, at or near critical ground, have little meaning unless they are backed by powerful Reserves ready to move to their support.

Since economics prohibit maintenance of the needed Reserves as part of the Regular Army, we can conclude that there is a vital need for a large Ready Reserve Force in civilian status.

The question that confronts us, then, is to what degree such a citizen force can be made truly "ready."

The National Guard and some units of the Army Reserve already possess a limited combat capability. The performance of National Guard troops during recent months in the face of mob violence and prison riots bespoke a high degree of discipline and unit cohesion.

By July 1, 1956, National Guard batteries had taken over 79 antiaircraft artillery sites, operating them as an integral part of the Continental Air Defense system.

Lt. Gen. Stanley R. Mickleson, chief of the Army Antiaircraft Command, has announced that in the future the National Guard will man half of the Nation's Nike guided-missile sites—a vital factor in our air defense.

Army Reserve units have participated frequently with National Guard and Regular Army troops in disaster relief, performing many of the supply, command, and staff functions that would be required of them in war. Numerous technical units of the Army Reserve could assume their full wartime role within a matter of a few days or weeks.

The training status of the crucial 37 Guard and Reserve divisions is such, however, as to require upward of 6 months' active-duty training for the Guard divisions and upward of 10 months' training for the Reserve divisions before they could be committed to battle.

The time lag between mobilization of our Reserve divisions and achievement of a combat-ready status must be reduced to a maximum of 3 to 5 months if they are to meet the requirements of total atomic war.

Total strength of the Army National Guard and the Army Reserve participating in paid, regular drills is approximately 686,000 officers and men. Of these, 436,000 are in the National Guard and 250,000 in the Army Reserve. Strength of the 27 National Guard divisions averages 8,000 to 10,000 each. The remainder are spread among 28 separate armored cavalry and infantry regiments and a large number of antiaircraft, tank, artillery, medical, and logistical units.

The 10 Reserve divisions average about 4,000 each. An additional 14 Reserve organizations carry divisional designations but are, in reality, training, logistical, and administrative commands.

Both the Guard and the "ready" portion of the Army Reserve participate in 48 two-hour armory drills and one 15-day summer encampment each year. Staff and command personnel receive additional training in the form of weekend schools and command-post exercises. Officers and enlisted men of both components are eligible for training on active-duty status at Army service schools up to and including the Army War College.

The Army National Guard differs from the Army Reserve in that, although organized, trained, and inspected according to Federal regulations, it owes its primary allegiance to the governors of the respective States and Territories rather than to the President of the United States.

This is so only as long as the Guard remains in State status. In time of emergency, the President has the power to call the National Guard into Federal service. The President then becomes the Guard's commander in chief.

The purpose behind this seemingly clumsy system lies in the second amendment to the Constitution—"A well-regulated militia, being necessary to the security of a free State, the right of the people to keep and bear arms shall not be infringed."

The organization of the National Guard along State lines is aimed at keeping absolute military power out of the hands of the central Government, except when a serious threat arises to the national security, and of decentralizing that power the moment the emergency has passed.

Any plan to streamline the Reserve system must safeguard this cardinal principle. To do otherwise is to tamper with the foundations of our democratic government.

The National Guard traces its history back to the colonial militia, the first permanent unit of which was organized in 1636. That history has been a story of heroism, great achievement, and bitter failure, brought on by the failure of the Colonies, and later of the Nation, to train, equip, feed, and pay the citizen soldiers adequately, if at all.

Happily, the status of training in the National Guard has advanced far beyond the ragged militia of even 20 years ago. Training in the guard today is administered through the National Guard Bureau in Washington, working closely with the Chiefs of Staff of the Army and the Air Force.

Guard officers, although still appointed by the State in accordance with the Constitution, must meet the same Federal standards as any officer of the Federal services.

Equipment, training aids, pay, uniforms, and general logistic support are provided the

guard on a basis comparable to that of the Regular Army.

No small part of the toughness and resilience characteristic of the present-day National Guard is due to the fact that each and every advance in training, equipment, pay, and general administration has been gained on the initiative of the guard itself, all too often in the face of bitter opposition from those from whom the guard had a right to expect help.

The Army Reserve is a Federal, rather than a State organization. It takes its orders directly from the Chief of Staff of the Army rather than from the adjutant general of the State.

Historically, the Army Reserve was created to provide a system of retaining the skills of the officers and men who could not be absorbed into the State militia. As a result, it now carries on its rolls a vast number of men in various categories of training and availability. Over a million and a half of these men have no more contact with the military than that their records are maintained by the Military Establishment and that they are subject to recall in an emergency.

The Army Reserve has been at its best in the creation and training of highly specialized units such as hospital and military-government teams whose members' civilian occupations are identical with their military role. It has been far less successful in dealing with combat-type organizations.

There is some justice in the belief by the National Guard that the combat-type units of the Army Reserve have been established in order to create a Federal Reserve system that will eventually supplant the National Guard.

This belief has been reenforced by the establishment of Army Reserve units and armories in localities where there was barely sufficient manpower to support the local National Guard unit.

Within the past 2 years a gargantuan effort has been made to increase enlisted strength under provisions of the Armed Forces Reserve Act of 1955.

One of the sharpest contrasts between the drawing power of the Army Reserve combat formations and those of the National Guard grew out of the Korean emergency.

National Guard divisions called to active duty in 1950 and 1951 with between 8,000 and 10,000 men each were returned to State control with but a fraction of that strength, due to expiration of enlistments while in Federal service.

None of the Army Reserve divisions was called to active duty during the Korean emergency. Their strength continued to average in the vicinity of 2,000 officers and men during the absence of the Guard divisions.

In the 3 years since the end of the Korean emergency and the return of the Guard divisions to State control, Army Reserve divisional strength has been raised to about 4,000 officers and men each. The Guard divisions, starting from scratch, already have regained their former strength of 8,000 to 10,000 and are pushing beyond.

The cost of recruiting enlisted personnel for the Reserve divisions, as compared with recruiting for the Guard, has been excessive. Because of this there is reason to believe that, had comparable Federal support been available to the Guard, far greater results would have been achieved for each dollar spent.

Much of the reason for the lag in Army Reserve division strength lies in the arbitrary control exercised throughout the Federal military Reserve system. In the great majority of cases, the capriciousness of this control has been quite unconscious. But its effects have been no less disastrous.

Changes in unit designations and total reorganization of other units have been made seemingly at whim. In time of emergency, key individuals have been called from a unit and the unit itself left to fare as best it could. Other units were called to active service and the commanding officers, who had organized and trained them, were left at home, branded as incompetents in the eyes of their fellow citizens.

Much of the difficulty can be traced to 2 factors: (1) Remoteness of policymaking headquarters from the units involved and (2) Assignment of individuals to those headquarters on a routine basis, with no special consideration given to the complexity of the Reserve problem.

The National Guard has been faced with the same problems as the Army Reserve. The Guard, however, has made every effort to prevent unnecessary changes in unit designation and in branch of service. It has, in addition, fought tooth and nail against the breakup of units either before or after recall to active duty.

Guardsmen have been no less resentful than Reservists at the breakup of their units after recall to active duty. But is was the knowledge that the Guard itself had done everything possible to prevent the breakup and had reconstituted the unit as soon as it was returned to State control that retained for the Guard the loyalty of its old troopers and won for it the allegiance of the recruit.

The great majority of National Guard officers at State level and at the National Guard Bureau are dedicated men who have made a career of Reserve affairs. Most of them have served in every rank from private to field-grade officer and above. They understand the problems of that kingpin of the entire structure—the company commander. They are capable of discerning the fine line between what is possible with a unit of the Regular Army and what is possible with a unit composed of part-time citizen soldiers.

The success of these men in protecting National Guard units from being turned upside down with each change in command at some distant headquarters and the resultant close identification of the individual with his unit are the bedrock of the National Guard's strength.

The first step in improving the combat capability of our Army reserve components must be the elimination of the competition that now exists between the National Guard and the Army Reserve.

Whatever value there may be in this competition, it is outweighed by the duplication of effort and expense involved in the building and maintenance of two sets of armories and the unseemly squabble over recruits and public support between two groups wearing the same uniform.

The National Guard has demonstrated its ability to organize, train, and administer major combat formations. Given a reasonable length of time between wars, it has recruited those organizations to the very limit of the funds and facilities available.

These accomplishments, contrasted with the shortcomings of the Army Reserve, as regards large, combat-type units, would seem to make it reasonable that responsibility for such units be turned over to the Guard, in toto.

The Army Reserve, on the other hand, has demonstrated a capacity for organizing and training the myriad highly specialized technical and administrative units required in modern war.

Army Reserve schools for groups of officers not assigned to a unit but anxious to maintain their military proficiency have made a valuable contribution in keeping fresh vitally needed skills. In addition, the Army Reserve performs an important function in training, by means of correspondence courses, those individuals who find it impossible, due to geographic location or business interests, to participate in regular drills or meetings.

This is the area in which the Army Reserve can make its greatest contribution and to which its activities should be confined.

Transfer of the major Army Reserve combat units to the National Guard would involve a temporary disruption of training and administration. With a major reorganization of the Army impending, however, such disruption is inevitable. The reduction in size of the infantry division and the shifts which will accompany that reduction provide an ideal opportunity for integrating the Reserve divisions into the National Guard.

No plan for solution of the military reserve problem, no matter how brilliantly conceived, can succeed until the useless rivalry between the National Guard and the Army Reserve is ended. The means are at hand for ending that rivalry without harm either to the individuals or to the basic constitutional values involved.

Whether or not the present cleavage in Reserve ranks is healed, four major requirements must be met before our land-power reserve can approach an acceptable level of combat readiness: (1) Stabilization of personnel turnover; (2) provision of active-duty basic training for all recruits without drying up sources of recruits in the process; (3) improvement of individual physical conditioning; (4) improvement and expansion of armories and related installations.

The 6-month active-duty requirement now in effect for all Army Reserve-component recruits, except those with prior service, appears unrealistic. The program has proved so expensive that it threatens to collapse completely in February 1958 unless large new appropriations are made available.

Desirable as 6 months, or even a year of training would be, a shortened period of training of 11 or 12 weeks would seem to be the only one that can be supported on a long-range basis.

For over a generation the United States has sought a way around the need for an effective and equitable system of compulsory military service. Compromise after compromise has been made. In the end, we have done the very thing we sought most to avoid by placing the principal burden for the Nation's defense upon the small group willing to assume it.

The time has come when we must face reality. If we are to depend on our Reserve components, and circumstances dictate that we must, then we must provide them with a stable source of trained recruits.

The third major obstacle to a truly combat-ready Reserve is the low level of physical fitness among our civilians.

President Eisenhower has joined leaders in the fields of medicine, education, sports, and the military in expressing alarm over signs of physical deterioration among American youth. That deterioration has been brought about by the same force that constitutes America's greatest military strength—superior mechanization and technology.

There is little or no time available during the weekly drill, or even during summer field training, for formal physical training. If National Guardsmen and Reservists are to be physically capable of bearing the burden of war without extensive active-duty training, then some basic reforms must be made in American life.

It is up to the home and the school to equip each individual with the habit of regular physical training, based on sound diet, adequate rest, and the sane use of liquor and tobacco.

Expansion of the present armory system and the replacement of old, inefficient structures remain of prime importance to the entire Reserve establishment. All the effort spent in recruiting, equipping, and paying a man is lost if, when it comes time for him to receive his training, he can neither see the instructor because of dim lighting nor concentrate on the subject matter for trying to keep warm.

Sufficient funds have been appropriated during recent years to allow a considerable progress in improving the armory system.

Year after year, however, power to obligate these funds has been withheld, apparently for reasons of economy.

Considering loss to the taxpayer in wasted training hours and damage to the national defense in the retarded training status of hundreds of reserve component units, this is indeed a penny-wise and dollar-foolish economy.

The solution to all these problems involves a consolidation and an expansion of the Reserve program. Adoption of the recommendations would reduce, it is believed, the time necessary to train and equip a National Guard division from over 6 months to between 3 and 5.

Whether readiness time could be reduced below that figure is doubtful in view of the fact that there are definite limitations on the amount of time citizen soldiers can be expected to give to military training.

The average National Guard officer already devotes a minimum of 2 nights a week to his unit. The company commander may spend an hour or more each day, in addition to his regular drill night and administrative night, at the armory. For every hour spent giving instruction, the enlisted instructor must spend 2 to 4 hours in preparation, assuming he is already familiar with his subject.

The saturation point in Reserve training appears to be the addition of three weekend outdoor training periods to the regular weekly drill, summer encampment, and weekend CPX routine. Beyond that, all efforts must be directed toward improving the quality rather than the quantity of training.

Reserve affairs are, perhaps, even more complex than those of the Regular Military Establishment, for they involve the handling and training of men whose primary concern must remain that of providing a home and a livelihood for themselves and their families. The benefits to be obtained, however, are enormous. The savings to be realized by maintaining a single Infantry division in National Guard rather than Regular status are measured in millions of dollars each year.

A truly ready land-power reserve can be built. It will be built only when we as a Nation cease deluding ourselves that we can build an effective military reserve without interrupting the soft-drink, hot-rod, and magnolia years of our youths. The greatest beneficiaries of that interruption will be the youths themselves.

Relationship Between Federal Government, States, and Municipalities

EXTENSION OF REMARKS
OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 29, 1957

Mr. MICHEL. Mr. Speaker, this morning our Intergovernmental Relations Subcommittee of the Government Operations Committee began a series of public hearings on intergovernmental relationships between the Federal Government and the States and municipalities.

Our first witness was Meyer Kestnbaum, Special Assistant to the President and former Chairman of the Commission on Intergovernmental Relations, popularly known as the Kestnbaum Commission.

This Commission was established by Congress in 1953 at the request of the President to study and clearly define the proper role of the National Government in relation to the States and their political subdivisions. The intensive study that ensued was, in the Commission's own words, "the first official undertaking of its kind since the Constitutional Convention in 1787."

Our subcommittee's activities in the field of intergovernmental relations have been planned with two objectives in mind: First, to carry out its general responsibility for studying Federal-State-local relationships, with particular emphasis on grant-in-aid programs; and, second, to evaluate the recommendations of the Kestnbaum Commission and to ascertain what action is being and should be taken concerning them.

Our subcommittee's study is very timely in view of the President's address on Federal-State relations last month at the Governors' Conference in Williamsburg, Va. The President asked the governors to join with the administration in creating a task force "to designate functions which the States are ready and willing to assume and finance that are now performed or financed wholly or in part by the Federal Government."

As a happy coincidence this morning, I received in the mail Senate Joint Resolution 23, offered by Senators Woodruff and O'Neill and passed by the Illinois 70th General Assembly. The resolution points up the need for reviewing and reassessing this whole structure of Federal-State-local relationships, particularly with reference to so-called grants-in-aid.

Our local and State governments are caught in the price-cost squeeze, and are looking for ways to meet their increasing obligations and responsibilities in rapidly expanding communities. For example, in our hearing this morning we were reminded that in 1932 local governments collected 53 percent of all taxes collected, and today, local governments collect only 13 percent of the total—another indication of the trend toward big centralized government. It seems to me that we ought to be thinking seriously of relinquishing to the State and local governments some of the Federal Government's tax-taking authority. I firmly believe that the closer we keep government to the people, the easier it is for the people to see and understand how and where their tax dollars are being spent.

The subcommittee is now planning a number of regional hearings throughout the country during the new few months in order to give more intensive consideration to the views of State, city, and county officials on important problems of intergovernmental relationships.

I hope to be present at all of these hearings and devote a good part of my time as a Member of Congress toward getting this whole problem back in proper balance and perspective.

STATE OF ILLINOIS—70TH GENERAL ASSEMBLY—SENATE

Senate Joint Resolution 23

Whereas the ever-increasing expenditures of the Federal and State Governments with consequent increasing tax burdens is a cause for grave concern to the people of this State and Nation; and

Whereas much of the financial burden of the taxpayer is the result of Federal grant-in-aid programs through which a State, by furnishing a sum of money to the Federal Government, receives an equal or larger sum from the Federal Government to finance and conduct certain programs; and

Whereas at first glance such an undertaking seems to be a highly desirable venture since it appears that the State is actually receiving something for nothing; and

Whereas this idea of getting something for nothing is as deceiving as the pea used in the old shell game, because the money which the State receives from the Federal Government is actually the money which the taxpayers have already paid into the Federal treasury in the form of taxes; and

Whereas in transferring the taxpayers' money from one pocket to another, which occurs when a State accepts a Federal grant in aid, an appreciable amount of the money is lost due to the expense of bureaucratic administration and overhead in effecting the transfer, with the result that the taxpayer, instead of reaping a benefit from the Federal grant, is actually receiving less than he has already paid into the Federal Treasury; and

Whereas in further deflating the "something for nothing" bubble, the taxpayer finds that in addition to the initial loss sustained in accepting the grant in aid, he must further pay the excessive cost of the program due to unnecessary Federal requirements and redtape; and

Whereas the State and local governments which participate in grant-in-aid programs are becoming more and more subject to Federal encroachment on their individual sovereignty due to the Federal controls, restrictions and regulations incident to such participation, and the Federal Government is interfering to an unwarranted and undesirable extent in purely State and local matters and is also compelling the States to expend their revenue unwisely and uneconomically; and

Whereas the time has come for the States to seriously review the Federal grant-in-aid programs to determine whether such programs are more harmful than beneficial, and in line with this policy, it is the sentiment of this general assembly that the State and local governments can more efficiently and economically expend the taxpayers' funds than can the Federal Government through the grant-in-aid programs: Therefore, be it

Resolved by the Senate of the 70th General Assembly of the State of Illinois (the House of Representatives concurring herein), That this general assembly respectfully request the Senate and House of Representatives of the United States to: (a) seriously review and reassess all present grant-in-aid programs for the purpose of reducing the costs of such programs and the Federal controls incident to such programs, (b) refrain from enacting new grant-in-aid programs in the future unless such programs are an actual necessity and the desired results cannot be obtained through State and locally financed and controlled programs, and (c) to reduce Federal control over all present and future programs for the purpose of permitting State and local governments to exercise their sovereignty and minimizing Federal encroachment on States rights; and be it further

Resolved, That a suitable copy of this preamble and resolution be forwarded by the secretary of state to each Member from Illinois in the Senate and House of Representatives of the United States.

Adopted by the senate May 1, 1957.

JOHN WM. CHAPMAN,
President of the Senate.
EDWARD E. FERNANDES,
Secretary of the Senate.

Concurred in by the house of representatives June 28, 1957.

WARREN L. WOOD,
Speaker of the House of Representatives.
FRED W. RUEGG,
Clerk of the House of Representatives.

School Aid Killed—Now Bury It Permanently

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to include an editorial which appeared in the Nashville Banner on Friday, July 26, 1957. This fine editorial expresses the feeling of a great many people in the State of Tennessee, and I think it will be of interest to the Members of Congress.

The editorial follows:

SCHOOL AID KILLED—NOW BURY IT PERMANENTLY

Having been killed twice in 2 consecutive years—and every time previously lofted—the proposal for Federal aid to education now is deader than the dodo, and should be buried beyond all possibility of disinterment.

The House action yesterday of final rejection was a double-barreled rebuff, impossible of misinterpretation. The integration rider, contrived to penalize the segregating districts, was briefly countenanced for the express purpose of killing the measure as a whole; and in the showdown Congress again has demonstrated majority American sentiment against school subsidy, per se.

Representative J. CARLTON LOSER expressed the middle Tennessee view voting "no" on both points. The whole Tennessee Democratic delegation shared that view—representative of their State, and voted it.

That it was an administration bill, sincerely regarded by President Eisenhower as an emergency device temporary in nature to help meet construction needs, did not alter the fact that it embodied a dangerous precedent. The alacrity with which devious pressure groups leaped to its support, from the integration addicts to the federalizing lobbyists, attested to its hazards as an entering wedge.

Had the question of financing alone figured in the case, these elements would not have opposed the substitute proposal by Representative ERRETT P. SCRIVNER of Kansas, to simply let the Federal Government rebate to each State 1 percent of all income taxes paid into the Federal coffers, with the money earmarked for school uses.

What Uncle Sam subsidizes, Uncle Sam eventually controls, and the public schools belong in all particulars under local and State regulation. There is no temporary emergency that can justify even a temporary departure from that rule.

Right now the Federal-State task-force study is getting underway—at the President's instance—to reassess the responsibility lines and tax lines between these two units of Government. The purpose of that is to redefine and differentiate between the functions properly of each.

The States are represented in that study by a committee of nine governors, and the Federal Government by a commission assigned by the President. It is a joint task, seriously and purposefully undertaken, as Mr. Eisenhower put it, to end the encroachments that have seen more and more power swinging away from the States and to centralized authority.

The best way to begin that stipulation of State authority—and responsibility, and tax resources to finance as needed—is by starting with the public-school system. The governors, surely, are aware of that.

The States can finance their own schools. They can and must retain control over them, where that control belongs, and where it historically has been.

It is not a job for Uncle Sam or any of his Federal appurtenances. It is a responsibility for State and local handling, and with State and local money, a sufficiency of which will be available if by adjustment of tax-resource lines requisite funds also are left where they belong—for State and local use.

The House this time has distinguished itself, and the constituency rightly concerned is entitled to the hope that this F. A. T. E. dodo now remains extinct.

The Congressional Quest for Information

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. HILLINGS. Mr. Speaker, Mr. Marion Edwyn Harrison, a member of the Virginia bar and a former congressional staff assistant and committee investigator, has written an interesting article on congressional work which appeared in the July 1957 issue of the Federal Bar News.

Mr. Harrison, now on active military duty in the office of the Judge Advocate General at the Pentagon, has shown a real understanding of the problems facing the members of Congress in our constant efforts to obtain information on governmental affairs for our constituents. I congratulate this able young man on his constructive article. The Judge Advocate General's office is indeed fortunate to have the services of his able, legal mind and such understanding knowledge of congressional affairs.

The article follows:

THE CONGRESSIONAL QUEST FOR INFORMATION

(Marion Edwyn Harrison)

Every Federal employee in a position of responsibility (lawyers included) must regularly answer queries from Members of Congress about a myriad of subjects. Often these queries take the form of letters from constituents routinely forwarded by Senators and Representatives who want facts upon which to base replies. In the ceaseless flow of cases involving comparatively personal matters (as distinguished from legislative policy), what kind of replies from the Federal agencies do Congressmen want?

THE WHOLE STORY SHOULD BE RELATED

Mere white truth is simple nakedness. And black truth, too. The need for a candid and complete reply cannot be overemphasized. Rarely does the Congressman or any member of his staff know any more of the story than what his constituent recounts. In referring a constituent's request or complaint to a governmental agency, the Congressman seeks not only some facts upon which to predicate a reply—he also very often seeks the other side of the story. Usually, the Congressman desires the facts fairly presented. Then, if the facts indicate action is warranted, he wants the action taken. Frequently a constituent puts his Representative out on a limb. The Representative then passes the buck to an executive agency, not with any malicious intent, but because the agency alone is capable of contriving an answer. Sometimes one gets a letter from a veritable crackpot. In those instances remember one thing, if the Congressman could have avoided making a substantive reply, he would not have referred the letter to an agency. The crackpot may influence 100 votes back home.

THE FORM OF A LETTER IS IMPORTANT

A Congressman would generally prefer to have an agency reply signed by someone occupying a responsible position with an impressive title. The signature assures him, or his staff, that although the facts may have been run down by a GS–5, somebody in authority has reviewed and vouched for them. The impressive title means a great deal to the inquiring constituent, to whom the agency's letter is often sent as an enclosure to the Congressman's response. Because agency letters frequently are mailed to constituents, they ought to be simply written. The style of bureaucratic language so often used when one Federal official writes another is taboo. It is not readily understood outside the Government. Perhaps more important, stylized language frequently appears to Congressmen to be evasive, expressionless, and even arbitrary. Members of Congress don't get reelected because they appeal only to the small, literate percentage of their constituents.

SPEED IS ESSENTIAL

Finally, speed. Congressmen are normal people. So are their constituents. Yet each constituent tends to think his problem is the only one with which his Representative need be concerned. Hence, virtually every congressional office acknowledges its mail within 48 hours of receipt. And most offices prefer to have a substantive reply dispatched within a few weeks; any longer means the constituent has again taken pen in hand (or worse, has telephoned). If a speedy reply is impossible, the Federal agency should inform the Congressman in some detail as to why a month or two will be required to answer. Then the Congressman can calm his anxious constituent.

PERSONAL SERVICES ELECT CONGRESSMAN

Perhaps it is unfortunate, but it is true; a great number of Senators and Representatives are reelected or defeated because of the services they have performed for their constituents. Legislative policy often takes a back seat. Hence, if a Federal agency is to get along with Congress, it must cooperate in the seemingly trivial ingredients that comprise a Congressman's bread and butter. Anyhow, it's easier to write a simple, factual letter than a verbose, stylized one.

Tribute to Truman

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. MILLER of California. Mr. Speaker, I am inserting in the RECORD as part of my remarks an editorial which appeared in the Oakland, Calif., Tribune for July 6, 1957, relative to the establishment of the Harry S. Truman Library at Independence, Mo.:

TRIBUTE TO TRUMAN

There is no reason to doubt that the most beaming countenance in the country today is that displayed by former President Truman before a big audience in his own home of Independence, Mo.

Today, with the help of former President Herbert Hoover and Chief Justice Earl Warren, Mr. Truman is dedicating the $1,750,000 museum where his state papers and mementoes will be preserved for history.

Mr. Truman has full right to be proud of himself today. The museum stands as a testimonial to the esteem in which he is held, for himself, by both political friend and foe, and in the minds of the thousands across the country whose contributions, big and small, made the museum possible.

It will be long before all the contents of the museum can be examined and assayed. It cannot be said now whether they will have any new influence in any discussions of the controversial issues that stemmed from Mr. Truman's occupancy of the White House.

Some of history's greatest pages were written by the events of that tenure, most of them devoted to the horror—and sometimes the glory—of a terrible conflict. Regardless of the views one has of Mr. Truman as a President, it should go without saying that his bequest to the generation of today and to those of the future is a major contribution to the knowledge of our Nation.

Communist Words Change—But the Deeds Remain the Same

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of July 29, 1957—1 of 4 which demonstrate unanswerably that we have no one to blame but ourselves and our wishful thinking, for our ups and downs of hope and despair. The Kremlin's record—as contrasted with its words—is completely consistent and unchanging in its pursuit of world domination:

TIME FOR AN OLD LOOK AT BOLSHEVISM—III

In the spring of 1953, just after Stalin's death, President Eisenhower held out an olive branch to the new Soviet leaders—inviting them to help turn the tide of history away from world war III and toward a rebirth of trust among nations—and real peace.

He challenged the new men in the Kremlin to prove the sincerity of their gestures with three questions. It seems to us it is time to recall those questions—and take stock of the Kremlin's answers.

Welcoming every honest act of peace, but rejecting mere rhetoric, the President suggested these tests of Stalin's heirs:

"Is the new leadership of the Soviet Union prepared to use its decisive influence in the Communist world—including control of the flow of arms—to bring not merely an expedient truce in Korea but genuine peace in Asia?"

(The answer 4 years later: That new leadership has not done so. Witness the broken Korean Armistice, the Soviet-supported war in Indochina, continuing threats to Formosa by a Soviet-armed Red China, subversion in Egypt and Syria, and unlimited mischief making in south Asia and the Middle East.)

"Is the new leadership prepared to allow other nations, including those of Eastern Europe, the free choice of their own forms of government and the right to associate freely with other nations in a world-wide community of law?"

(The answer: It has not. Need more than the Soviet rape of Hungary be mentioned?)

"Is the new leadership prepared to act in concert with others upon serious disarmament proposals to be made firmly effective by stringent U. N. control and inspection?"

(The answer: It has not. It toys with the West at London as a cat with a mouse. Premier Bulganin, after 4 months of talks, accuses the Western powers of bad faith—even after concessions which could jeopardize the West's security. There is lots of rhetoric but no sign of honesty from the Soviets which would prevent an arms agreement from being the same kind of fraud and farce as the Korean armistice.)

The President said more than 4 years ago that the "test of truth is simple"—the Soviet answer, by deeds not words, to those three questions. If the new Soviet leaders are not prepared to do those things, he said, there is no evidence they honestly seek peace.

We believe the test has been clear—the time allowed more than adequate.

The new Soviet leaders have flunked the test. Not only have they rejected the deeds President Eisenhower suggested; they have shown, as the answers above prove, that their pious words about peace are "mere rhetoric."

"Whatever the answer be, let it be plainly spoken," the President said. "The hunger for peace is too great, the hour in history too late, for any government to mock men's hopes with mere words and promises and gestures."

For 4 years, the Soviet have continued to mock men's hopes. The answer has been "plainly spoken." Are we going to wait another 4 years to recognize this mockery?

Crucial Defeat for School Aid

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. LANE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include a clear, concise, and thoughtful editorial that appeared in the July 27 edition of the Christian Science Monitor, entitled "Crucial Defeat for School Aid":

Last year partisan conflict killed school aid. This year responsibility rests chiefly on Republicans who refused to support the President and to fulfill their platform pledge.

Many political and economic cross-currents entered into the result. But at the time the House of Representatives killed the bill it had before it an amendment which would have accepted the excellent Eisenhower formula. And the motion to kill—offered as an alternative—was opposed by 57 percent of the Democrats, supported by 59 percent of the Republicans.

The issue was more clearly drawn than at any previous time. For by various steps many of the objections to earlier school-aid proposals had been removed. The House had emphatically declared its intention to leave local control of education unimpaired. The measure was limited in time and amount. It was confined to the sole purpose of building new classrooms. And finally the Democratic managers had accepted the President's plan for distributing funds according to actual need and the size of State efforts to meet the need.

The bill was still burdened with an anti-segragation amendment attached by a Republican who opposed the bill itself. This amendment naturally intensified the opposition of southern Democrats and made it simpler to justify at home their opposition to a measure which would have helped build schools. The provision to deny aid to segregated schools would not have beaten the bill had all who favored it voted also for the basic measure to which they attached it.

This newspaper believes that schools are traditionally and rightly at local responsibility. It holds that Federal aid should be a last and strictly limited resort. It has frequently pointed out that many of the States do not need Federal help. Giving them school aid simply means Washington takes more tax money and sends a portion back as a deceptive and expensive political sop. This was the type of aid offered both last year and this year by the majority leaders in Congress.

But for 5 years there has been accumulating evidence that a few States are not meeting their school needs. And several are devoting to schools a far larger share of their resources than do the richer States. These circumstances have convinced us that a carefully limited Federal aid measure was justified. The President proposed precisely this type of bill. The Democrats in Congress pushed their own measure, simply allotting funds to all States according to their pupil population. A short time ago a compromise was arranged by which both formulas would have been used—on a 50–50 basis.

Then on the final day the Democratic House leaders accepted the Eisenhower plan completely. Even then a combination of Republicans and Southern Democrats killed it. We believe that some were influenced by economy pressures. There is reason to believe that the President's plan could be carried out for half the $1.5 billion proposed. It seems to us that the best chance now would be for advocates to limit the amount as well as the purpose to deal only with the clearest needs.

A Vital Economy Measure

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, the leading newspapers of the Fourth District of New Jersey, which I have the honor of representing, have called for the passage of H. R. 8002, a bill which has the support of the New Jersey Taxpayers Association and the Citizens' Committee for the Hoover Report.

I include here for the information of my colleagues an editorial from the Trentonian of July 24, 1957, and an editorial from the Trenton Evening Times of July 23, 1957:

[From the Trenton (N. J. Trentonian of July 24, 1957]

A VITAL MESSAGE

Repeated cries that Congress implement more of the sound recommendations laid down by the Hoover Commission have fallen on unheeding ears, but now the House of Representatives has before it the opportunity to pass a bill described as "one of the most vital and far-reaching economy measures"

resulting from the Hoover Commission's work.

The bill is H. R. 8002, and it would restore to Congress some control over the public purse by placing Federal spending on a strictly annual basis.

Francis J. Pinque, president of the New Jersey Taxpayers Association, has joined with Clarence Francis, national chairman of the Citizens Committee for the Hoover Report, in asking all-out support of H. R. 8002. Mr. Pinque explains the measure thusly:

"Among other fiscal reforms H. R. 8002 would renew annual control by Congress over the so-called carryover appropriations. These are now estimated to total nearly $70 billion—nearly equal the entire budget Congress is enacting for the current fiscal year. They form a roadblock in the current congressional effort to economize.

"Illustrative of the situation which H. R. 8002 would prevent is the example furnished by approximately $12½ billion which Congress in the fiscal year 1953 appropriated for guns, tanks and other military equipment in Korea. Although the fighting ended only about a month after the close of that fiscal year, the appropriations carried over and in May 1957 the Army was still spending from the $12½ billion fund without any further congressional review.

"Such a bill in force now also would give the congressional economy drive more meaning. The stake of New Jersey taxpayers in the Congressional effort to achieve economy and efficiency in Government is tremendous. While every dollar of appropriation reduction does not, of course, translate fully into reduced spending or tax relief, due to the complexities of the tremendous Federal fiscal program, the substantial interest of the New Jersey taxpayer in more efficient, more economical Government is obvious.

"Since New Jersey taxpayers contribute approximately 4 percent of all Federal revenue, it can be seen that every billion dollar reduction in Federal spending and consequent demand for revenue could shave as much as $40 million from future Federal revenue requirements in New Jersey."

A similar bill has passed the Senate without difficulty, but H. R. 8002 has not found clear sailing in the House. It should, however, be given the same strong nonpartisan support in the House that it has received elsewhere.

[From the Trenton (N. J.) Evening Times of July 23, 1957]

AN ECONOMY MEASURE

The president of the New Jersey Taxpayers Association, Francis J. Pinque, has joined with Clarence Francis, national chairman of the Committee for the Hoover Report, in appealing for favorable action in the House on H. R. 8002, a bill designed to modernize Federal Government budgeting.

It is unfortunate that this measure will not arouse the degree of public interest and support justified by its merits. Its importance is recognized by leading fiscal authorities, including Secretary of the Treasury Humphrey and United States Senator HARRY F. BYRD.

One of the effects of this measure would be the tightening of congressional control over Federal finances by placing the budget on an annual accrued expenditure basis. So-called carry-over appropriations, according to Mr. Pinque, are now estimated at nearly $70 billion—nearly as much as the entire budget for the current fiscal year.

"Since New Jersey taxpayers contribute approximately 4 percent of all Federal revenue," Mr. Pinque continued, "it can be seen that every billion dollar reduction in Federal spending and consequent demand for revenue could shave as much as $40 million from future Federal revenue requirements in New Jersey."

New Jersey residents have a stake in the adoption of H. R. 8002. It can mean less taxes at a time when every dollar of taxes involves a little pain.

Look for Motive Behind Protests

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, July 29, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an editorial which appeared in the Nashville Tennessean on July 26, 1957.

The location of the new Veterans Hospital to be built in Nashville, Tenn., has been of considerable controversy for some months, and it is hoped that the Veterans' Administration hospital survey team which will come to Nashville soon to study the feasibility of locating this new facility near the Vanderbilt University Medical School will arrive at a decision that will be to the best interest in every way to the veterans of middle Tennessee.

The editorial follows:

LOOK FOR MOTIVE BEHIND PROTESTS

Now that a Veterans' Administration hospital survey team is coming to Nashville to study the feasibility of locating the new $12 million hospital nearer the Vanderbilt University medical school, Davidson countians can expect to hear howls of protest from some quarters and should be on their guard.

Leading the protests the last time the hospital was proposed in Nashville's Medical Center, where it belongs, were certain veterans' organizations. Some of the members of these organizations were sincere in their objections. Some others were just sucked into parroting a line from the professional veteran-politicians at national headquarters, who are not so much interested in dictating where a hospital in Nashville should be located as they are in dictating how every VA hospital in the Nation shall be run.

An organized, centrally steered campaign against the Vanderbilt site was obvious in the almost identical language contained in resolutions adopted by veterans' organizations all over this county before.

At least some new arguments will be advanced this time. The rug has been jerked from that phony economy argument since the Government will actually save money by purchasing the Howell Campbell estate and selling—at almost double the price—the present Thayer hospital site.

The inadequate parking argument was a phony from the beginning. Plans for adequate parking were provided at the original Vanderbilt site, which would admittedly have cost about $1 million.

And certainly it cannot be argued that the Woodlawn Drive-Hillsboro Road area is congested, nor that the air is less fresh there than it is on White Bridge Road, nor that it is more vulnerable to enemy attack. The Ford plant, nearer White Bridge Road, makes a more inviting military target than that string of churches on Hillsboro Road.

Those who professed such mortal fear of atomic attack and/or catastrophe that they would torpedo these plans, too, would do well to go to Louisville and warn the poor, unsuspecting people there.

In three square blocks of Louisville, known as the medical center, are located: The University of Louisville Medical School, the University Dental School, Jewish Hospital, General Hospital, Children's Hospital, and the Kentucky Crippled Children Society.

Now, it is announced, the Methodist-Evangelical Board has been foolhardy enough to begin work on a new $4 million hospital in this same 3-square-block area. What Louisville plainly needs is some good old professional veteran politicians who know more about where to locate a hospital—and how to run it—than almost nobody.

Postal Pay Raise

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. FULTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I submit an excellent article showing the present position of the postal pay raise:

SOUTHERN FEUD HELPS STALL POSTAL PAY RAISE

(By Jack Steele)

WASHINGTON, July 25.—Two Southern Democrats, who seldom see eye to eye on anything, together have dashed Congressional hopes of increasing both postal rates and the pay of potsal workers this year.

These legislators, who are doing a thorough job of cancelling each other out, are:

Senator OLIN D. JOHNSTON, of South Carolina, chairman of the Senate Post Office and Civil Service Committee.

Representative TOM MURRAY, of Tennessee, chairman of the same committee in the House.

Their monumental differences over the postal rate and pay bills have created a legislative snarl as complicated as the gordian knot.

And even congressional leaders can't figure out any way to untie or cut it.

THEIR BACKGROUNDS

Mr. MURRAY, a roly-poly man with a white thatch of hair and a booming voice, worked for years as a lawyer for the Post Office before his election to Congress.

He strongly favors a boost in postal rates to help pull the Post Office out of the red, but is bitterly opposed to any across-the-board pay increase for Government workers this year.

Senator JOHNSTON, a great hulk of a man who seldom raises his voice but always carries a big stick, has made his reputation in Congress as the Government worker's best friend."

He favors a big increase in pay for postal and all other Government workers, but is violently against any increase in postal rates.

Mr. MURRAY'S position coincides with that of the Eisenhower administration.

The President has urged Congress in vain for 5 years to increase postal rates. But he is prepared to veto any general pay boost for Government employees this year.

Mr. MURRAY'S committee approved the administration's postal rate bill more than 2 months ago.

But he has refused to ask the Rules Committee to send it to the House floor, where its passage is considered certain.

His stand is based on the fear Mr. JOHNSTON either will block Senate action on the

rate bill or tie it to a pay bill in an effort to force the President to sign both measures.

"The rate bill won't go to the House floor until JOHNSTON's committee reports a rate bill to the Senate," Mr. MURRAY said flatly today.

Senator JOHNSTON, meanwhile, declared just as firmly that his committee won't act on the rate bill until it clears the House.

For 7 months Mr. JOHNSTON has refused to even hold hearings on the rate bill, although he said last year that such hearings would be called as soon as Congress convened.

The House passed on Monday—over Mr. MURRAY's objections—a bill to boost the pay of all postal workers $546 a year—an increase of about 12 percent.

It did so under the unusual expedient of having a majority of House Members sign a discharge petition to bypass MURRAY and the Rules Committee.

CHANGE OF FACE

Mr. JOHNSTON arranged yesterday to have this House-approved pay bill placed directly on the Senate calendar, even though his committee has reported a pay bill of its own.

(Along with other southerners he protested bitterly when this same procedure was followed with the civil-rights bill.)

Senator JOHNSTON hopes the Senate, as soon as it finishes up with the civil-rights battle, will pass this House pay bill and send it directly to the White House. This would prevent Mr. MURRAY from bottling it up in conference.

But Ike is sure to veto this pay bill—and to blast Congress for "fiscal irresponsibility" for voting to boost postal pay without increasing postal rates.

What happens after that is anybody's guess.

Invasion From the North

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. TUCK. Mr. Speaker, the Winchester Evening Star of Friday, July 26, carried a lead editorial commenting upon the Invasion From the North, conducted by such integrationist publications as the Washington Post, Time magazine, and others.

Courageous Virginians will not be intimidated by these people and we will stand up firmly for our rights as we have known them through the centuries. As the able editor of the Winchester Evening Star, State Senator Harry F. Byrd, Jr., said, Virginians are intelligent and independent and cherish their rights. They will not succumb to these specious doctrines.

Under leave heretofore granted me to extend my remarks in the RECORD, I include the editorial, which is as follows:

INVASION FROM THE NORTH

Between now and election day on November 5, Virginia can expect a journalistic invasion from the North. In fact, it already has begun.

Within the past several days, the determinedly integrationist Washington Post, the antisouthern Time magazine, and Washington columnist, Doris Fleeson, all three have had a fling at Virginia. The line of each has been the same. Each has bitterly condemned Virginia's fight to maintain segregated public schools; each has praised the Republican nominee for Governor, Ted Dalton; each feels Mr. Dalton's election as Governor would be the first step toward the mixing of the races in the schools, a step which each of the three desires.

A continued effort by publications north of the Potomac to build up Mr. Dalton can be expected. The Washington Post particularly has adopted him as its darling and can be depended upon to use its powerful resources in Mr. Dalton's behalf. The coowner of the Washington Post, Mrs. Agnes Meyer, in a speech the other day, declared much of Virginia to be primitive. She, whose home is Mount Kisco, N. Y., has set out to modernize our State. She has chosen Mr. Dalton as her instrument.

The Post, which has a circulation of 430,000, nearly 4 times that of Virginia's largest paper, will be a powerful weapon in Mr. Dalton's arsenal. The Post is out to smash what it calls the Byrd machine and is using both its news columns and its editorial columns in the endeavor.

We do not underestimate the power of the Post. But neither do we underestimate the intelligence and the independence of the Virginia people. They are not as sophisticated perhaps as Mrs. Meyer, a fact which may have led her to refer so sneeringly to Virginia's primitive counties. But the Virginia people are solid, conscientious, and clear thinking. They are not likely to be misled by either the sophistication of Mrs. Meyer or the power of her newspaper.

Corona Naval Hospital

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of a resolution by the Board of Supervisors of the County of Los Angeles, Calif., re the proposed closing of the great Corona Naval Hospital, Riverside County, Calif. The facts recited in this timely resolution being of themselves commanding figures and reasons, I wish to say that the honorable Secretary of the Navy, together with representatives of the Bureau of Medicine and Surgery of the Department of Defense, recently met with the California delegation which asked that the Navy not proceed with its projected closing on August 1, but that it review its policy and reconsider same. I am pleased also to inform you that the President of the United States, subsequent to said California delegation meeting and request therein made, has directed that the hospital not be yet closed but that there be a review and reconsideration of the order heretofore made to close the same on August 1.

While the great 23d Congressional District, which I have the honor to represent in this my 11th year in this great legislative body, does not supply the majority of the patients in this necessary Corona Hospital, nevertheless, some of its daily patients do come therefrom. In all events, it seems to me, Mr. Speaker, as unwise that these thousands of potential patients of Corona Hospital should be placed on such status that they would have to go to either an inadequate hospital ship in Los Angeles Harbor or to Camp Pendleton, 70 miles from Long Beach, or to San Diego, 100 miles from the area, or to Fort Ord, more than 300 miles away, instead of Corona Hospital, only 47 miles.

I have known of cases of deaths of babies and patients en route to Corona on account of the distance of Corona even. I shudder to think of the health tragedies which will normally result if these thousands of deserving and legally entitled patients have to travel two or more times the distance. I am advised that also some of the daily patients would be transferred to private hospitals and that is O. K., Mr. Speaker, up to a point, but the fact is that in the very area concerned the private hospitals are already overcrowded. The doctors are overworked and many times unavailable in cases of emergency.

What about transportation costs, Mr. Speaker? A very considerable number of these legally and morally entitled patients do not have transportation facilities and cannot afford the expense of hiring a commercial transportation service. So it normally results in eliminating many estimated hundreds legally and morally entitled military personnel from the services to which they were assured of when they enlisted or were inducted into service—they and their dependents. Granting that we must be economical and conserve our resources, this in my judgment does not mean that we must eliminate medical services to those legally and morally entitled thereto.

The resolution of the board of supervisors follows:

RESOLUTION REQUESTING BUREAU OF MEDICINE AND SURGERY OF THE DEPARTMENT OF DEFENSE TO SERIOUSLY RECONSIDER ITS DECISION TO CLOSE SAID HOSPITAL

Whereas the Bureau of Medicine and Surgery of the Department of Defense has revealed plans to close the Corona Naval Hospital; and

Whereas this hospital of 725 available beds used an average of 605 beds daily, besides providing treatment of 146 persons daily on an outpatient basis; and

Whereas 84,016 military personnel on active or retired status and 112,603 military dependents entitled by law to military hospitalization rely directly on the Corona Naval Hospital for medical services; and

Whereas the nearest military medical facilities capable of ministering to the needs of this total of 196,619 persons in the Long Beach area, if Corona Naval Hospital is to close, are in Camp Pendleton, a distance of 70 miles from Long Beach, San Diego, 100 miles distant, or Fort Ord, more than 300 miles away, with these hospitals presently operating at or near capacity; and

Whereas Long Beach and Lakewood, with their population of 373,807 growing rapidly as 623 persons migrate daily to Los Angeles County, have only 1,227 hospital beds available to their residents, or less than half the minimum requirements; and

Whereas removal of Corona Naval Hospital would leave the military essentially without medical facilities there, and would increase the seriousness of the Long Beach-Lakewood hospital shortage to the point of creating an acute health emergency in that area; and

Whereas many personnel of the military have willingly chosen the defense of our Nation as their career, they and their dependents are not only deserving of the finest medical care available, but they are also promised this care when embarking upon their military occupation: Now, therefore, be it

Resolved by the Board of Supervisors of the County of Los Angeles, That the Bureau of Medicine and Surgery of the Department of Defense seriously reconsider its decision to close the Corona Naval Hospital, weighing the far-reaching effects of this act on both military personnel and civilians of the Long Beach area; and be it further

Resolved, That copies of this resolution be sent to Senators THOMAS H. KUCHEL and WILLIAM F. KNOWLAND, Congressman CRAIG HOSMER, and all other congressional Members of the Los Angeles County delegation.

Hoover Commission Recommendations

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 29, 1957

Mr. BOLAND. Mr. Speaker, the Rules Committee has already cleared for House action in the very near future H. R. 8002, a bill which embodies Hoover Commission recommendations. This legislation authorizes the submission to Congress of requests of proposed appropriations on the basis of the amounts of annual accrued expenditures to the maximum extent deemed desirable and practical by the President. Such expenditures shall relate to goods and services to be received in a fiscal year, advance payments, progress payments, and such other payments as are authorized by law to be made in such fiscal year.

I was one of the several sponsors of this legislation in the House. Similar legislation sponsored by Senator JOHN F. KENNEDY, of Massachusetts, and Senator FREDERICK G. PAYNE, of Maine, has already passed the Senate. The Citizens Committee for the Hoover Report has done yeoman service in explaining this legislation to our citizens at the grassroots level in America. Businessmen, fraternal organizations, and newspapers have endorsed this legislation.

Mr. Speaker, under leave to extend my remarks, I would like to have printed in the RECORD a sampling of these editorials for my colleagues to read. They are taken from the New Bedford, Mass., Standard Times of July 1, 1957, the Providence, R. I., Journal of June 21, 1957, and the Springfield, Mass., Union of June 15, 1957.

The editorials follow:

[From the Standard-Times of July 1, 1957]

FEDERAL BUDGET REFORM

The Citizens Committee for the Hoover Report, a nonpartisan group working for adoption of Hoover Commission recommendations, has cited 12 bills before Congress that deserve immediate attention and should be enacted before the 1957 session is adjourned.

The measures were selected from approximately 170 bills in the hoppers of the Senate and House that deal with Hoover Commission proposals. Since it is apparent that most of these bills will not get to the floor of either Chamber in the comparatively few weeks remaining in this session of Congress, a concerted effort is being made to get action on proposals that will have the most beneficial results.

Top priority is urged for a measure cosponsored by Senators KENNEDY, Democrat, of Massachusetts, and PAYNE, Republican, of Maine, which would require the Federal budget to be submitted on an annual accrued expenditures basis. Enactment of this bill, already passed by the Senate and awaiting House action, would save the American taxpayers $4 billion a year, according to Hoover Commission estimates.

The measure provides that Congress would appropriate each year only funds required to operate the Government for a period of 1 year. This would eliminate the hoarding of unused appropriations by Federal agencies and give Congress tighter control over expenditures.

Need for the change in budgeting procedure is brought home forcefully in the estimate by Senator BYRD, Democrat of Virginia, that the various Departments of the Federal Government now have on hand approximately $70 billion in unexpended funds appropriated by Congress in previous years.

This means that if Congress appropriated an additional $71,800,000,000 for fiscal 1958, as requested by President Eisenhower, the Government actually would have in excess of $140 billion at its disposal during the next 12 months.

It is unsound business practice to run the Government on this basis. The system encourages extravagance by Federal agencies, some of which literally have more money than they know what to do with. It is not uncommon for Federal Departments to deliberately pad their budget requests in the hope of building a perpetual surplus.

This is an unhealthy and wasteful situation that can and should be corrected by enactment of the Kennedy-Payne bill.

Other measures on the priority list of the citizens committee would centralize procurement and supply activities of the armed services under a single agency, curtail unnecessary participation by the Federal Government in activities best handled by private enterprise, and centralize surplus property disposal in the General Services Administration.

These and various other bills designed to reduce waste and inefficiency in Government should be approved by Congress with all possible speed. The sooner the measures are enacted, the sooner the American taxpayers will reap the rewards of more efficient Government at reduced cost.

[From the Providence (R. I.) Journal of June 21, 1957]

THE HOOVER PROPOSALS DESERVE SPEEDY ATTENTION

A majority of the five recommendations of the Hoover Commission on which Mr. Eisenhower has urged Congress to act during the present session already have received Senate approval. The letters respecting these recommendations which the President has sent to Vice President NIXON and Speaker RAYBURN consequently are of special concern to the House.

The Senate has voted to extend the Reorganization Act for 2 more years. Inasmuch as the President suggests that the extension should be 4 years, the pending House bill that provides for this longer period will, if passed, presumably be accepted by the conference committee. Certainly the extension is necessary.

The most important of the five recommendations is that which would authorize appropriations on the basis of annual accrued expenditures. The tighter budgetary control which such authorization would provide is a fiscal reform long overdue. The Senate has sanctioned this change.

Likewise, the Senate has acted favorably on the Presidential recommendation which would authorize the training of Federal employees at either public or private institutions. This proposal is intended primarily to increase efficiency rather than to promote economy in Government. But in the long run, some economy should result.

The common judgment, not only in Congress but in responsible private quarters, that the postal savings system has outlived its usefulness should prompt both branches to adopt this Presidential recommendation without much debate. Apparently, the Commission was emphatic in its belief that the great expansion of private savings facilities during the past two decades, with security for depositors guaranteed by the Government, obviates any need for a Government-managed savings service.

Legislative action in regard to these five matters is now largely the responsibility of the House. It, rather than the Senate, has been dragging its feet on this important and desirable legislation. The enabling bills should be passed without delay.

[From the Springfield (Mass.) Union of June 15, 1957]

BUDGETING PROCEDURES

The Senate this week reaffirmed the stand it took last year when it passed the Kennedy budgeting and accounting bill, which is designed to place the Government's budgeting and accounting procedures on an accrued expenditures basis. In plainer English, that means appropriating only enough money to cover what you expect to spend in the succeeding fiscal year.

The Bay State's Senator JOHN F. KENNEDY, its sponsor, has called the legislation "one of the most fundamental reforms in governmental budget practices since enactment of the Budget and Accounting Act of 1921," asserting that it would result in much more careful and effective control of expenditures by Congress. The proposal is based on one of the principal recommendations of the Hoover Commission and has the backing of, among others, the Secretary of the Treasury, the Comptroller of the Budget, the Director of the Bureau of the Budget, and 48 other Senators, including its cosponsors, Senators BYRD of Virginia and PAYNE of Maine.

Under the bill, appropriations would be converted on the basis of annual expenditures and Congress would make them for each fiscal year on the estimates by the various agencies and departments of the expenditures they actually would make. Under the present system—that is, outside the forecasts for a single year only—there are carryovers of the unexpended balances of appropriations that run into billions of dollars annually. The chief flaw in the current system is that Congress has little or no control over the expenditure of these balances, for its responsibility ends, to all intents and purposes, with the job of appropriating. Hence, we have, the picture of a Government department presenting new heavy demands for its budgetary requirements in spite of a huge carryover of funds which it enjoys from previous appropriations.

Senator KENNEDY expressed the hope, following passage, that the House also would act favorably on the bill during this session. A similar bill lost out in the House last year, following the Senate's approval of the measure, and the same fate may await the proposal if the House does get around to action on it before adjournment. The bill deserves enactment as a logical change in present practice that almost undoubtedly would result in important savings and a solution of budget and appropriations problems in line with the actual and immediate need for money to operate the vast enterprise of the Federal Government.

Address by the Honorable Ralph Harvey

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I would like to include an address given by one of the hard-working and capable Members of this Congress; namely, United States Representative RALPH HARVEY, of the 10th District of Indiana.

Congressman HARVEY deals with the subject of Agriculture and I am sure that all of us who know him recognize he is an expert in this field. Ralph is honest and sincere in his convictions and he will express them whether they meet with your approval or whether they do not.

I recommend his remarks for reading to each and every Member of the Congress. These remarks along with his excellent record will verify the statement, we need more Ralph Harveys in Congress.

ADDRESS OF UNITED STATES REPRESENTATIVE RALPH HARVEY, 10TH DISTRICT, INDIANA, MEMBER, HOUSE COMMITTEE ON AGRICULTURE

Meeting with you today is an appreciated privilege. I know that virtually every member of this fine audience is personally and officially interested in the well-being of agriculture in the Midwest.

I have come from Washington for more than the pleasure of fellowship. I am calling your attention and sober thinking to a movement that may very well play a decisive role in the agricultural enterprise that our section of the country represents.

It is not easy to relate to you the story that I must, nor do I relish the duty of relaying news of a disturbing nature. My effort will be to outline a factual situation and then rely on you, after due discussion, to make such recommendations as you find warranted.

To all of us, the farm problem is an old and familiar subject. Many here have lived and farmed through 40 years, and looking back now, are aware of all that has happened to farming during that period of time.

Today's farm problem for us—and this I cannot too strongly stress—is not the same problem of 40, 30, or even 10 years ago. It is akin to earlier problems in one essential—overproduction, the constant recurrence of more food and fiber than the market can absorb.

By way of review, I will attempt to set forth some of the factors in this problem. First of all, the period of the past 15 years has marked a rapid evolution in agriculture, particularly in the Midwest. During that time highly efficient farm machinery and equipment have become available for our use. It has not only drastically reduced the manpower requirements of farming, but has multiplied per unit production. At the same time we have made strides in crop variety improvement and in the use of commercial fertilizing. Undeniably, too, the general stimulus of an excellent and growing domestic market has likewise contributed to the impact on our agriculture.

Farmers, in endeavoring to cope with this evolutionary period, have made many changes. Some, in our area especially, have prospered beyond their dreams—if you recall the goals of the average farmer before 1942. Others, because they could not enlarge their operations, have been compelled either to live on a subsistence income or supplement their income with off-farm employment. In any event, we must acknowledge the fact that the American standard of living has gone up for all our people, and farmers are no exception.

Due to the effects of inflation as well as the cost of higher living standards, the farm family of today, to live as well as their city neighbors, need 3 times or possibly even 4 times as much dollar income as was needed 40 years ago. During this time, too, the Federal Government has made numerous attempts to assist agriculture.

We can agree, I am sure, that the farflung activities of the Department of Agriculture, including research, experimental work, extension service, and organizational competition for youth, have contributed immeasurably to the productivity and better living of our farm families. But in the repeated efforts to reduce farm surpluses, there has been less success, and the problem of surplus commodities remains the most serious for all agriculture.

In Washington now we are in the throes of reevaluating our farm programs to determine what our policy should be in the future. Several of the efforts that seemed in years past to be the best and most logical have been either discredited or discarded, so we are still searching for the proper approach to the problem.

There are many among you today, I feel certain, who may be saying the best thing that could happen would be for the Government to get out of the farm picture entirely and let farmers have a survival program. If that were the best answer, it obviously would be the easiest one from the standpoint of Congress.

While I have frequently heard it said that Congress has dwelt on the problem for political reasons, and because politicians want to interfere in the lives of farmers, I say to you that in my judgment nothing could be further from the truth. Frankly, and as a farmer, I can say that no problem confronting the Nation can be escaped by the Congress—by the very nature of our being, that is the way it must be. And so, however simple it might seem just to forget the whole thing, there is too much at stake to consider the easy way out.

It isn't too easy either for us in the Midwest to face up to the farm problem. You see, through the years we have had an extremely fortunate set of circumstances so that the farm problem has been much less oppressive to the Midwest than to many other areas of the country.

There are three great crop-producing areas in the United States, namely, the Cotton, the Wheat, and the Corn Belts, with, of course, some overlapping in all. The wheat and cotton producers have had a continuing problem because they depend on foreign export for a substantial part of their market. We in the Midwest grain and livestock farming area have not been dependent on overseas markets for too much of our production, and from that standpoint have been most fortunate. More than that, and more perhaps a matter of luck than anything else, our area has been just about the right size to produce the right amount of food for the people of our country. A flexible type of farm program has been fortunate for us and workable, too. We have had a sufficient variety of outlets for our products, not only as crops but as processed livestock, to enable us to say out of serious difficulties. This has not been true of the other major crop areas. As long as nothing happened to distort or upset this natural balance of supply and demand, we of the Midwest could look upon the farm problem with a good deal of objectivity and even feel a little superior.

Due now to a whole series of events (and agriculture is subject to progress and development even as the rest of our economy) we are confronted with a new problem.

As indicated earlier, the other major crop areas are faced with the problem of how best to utilize their idle acres. The export trade that they enjoyed during such war years as 1941–53 has been partially lost, and the resultant idle acres meant also a setback in their improved standard of living. It has been only natural for these farmers, assisted by the Extension Service of their area, to try to find something to replace this income. The plant breeders came to the forefront with an answer.

As long as feed grain production was confined largely to our Midwest area, and the feed converted to livestock, we could look forward to continuing prosperity. Now, however, there are thousands of acres—idle acres, so to speak—in the Great Plains area, stretching from the Texas Panhandle to the Canadian border. And there they have found a new crop that can be grown successfully and profitably.

At this point, I should like to dispel a statement that is rather widely quoted to the effect that "corn, as a commodity, has been increasing in production." As a matter of fact, we are at an alltime low as far as corn acreage is concerned. National production has remained remarkably steady because farmers have better varieties, better fertilizers, and better equipment to produce corn. The result has been a consistent harvest of corn, varied only by weather conditions. Incidentally, the decrease in corn acreage during the past 25 years is offset by the increase in soybean acreage.

The production of corn and such other minor supplemental grains as we grow, with their volume, too, remaining steady, has naturally governed and influenced the production of livestock. While we have achieved some increase in the efficiency of livestock production, the overall pattern has not notably changed. Approximately 80 percent of corn is fed to livestock, and 20 percent goes into commercial uses. At the present time, were it not for outside influences—I mean outside our Midwest—we might again be confident of continued prosperity.

There has come into the picture, however, the new crop of which I spoke, and it is grain sorghum. The plant breeders have devised a new hybrid sorghum that is effectively adapted to the Great Plains area. Production this year will be up 79 percent over the 10-year average, and with the drought broken in the Great Plains, we may except a sensational upsurge in the production of this new crop. The total planting for this year has been reported as 25,664,000 acres. Thus, for the immediate future and for some years to come, I believe we are going to witness a substantial increase in feed grain production. Since grain and livestock prices follow a parallel pattern, a grain glut would bring a drastic reduction in livestock prices and could very well have a severe impact upon our whole economy. Cheap grain means cheap livestock.

It is important to remember that approximately 60 percent of all farm income is derived from livestock, and livestock, after all, represents nothing more than a market outlet for grain produced in the Midwest.

Those of us who could foresee the problem were hopeful that the soil bank might absorb many of these acres, particularly in the Great Plains, and that the financial attractiveness of the program would help solve the problem. It is common knowledge, however, that although the program is barely under way, the soil bank is having difficulties in Congress. Since, too, it is fairly conceded that such a program would require 10 to 15 years to become fully effective, it does not appear that we can look forward to soil bank operations.

To be sure, we are doing other things as well. We have the foreign surplus disposal program, but grain has not been historically an exportable commodity in sizable quantities. Whereas the cotton and wheat people can always dispose of their surplus, if willing to sell cheap in the world market, even a low price holds forth no substantial inducement for the solution of our surplus feed grain problem. Some of us, too, are aggressively supporting legislation to speed the expanded industrial uses of all farm production.

This is the situation we face today, and it accounts for my being here. It seems to me that unless we are willing to face up to the problem and accept the realities of the production pattern, we will not be doing justice to our economy.

There is to be held in Washington early next month a meeting of the various commodity groups, and I feel that corn and feed grain producers should be represented at that meeting. The new theory for meeting the farm problem seems to be for each commodity group to attempt to draft a program that will help them solve their individual problems. All major commodities, ironically enough, have organizations representing them from a marketing standpoint—all, that is, except corn, the most valuable of all commodities. Yet because it is mostly marketed through livestock, there has been no reason for corngrowers to have a marketing division in their organization. I would be less than fair, however, if I did not say that in the months to come it may very well be that the whole pattern of our farm program will be changed and the new pattern emerging may be the result of the joint efforts of the various commodity groups. In the final analysis your Government can only furnish the machinery to carry out any program; you yourselves must determine what you want, and do most of the work. It is for this reason that I feel corngrowers, as such, should be represented, and I am suggesting that, even should you not care to participate in the Washington meeting of August 5, you may wish at least to have observers there to keep corngrowers of your various organizations advised of what is transpiring. Then if events seem to indicate, corngrowers may wish to participate with other groups in formulating a new approach to the farm problem.

There are undoubtedly questions you would like to ask, and I shall be happy to entertain them. It is my hope that out of a roundtable discussion, those of you representing various States can come forth with a solution or at least a better understanding of the problem.

SUMMARY

1. In recent years there has been no marked change in total corn production, either within or outside the Corn Belt.

2. There will continue to be a steady increase of feed grains, chiefly sorghum in the Great Plains area.

3. Expanding feed production is upsetting the grain-livestock balance which has been the buttress of our Midwest farm prosperity. Cheap grain means cheap livestock.

4. The Surplus Disposal Act, while working well for many commodities, has had little effect on livestock products, and even less on surplus grain.

5. Surplus grain disposal through greater industrial uses is a long-range prospect, but not an immediate remedy.

6. The future of the soil bank is not bright.

7. As of now, the new approach to a farm program appears to be single commodity treatment in contrast to across-the-board programs of the past.

8. The scheduled August meeting of farm groups to draft the single-commodity program omits corn and feed grain interests.

SUGGESTED ALTERNATE APPROACHES TO A CORN AND FEED GRAIN PROGRAM

A. Include corn and all feed grains in the same category and—

1. Place all acres of both under control and guarantee 70 to 90 percent parity;

2. Remove all production controls and permit the Secretary of Agriculture to fix the support level.

B. Support the soil bank as best hope and leave other control programs as they are.

C. Take off all controls and follow a survival policy.

The Case of the Farmer Who Banked a $209,701 Soil-Bank Payment

---

EXTENSION OF REMARKS
OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. UDALL. Mr. Speaker, several weeks ago I called to the attention of the House Arizona cotton farmer, Jack A. Harris, who put a 1,600-acre farm in the soil bank in return for a $209,701 payment. At that time I related that I had information which led me to believe that this same farmer had simultaneously launched a new farming venture in another location in Arizona and was planting nearly 4,500 acres of "penalty" cotton outside the price-support program. In the interim Harris readily admitted the nature of his operation when confronted by the press.

Subsequently I protested his contradictory activities and requested that the Secretary of Agriculture investigate Harris' case to determine if his soil bank contract could be forfeited.

Many of my colleagues have expressed interest in this extraordinary case, and in order to provide a rounded picture of Harris' farming operations—and philosophy—I am including as part of these remarks my letter to the Secretary of Agriculture and the Department's reply, and an article which appeared in the July 22 issue of Time magazine:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., June 27, 1957.

Hon. EZRA TAFT BENSON,
Secretary of Agriculture, Washington, D. C.

DEAR SECRETARY BENSON: I am writing to call your attention to the facts which I presented to the House in a speech last Monday concerning the operation of the soil-bank program in Arizona. (I am enclosing a copy of my remarks as they appeared in the CONGRESSIONAL RECORD.)

I think you will be particularly interested in the case of the Pima County, Ariz., farmer who is to receive a $209,701 soil bank payment. This producer, who has been identified as one Jack Harris, has admitted to the Arizona press that he is growing nearly 4,500 acres of penalty cotton at another location in my State during the same crop year in which he signed an agreement to take his cotton land out of production.

In my opinion, this is a flagrant and outrageous violation of the whole spirit and purpose of the acreage reserve program of the soil bank. I have just reread the Soil Bank Act, and I note that it confers upon you the power (sec. 1031) to terminate contracts and "forfeit all rights to payments or grants under the contract where any producer is guilty of any substantial violation of the contract."

I would like to urge that you undertake an immediate investigation of the Harris case to determine if his contract cannot be forfeited. I submit that our efforts to achieve economy are a farce if this man can pursue the course of action he is following and still receive a gratuity from his Government totaling nearly a quarter of a million dollars.

As perhaps you know, the cotton growers of my State have an outstanding record for honesty and self-reliance, and it is highly regrettable that one or two producers should bring discredit on a whole industry. The fear of my farmers today is that our system of price supports is pricing cotton out of the competitive market, and they favor the elimination of subsidies and return to the free market at the earliest feasible time. For these reasons the soil bank has been unpopular with the Arizona cotton men—indeed, last year the Arizona Cotton Growers Association wrote Senator GOLDWATER and urged him to have the soil bank killed.

I firmly believe the integrity of our Government is at stake in this issue, and I urge you to inquire into it at once.

Sincerely,

STEWART L. UDALL.

DEPARTMENT OF AGRICULTURE,
Washington, D. C., July 16, 1957.

Hon. STEWART L. UDALL,
House of Representatives.

DEAR CONGRESSMAN UDALL: This is in reply to your recent letter concerning the operation of the soil-bank program in Arizona. We realize that there has been some delay in replying and would like to explain that this has been caused by an effort on our part to get additional information in regard to the case involved, namely, the cotton acreage reserve agreement signed by the Harris Ranches, Inc., in Pima County, Ariz.

Harris Ranches, Inc., entered into a 1957 acreage reserve agreement covering 1,666 acres located in Pima County, Ariz. The total compensation payable under the agreement amounts to $209,701.80. While you take exception to the sum involved, it should be poinetd out that the purpose of the acreage reserve program is to obtain a reduction in production below that which the producer is permitted under the allotment and quota programs, and to relieve the economy of the strain of excessive production of surplus agricultural commodities. In order to give all farmers with allotments an opportunity to participate in the 1957 program, the Department set initial maximum limits on the number of acres which could be placed in the program. In the case of cotton, such limits were removed early in the sign-up period and all of the acres offered by a producer were accepted in the acreage reserve agreements. It should be noted that compensation was based on the normal yield for the number of acres involved. If the acreage had not been placed in the soil bank the producer could have planted the 1,666 acres to cotton and obtained price support thereon, with a resulting probable expense to the Government in excess of that payable under the soil-b[illegible]nk program.

The reports which we have do indicate that Mr. Jack Harris, a stockholder in Harris Ranches, Inc., is also a stockholder in the Jaresa Cotton Co., which at the present time is producing what is known as penalty cotton on an estimated 4,500 acres in Maricopa County. This cotton is being produced without an allotment. Production of penalty cotton is not a new practice. While it is not generally done, there have been other cases in the past where cotton growers have carried out this practice. In order to discourage

this type of cotton production, the Congress has seen fit to set a penalty of 50 percent of the parity price for cotton produced in excess of the allotment. In this case the penalty for upland cotton will amount to 18.5 cents for every pound of the farm marketing excess based on parity price for cotton as of June 15, 1957. The initial farm marketing excess is determined by multiplying the normal yield per acre established for the farm by the excess acres of cotton. If our figures of 4,500 acres are accurate, and on the basis of a normal yield of 2 bales per acre, the penalty involved would amount to approximately $800,000. If the producer establishes to the satisfaction of the Secretary that the actual yield per acre of lint cotton is less than the normal yield per acre established for the farm, a corresponding reduction will be made in the farm marketing excess and the penalty for the farm. There may be some question as to whether the above-mentioned penalty is effective in controlling this problem; however, when this penalty is fixed by law the Department of Agriculture has no choice in the matter.

The 1957 acreage-reserve program did not require that a producer having an interest in more than one farm stay within his allotment for other farms in order to participate in the program for a particular farm. The soil-bank program is supplemental to the acreage allotment and marketing quota programs, and it has been the practice under such programs and the price-support program to check farms on an individual basis and not require cross-compliance as between farms. For this reason, cross-compliance between farms was not required under the 1957 acreage-reserve program. The feasibility of requiring cross-compliance among farms for price-support purposes has been explored in the past, but any such procedure would be extremely difficult to carry out from an administrative standpoint. In addition, the penalty which producers incur in harvesting commodities in excess of the farm allotments are, in most cases, sufficient to deter them from such a practice.

On the basis of the information which we now have available, it would appear that Harris Ranches, Inc., was eligible to participate in the program with respect to the 1,666 acres in Pima County. We are, however, continuing to explore the matter and will take whatever action is necessary and proper if it should develop that the corporation was not eligible to participate in the program. We are also giving careful consideration to ways and means of revising the regulations so as to eliminate the problem raised by multiple-farm interests.

Sincerely yours,

TRUE D. MORSE,
Acting Secretary.

P. S.—The pending agriculture appropriation bill limits to $3,000 the amount which may be paid any producer under the 1958 acreage reserve program. This restriction may well limit the effectiveness of the program by reducing participation, particularly among farmers who desire to take their entire farm out of production.

[From Time magazine of July 22, 1957]

SOIL BANK FIASCO

When House-Senate conferees voted to extend the life of the Agriculture Department's soil bank for another year (see National Affairs), many Congressmen did so reluctantly. Last week Arizona's Democratic Congressman STEWART L. UDALL turned up a case that went a long way toward explaining their reluctance. The case: Arizona Cotton Farmer Jack A. Harris, who put his entire 1,600-acre Pima County cotton farm in the soil bank in return for a $209,701 Government payment, then turned around and plowed up a new farm to grow three times as much cotton. Cried Congressman UDALL: "Here is boondoggling on a grand scale. Indeed, the word boondoggling is utterly inadequate to describe this program. We should coin a new term, boonswoggling."

HOW SILLY

In singling out Harris, UDALL picked on a farmer-businessman who is actually on his side. Last year Harris was credited with being a force behind an Arizona Cotton Growers Association resolution calling for an end to the soil bank and to Government farm price supports and controls. This spring Harris watched in strong disapproval as county soil bank authorities offered farmers $145 an acre not to plant cotton. Then Harris put his whole Pima County farm in the bank. Explaining his apparent flipflop, Farmer Harris says: "I wanted to show how silly, and how unnecessary, this whole thing is." He also saw a chance to turn a huge profit.

Leasing 4,500 acres of farmland in Arizona's Maricopa County, Harris trekked his work crews, tractors, and cotton gin 125 dusty miles to the farm and planted it to cotton. This fall, when he harvests his crop, he will have to pay a penalty of 18½ cents per pound for growing cotton without an allotment. But even if the penalty amounts to $800,000 as it may, Farmer Harris will feel no pain. A fair-to-middling crop will likely yield him $1,200,000, plus his soil bank payments, or a profit of $600,000. Harris also has a 2,000-acre cotton patch near Fresno and a 1,000-acre field near Phoenix, both eligible for full price supports.

TAXPAYERS' LOSS

Washington officials admitted last week that cotton-picking Jack Harris was not alone in picking the soil bank clean. So many other big-acreage cotton farmers are growing penalty cotton that the Agriculture Department long ago gave up any attempt to count them. Rather than cutting cotton surpluses through the soil bank, Harris had made the cotton surplus considerably worse. The 9,000 to 13,500 bales of cotton that he will grow on his new farm will take away the market for an equivalent amount of other cotton grown in compliance with the rules. This other cotton will end up in Government warehouses, causing the taxpayers a further loss of up to $960,000. Last week, enjoying his demonstration, Harris said he looks forward to early attainment of his real goal: "Freedom to grow cotton for the world market with no supports or controls."

F. Albert Reiman

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. BRAY. Mr. Speaker, I am saddened to report to the House the death of a former staff employee, Mr. F. Albert Reiman, of Vincennes, Ind. Mr. Reiman was a member of the professional staff and served as assistant clerk to the Committee on Labor and Education throughout the 80th Congress. There are many still in the House who were acquainted with him during his period of service to the House of Representatives.

Mr. Reiman returned to his real-estate business in Vincennes at the conclusion of the 80th Congress. A onetime Republican candidate for mayor of Vincennes, he was active in many civic and political affairs. He was a past master of the masonic lodge, a past president of the Kiwanis Club, a member of the Shrine, Scottish Rite, Harmony, and Elks Club. He served as an elder in the First Presbyterian Church.

I am sure there are many in Washington who were deeply impressed by Mr. Reiman's sincerity and warm personality. His friends in the Capitol are many and we all share the grief of his widow, Mrs. Margaret Reiman, and his son, James.

The Menominees Deserve a Fair Deal

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. LAIRD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Green Bay Press-Gazette, Green Bay, Wis., of July 19, 1957:

THE MENOMINEES DESERVE A FAIR DEAL

Congressman MELVIN LAIRD, followed by other Wisconsin leaders, has good reason to be incensed at the United States Department of the Interior in its run-around for the Menominee Indians. And the attitude of the administration toward insisting upon quick release of the tribe from Federal supervision contrasts sharply with its almost fawning efforts to win friends in other lands. Is the administration's aim merely to aid where the biggest dividends are paid or does it really want to help people to help themselves?

Several years ago the Menominees witnessed a flagrant example of this cavalier treatment. Senator ARTHUR WATKINS journeyed in for a 1-day stand at Keshena and then announced, from this extensive survey, that the tribe should be cut loose as soon as possible, despite all the evidence from people who had been studying the problems for months.

The Wisconsin State Indian Commission, headed now by Attorney General Steward Honeck and made up of intelligent white and Indian membership, has backed Congressman LAIRD's bill to give the Menominees 2 more years to get their affairs in shape. We do not argue that they should be kept indefinitely in Federal protection and neither do the Menominees. But after such a long tenure under Federal patronage and with the financial and personal problems to be eased, the severing will not be simple. The Interior Department not only apparently did not show all its cards to Congressman LAIRD, it was snippish and arrogant in its attitude that mineral wealth may lie in the area or that the commercial value of tourist travel is negligible.

The administration has no trouble in bending over backward to soothe the ruffled Japanese, to comfort the troubled Saudi Arabians or to rush millions of dollars worth of jet planes to Yugoslavia. What about some intelligent and compassionate consideration for Americans who haven't always received the best of the bargain in their dealings with the Government? Maybe the Menominees ought to threaten to trade with the Red Chinese or smile benignly at Khrushchev to get a fair deal.

We're on the Road

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks I would like to insert at this point in the RECORD an article on the highway program in the State of Washington. This article appeared in the Laborer, the official publication of the International Hod Carriers, Building and Common Laborers' Union of America.

This article, written by R. A. Moisio, a resident of my native State of Washington and a member of the State highway commission, describes briefly the activities of my State in developing adequate highways to handle today's increased traffic loads.

The State highway commission, a bipartisan board, has, over the past decade, advanced a forward-looking, sound program of construction, improvement, and constant maintenance of the State's highway system. I am pleased that the Federal-Aid Highway Act of 1956, which I supported in the Congress, will play a significant part in the future expansion and modernization of our road network. It is also gratifying to me to note that much of the current construction is being done in the Second Congressional District, where soon a four-lane road will reach from the outskirts of Seattle to the Canadian border.

Text of the article is as follows:

HIGHWAY PROGRAM IN HIGH GEAR

(By R. A. Moisio)

Highway construction in the State of Washington is at an alltime high, partly because of impetus from the Federal-Aid Highway Act of 1956, but mostly because of the interest and determination the people of the State of Washington have shown, as evidenced by actions of the State legislature, road groups, and individuals.

The calendar year 1956 set a record for the amount of money in contracts awarded. More than $45 million in highway construction work was contracted in that time.

This year it is expected that even that high record will be topped, and following years will probably show like increases. More than $27 million in highway construction contracts have been awarded since January 1, 1957. For the fiscal year beginning July 1, 1957, and ending June 30, 1958, about $84 million in construction contracts is programed.

Right now the Commission has more than $50 million in highway construction contracts underway around the State.

All grading and bridge construction work on the 8-mile Olympia Freeway is now under contract. Later this year the paving work will be under contract. Also, illumination, signing, and other finishing-touches work is yet to be contracted. This $10 million facility will eliminate a serious bottleneck for U. S. 99 traffic, providing safer, more comfortable, more economical travel to the motorist.

Another bottleneck of U. S. 99, that at Fort Lewis, is also being eliminated. The 3-mile stretch of highway from the east Nisqually Hill to North Fort Lewis, where a previously built section of freeway facility ended, is being brought up to interstate standards. This means that all traffic lights and intersections at grade will be eliminated. No traffic jams will develop, as they have in the past, because access will be limited and there will be no reason for traffic to slow or to stop.

The first contract for construction on the Tacoma-Seattle-Everett Freeway was awarded by the commission may 22. Under this contract three bridges south of Tacoma near Ponders Corner, to carry New York Avenue and Carlyle Road traffic over the route of the freeway, and to carry freeway traffic over Clover Creek, will be constructed. Much other work is programed for the immediate future on this facility. Elsewhere on the 65-mile freeway further preparation of plans, location work, and right-of-way acquisition is being carried forward by the commission.

A new highway district has also been created for work on the freeway within the limits of the city of Seattle.

North on U. S. 99, work is continuing on four-laning the highway toward British Columbia. Three contracts for structures to separate traffic on the route of the Bellingham Freeway are under contract.

OTHER CONSTRUCTION

Four-laning of that vital east-west artery, the Snoqualmie Pass Highway, is continuing. Four separate contracts providing for grading for the wider highway on the east side of the pass from Keechelus Inn to the Kachess River, about 11½ miles, were awarded April 29. They call for considerable blasting and solid rock excavation close to the present highway. Since there is no adequate detour around that area, it is necessary to close the highway during working hours, 5 a. m. to 1 p. m. This will also allow the grading work to be accomplished in this one construction season.

Construction is continuing on the Spokane Valley Freeway between the city of Spokane and the Idaho border on U. S. 10. About half the facility is completed and open to traffic. On June 19, the Commission awarded a contract for paving more than 5½ miles of the facility from Pines Road outside Spokane east to Greenacres.

These are some of the big projects underway and planned. Other work is underway on State primary and secondary highways including: State Highway 9, the Olympic Loop route; on State Highway 8, the Columbia River Highway; on State Highway 10 up the Okanogan River Valley to British Columbia; and on other sections of State highways.

There is a great range of work going on in Washington, from complete relocation of long sections of highway through repaving to oiling roadways and blading of shoulders.

Every road cannot be a four-lane, divided highway, but the Washington State Highway Commission is working toward the construction and maintenance of comfortable roads, adequate for the traffic they will carry in the future.

Why Can't ACP Funds Be Used To Rebuild Flooded Lands?

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mrs. KNUTSON. Mr. Speaker, I have just received a letter from one of the farmers union locals affected by recent floods in my district. He suggests emergency ACP payments at $5 to $6 an acre be made to help recondition the flooded farm land.

Because of the merit of this approach, I request permission to insert this letter in the RECORD for all to consider:

GOODRIDGE, MINN., *July 22, 1957.*

COYA KNUTSON: The Erie Farmer's Union local at its last meeting passed a resolution. That emergency ACP payments at $5 to $6 an acre be made to help recondition the flooded farmland. This would be of most aid to the farmers which have had flood damage to cropland in a serious degree. and also that emergency credit of 3 percent for a period of 5 to 10 years be available to farmers' where the disaster had struck, and that you give this resolution your support.

ALF LOBKEN,
Secretary.

Mr. Jones' Record Holds Cause for Deeper Digging

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. LOSER. Mr. Speaker, I wish to include in the CONGRESSIONAL RECORD an editorial which appeared in the Nashville Tenneesean on Friday, July 26, 1957.

This editorial concerning the appointment of Mr. Arnold Jones to the vacancy on the TVA Board will be of interest to all friends of the Tennessee Valley Authority.

The editorial points out that during the time Mr. Jones was a member of the Kansas Corporation Commission he was largely instrumental in applying restrictive shackles to rural electric cooperatives while giving increased freedom to private power. I believe after reading the editorial you will agree that this noncontroversial person has become rather controversial. The editorial follows:

MR. JONES' RECORD HOLDS CAUSE FOR DEEPER DIGGING

When the Deputy Director of the Budget Bureau, Mr. Arnold Jones, was appointed to a vacancy on the TVA Board by Mr. Eisenhower, it was noteworthy that little was known of him generally and practically nothing was known of him by the people of the Tennessee Valley who might have expected to know something of the person chosen to serve in such a high position among them.

It was obvious that Mr. Sherman Adams knew all about him, and that he fitted somewhere in Mr. Adams' planning for TVA. It was also obvious that as a member of the Budget Bureau he had worked among those whose outright enmity for TVA has never been hidden—the place that played incubator to the infamous Dixon-Yates deal, although that preceded Mr. Jones' arrival.

The President called him the most capable and disinterested man I could find for the job. Kansas Senator FRANK CARLSON called him a very good man, and several other old guard Republicans gave him their endorsement. The Budget Bureau prepared a biography with a minimum of information. Mr. Jones commented, "I guess I was chosen because I seemed to be a noncontroversial figure." He added that he guessed he could be called friendly to TVA, and then

clammed up, perhaps for reasons that have become apparent as his past record is unfolded.

Senator THRUSTON B. MORTON, of Kentucky, more favored by Assistant President Adams than his colleague, Senator JOHN SHERMAN COOPER, asserted, "You can call him a friend of TVA." He went on to say that Mr. Jones' record as a member of the Kansas Corporation Commission, which regulates utilities, was "highly satisfactory from the point of view of the REA."

Unsatisfied with sketchy knowledge about a man who could play so vital a role in the TVA, this newspaper assigned Mr. Nat Caldwell to go to Kansas and take a close look into the background of Mr. Jones.

Those findings have been published in this and other newspapers, and their import is foreboding. Rather than a friend of TVA, Mr. Jones is found to have had strong leanings in the past toward private power. And his public career seems to have been one of conflict of interest, favoritism, petty bureaucracy and political opportunism.

Mr. Caldwell found that this Eisenhower appointee, while a member of the corporation commission, was largely instrumental in applying restrictive shackles to rural electric cooperatives while giving increased freedom to private power.

As a commission member, Mr. Jones so refined the dual certificate policy of overlapping service areas that rural co-ops were forbidden to serve industry, or the oil fields. Their areas were raided and these co-ops were gradually reduced to serving only farmers inside specified territory. The six big Kansas power companies have territories allotted to them that coincide with the co-op areas and under the present policy can raid co-op customers at will, hinder their growth, and by cutting their volume of customers, force higher rates. These co-ops now must win freedom or fail completely.

Mr. Caldwell was also informed that while a member of the commission, Mr. Jones' votes, with rare exceptions, were favorable to big companies. A veteran co-op attorney remembers bitterly that the commission was so partisan the private power firms didn't even have to carry the ball when co-op cases were heard.

Too, a former business partner in an accounting firm confirmed that Mr. Jones was a member of the firm which served clients regulated by the commission at the same time he was a commissioner. But the former partner couldn't produce his records, because he had burned them less than a month ago. He did remember that Mr. Walter Fees, multimillionaire oil and gas executive, was a client while Mr. Jones was a commissioner. But Mr. Fees, also State GOP chairman during the Jones tenure, couldn't be certain about his dealings with the firm. Fire had also destroyed his office records.

In later years, with the help of Dr. Milton Eisenhower, Mr. Jones was lifted out of the Army and into a position at Kansas State College. A majority of the faculty members still there recalled memories of a man who created vast amounts of redtape, who damaged morale, and who was ruthless in official dealings as dean of financial administration. So much was he a disturbing influence that he was finally demoted, a move which was kept quiet by college administrators because of Mr. Jones' influence with a GOP State legislature.

Before his appointment to TVA's Board, this "capable and disinterested" man, this "noncontroversial" figure wrote a letter from the budget bureau to a Senate committee in which he urged more stringent legislation for TVA and in which he proposed a bond limitation even below that recommended by his agency.

He is the man of whom a former Kansas associate said, "If they want a man on the TVA board who will magnify redtape until the people under him hate the agency and quit in disgust, he is the man."

In naming Gen. Herbert D. Vogel to board chairmanship, Mr. Eisenhower termed him capable also and said General Vogel shared his own philosophical approach to TVA. In fact, General Vogel shamelessly played errand boy for the private power monopoly on Dixon-Yates; he has continuously tried to frustrate the objectives of TVA; he has publicly depreciated its yardstick idea, and he has applied budget bureau thinking on its financing.

Are we now to have as a cohort of General Vogel this Mr. Jones whose "capability disinterest and noncontroversial" attributes are measured in terms of a double standard of public service and a penchant for privilege that allows him to stab the Kansas rural co-ops? Is TVA to become so enmeshed in his redtape that it is helplessly delivered into the hands of its enemies?

The Senate can answer this decisively. The record of the reticent Mr. Jones is clearer but it should be revealed even further. There is a pressing need for full inquiry into this latest contribution of Mr. Eisenhower—and Mr. Sherman Adams—toward maintaining TVA at maximum efficiency.

Public Power Takes Beating

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. ENGLE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include a column written by Warren Unna, in the Washington Post last week pointed out that public power is taking the worst beating it has had in years. This administration is apparently dedicated to ending all public-power development, and there is a concerted drive by the private utilities, supported by high-priced advertising in such magazines as Time. If there is to be any public power left in the Nation for rural electric cooperatives, and other public agencies, the advocates of public power will have to put on a better and more coordinated fight than they have up to the present. Mr. Unna's column is attached for the information of the Members:

PUBLIC POWER TAKES BEATING

Public power has been taking a drumming this week like it has seldom had.

Wednesday, the House Interior Committee voted 16 to 14 to kill a bill calling for a high Federal dam at Hells Canyon, on Oregon and Idaho's Snake River border.

Also Wednesday, a Federal Power Commission examiner recommended granting the Pacific Northwest Power Co. a 50-year license to build two other dams on the Snake River—Mountain Sheep and Pleasant Valley—in lieu of a high Federal dam at Nez Perce.

Yesterday, a House Interior Subcommittee closed hearings on the Fryingpan-Arkansas project which would divert the waters of the Fryingpan River in Colorado over the Continental Divide and into the Arkansas Basin.

The only trouble with this last is that it is not slated to get through Congress. Democratic endorsement of the administration-backed Fryingpan-Arkansas was tied to Republican endorsement of the Democratic-backed Hells Canyon.

Result—the Nation's natural dam sites will have less than maximum development at Hells Canyon, Mountain Sheep, and Pleasant Valley and no development at all at Fryingpan-Arkansas.

The Hells Canyon defeat has been the most heartbreaking to the public power advocates. Hells Canyon is the deepest undeveloped natural gorge on the North American Continent and its Snake River waters affect power, irrigation, and water storage of the entire Pacific Northwest.

The Idaho Power Co. has been licensed by the Federal Power Commission to build three small privately owned and operated dams—Brownlee, Oxbow, and little Hells Canyon—in place of the one Federal high dam at Hells Canyon. Construction has begun on Brownlee and is slated to begin on Oxbow. Senator WAYNE MORSE, Democrat, of Oregon, author of the Federal dam bill, has charged that the third dam was merely authorized on paper by the FPC so that the private development would make a better showing when compared with the public development. He doubts that the small Hells Canyon will ever push its head above water.

Although defeated by the Senate last year, the high Federal Hells Canyon Dam was given a 45-to-38 vote of approval by the Senators this year, on June 21. It required some horsetrading: Pacific Northwest Democrats voted to refer the civil-rights bill to committee instead of putting it on the Senate Calendar, southern Democrats reciprocated by coming out for Hells Canyon.

But the luck of the Hells Canyon people ran out in the House when southern Democrats combined with the Republicans to kill the project in committee. The actual Senate bill has yet to be voted down, but the coup de grace has been given an almost identical bill.

Both the high dam at Hells and a high dam further downstream at Nez Perce form the guts of the Army engineers report of 1948. This report said the dams were essential to giving the Columbia River and its Snake and Clearwater tributaries their full potential of 27 million acre-feet of water storage. Both projects are multipurpose and too expensive for anybody but the Federal Government to undertake.

Interestingly enough, a staff study by the FPC itself last March also said a high Nez Perce was vital for proper flood control. And Secretary of the Interior Fred A. Seaton, although not advocating a Federal Nez Perce, at least asked the FPC to hold up its decision on a private Pleasant Valley and Mountain Sheep until he had a chance to see if a high Federal Pleasant Valley Dam wouldn't be preferable.

Seaton's request had its answer Wednesday when the FPC examiner went ahead and made his recommendation anyway. Actually, the Secretary's request for consideration of a high Pleasant Valley Dam might have proved embarrassing to the FPC. Such a dam would have backed up the Snake waters so high they would have flooded over the site of the little Hells Canyon Dam the FPC already had licensed to Idaho Power.

The Fryingpan-Arkansas situation is something else again. This is a project the administration wants. The project would cost $160 million. Its 112,000-kilowatt power production would be very much secondary to the irrigation benefits provided by diverting water from the eastern slope of Colorado's Continental Divide to the western slope.

The project was approved by the Senate without controversy June 27. Then came the Hells Canyon vote in the House Interior Committee and the decision of Representative J. EDGAR CHENOWETH, Republican, of Colorado, to change his "yes" vote for Hells Canyon last year to a "no" vote this year.

CHENOWETH, whose home State very much wants the Fryingpan-Arkansas project, was in a box.

From the Democratic side, Montana's JAMES E. MURRAY, powerful chairman of the Senate Interior Committee, warned a Fryingpan-Arkansas conference on a House-approved bill "will never even meet unless Mr. CHENOWETH changes his position on Hells Canyon."

From the Republican side, both the administration and his colleagues told CHENOWETH he would have no Fryingpan-Arkansas if he didn't change his last year's position on Hells Canyon.

CHENOWETH changed.

It has been a bad week for public power.

Poles Protest Eisenhower Message

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. ANFUSO. Mr. Speaker, the Polish-language daily newspaper Nowy Swiat, published in New York, in the issue of July 24, 1957, carried on its front page the text of a letter in English addressed to President Eisenhower protesting his recent message of congratulations to the Polish Communist regime on the anniversary of the formation of the so-called Lubin Committee.

I believe this letter is most interesting since it speaks the mind of most Americans of Polish descent, in fact of all freedom-loving people who hope and pray for Poland's early liberation from the yoke of communism. I feel that the Members of Congress should know of this letter and of the views of Poles in this country, and for this reason I am inserting it into the RECORD.

The letter follows:

A LETTER TO THE PRESIDENT

DEAR MR. PRESIDENT: We learn that you have sent an almost cordial congratulatory message to the Polish regime on the anniversary of the formation of the so-called Lublin Committee, which has for many years been the regime of Poland.

We highly appreciate your good intentions, your friendly attitude toward Poland, toward a "friendly Poland." We are grateful to you for your sympathy and benevolence as well as your personal generous support of American assistance to the Polish people but we deeply regret that you have sent such greetings to the Polish regime on this somber occasion.

We say with certainty that your well-meant message will, to say the least, confuse and disappoint the Polish people, basing our opinion on the same reaction of millions of Americans of Polish descent.

You have congratulated the oppressors of Poland.

Not a government but a regime, a Communist regime that is hated by the Poles abroad and by us here. You have conveyed a message of friendship of our Government to a ruthless, Soviet-dominated clique. Your intention to address the Polish people, to share in their happiness, their pride and achievement will not reach them. The Polish people are neither happy nor proud of the regime and its bloody, disastrous achievements. They tolerate the Communist rulers as a necessary evil—but as an evil.

Your message, Mr. President, will undoubtedly be interpreted to mean that you favor the regime which the people hate.

We know how the Lublin committee came to be.

It was Stalin's strategic trick to blackmail the United States at Yalta.

It was Stalin who supported and forced that committee upon the Polish people.

It was Stalin who with ruthless brutality forced the United States to recognize the regime because he, and only he, recognized it.

The Polish people never recognized it, even under unspeakable duress.

The record of the Lublin committee is a record of many years of crime and persecution, of lawlessness and oppression.

We realize that the empty formality of a congratulatory message has no political meaning. But we are against burying the truth under artificial flowers and formalities.

We maintain that your message will highly disappoint and confuse the Polish people as it confuses and disappoints us.

Simple people, suffering people, have little understanding for diplomatic amenities. To them there is meaning in everything the United States does and says. They will not be able to grasp the meaning of your message.

Proposal for a New Deal in the Poultry and Egg Business

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mrs. KNUTSON. Mr. Speaker, everyone in our country has come to accept the fact that the family farmer is in trouble. This is particular true in the poultry and egg industry. The family farmer's wife has traditionally used the egg money for family needs. The drooping prices of the last few years have knocked out this element of a way of life. While the hardships are admitted, I have seen no evidence that the Department of Agriculture has taken any steps whatsoever, of a serious nature, to do anything about it.

Mrs. Ira Stetzel, of Paris, Ark., who operates Stetzel's Hatchery, is promoting control of production of hatchery chicks to bring the market supply of eggs, broilers, and other chickens into balance with consumer demand at reasonable prices. As with other production-control programs, governmental action would be necessary, but no large expenditure of public funds would be involved. I believe we should consider all the elements and angles that have any potential whatsoever. Under leave to extend my remarks, I request permission to insert in the RECORD the materials sent to me by Mrs. Stetzel:

The materials follow:

DEAR FRIENDS IN WASHINGTON: We are sure these periodic low poultry markets could be avoided by controlling the number of eggs set, both for broilers and for commercial laying stock. Our trouble is caused entirely by overproduction. We could avoid all these damaging low markets by limiting the number of eggs every hatchery can set. It could be so easily controlled, need cost very little, and it would be fair to everyone.

Read Who Is Putting the Pressure on the United States Department of Agriculture? This lack of planning resulting in one surplus after another, and calling on the Government to come forward and bail us out, in the end ruins our industry for everyone except the feed companies, while we pile up more and more Government debt and our small operators over the country are being destroyed. In the accounts we have read of the Brown probe of the poultry industry, the preponderance of those who testified were feed manufacturers. It is true Don Turnbull, from our Hatchery Federation, testified. But his testimony did not truly represent the thinking of the rank and file members of the industry. Please read From a College Poultry Department Head. This gives you a better picture of what is happening to our hatchery industry members, than Turnbull's testimony.

We beg you to take time to read and study carefully the papers we are enclosing. Our only hope, and the only hope of many thousands of independents in the poultry industry, lies with Congress. And Congress must act quickly, or it will be too late.

Maybe it is already too late, for some. Do you realize that here in Arkansas hatcheries hardly dare to express an interest in controls because feed manufacturers oppose controls, and every hatchery either is heavily in debt to the feed manufacturers, or they sell their chicks to feed dealers who are financed by the feed manufacturers and are heavily obligated to them. This is even more true in Georgia. And even in New Hampshire, Andrew Christie has indicated in his letter to me that that is his position. Charles Hawks, secretary and manager of our Arkansas Poultry Federation, tells me that 30 months ago all the hatchery members but 4 here in Arkansas were in favor of controls. The thing has changed that much in those 2½ years, no one dares speak out now.

A prominent member of our industry here in Arkansas told me why industry members were slow to sign any statements about their position on controls, because of the power feed companies hold over them since withdrawal of finances now would cause foreclosures and loss of market for their chicks. He mentioned sitting in on one of the feed market groups, and he said it was very interesting to get their thinking on the situation. They admitted that until now they had made all the decisions, and had held complete control. They showed concern that with all the talk of Government regulations and controls they might lose some of their power over the industry. They indicated they were going to do everything within their power to hold as complete control as possible.

Far from being a blessing to the small farmer of the South, this contract broiler growing is but a continuation of the old sharecropper system of the South. How can a child mature, when the parent makes all the decisions, collects the money, and pays the bills? How can the small farmer of the South ever become a businessman in his own right with a paternalistic feed company always at the helm, keeping him alive, and that is all. He needs to plan for himself, to face the consequences if he does a poor job, and to be able to make more than a bare living when prices are good.

Jesse Jewell, of Georgia, testified before the Brown committee that he had 1,600,000 broilers on feed at one time in his integrated operation, that he had lost 2 cents a pound over the last 18 months, a total loss of $1,200,000. Yet we understand at the same time he had just finished negotiations for a new loan from the Federal land bank for $167,500 to be used in further expansion in the broiler business. We do not know how Mr. Jewell reconciles his loss of $1,200,000 in the last 18 months and his further expansion. We believe he is one of

those who is paying losses in his business from outside income. It appears such competition will soon smother out small independents, and perhaps Mr. Jewell looks forward to a more profitable period when just a few such operators will control our poultry industry. Then prices can be manipulated so the consuming public will pay them a good price.

We hear repeated many times our industry is going through a revolution. Many folks seem to think this means a temporary rough period, and then if we get through it, everything will be fine. We believe the changes taking place within our industry favor bigness, and a monopolistic form of operation. What is a monopoly? If the processing plant tell the feed dealers they will not buy their broilers as they are ready for the dressing plant unless the dealers buy the chicks from them, thus cutting out all independent market from the independent hatchery, and permitting the processor to buy from the hatchery at 6 cents per chick and resell to the dealer at 12 cents, who in turn often marks up the chick to the grower to 16 cents, could that be a monopoly? That is happening righ here, friends. We know, because since late February it has been happening to us, with just one customer for our chicks, the processing plant. We say the changes in our industry are far from good. And we are sure if the independents are to stay on top they will have to have help very soon.

One more suggestion, and I am through. Instead of big loans at low rates to folks like Jesse Jewell to increase his gigantic integrated operation, why not make it possible for the small poultry farmer to borrow at low rates of interest, to give him operating capital, so he can go on the open market and bargain for his baby chicks and his feed? In the article by Leland Duvall which is enclosed, we find Benny Rogers marks up his chicks as much as 300 percent and his feed right along at least 25 percent. That would be approximately $2,300 markup on feed and chicks on a 10,000 lot of broilers, plus markup on medication and other items. The little poultryman, depending upon feed companies for finance, just hasn't a chance. He is nothing but a serf, in his present situation.

Would such loans be safe loans? If we limit production, then there can always be a fair price for poultry products that will make it a safe venture for the careful operator. If we can find a way of holding back these mammoth-size integrated operations, and make it possible for the small operator to buy on the open market, we can end this domination by the feed companies, and this economic serfdom growing within our industry.

Please let us hear from you. This is serious business to us. We can see where our life's savings can go down the drain, with thousands of others, if we cannot get some help to stabilize our poultry industry very soon.

At the last of the Leland Duvall article, bottom of second column on the back of the large sheet enclosed, tell us if you think there is any parallel between the Supreme Court ruling on the DuPont family, and what is happening in these integrated operations in the broiler and egg producing business in our poultry industry.

We look forward to hearing from you. Our future is in your hands.

Yours very truly,

MRS. IRA STETZEL,
Stetzel's Hatchery.

P. S.—After studying the material we have given you, would you consider a sound, workable bill that would stabilize the production of broilers, turkeys, and eggs by controlling volume of eggs set?

Let us handle it without subsidies, without price supports, without any Government buying of surplus whatsoever. Let us cut back on production by giving each hatchery a quota, and hold volume back to where consumer demand is willing to pay what our product is worth.

To the Honorable Members of the United States Senate and House of Representatives, 85th Congress.

DEAR FOLKS: We are sending material like these two sheets we are enclosing to the hatcheries over the country, telling something of the condition of our poultry industry, and giving a plan for control at the hatchery level.

We must stop this senseless overproduction, where thousands of baby chicks have been destroyed, and many others sold for as low as 3 cents.

We desperately need your help to save our individual businessmen and family-size poultry growers.

Yours very truly,

MRS. IRA STETZEL,
Stetzel's Hatchery.

P. S.—Please refer to our statement on the proration law, as used in the oil industry. We believe something like that—cutting production at the hatchery level—can stabilize our entire industry.

PLANS FOR STABILIZING THE POULTRY INDUSTRY

The following provisions should be made into a bill to be introduced in Congress:

1. Peg hatchery capacity at some retroactive date; probably January 1, 1956. It is unfair to the many hatcheries who have made cutbacks of as much as 50 to 80 percent during the months while the industry has been in such serious condition because of overproduction to recognize capacities added during this period.

2. Make it mandatory that no hatchery shall increase capacity until granted by the industry.

3. The Government shall limit and control incubator manufacturers to sell replacement incubators only, to replace present hatching capacity. In this case it might be necessary that some subsidizing be done by the Government, but only to incubator manufacturers.

4. Place a limit on the hatching capacity of any one person or corporation.

5. Request Congress to pass a law that any hatchery producing baby chicks must be licensed, through their State hatchery associations. Only hatcheries operating at date of census shall be granted licenses.

6. Whenever it becomes apparent that existing incubator capacity is not sufficient to supply the needs of the Nation, permits should be granted to all hatcheries, proportionate to capacity existing on date of census, to permit an increase in hatching capacity. These permits to increase capacity shall be negotiable withn the State.

7. A national hatchery board shall be set up by States or by districts to determine the percentage of hatching capacity to be used, and to set quotas. Members of the hatchery industry shall be elected to this board or council in such a way that all groups will be fairly represented. They shall serve for short terms, not more than for 1 or 2 years, and shall meet at stated intervals as necessary to determine any adjustments in volume needed.

8. Provide for Government inspection of every hatchery ever 3 weeks to count trays of eggs under incubation, and to determine compliance with allotments.

9. Require that each hatchery post substantial guaranties to be forfeited for violation of allotment of ceiling on eggs set in his machines.

10. Provide for a license fee from each hatchery, based on estimated allotment a year in advance, same to be applied to cost of administration.

11. Set up a milling charge to be collected from all feed mills, based on tonnage of poultry feeds, to share cost of administration.

OUR POULTRY INDUSTRY IS IN A MESS—THIS INCLUDES BROILERS, COMMERCIAL EGGS, TURKEYS

How about broilers? In 1955, 2,912,000,000 pounds sold at average of 25.1 cents per pound, $731 million gross.

In 1956, 3,780,000,000 pounds sold at average of 19.4 cents per pound, $735 million gross.

Increase of 30 percent more meat, but only increase of 1 percent in value, and in the face of rising costs.

What if the automobile industry would deliberately produce 20 percent more cars than the automobile market would absorb even if price were cut to cost of production? How long would even their almost unlimited resources stand such economic abuse? They would be forced to adjust production to the market, force the cars on the market for whatever they could get for them without regard to cost of production. That is exactly what the broiler industry has done now for more than a year, and it has brought calamity to all segments of the industry.

The oil industry was in the same chaos 25 years ago, when the oil proration law was enacted, as the broiler industry is today, and for exactly the same reason—senseless overproduction. Oil, then, was 10 cents a barrel, and though swimming in a sea of oil, oil men were going broke by the score. Now, after 25 years of genuine stability the oil industry is sound and prosperous, and considers the proration law indispensable.

What of commercial eggs? The statement below by Philip Alampi, secretary of agriculture of New Jersey, is quoted from The Poultryman, February 1, 1957:

"I have never seen the poultry industry in so desperate condition as today. The plight of the family-sized poultry farmer is approaching the point where he will be driven out of business unless relief is afforded. He has invested his life savings in a farm which through no fault of his own is becoming outdated. Outside capital is being invested in mammoth size poultry farms with every conceivable labor-saving device. These farms are able to produce eggs in volume and show a profit even on a very small margin over feed cost.

"In some sections of the country, big business has already displaced the family farmer, and farm owners have been reduced to a sharecropper status only slightly better than Russian collective farming.

"Elimination of the family poultry farmer will put the small feed dealer, processors, equipment manufacturers, and small hatcheries out of business also."

Of 7,500 commercial egg producers in New Jersey January 1, 1956, 750 have been forced to dispose of their flocks and seek employment in the cities.

FIVE HUNDRED HATCHERIES IN OHIO CLOSE SHOP

The above from a letter by C. W. Liechty, hatcheryman at Wauseon, Ohio, mailed out to the remaining 300 hatcheries in the State of Ohio recently. In his letter he quotes from a letter he received from a hatcheryman in New England: "I used to be 100 percent against controls on production of any kind. I am fast changing, along with many of the other very conservative people here in the Northeast. It seems that there are feed companies that have immense amounts of money earned from other sources that are willing to keep on operating feed manufacturing at a loss to keep their volume going. Perhaps they feel that in the end 2 or 3 concerns will dominate the entire in-

dustry, and they can then control the price of chickens. It would seem to me if we could have some type of production controls that would prevent this continued overexpansion and overproduction, everybody in the industry would be better off."

Why not do something about it now, while you still can? It is up to you.

WHAT CAN I DO?

We quote the following from the Arkansas Federation News Letter, published the last part of March: "It is my belief that the hatcheryman, whether he is integrated or not, is in a very vulnerable position. A number of solutions have been advanced as to how we can obtain a production program in line with consumption. Not a person in the broiler industry can truthfully say that a voluntary program to create this condition is possible, simply because they are always enough factors who will take advantage of someone else's willingness to take a reduction. Don't for a minute say that the hatchery segment doesn't want anything to do with it. It is up to you to do something about it."

Here is a letter from Richard C. Larkin, Agricultural Marketing Service, Washington, D. C.:

"Your letter of February 11, 1957, addressed to Secretary Benson, has been referred to this office for reply.

"The Department appreciates the very serious situation which has confronted the poultry industry for some time. The subject of controls is being widely discussed within your own hatchery industry and within other segments of the poultry industry. It is our hope that such discussions will be both thorough and nationwide, such that the industry itself will be more unified in its interest in this regard. We would suggest that you indicate your interest in controls to your own hatchery federation. I am referring to the American Poultry & Hatchery Federation, 531 East 63d Street, Kansas City, Mo.

"Thank you for stating your opinion in this regard."

A letter from Don Turnbull written us March 1 states in part: "It isn't a question of our refusing to act but it is a matter of policy in which we are following what appears to be the feeling of the majority of our members as indicated by correspondence and personal contact."

That is the thing in a nutshell; 1,859 hatcheries have been pushed out of business the last 4 years. Big hatcheries get bigger; small ones are losing out fast.

So make it a point to write Don Turnbull, American Poultry & Hatchery Federation, 531 East 63d Street, Kansas City, Mo., and tell him you want something done.

Contact your State association, and ask them to help you get something started in your State.

Contact Hon. W. Kerr Scott, United States Senate Building, Washington, D. C. He is very interested, and wants to help us.

Contact your own Senators at Washington, and your Representatives.

Get your county hatcheries together, and then your State groups. Write to those you know. Get working, and keep working until something is done.

You will find as we have there are those with money and prestige that will oppose. If your situation hurts bad enough, and you get interested enough, these things can be overcome. The main thing is to start working, and stay with it.

Please contact us, and let us know you are interested, and working with us. Make suggestions on the plan.

Yours very truly,

MRS. IRA STETZEL,
Stetzel's Hatchery.

PARIS, ARK.

The Girard Case

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. TUCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following interesting and informative address delivered by Mr. George E. Sokolsky on July 14, 1957, on the William S. Girard case:

THE GIRARD CASE

It matters very litle now either to William S. Girard or to most Americans what the Supreme Court has decided in this case. Whether Girard goes to a Japanese prison or a United States military prison is not as important as that the principle shall be reestablished that an American citizen does not lose his constitutional rights when he joins the military forces of his country. The Supreme Court has declared otherwise to the disgrace of the United States.

The Supreme Court has again ruled against the American people. It has taken the position that decisions of the administration are superior to the rights of Americans as specified by the Constitution of the United States. How the Supreme Court can consistently take that position and at the same time use the constitutional rights of citizens to protect Communists, rapists, and other criminals, is difficult to say. It is neither logic nor in the national interest.

The Status of Forces Treaty came into effect in 1951 as a result of the organization of NATO. The United States entered into the Status of Forces Treaty with 13 nations. But Japan was not one of these countries. Japan came into this through the back door by a series of agreements, not one of which is a treaty, not one of which has been ratified by the Senate as the Constitution provides. However, executive agreements are binding upon the United States and apparently there are nearly 50 of them with various countries, including the agreement concerning the Dhahran Airfield in Saudi Arabia, according to which King Saud, the medieval despot of that country, can instruct the United States as to the race, religion, prior nationality of any American who is sent to guard his country against his enemies. It is even questionable whether the United States is being permitted to use this field, which cost about $50 million, for military purposes.

Senator ROMAN HRUSKA, of Nebraska, has summarized succinctly what constitutional rights the American soldier loses under the Status of Forces Treaty. I will now quote Senator HRUSKA's summary:

"First. A right to bail.

"Second. The right to be tried by a fair and impartial court.

"Third. Reasonable time to prepare defense after being informed of charges made against him.

"Fourth. The right to be present at his trial.

"Fifth. The right to be presumed innocent until proven guilty.

"Sixth. The burden of proof on the Government in all criminal cases to prove guilt beyond reasonable doubt.

"Seventh. The right not to have involuntary confessions used against him.

"Eighth. The right not to be compelled to testify against himself.

"Ninth. The right to cross-examine the witnesses against him.

"Tenth. Protection against double jeopardy.

"Eleventh. Protection against ex post facto laws.

"Twelfth. Protection against bills of attainder."

These fundamental rights are granted American citizens by their Constitution. Justice Frankfurter seemed offended by Girard's counsel who did not show enough respect or deference for some of the noble countries that have status-of-force treaties with us. He particularly cited Great Britain, France, and Japan.

Mr. Justice Frankfurter is an educated man who was a professor of law in the Harvard Law School. Surely he has not forgotten what he must once have known, namely that neither France nor Japan has codes that provide the constitutional rights to which an American is accustomed and entitled. Under American law and British law, a man is believed to be innocent until proved guilty; this is not true of French or of Japanese law. As a matter of fact, Japanese jurisprudence has been influenced more by the Code Napoleon of France than by the common law of England which is the basis of American law. I wonder what would happen if a Japanese soldier were tried in an American court. The Japanese would scream blue murder.

All this Mr. Justice Frankfurter must know even if some of the more recent appointees to the Court are aware of nothing but the politics of the moment. Therefore, Justice Frankfurter should not have taken umbrage when Girard's lawyer doubted the juridical methods of these countries. What did Frankfurter expect—that American lawyers face westward and kowtow to the Emperor of Japan? Maybe one day we shall have to face eastward and bow in prayer to Mecca to please King Saud and his harem. And don't forget when we do that, we shall have to take off our shoes.

After all, if our opinions and beliefs are to be governed by what may, for the moment, be administration policy, there is no telling where we shall land. We may have to erect a statue of Ivan the Terrible near the Washington Monument in Washington and put a figure of Khrushchev in the arms of the Statue of Liberty. When temporary policy becomes our master there is no telling in what direction we shall go, except the way things look now, it will not be in the right direction.

I know the Japanese well, having lived among them for many years. Also, I like them very much and have dear friends among them. They will recognize that just as their masses can get angry over the establishment of any form of extraterritoriality in their country, so can the masses of our country grow incensed over an act of downright injustice on their part. They will, of course, take into consideration the reactions of Communists and Socialists and other wild Japanese elements, but they will also recognize that a judicial murder of Girard will be received in this country in real anger and that the anger is more likely to be vented against Japan than against the American State Department, which is really responsible for the current impropriety. The Japanese will bend over backward to prove their humaneness. They are really a good people, but their laws are not our laws.

The real trouble with this situation is that the American people are losing their respect for the Supreme Court. That is very bad. The Supreme Court is the last refuge of American liberties, and our people are accustomed to believe that the Court is ruled by law, before which all men are equal. Every appointment that President Eisenhower has thus far made to the Supreme Court has been political and inadequate. The Court now presents a sorry picture of Justices who, with few exceptions, are distinguished neither as lawyers nor as judges.

These are small men who in pursuit of doctrinaire legalisms are creating disorder throughout the country. The Jencks decision, the Watkins decision, the Mallory decision, and now the Girard decision are milestones in the breakdown of the morale of our people, of the law-enforcement agencies, of faith in our institutions.

These are harsh words and I am distressed to say them. But to repress them would be to sacrifice truth to expediency. The day will come, may we pray not too late, when other Justices sitting where these lesser beings now sit garbed in the black of Pharisaism, will reverse these errors of judgment.

Meanwhile, the American people must pass the Bricker amendment or even a more strongly worded one—an amendment to the Constitution which will protect every citizen in his constitutional rights no matter where he may be sent by the Government of the United States.

I do not know Girard, his brother, his parents, or his lawyer. But I cannot refrain from realizing that what is happening to Girard can happen to your son. It has happened to many American boys. This is a subject for Senator EASTLAND or Representative CELLER to study in their respective congressional committees. How many American soldiers are languishing in foreign prisons? For what reason? And for how many years? Congressman CELLER, in particular, regards himself as a tribune of the people. Why does not his House Judiciary Committee investigate whether American soldiers are justly treated under this iniquitous treaty? Let us read a factual report and then we shall judge for ourselves whether our sons are being treated rightly.

Whenever the Supreme Court becomes political it grows unpopular among the American people. The reason is that this Court is generally so beloved by our people. When the Supreme Court attempts to act as a third chamber of Congress, really legislating for the country, it becomes a hated institution.

It is that now. Go where you may and you will hear words of distrust hurled at this Court.

It is time for Americans to act. Congress can pass binding legislation controlling the Court. Why not pass legislation safeguarding the FBI files from kidnapers, murderers, forgers, racketeers, and shyster lawyers? Why not write your Senator and Congressman today? Who knows—your children may pay for your carelessness with their lives.

Request of Gov. Foster Furcolo To Declare Massachusetts a Major Disaster Area

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a telegram from Gov. Foster Furcolo, of Massachusetts, which quotes a telegram he directed to President Eisenhower:

JULY 26, 1957.

Hon. THOMAS J. LANE,
House Office Building,
Washington, D. C.:

Attached please find copy of request to President Eisenhower asking that Massachusetts be declared a major disaster area. I earnestly solicit your support in this critical situation. I am sure that you will wish to join with me in making every possible effort to assist the people of the Commonwealth. The telegram follows:

"DEAR MR. PRESIDENT: I am advised by the Massachusetts Department of Agriculture that you should be requested to declare the Commonwealth of Massachusetts a disaster area because of damage to the crops, pastures and forest and water supplies, resulting from the lack of rainfall and unusual drought conditions.

"Long term weather forecasts indicate little prospects of relief. Every possible effort is being made by the several departments of the Commonwealth to cope with the present situation. In order that those who earn their livelihood by farming in this Commonwealth may have every possible assistance that the Federal Government may provide, I respectfully request that you declare Massachusetts a disaster area. I am sure that you know that the necessary steps by the United States Department of Agriculture Disaster Committee at the State and county levels have been carried by me during the last week. I understand that they are preparing a report and recommendations for the United States Department of Agriculture.

"If I may be of any assistance to you in this matter, please do not hesitate to call upon me. Every possible cooperation will be extended to you and the departments of the Federal Government.

"Sincerely,

"FOSTER FURCOLO,
"Governor of the Commonwealth of Massachusetts."

Minnesota Loses a Great Medical School Dean and the American Cancer Society Gets a Great Scientist and Administrator as Its Chief Medical Officer

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following splendid editorial from the Minneapolis Star of July 27, regarding my close personal friend and medical colleague of many years, Dr. Harold S. Diehl:

A GREAT DEAN

We can't help but have mixed feelings over the loss to Minnesota of Dr. Harold S. Diehl, dean of the university's college of medical sciences.

The whole State is honored that the American Cancer Society has seen fit to pick Dr. Diehl as its chief medical and research officer and deputy executive vice president. It is a wise choice indeed. But what undoubtedly is the Nation's gain is the State's loss. It will not be easy to fill his place at the university.

Outsiders who visit Minneapolis are frequently surprised at the vast physical plant and equipment on the medical campus. It is obvious even to the uninitiated that Minnesota "has the dough." The story is told that a prominent eastern doctor once asked Dean Diehl at a medical convention how the money was obtained. The reply was, "Oh, it just comes."

Those who know how Dr. Diehl has worked night and day, in season and out, to obtain grants, research funds, scholarships and other financial resources for the medical school realize how casual this remark was.

The dean has been one of the real builders of the University of Minnesota—and this has not been an offhand performance.

In addition to his contributions to administration and finance, Dr. Diehl has brought warmly human qualities to his job. It is well known that the University medical school has less friction, less rivalry and less jealously than any other similar organization in the country. This is largely because the dean has insisted on the right atmosphere within the institution.

A veteran staff member once remarked that Dr. Diehl had three cardinal principles of operation: Never neglect the patient; never neglect the student; never neglect anything having to do with growth and development of the organization.

These three ideas go far to explain why Minnesota's Medical School is now one of the greatest—if not the greatest—in the world. And they shed considerable light on the man who has had so much to do with building that worldwide reputation. We congratulate the American Cancer Society—and Dean Diehl.

What Price Haste if Food Additives Are Dangerous to Health?

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 9, 1957

Mrs. KNUTSON. Mr. Speaker, Jack T. Jennings, assistant director of the Cooperative League of the United States of America, prepared an excellent statement on the use and dangers of additives in foods. Since too little attention has been paid to these dangers and the additives continue in use during consideration of their dangers, I request permission to insert in full his statement before a health and science subcommittee of the Committee on Interstate and Foreign Commerce on Amendment to the Food and Drug Act, July 24, 1957:

Mr. Chairman and members of the committee, my name is Jack T. Jennings. I am assistant director of the Washington office of the Cooperative League of the United States of America.

The Cooperative League is a national federation of consumer, supply, and service cooperatives. Through one or another of our member organizations, 13 million of the United States families who own co-ops are represented in the Cooperative League. These 13 million families represent the largest group of organized consumers in the United States.

We appreciate the opportunity to appear here in support of certain controls over food additives. We believe that it is most important to consumers today, when so much of our foods are processed for quick readiness for the table, that they be free of dangerous chemicals or other additives. America seems to be on the run. The housewife spends fewer hours in the kitchen. The demand for ready meals, all packaged in attractive wrappings, is increasing greatly. If she purchases carefully, the housewife needs not even dirty her dishes and silverware—much less her pots and pans—for the food comes in generous helpings on disposable plates requiring only heating.

This modern era which portends even greater timesaving for cooks of the future has brought about a whole new concept in food preparation and merchandising. Al-

ready we have seen a number of things happen which have not necessarily been in the interest of the consumer.

Grandmother used to bake bread once or twice a week. The bread was made of locally milled flour and other health-building ingredients. It was soft only while it was oven warm. Nobody objected to hard bread until the commercial bakers took over. Then they educated grandmother and others that hard bread was stale. Fresh bread was soft. But they didn't tell grandmother they could fool her a bit by adding something to the bread to keep it soft for many days. What they added was not necessarily good for grandmother, but she didn't know the difference.

They pulled the wool over her eyes, too, when they convinced her that real white bread was better. They didn't tell her that in order to get it white, they used a poisonous substance which gave dogs fits. They didn't tell her they removed some of the finest nutritional qualities to make the bread white. What they were doing was lowering the quality of a basic food while claiming they were making a better looking, better tasting product.

The same situation may apply to many other foods. Those who manufacture foods are always looking around for cheaper ingredients than the food itself. We recall the strawberry preserves manufacturer who was hauled before officials who asked him why there was only one strawberry to the jar. It was cheaper not to use strawberries for the jam. We don't think grandmother would have appreciated this man's recipe.

As consumers, we have been fooled quite a bit. We are still being fooled, for there are some 150 food additives that have not been tested by Food and Drug Administration but are present in food we eat today. We are not sure, when we buy our daily requirements, whether we are paying for wholesome, nutritious food or whether we are paying high prices for sugar extenders, butter, and shortening substitutes and imitation coloring and flavor.

For some reason, we have been educated to the idea that there should be a certain amount of pride in making something that really isn't what it is. Like strawberry preserves without any strawberries. Or chicken salad without any chicken. There's something wrong with this philosophy. It helps those who really want to use cheap substitutes to give us the business.

We don't propose to return to the good old days, but we do think there is some merit in taking stock of our present progress. Since mother and grandmother are not spending much time in the kitchen, we've got to depend upon someone else's integrity. You could rest assured that grandmother would not put anything in food that might make us ill—or was not good for us—if she could help it. She cooked beans all day so they would be tender and delicious. Now they come in a can probably with a generous amount of softeners and imitation meat and flavoring.

As consumers, we should know what we are eating. And those of us who cannot distinguish between good and bad chemical names should be given some help. We went through this a few years ago before another committee where we pointed out that animal feed formulas are disclosed on a bag of feed, but the secret ingredients of food we eat have been carefully guarded. In co-ops we try to give the consumer all the information possible so that she will know what's inside the can, bottle, or package.

There was a time when farmers bought feed sight unseen. Co-ops, owned and controlled by farmers, decided farmers had a right to know what was in the bag. Co-ops began to list the ingredients and the formulas for hog, chicken, and other feeds. The industry then said such a program would put old line feed manufacturers out of business. Now much of the industry is following the co-op open formula plan, and to our knowledge, not a single open and aboveboard maker has suffered. Feed standards are much higher as a result.

The point we are trying to make is this: If the housewife were informed as to certain additives in certain foods, she might not choose to buy them. At least a part of this food additive program might then be solved. Additive manufacturers might not be anxious to peddle their wares if they know that an informed housewife could find the additives listed predominantly on a food product label.

Probably some of the things we have mentioned cannot be incorporated in the legislation being considered here. Nonetheless, the fact remains that we are faced with a broader problem than just policing the use of certain food additives.

We cannot pose as experts before your committee on the food additive issue. We suggest that the uppermost thought in considering these bills is consumer protection. We leave it to the experts to incorporate this protection in effective language. We believe final legislation should include the following provisions:

1. Chemicals and other substances used in or proposed to be used in food which have a questionable or hazardous effect on the human body should be outlawed. In our opinion, that is the objective of the bills being considered here.

2. There should be no grandfather clause to exempt any food additive now in use. Provision should be made for review of any substance, even though it has been previously approved. Only H. R. 7798 makes this provision clear.

3. Food and Drug Administration and the Secretary of the Department of Health, Education, and Welfare should weigh each additive in relation to all others in its total effect on the human body. Additives A, B, and C each may be harmless, while normal consumption of all three in combination may be harmful. The cumulative effect of various substances should also be considered. H. R. 6747 covers and H. R. 7798 partially covers this provision.

4. Besides the use of chemicals for preservation, other processes should be considered which might cause harmful effects. Among these is radioactive radiation. Other types of radiation and other means of preservation may be perfected. Control of these should be inherent in the bill. H. R. 8112 and H. R. 7798 make adequate provision in this respect. H. R. 6747 makes reference to radiation.

5. An additive should be beneficial to the consumer. Unless food is enhanced in flavor or nutrition, or otherwise better preserved by an additive, it should not be used. Only H. R. 7798 provides that an additive must serve a purpose which will be useful to the consuming public.

6. Food and Drug Administration and the Secretary of the Department of Health, Education, and Welfare should have the right to regulate food additives after proper examination of findings. All the bills under present consideration make this provision.

7. The Secretary should compile a list of chemicals and processes which should be revised and amended as necessary for the benefit of industry and the public. The list should include approved chemicals and processes, those which are known unsafe, and those which are questionable. H. R. 366 partially covers this provision.

8. The right of an applicant to appeal should not be taken to the courts. We approve the procedure proposed in H. R. 7798 which puts the problem in the hands of experts. Very few cases are likely to get to the appeal stage.

9. The burden of proof as well as the burden of appeal should be placed on the manufacturer or user of an additive. No legislation should be equipped with built-in loopholes which will give an additive maker or user the right to continue to use the public as guinea pigs.

Producers and users of food additives can present an impressive show. They can hire experts who serve to protect the industry. We repeat, that out of all the testimony from the parade of witnesses, the consumer interest is paramount. The consumer interest is the public interest. The Cooperative League respectfully urges your insistence that any food additive legislation will assure consumer protection.

Thank you.

The 22d Amendment: A Second Look

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. UDALL. Mr. Speaker, I present herewith a penetrating analysis of the effect on the Presidency of the 22d amendment which appeared yesterday in the Sunday magazine of the New York Times.

The author of this article, Richard L. Strout, has covered Washington for the Christian Science Monitor for nearly 35 years. In my opinion, Mr. Strout is eminently qualified to make the assessment which is contained in this place. I commend it to those who are interested in studying this problem.

The article follows:

THE 22D AMENDMENT: A SECOND LOOK

(By Richard L. Strout)

WASHINGTON.—America is making its 1st great laboratory test of the 22d amendment limiting a President to 2 terms. Congress passed it in 1947, the States ratified it in 1951, and Mr. Eisenhower is the first to feel its impact. Already it is affecting political Washington. Already Mr. Eisenhower has termed it "not wholly wise." Already there is evidence that it will have consequences far beyond its sponsors' expectations.

The Founding Fathers rejected fixed presidential tenure, and Washington wrote Lafayette that he could see "no propriety in precluding ourselves from the service of any man who, in some emergency, shall be deemed most capable of serving the public."

The 80th Congress—the first Republican Congress since Hoover—felt differently. If Mr. Eisenhower had been a Member of the Congress he might have voted against the amendment, but he would have been alone among Republicans. Every GOP Member in both Houses voted for it.

Emotion ran deep. Roosevelt had infuriated them and incumbent Truman irked them (although he was specifically exempted by the amendment). And beyond the experience of the fathers there had been, also, a slow, seemingly inexorable rise in centralized executive authority. Congress was in rebellion against that, too, and so presumably were the majorities of the 36 State legislatures, Democratic and Republican, who ratified the amendment. (Curbing executives is an old thing for State legislatures: Today 6 governors limited to 2 terms, 14 to only 1.)

The 22d amendment seems direct and innocent enough. It simply means that Mr.

Eisenhower can't run three times. Since everyone knows he does not want to run again, what difference does it make? There are several answers. One is that the Constitution's "No" destroys a political device that time and again has been an effective arm of Presidential authority. That was the President's availability. He could always keep them guessing.

As early as Inaugural Day, 1949, for example, Mr. Truman knew he wouldn't run again in 1952 but he told nobody. "That is one secret," he wrote afterward, "that the President must keep to himself to the very last minute." Truman did not reveal his secret until his March 29, 1952, banquet announcement, and it was only then that the Democratic succession fight started, whereas the Republican fight this year, under the new rule, began even before Inaugural Day.

For Mr. Eisenhower the "one secret" is gone, wiped out by the Constitution. It is gone for every second-term President from now on. It is reasonable speculation that today, but for the amendment, Mr. Eisenhower would be playing a smiling game of reticence with the press over the third term. The public would be enjoying the joke, obviously expecting the President to step down, but nevertheless recalling what happened after his heart attack, and led into tweaky cuirosity by the chance of some final political or international emergency. One way or another, the President's team could have planted enough doubt to keep uncertain riders on his coattails. And in politics it is doubt that can move mountains.

As for Mr. Eisenhower's declaration that he wouldn't run anyway, nobody can doubt him and yet two quotations are of interest:

"I think history shows that most Presidents in their second terms have seriously considered running again," says Harvard's Prof. Samuel P. Huntington.

"It is hardly an exaggeration to say that since Old Hickory, every Executive who lived out a second term has been an active or receptive aspirant for a third term," agrees historian Arthur M. Schlesinger, Jr.

In any event, America today has a President who, for the first time in history, is constitutionally debarred from running again.

Does the new situation reduce, or threaten to reduce, the President's influence? Washington observers weigh the following points:

1. Mr. Eisenhower's "not wholly wise" comment and other observations indicate the question in his own mind.

2. Even before the second inaugural, Senate minority leader KNOWLAND of California declared his intention of quitting the Senate at midterm, probably to run for Governor and thence reach for the Presidency. Is it just a coincidence that the Presidential race is starting this early?

3. When the administration's battle of the budget began this spring the hitherto solid Eisenhower press and business support wavered. The reasons were understandable and the rift may close, yet the event, it is noted, did not occur until Mr. Eisenhower lost his availability.

4. The President's Gallup poll rating dropped from 79 percent in January to 62 percent in June (still a phenomenal popularity). Did this in any way reflect a post-election relaxation—a diminution of urgency now that Ike could no longer be reelected?

5. William S. White, of the New York Times, like other Capitol Hill reporters, noted that the President's grip on the GOP minority had weakened visibly in early spring and remains less strong than a year ago, though it has regained some power. Yet the President now has a fresh mandate and has just been reelected overwhelmingly. Another coincidence?

I believe most Washington political observers suspect that there is a new force at work in the Capital which must be watched carefully. Two things deserve note: one, that while Mr. Eisenhower may escape the the new difficulty, other less popular second-term Presidents may be hit hard; and second, that the real test, even for Mr. Eisenhower, will probably come in the final 2 years.

Consider, for example, one problem in 1958, when the battle for the GOP nomination will really grow stiff. Republican politicians will be tempted to turn to Mr. NIXON if he then still seems to have the inside track as he has now. This could be deeply embarassing. Two party leaders in Washington is one too many. Mr. NIXON's past behavior has been discreet but the danger is there all the same—the possibility of discord and even of party disaster. This possibility is now a built-in part of the second-term drama, with the bias of the 22d amendment toward making a President an elder statesman ahead of time or, in some conceivable circumstances, a lame-duck or a has-been, drained of his power.

How much power will a lame-duck President have in choosing his successor? Almost certainly less than his predecessors did. Even without the 22d amendment, three two-term Presidents in this century, Wilson, Coolidge, and Truman, did not play decisive roles in selecting the party nominee. Theodore Roosevelt was the exception, though the GOP 1908 convention very likely would have named Taft in any case.

With the new amendment, presidential influence at a convention is further weakened because second-term influence is generally weakened. Mr. Eisenhower may well have substantial bargaining power in 1960, but in all probability less than if he had been able to postpone the battle to the last minute. It is like a poker player forced to show his hand: He may still draw aces but his capacity for bargaining from hypothetical strength is sadly cramped.

Mr. Eisenhower observed on October 5, 1956, that while he did not think the amendment had lowered a President's influence "too much" (because he could still give to or withhold blessings from a successor) he added: "By and large, the United States ought to be able to choose for its President anybody that its wants, regardless of the number of terms he has served."

(It is remarkable how closely this follows the original thought expressed by Washington to Lafayette.)

The President's comment came in response to a flurry of proposals to repeal the 22d amendment. One congressional advocate of repeal, Representative STEWART L. UDALL, of Arizona, thought he would try out scholarly sentiment. He invited responses from 36 political scientists, historians and students of government, picked with the aid of two learned bodies. He stated his own views frankly and promised to put the answers, uncensored, into the CONGRESSIONAL RECORD.

Mr. UDALL got 29 replies. Of these, 3 took stand, 5 favored the amendment, and 21 vigorously opposed it, urging prompt repeal. A significant feature of the replies was the virtual unanimity, whether for or against the amendment, that it would reduce second-term executive power. For example, Dr. Thomas S. Barclay, of Stanford University, a stanch believer in the amendment, frankly stated that under it a President "must face during the last 2 years of his administration a waning of his influence over Congress and elsewhere."

Advocates of repeal were equally sure of this. Dr. Cortez Ewing, of Oklahoma University, likened the President's situation to that of a Governor in a two-term State and quoted one such Governor as saying that in his final 6 months he had "so few visitors" that "it is almost necessary to send out engraved invitations to keep from feeling lonely."

Dr. James MacGregor Burns, of Williams College, wrote that "virtually all political scientists and students of American history agree" that curtailment of tenure will reduce Presidential influence.

Few laymen casually discussing the amendment probably think of the matter in this light. They think of the issue as between 2 terms and 3 (or more) terms. The majority of the scholars, on the other hand, see this phase of the issue as between an unfettered President and a curbed President, unable to use his full political power.

Another surprise is that the professors who attack the amendment generally profess their support for the two-term tradition. For the normal President two terms, they affirm, is quite enough. What they deplore is writing an inflexible ban into the Constitution. In an emergency—say, to permit a Lincoln to serve a third term to prevent a vengeful reconstruction—a tradition can be broken; that is merely an exception. If a Constitution is broken, it is a revolution.

The following notes indicate the unusual—one might better say extraordinary—nature of the 22d amendment:

Most recent amendments have sought to enlarge the rights of the people; the 22d limits their rights.

The amendment limits presidential tenure, but, in a capital where experience is vital, it lets Congressmen serve indefinitely. (Senator CARL HAYDEN, of Arizona, is in his 45th congressional year, 30 in the Senate, 15 in the House; Speaker SAM RAYBURN, of Texas, is in his 44th year.)

America's two-term executive curb is unique. Canada's Mackenzie King served over 20 years and Gladstone in Britain served as Prime Minister some 14 years; it seems inconceivable that either nation would consider a limitation on popular franchise that restricted such resplendent leaders to much shorter terms of service.

The curb on the President comes just as his role increases in international affairs; any diminution of the American Presidency may have serious effects on United States foreign policy.

Points like these lead up to the condemnation of the amendment on moral grounds by Dr. Henry Steele Commager in his reply to Representative UDALL. The "fundamental and to my mind irrefutable criticism," he wrote, is that "it represents a vote of no confidence in democracy. It says, in effect, that our generation cannot trust any other generation to make the right choice. * * * It it based on the arrogant assumption that we somehow have more wisdom than our children and their children will have."

What all this comes down to, I believe, is that there is a philosophical bias behind the 22d amendment which is not generally understood but which may become plainer in the months ahead. The 80th Congress 10 years ago was not merely hitting at the detested image of Roosevelt; it was also, whether consciously or subconsciously, striking at all so-called strong Presidents in an upsurge of legislative rivalry. It was a shrewd blow, for it automatically exempts most of the unsuccessful, the weak, and the one-term executives and will operate only against those successful enough to get elected twice.

Who are the strong Presidents? It now seems agreed that they include Jackson, Lincoln, Theodore Roosevelt, Wilson, and Franklin Roosevelt. It is this type of man who, in the future, in varying degrees as circumstances arise, will face the effect of the 22d amendment in his second term.

If this interpretation is correct, then an inner conflict of great potential importance has been written into our Government. When all is said and done, it is steady pub-

lic pressure that has broadened national power and created the modern President. It is the people who have made the Presidency the instrument of popular sovereignty. The new amendment, in its implications anyway, runs counter to this trend.

How the contradiction can be resolved it is hard to say—it seems as difficult to reverse the trend as to repeal the amendment.

Until recently it was the liberal reformer who tried to achieve his goal by the amendment route, with success in the Federal income tax (the 16th); the popular election of Senators (the 17th), women suffrage (the 19th), and the elimination of the lame duck Congress (the 20th). The drive spent itself with the passage and repeal of prohibition (the 18th and 21st).

Now, as Clement E. Vose writes in the Yale Review, the reformer on the right seems the one who is pushing amendments. A package of these, including Senator BRICKER's effort to limit the President's treatmaking power, and another to reduce Federal income taxes, is being sponsored by conservative organizations. The drive from the right has scored only one big victory so far—the 22d amendment.

One final effect of the 22d amendment is probably least understood of all and yet it will soon be visible as the Eisenhower term approaches the midpoint. It imposes a cutoff date and limitation on the Vice President. If a Vice President inherits the White House and serves more than 2 years of an unexpired term he may be elected only once thereafter in his own right.

History shows how important this new restriction is. It would, for example, have made Theodore Roosevelt ineligible to run in 1912. He had been Vice President, had served more than 2 years after McKinley's assassination, and was then elected for a term of his own in 1904. That would have written "finis" for him under the new rule. He would have been disqualified thereafter. Instead of forming a third party and splitting the G. O. P. in 1912, the magnetic "Teddy" would have been out and Taft might well have beaten Wilson.

The cutoff date for Vice President Nixon is noon on January 20, 1959. If he succeeded to the Presidency 1 minute after the clock struck 12 on that date, he would be eligible to be elected twice thereafter in his own right, but if he succeeded I minute before 12, he could be elected only once.

The 22d amendment is now part of the Constitution and the circumstances that could achieve its repeal, however much political scientists may fume, are hard to imagine. In quiet spells few will care; in an emergency at the end of two terms there won't be enough time to repeal it. Yet signs are gathering that the real meaning of the enactment was not fully understood either by the public, or by the Congress which launched it 10 years ago.

The First of a Series of Editorial Letters, by F. F. McNaughton

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 29, 1957

Mr. MICHEL. Mr. Speaker, today I should like to have printed in the Appendix of the RECORD the first of a series of editorial letters written by my good friend, Mr. F. F. McNaughton, publisher of the Pekin Daily Times. These editor's letters will deal principally with Russia, and I should like to insert the articles daily until the series is complete. I am sure that my colleagues will find these letters very readable and most informative.

By way of introduction, I might say that Mr. McNaughton is a firm believer in education by travel, and he and Mrs. McNaughton have just returned from another trip to Russia. Previously they had taken their sons on an 8-months tour of 4 continents that they called a year of college for all 6 of us. That time, as on all their trips except two, the McNaughtons traveled in their own automobile and thus were able to see the insides of the countries they visited. Last year Mr. and Mrs. McNaughton took a slow trip around the world, with particular study of India.

Born on an Indiana farm, Mr. McNaughton took his master's degree at Columbia University, then entered the Pulitzer School of Journalism. He served his cub days on the New York Tribune, then went back to the Midwest to buy his own newspaper. He and his sons, all newspaper trained, have interests in newspapers and radio stations in Illinois, Iowa, and Arizona. The family home is at Pekin, Ill.

On the trip with the sons along, Mr. and Mrs. McNaughton had visited Russia in 1938, so on this summer's trip they were able to appraise the progress which Russia has made.

Mrs. McNaughton, who takes over the McNaughtons' daily column on Friday, is the daughter of Mrs. J. E. McMillan, of Dallas, Tex., and writes on topics of interest to women such as Built-in Baby Sitters in Sweden, and No Foundation Garments in Russia.

The first in this series of editor's letters follows:

This is from Moscow.

We are about to write columns to you from Russia. Chances are that when you read some of them, you will say, "That McNaughton is a Red."

But I tell you now that I am going to write it as I see it. Too often, America sticks its head in the sand and won't see the truth. America is big enough that it does not have to kid itself.

I'm not going to kid you.

The minute I stepped out of our hotel into the Square of the Revolution on our first morning in Moscow, I saw that the great Union of 15 Soviet Socialist Republics is going places. The contrast with 19 years ago is vast.

If one didn't take a second, close glance at people's dress, one could easily believe he was in St. Louis or St. Paul. There are no animals in sight in the streets, as in Calcutta or Cairo. In fact, I'm almost convinced that there are fewer animals than in Copenhagen or London. Moscow is now a modern city. In fact, they tell that far inland where the caravans of the silk routes of antiquity used to cross, they now have the same stop and go lights as Fifth Avenue (except that they have the red on the bottom.)

Autos, taxis, big buses.

There is this difference. There is little noise.

Women keep the streets free of dirt, and rules keep them free of noise. No auto horns sound. Somehow police get attention without blowing a whistle. And that awful honk (like a noise from a struggling cow) that is heard all over Scandinavian cities; or the screaming of sirens like we hear in American cities is rarely heard in Moscow. Somehow the police, ambulances, and firefighters get to their tasks quietly.

Our driver was arrested once. It was a most quiet and orderly affair.

New buildings are going up.

Crowds from new suburbs cascade out of the world's handsomest subway.

Everybody seems busy.

And people from the whole world, especially from the uncommitted billion (and that is important), seem to be in Moscow on a visit.

Khruschev's drive to make friends for Russia, and particularly to make the Russian people themselves happier, is easy to see. Russia is making friends.

Tomorrow we'll tell you some of the ways they do it.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

The Road to Civil Rights

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 30, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Road to Civil Rights," by Walter Leckrone, editor of the Indianapolis Times, which was published in that newspaper on Sunday, July 28, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ROAD TO CIVIL RIGHTS

(By Walter Leckrone)

Enough nonsense has been spouted lately about civil rights to befog the subject rather thoroughly, although essentially it is a simple and uncomplicated one, easily understandable to anyone who doesn't want more privileges for himself than he is willing for others to have.

Civil rights is a system primarily to protect the individual from oppression by his government. The constitutions of the United States, and of the 48 individual States, exist almost entirely for that purpose alone.

In its broadest sense the perfect system of civil rights simply guarantees exactly the same privileges, penalties, and responsibilities to everyone under the same conditions and circumstances. As we know it in America it enumerates certain rights that are fundamental and forbids government, or anyone else, to abridge or infringe them.

Basically, those derive from the goal of life, liberty, and the pursuit of happiness, the right to personal security against physical assault; the right to earn a living; the right to own property; the right to think, or speak, or believe as we wish and to have the information provided by a press that is free from government interference or control; the right to share equally in the use of everything publicly owned or maintained; the right to equal status under the laws; the right to participate in government; and, especially the right to security from persecution or unjust punishment on any pretext whatever by any agency of government.

That last one must have seemed about the most important of all to the men who wrote the United States Constitution, from the emphasis they gave it.

Five of the ten amendments that constitute the Bill of Rights, without which the Constitution itself would have been rejected, deal with that one point of protecting the rights of the individual before the courts and placing rigid limits on the power of government to accuse, or try, or punish.

They restrict the authority to search or seize private property, or to make an arrest. They forbid trying anyone more than once for the same offense, or requiring him to testify against himself, or the holding of trials in secret, or excessive bail or fines, or cruel and unusual punishment.

They do not, in fact, even permit Government itself to make a formal charge of crime on which a defendant may be tried in court or to determine whether any defendant charged is guilty or not guilty.

The charge must be made by a grand jury, which is a panel of private citizens not a part of Government. Guilt or innocence must then be decided, after trial, by an impartial jury, which also is a panel of private citizens not a part of Government.

The people of the United States in 1783 had had bitter experience of courts with great power appointed by a distant authority over which they had no control. They wanted no more of that.

This whole system of safeguards of a fundamental right Congress last week was asked to abolish over a broad, vaguely defined area of violations of law, much of which is still unwritten, and the lower House already had voted to do so, in order to assure the exercise of another civil right, the right to vote in elections.

The right to vote is, itself, a form of limitation on the powers of Government, placing in the hands of the people ultimate control over the composition of their Government and, at least in theory, over its policies. So, it, too, is a basic and important civil right.

But, while the legislation now pending is Federal, voting rights from the very beginning have been wholly State. Nowhere in the United States Constitution is there any recognition or guaranty of any uniform or universal right to vote. The Constitution, as originally adopted, simply assumes some such right exists outside its own terms. It provides (art. I) that anyone who has a right to vote in electing the State legislature in any State also shall be eligible to vote in electing Members of the National House of Representatives from that State. The 17th amendment (adopted in 1913) extends the same qualification to voting for United States Senators, who up to that time had been elected by State legislatures and were presumed to represent the States rather than the people. Two other amendments forbid any State to deny any citizens the right to vote because of their race or color (1870) or because they are women (1920). Otherwise, constitutionally, a State still sets any voting standards it wishes, and Federal Government none.

At the time the Constitution was adopted no State allowed everyone to vote. Only taxpayers or property owners could take part in elections. In Virginia no one could vote unless he owned at least 25 acres of "settled" or 500 acres of unsettled land. At the other extreme, New Hampshire required only payment of a small poll tax, and in Pennsylvania the sons of landowners could vote even though they paid no taxes themselves.

Indiana was the first to adopt a State constitution granting universal voting rights, in 1816. They were universal only to the extent that anyone could vote who was white, male, and 21 years old, and have since been extended to all citizens over 21.

New Jersey had removed the property qualification in 1806 by amending its State constitution and Maryland did the same in 1810, although in Maryland religious qualifications for voting were not lifted until 1826. By 1828 all but 2 of the then 24 States also allowed the people to vote in presidential elections, originally entirely a function of State legislatures. But as late as 1842 President Tyler ordered Federal troops to support a State government in Rhode Island in putting down a rebellion against its restrictions of voting to landowners and their eldest sons, which was removed a year later. Most States now legally extend the right to vote to all citizens past 21 years of age, 2 States to all past 18 years of age. Some, mostly in the South, require that a voter be able to read and write, a qualification that sounds fair but is much abused.

It is at these Deep South States, however, that pending civil rights legislation is frankly aimed with the intent to compel them to extend in fact and without evasion not only the right to vote but all other civil rights as well to their Negro citizens. Strange as it may seem in a State like Indiana where Negro citizens not only are encouraged and urged to vote but where all political parties eagerly seek their support, there can be no question that in many areas of the South that right is denied them * * * sometimes by slick evasion of law, more often, perhaps, by intimidation that may be either economic or physical. Congress, given power by the 15th amendment 87 years ago to enforce that right by appropriate legislation never has done so.

The proposal to do so now was loosely drawn and ill-considered. As passed by the House it struck deeply at a whole host of other civil rights including those of the very group it was intended to benefit * * * among them the basic right to a public trial by an impartial jury when charged with any crime.

For this whole constitutional system it would have substituted injunctions * * * which means orders * * * from a Federal judge for specific statutes. Anyone suspected of violating such an order, or just of intentions to violate it for that matter, could then be haled before the judge who issued it, tried in secret without a grand jury to indict or a trial jury to determine his guilt, and fined or sent to prison. It even included heavy fines for anyone who reported what went on at a trial declared secret and perhaps accidentally, authorized the President to send in the Army to back it up. The injunction idea was simply an evasion of the Constitution.

Supporters of it, who included large numbers of bewildered liberals and a goodly sprinkling of cynical politicians looking for minority group votes for themselves, argued that southern juries might not convict everyone accused and that anyway 28 Federal laws already legalize injunction procedures. Opponents at once pointed out that is why we have juries, and that all these 28 laws apply only to corporations or similar entities, not 1 to any individual who might otherwise have a right to a constitutional trial on criminal charges. It was, purely, a radical shortcut, and like most shortcuts in law a very dangerous one.

As passed by the House this bill would have set genuine civil rights back more than 200 years in America.

More thoughtfully the Senate, had, by the end of the week, removed most though not yet all, its more dangerous features. There began to be some hope, for the first time since 1870, that a genuine civil rights law might actually emerge from Congress, a law that would truly guarantee the rights of Hoosier citizens, for instance, to hold a meeting in the war memorial or the public library building which they jointly own, or of any citizen to vote, to hold office, to pay taxes, to serve in the Armed Forces, or even to hold a job without joining a labor union.

Indiana, still well ahead on civil rights, already has reached that point.

Supreme Court Decisions

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 30, 1957

Mr. ERVIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "High Court Decisions: Ends and Means," which appeared in the Greensboro Daily News, of Greensboro, N. C., July 23, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HIGH COURT DECISIONS: ENDS AND MEANS

While the United States Supreme Court is being roundly applauded in some circles and harshly assailed in others for its recent flood of significant liberty versus authority opinions, it may be well to back off and seek perspective.

In its opinions concerning congressional investigations, FBI files and Smith Act convictions the Court simply, in the words of Dorothy Thompson, returned to the sound, old, conservative American doctrine that greater rights of individuals are no longer incompatible with the security of the state.

This is another way of saying that the Nation's near-hysterical fear that Stalinism would triumph has subsided, and once more we are able to tolerate dissent, even dangerous dissent, better than we were during the Korean or Indochinese war years.

To the extent that these opinions redefine individual rights and knock out sharply abusive and dangerous disclosure for disclosure's sake tactics of the House Un-American Activities Committee, they are salutary.

But their real danger lies not so much in the objectives they seek (for certainly restraining government power and upholding individual liberty are worthy goals), but rather in the methods they use and the kind or precedents they set.

In the new alinement of liberals on the Court, the Black-Douglas, Warren-Brennan combination of F. D. R.-Ike apopintees, the Court's enthusiasm for individual liberty could spill over into blind prejudice.

Max Freedman, writing in the Manchester Guardian, warns against the broad scope of Chief Justice Warren's opinion in the Watkins case: "There are numerous generalizations in this judgment on the powers of Congress which will hardly survive careful scrutiny in coming months. Yet all these passages in the opinion could be reduced or completely removed without affecting the final decision that Watkins be cleared of contempt."

Bernard Schwartz, professor of law at New York University, writing in the New York Times, while laudatory of Warren as an administrator, says this of his judicial ability:

"The responsibility for the immoderate recent dicta must be laid, in large measure, at the door of the Chief Justice. It is the Chief's job to restrain his colleagues against extreme language, unwarranted by the actual case. Instead, Warren himself has been as guilty as any of uttering unduly broad dicta. * * *

"The deficiencies in the Watkins opinion may be traced, at least in part, to Warren's lack of prior judicial experience. A master of the judicial craft does not adjudge in advance, by an omnibus answer to an omnibus question. He deals only with the particular instance; and he waits till it clearly arises. He is, in Cardozo's phrase, cautious, even timid, fearful of the vivid word, the heightened phrase."

By defending broad principles in sweeping laguage, Chief Justice Warren exposed the Court to dangerous precedents. His arguments for his convictions were as important as his convictions; and the fact that he wandered down unrelated paths of constitutional law could damage the Court's reputation. A basic lack of tightness in some of the Warren decisions (that is, unfamiliarity with judicial tradition) may also account for the large number of concurring opinions now being written in important decisions. In many of these opinions careful students of the law, Justice Harlan being a good example, are reaching the same conclusions as Warren but via language of greater restraint and with more respect for the continuing body of the law.

Plainly the judicial mind must cleanse itself of personal prejudices both in regard to those precepts which the Constitution sets forth as well as against expedient counter theories of the moment. Justice Tom Clark, probably the least able jurist of the nine, nevertheless makes a splendid point in his dissent in the Watkins case.

He refers to articles written and statements made by Justices Frankfurter and Black in the 1920's when they were fervent advocates of unlimited congressional investigations, since at that time such investigations (Teapot Dome scandal, et al.) were directed toward corporations and wealthy conservatives with whom they differed. At that time Justice Frankfurter wrote in the New Republic:

"Undoubtedly, the names of people who have done nothing criminal or wrong, or nothing even offending taste perhaps, have been mentioned in connection with these investigations. * * * But where so much that the Department of Justice was doing under Daugherty was not innocent, it is highly important that even innocent transactions in the general field of fraud and suspicion be explained in order to separate the sheep from the goats. The question is not whether people's feelings here and there may be hurt, or names 'dragged through the mud,' as it is called. The real issue is whether the danger of abuses and the actual harm done are so clear and substantial that the grave risks of fettering free congressional inquiry are to be incurred by artificial and technical limitations."

Would Justice Frankfurter, who concurred in the Watkins decision, be willing to make the same statement about some of the congressional abuses aimed at ferreting out subversives and traitors in recent years?

This is a serious question since it implies that a Justice might favor one set of facts to fit his conclusions when they apply to issues which he approves and another set when handling issues he opposes. This injects personal prejudices in the adjudication of the law. It proves, again in Max Freedman's words, that "oscillations of prejudice, instead of the history and guidance of the Court's opinions" can "become the arbiters of law, for it is possible to have a prejudice in favor of freedom as well as a prejudice in favor of authority."

So while the Supreme Court's latest blows struck in defense of individual freedom may be salutary, they also could be dangerous; for if the traditions and precepts of the law are not honored, what will stand in the way when the defenders of reaction establish themselves in the seats of power and use these same precedents to support their own illiberal crusade?

Merchant Marine Kit Distributed by American Merchant Marine Institute

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Tuesday, July 30, 1957

Mr. MAGNUSON. Mr. President, I have prepared a statement in relation to the merchant marine kit distributed by the American Merchant Marine Institute to schoolteachers and others requesting it. I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

MERCHANT MARINE KIT DISTRIBUTED BY AMERICAN MERCHANT MARINE INSTITUTE

In recent years it has come to be an accepted obligation of American industry to support the educational system in teaching and strengthening the American way of life, by making informational resources available to teachers and students. The public interest underlying such a service is heightened where, as in the case of shipping, the industry in question is of vital importance to the Nation's commerce and security, yet is relatively little known to a majority of our citizens.

Acting on these considerations, the American Merchant Marine Institute started several years ago to distribute a merchant marine kit to schoolteachers and any others requesting it. So popular has this service become that demand has risen from 2 to 3 requests per week at the start to as many as 1,000 a week. Analysis of approximately 3,300 requests, about a month's volume, showed that they came from every State. The analysis likewise revealed a disturbing lack of public information on shipping. There was evidenced, however, an encouraging and widespread desire to learn.

So far as is known, this kit is the only school assistance program of its size and scope in the entire maritime industry. Funds for conducting it have been small compared to the much more lavish outlays of other industries, many of which have long recognized the public interest to be served, and the mutual benefits to be reaped, from educational assistance programs.

The maritime industry is second to none of these in its need for wide public understanding. This the institute recognizes, as do many individual steamship companies, which have demonstrated their conviction by contributing their own publications to the merchant marine kit.

The various pamphlets, sketches, etc., included in the kit offer factual, historical, and technical information that are of interest to anyone, pupil or adult, seeking knowledge about the Nation's commercial shipping fleet and allied activities. Not only is the kit useful in introducing young America to the engaging story of the development and activities of American shipping, but there are articles and brochures of famous ships of bygone days and of today; a handbook of American-flag passenger ships; a merchant marine primer whose story begins with the launching of America's first ship in 1607 and brings the history of America's shipping down to today, and other data on the vast American maritime industry which has contributed and is today contributing so much

to the growth and security of our country.

The American Merchant Marine Institute and its cooperating member lines are to be congratulated upon their initiation of this valuable educational service. It is a service of importance to every person living in every one of the 48 States. Many of American shipping's difficulties in the past, and even today, have stemmed from the lack of understanding among our people, and sometimes even in high places, of the need for and the accomplishments of the American commercial fleet and its thousands of loyal officers and men. I commend the merchant marine kit to pupils and adults alike.

Federal School Funds Are Not the Answer

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. SCUDDER. Mr. Speaker, in order to give to the Congress the viewpoint of the thinking in California, I am herewith extending an editorial which appeared in the Santa Rosa Press-Democrat on May 29, 1957.

I voted against the so-called school construction program because I did not feel there was equity in the Kelley bill as presented. I believe that such school construction is a State obligation and that such a program should be developed on the local level.

In the future when a bill is developed I trust that it will be based on a formula where the State must come to the aid of its local political subdivisions for assistance before any bill will provide for Federal assistance to that State. I am firmly against Federal regulation of our school system, and the bill that we were called upon to vote on most certainly would have required a certain amount of Federal regulation.

The editorial follows, and it is certainly most thought provoking:

FEDERAL SCHOOL FUNDS ARE NOT THE ANSWER

When historians of a future generation write the history of this decade, they probably will mark it down as the era when the entire population of a great nation suffered the delusion that you get something for nothing.

There have been spectacular delusions of this sort in the past, always followed by the inevitable busts and paying of the bills, but never on such a universal scale.

You find it on a level as close to home as the grocery store, where housewives obtain trading stamps with their purchases. Since the grocer's only source of income is his customers, they naturally pay the cost of the stamps and the merchandise which the stamps redeem. But they think they're getting something for nothing.

Where this national craze is encountered on the grand scale, of course, is in the National Government. Everybody moans, with good reason, that Federal taxes are a crushing burden. Yet everybody still thinks that anything you get from Uncle Sam is free.

It is a tossup whether the Congress will put Uncle Sam in the business of helping finance new school buildings. The proponents are now urging that everyone write their Senators and Representatives demanding such action—and for every thousand people who obediently do so, there will be only one who will write asking the lawmakers to use commonsense and defeat the proposal.

Federal aid in financing public-school buildings would accomplish nothing that the States, counties, and local districts could not do better at less expense. It would simply create one more bureau to take out its own cost of operation before returning part of the money to the taxpayers who were relieved of the money in the first place.

But this hocus-pocus is not as simple as taking a dollar from you as a California taxpayer, keeping a dime for expenses and returning 90 cents to you as a subsidy for new school buildings.

States which could pay for school buildings but have been too niggardly to do so would, instead, receive Federal funds collected in other States which already have decent school buildings—and will be paying local taxes for the next 20 years or so to retire the bonds that built them.

Californians, who have spent hundreds of millions for new schools, and whose children will still be paying the bill, would continue to pay for their own schools—and also pay the cost of bringing Mississippi schools up to something approaching a decent standard.

Yet we still think there's such a thing as getting something for nothing.

Federal Employee Retirement Benefits

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, July 30, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an effective guest editorial from the Oregon Journal of Portland, of July 24, 1957, written by Mr. H. A. O'Neal of Milwaukie, Oreg. Mr. O'Neal, a retired employee of the United States Government, makes vividly clear in this article why an increase in retirement annuities for former employees is fully justified and merited.

The facts presented by Mr. O'Neal also serve to demonstrate why I took an active part—both in our retirement subcommittee and in the Senate Post Office and Civil Service Committee—in helping to bring about favorable action on the Carlson bill to increase Federal employee retirement benefits, as recommended by the National Association of Retired Civil Employees.

For the benefit of my colleagues in the Senate, I ask that the entire article by Mr. O'Neal appear in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RETIRED FEDERAL EMPLOYEES IN NEED OF LIVING FUNDS

(By H. A. O'Neal)

This article has to do with some 250,000 retired United States civil-service employees. This is an extremely heterogeneous group of men and women, some single, but the majority is composed of men with wives and in frequent cases with other dependents.

With a few exceptions, when these people reach retirement age, in general 65 to 70 years, they no longer receive the compensation which they have been accustomed to, but are given a retirement pension which at best is grossly inadequate and, in many cases, is so small that only bare existence is possible.

In the above group of about 250,000 retirees, the record shows that some 40,000 of them receive only approximately $50 a month, another 53,000 receive between $50 and $100 a month, and a third group of 44,000 receive from $100 to $150 a month.

It would appear that $4,500 could be assumed to be a minimum salary, therefore the compensation of those in the $100 to $150 group is reduced to one third of the accustomed amount and those in the still lower brackets are even more severely affected, yet in the face of this, the cost of living steadily increases, taxes increase, insurance increases, and after age 65 or 70, medical expenses are bound to rise.

What standard of living can the above retirees enjoy?

The record shows that these 250,000 former civil-service employees, now in the age group of 65 to the high 90's, all retired prior to October 1, 1956. They are the retirees whose financial circumstances have here been described. They are the group that the second session of the 84th Congress (refused, failed, neglected, use any word you want to) did not give aid to, and here is the reason why:

Bills were introduced in that session of the 84th Congress to increase the retirement benefits of the above retirees. Such a bill passed the Senate unanimously, was sent to the House, where it died when Congress adjourned, because the chairman of the Committee on Post Office and Civil Service would not hold a hearing on it. The outcome resulting from the nonpassage of this bill is made the more discriminatory and inequitable because of the enactment by the same Congress of a law increasing by about 25 percent the retirement benefits of civil service employees who would retire after October 1, 1956.

Thus, the final result means that for each $1,000 received by an employee retiring before October 1, 1956, this same employee, if retiring after that date, would receive about $1,330. Another example of this gross injustice would work out something like this:

If one on a $4,000 salary, with 25 years service, retired before October 1, 1956, he would receive about $1,500 a year; however, if he retired after October 1, 1956, he would receive about $1,950 a year.

Now, on July 1, 1957, 7 months later, the employee who retired before October 1, 1956, is still receiving only the same $1,500 a year, yet those employees who have retired since October 1, 1956, have all retired on the increased rates. This prompts the question, what is to be the future of these 250,000 retirees?

More than 100 bills have been introduced in the Congress to rectify this shameful neglect, yet to date absolutely no action has been taken.

How would you, and you, and you, like to be one of these 250,000? Could you maintain a decent standard of living on their income?

One fact stands out above all others:

These retirees pass to the great beyond at the rate of about 1,000 a month, which means that some 9,000 or 10,000 have already passed on since October 1, 1956, without having been given the consideration which was justly theirs.

Nickerson's Fate

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 30, 1957

Mr. SPARKMAN. Mr. President, recently court-martial proceedings were held for Col. John C. Nickerson with

reference to some of the missile projects. As an outcome of that court-martial Colonel Nickerson has been assigned to a very low rating position in the Canal Zone—virtually banished. The Birmingham News had a very brief editorial on July 27, entitled "Nickerson's Fate," which states the situation quite well. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NICKERSON'S FATE

The Army has ordered Col. John C. Nickerson to the Panama Canal Zone. He will have a routine, menial engineering job. He can't command anybody for a year. When he gets to the zone, he has the very lowest priority for housing—any shavetail can get quarters before Nickerson can.

This is an ugly piece of business, even if Nickerson did commit a grave error. The Army now is deliberately trying to humiliate the man. He would be far better off if he resigned his commission. With his missile knowledge the man can serve his country in private industry.

The Army's decision is puerile.

The Path to Mental Slavery

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 30, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial entitled "The Path to Mental Slavery," from the July 25, 1957, issue of the De Kalb New Era, of Decatur, Ga.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PATH TO MENTAL SLAVERY

A diligent search of the English language fails to reveal words strong enough to express the childish silliness of the three big networks in their refusal to permit, as written, the rendition over radio and television of such songs as those written by Stephen Foster. Such songs are edited to eliminate such words as "darkies, massa, mammy, and Old Black Joe." The reason given for this farcical action is that such words "are offensive to a large segment of the people."

Really now, how far are we going to carry this thing? What sort of a life are we going to be called upon to live if things continue in such a trend?

Such songs depict the life of a people. These words are words of love and honor. They reflect on no one, but honor their subjects and perpetuate them in the hearts of the American people. Any people, any race, would ordinarily be proud of such a place in history and more especially in the hearts of another people. And yet they are being censored and inane words substituted that entirely take away from the context the true meaning and the soulful expressions of a day that is gone.

These songs are the truest examples of American folklore. Yet all that is destroyed. The songs must be modernized. They must be streamlined. They must be destroyed to meet the whims of moderninity. What manner of thinking is this? Are the American people becoming so modern that they must destroy all that has gone before them? Are groups becoming so demanding as to be offended at tradition? Are they becoming so narrow that they are losing contact with the sweetness of the soul? Are they putting all emphasis, all thought and all direction on the cynic's view, that all things are hemming them in and restricting their rights?

To preserve our heritage, the heritage of all races and creeds is not to be laughed off as sentimentalism. Such things go deep into the roots of any people. Destroy these things, and we destroy the basic things of life. The censorship of such songs as Stephen Foster wrote perhaps is an unimportant and trivial thing in itself. But it is the thinking and the feeling back of such actions that is of the gravest importance.

This is dictatorship, and no less. More and more the encroachments are edging their way into our private lives, our thinking and our very souls. How far will it go before we are sold into slavery?

Patching Holes in United States Security

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 30, 1957

Mr. SALTONSTALL. Mr. President, as Senators know, there has been considerable debate of late concerning the policy of our Government in handling news—a debate which thoughtful citizens have followed with great interest. An interesting article on this topic, which was written by Jim Bishop, appeared in the Washington Evening Star on Monday, July 22. I believe that his analysis warrants the thoughtful attention of all who are concerned with this important subject, and I ask unanimous consent that Mr. Bishop's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PATCHING HOLES IN UNITED STATES SECURITY

(By Jim Bishop)

The easiest country for a spy is the United States. This is so for several reasons. One is that this is a polyglot nation with millions of people who have secondary loyalties. Another is that hundreds of thousands of officers of our Government have the power to stamp anything secret—including a box of paper clips—and the word secret is a joke. Third, the punishment for being caught spying in peacetime is seldom harsh. Fourth, we have no central security agency.

In any other country except Great Britain, security is a unified job handled by one department under the head of the Nation. It is the job of this department to screen employees in sensitive work for loyalty; to track and trap foreign agents; to deal with the press. In America, the Federal Bureau of Investigation checks the loyalty of suspects and ferrets spies; the Central Intelligence Agency spies on other nations and forwards its findings to the interested department here; each Government department has its own press section to tell, or withhold, secrets from the newspaper reporters.

A few days ago I finished a series of articles on missiles. Every word of it was cleared by three governmental sections. This was done at my insistence for two reasons: (1) I don't want to reveal secrets, even unconsciously; (2) the press information sections of the Air Force, the Navy, and the Army have kept me from writing colossal blunders for the past 14 years by suggesting that certain brilliant deductions of mine be erased.

WRIGHT STATEMENT CITED

Last week, according to Newsweek, Lawyer Loyd Wright of Los Angeles, in a report from his Commission on Government Security, charged that, on occasion, the United States has been betrayed by the press. The newspapers, which are always sensitive to blanket criticism, jumped behind the typewriter barricades and clackety-clacked Mr. Wright to death.

My feelings, having worked with the men in the Pentagon for a long time, is that the charge is probably true. In a few instances, reporters have decided not to hold onto a so-called hot story for fear that it would be leaked to a competitor. In other cases, a rival Government agency deliberately leaked the information to a writer and urged him to use it. In the majority of cases, the reporter, having been armed with, let us say, two given facts, deduced a third which, on publication, got everybody into trouble.

I don't think that any full-time reporter ever tried to hurt this country.

The serious betrayals of secrets, in every instance, had nothing to do with the press. When Sgt. David Greenglass walked out of Los Alamos, he carried with him a mental blueprint of the trigger for the atomic bomb. If the scientists standing near his workbench had kept their lips buttoned, Greenglass would not have been able to give the secret to a Soviet courier.

In the case of Dr. Klaus Fuchs, who gave Russia a blueprint for the making of the bomb. British security was lax. The officers at Harwell had a report that Fuchs had been a German Communist. They took no action on the matter and, when Fuchs came here, indorsed him to our security officers.

SUGGESTED REFORMS

Good stories are every reporter's business. The hotter the better. There will be no real security on the editorial side of the question until President Eisenhower appoints an agency with power to clear all sensitive material, no matter what department it concerns. Let the one agency be a clearing house for all Government information.

It cannot be worse than the current system—or lack of it.

A security check could be run on each reporter who deals with this agency. When he is cleared, he could be given access to lower echelon material marked "secret" to condition his thinking in writing stories on allied subjects. I would have no objection to being photographed and fingerprinted, and given an identification card if, in return, I was assured of better guidance in the gathering of material for stories.

If the agency could read and clear material quickly, all such writers, I am sure, would be willing to have the stories screened before publication. It might be good to pay such reporters $1 a year and make them part-time Government workers so that they would be subject to the laws covering betrayal of secret information.

It's harsh for us, but it would force both sides to be more responsible.

Shipbuilding Funds

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Tuesday, July 30, 1957

Mr. MAGNUSON. Mr. President, the Journal of Commerce, which has always

devoted much attention to, and has strongly espoused the interests of, this Nation's commercial shipping, is vastly concerned about the outlook for vessel construction and Government's participation in the vessel-replacement program.

An editorial in the issue of July 26, 1957, entitled "Shipbuilding Funds," written by its very competent shipping expert, Mr. Edward P. Tastrom, presents the facts with clarity and force. I ask unanimous consent that the editorial from the Journal of Commerce be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHIPBUILDING FUNDS

(By Edward P. Tastrom)

The question of shipbuilding appropriations to aid American-flag operators in their long-range fleet-replacement program is again in the news this week.

Secretary of Commerce Sinclair Weeks, testifying before a House committee, admitted he was trying to make up his mind whether to ask for a limited additional appropriation to provide for construction of a sister ship to the United States as a replacement for the *America*, or go along with pressure both inside and outside the administration for economy in Government spending. Right now, the prospects that the Secretary will seek new funds seem dim.

The following day; the subsidized lines, which are vitally interested in this question of fleet modernization, expressed concern in a letter to Secretary Weeks that the cuts made in shipbuilding funds this year may not be restored in the 1959 budget, now in preparation.

This concern is well founded and the campaign to secure restoration of shipbuilding appropriations to carry out the long-range plans cannot get underway too soon.

This long-range shipbuilding program, ultimately to involve some $3 billion of new vessels, is based upon the recommendations made by the Maritime Administration (a Division of Secretary Weeks' Department), following lengthy congressional hearings on the subject and special governmental studies.

Its purpose is to keep our merchant fleet in first-class condition, both for trade and defense, in recognition of our dominant position as a world power accounting for nearly one-third of all foreign trade and committed to come to the defense of most of the free world.

The cost of this program was to be $120 million a year, involving the construction of 50 ships annually.

Well, it got off the ground for one round and then, early this year, the lightning struck. The White House started things by nipping off $25 million which it transferred to the Civil Aeronautics Administration for special uses. Then the House Appropriations Committee sheared off $92 million, leaving $3 million in new appropriations of the $120 million sought in the 1958 budget.

The shipping industry did not oppose this action with any great vigor, though we felt it should have restated its position on a program that had been so carefully screened and had the merit of Government indorsement as vital to our commerce and defense.

The fact that $108 million remained unexpended in the previous year's budget should not have weighed as heavily with shipping men in deciding what should be done, as apparently was the case.

This sharp cut in long-range building funds struck us as a serious thing. It broke the continuity in this program just as it was getting started. As we observed at the time (though it never got into print), "When Congress next year considers funds for fiscal 1959 it will be dealing, in so far as shipbuilding is concerned, with a shelved program. If economy is still the rule of the day, the chances of getting the long-range funds restored will be considerably dimmed."

This could very well be the case, on the basis of this week's developments, unless active steps are taken to recover the lost ground.

The carryover should no longer prove a bugaboo since all the funds by now have been earmarked and are in the process of getting committed.

Reporting and Disclosure of Welfare and Pension Fund Plans

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, July 30, 1957

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a telegram I have received from the American Institute of Public Accountants. This important organization, to my gratification, has sent this telegram in support of S. 2175, a bill introduced by myself to require the registration, reporting, and disclosure of welfare and pension fund plans. The same wire has gone to Representative PETER FRELINGHUYSEN, JR., sponsor of H. R. 7802, a companion bill introduced in the House.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

NEW YORK, N. Y., *July 25, 1957.*

Senator IRVING M. IVES,
United States Senate,
Senate Office Building,
Washington, D. C.;

Hon. PETER FRELINGHUYSEN, JR.,
The House of Representatives,
House Office Building:

After careful study of S. 2175 and H. R. 7802, identical bills which you are sponsoring in the Senate and House respectively, the American Institute of Certified Public Accountants wishes to go on record as supporting the principle of this proposed legislation. In the judgment of the institute the objectives of these bills are clearly in the broad public interest.

The half-million employee welfare and pension benefit plans in existence today constitute for more than 75 million Americans—nearly half of our entire population—a protection against the misfortunes of life and the uncertainties of advanced age. They offer security and peace of mind and thus help to minimize the risks that were once thought to be the price of opportunity in a free economy. They encourage economic expansion and human progress by making it possible for people to use their present incomes to improve living standards without undue concern for their future welfare. They help demonstrate that by the wise management of their own social institutions people can provide adequately for their needs without excessive dependence upon governmental organization.

It is entirely likely that the vast majority of existing employee welfare and pension funds are being administered responsibly and honestly and that the trustees of these funds are conscientious men who have a keen awareness of their responsibilities toward the beneficiaries, whether the funds are administered by unions, by mangement, or jointly. But no one really knows how well they are being administered.

The financial resources of these funds have become so large, and the number of direct and collateral beneficiaries so vast that uniformly high standards of responsibility and accountability seem absolutely essential. In both size and scope employee pension and welfare funds have become a vital part of the national economy. Their assets constitute one of the largest existing pools of private capital. As time passes and many more million workers and their families become participants, the place of such funds in the economic framework of our society will take on increasing significance. The necessity for statutory standards of responsibility and accountability seems clear.

Any institution which directly affects the welfare and security of half our population, to say nothing of its impact upon the economic life of the Nation as a whole, is clearly affected with the public interest. Present safeguards—voluntary, Federal, and State—are insufficient protection of the public interest.

The proposed legislation seems a wise middle road between voluntary self-discipline and regulatory controls. It devises a remedy which is not only adequate to the need, but one which respects the ability of people to safeguard their own interests through the exercise of individual responsibility and their individual rights.

Furthermore, in the institute's views, there is nothing in this legislation to suggest a punitive motive. It could not be argued with validity, for example, that Congress would be seeking to punish the trustees of funds if an audit of their financial statements were required by law. Business firms, in order to sell securities in interstate commerce or through the mails, or to list their securities on a national securities exchange, have long been required to have their financial statements audited—to provide investors with an independent expert review of representations in financial statements. Even in the absence of legal compulsion thousands of business and nonprofit institutions regularly open their books to independent audits as an accepted practice of sound management.

For these reasons the American Institute of Certified Public Accountants endorses the purposes and principles of the proposed legislation.

MARQUIS G. EATON,
President, American Institute of Certified Public Accountants.

The Civil-Rights Bill

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 30, 1957

Mr. ERVIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "We Must Avoid the Extremes," published in the Asheville Citizen-Times of Asheville, N. C., July 28, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE MUST AVOID THE EXTREMES

Tradition and long custom hold the South to the old ways of life; but, if the South is not pressed too hard by agitators and by

drastic Federal legislation, the South will make, and is making, adjustment to new ways of life.

Historic events of 1 day, July 23, confirm this generalization. For on that day a jury of Tennessee citizens and three North Carolina school boards made history which fits into the developing record of the new South.

The Tennessee jury verdict utterly refutes the main theory and the assertion upon which the administration's civil-rights bill was drafted.

That theory is that southern juries will not convict when the trial in any way concerns the problem of segregation.

The voluntary action of the 3 school boards of Charlotte, Winston-Salem, and Greensboro, assigning a total of 12 Negro students to former all-white school, demonstrates the reasonable possibilities of a sound, just, and flexible school law placing responsibility for the future of the public schools upon local school officials and local communities.

The 3 boards rejected the petitions of 41 Negro students.

The jury in the Federal court of Judge Robert Taylor, a Tennesseean, convicted segregation agitator John Kasper and six citizens of Clinton, Tenn., for criminal contempt of court. The defendants were charged with willful violation of a court order forbidding any interference with the lawful integration of Clinton High School.

Thus, as Judge Taylor said in his charge to the jury, the issue of integration was not on trial. Yet the defense counsel virtually rested their case on appeals to the jury to uphold the southern way of life.

How did the action of the three school boards come about? For the feelings of Tar Heels on such matters are close to similar feelings among the peoples of the States in the lower South where there is as yet no sign of integration in the schools.

The answer: confronted by the school crisis created by the Supreme Court's decision in 1954, North Carolina chose to meet the issue in good faith. Through the joint deliberations of the State school advisory committee and the general assembly, the Pupil Assignment Act was adopted.

In the words of State superintendent of public instruction Charles F. Carroll, this statute "imposes upon each local school board the moral and legal obligation to act in good faith, and with appropriate regard for the best interests of all concerned."

The law can operate with flexibility. It has alternatives for parents and students objecting to a given school assignment. But the act does not countenance assignment on the basis of race alone.

There was opposition to the enactment of the law. Loud voices called for resistance to the Court's ruling. It was proposed that the public schools be replaced by a so-called and legally dubious State system of private schools.

Statesmanship and good faith, however, prevailed in the general assembly. And among the people in general there was a willingness to go along, to experiment with ways to preserve, above all else, the school system that had been established by toil and sacrifice.

It was in this spirit, with this background of State history since May 1954, that the three school boards acted, in good conscience and after earnest deliberation.

Experiment, effort, and error—doubtless the future course of the public schools in this new era of world and American history will not be always smooth or happy.

But the old north State, in the main, throughout its history has sought to follow a good course avoiding extremes of action in the quest for orderly advancement.

And this indeed seems to be the explanation why our American representative democracy has outlived Europe's predictions of disaster at the birth of this Nation.

Despite recurring crises, this democratic Republic has never long wandered away from the middle way between the rocks. Thus the ship of state has not foundered in furious seas of political and social storm.

It would be well now for the more militant advocates of the civil rights bill to remember this red thread running through the cloth of our national history. Avoid the extremes, holding a middle way in good faith and firm will.

Racial Relationships in Housing in New York City

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 30, 1957

Mr. JOHNSTON of South Carolina. Mr. President, I send to the desk an advertisement from the New York Times of Monday, July 29, 1957, regarding racial relationships in housing in the city of New York, which I believe points up that, whether a racial problem be in the South, West, or in New York City in the North, people of different racial or color lines cannot be compelled to integrate if they do not so desire.

I ask that this advertisement be printed in the Appendix of the RECORD.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

TENANTS: IT IS UP TO YOU TO PROTECT YOUR INTEREST IN NEW YORK CITY AS A PLACE IN WHICH YOU WISH TO LIVE

Some weeks ago the city council considered a proposed law that would have compelled owners and managers of private apartment houses to rent apartments to tenants without regard to color or race or national origin, and regardless of the wishes of the tenants already occupying the buildings.

When tenants realized the meaning of this proposed law, they sent letters of protest by the thousands to Mayor Robert F. Wagner and to Joseph T. Sharkey, majority leader of the city council. As a result of this flood of letters the project was put aside by its political backers.

In the meantime, those who favor such totalitarian legislation have forced out an amended bill which they now intend to ram through the city's legislative process unless tenants again take the trouble to write in protest to the mayor, and to Mr. Sharkey. Accordingly, you are urged to again write letters of protest and address them to the mayor and Mr. Sharkey at city hall, New York 7, N. Y.

Owners of private apartment buildings now have the right to rent to tenants whom they regard as acceptable neighbors for their existing tenants. This bill would deprive them of that right and compel them to take new tenants whose presence may not be agreeable to present tenants. Under this compulsory renting law, as vacancies occur in private apartment buildings, present tenants thus would be required to share their apartment buildings with new tenants whom they may not prefer. This is an unwarranted invasion of private rights.

The people of New York City have a long record of mutual toleration and respect. The many races that make up our population have every right to associate freely under existing law, and they do associate freely. But to bring about compulsory association by applying the force of law to owners and managers of private apartment houses is an entirely different thing. Compulsion would change the fundamental basis of racial relationships within the city. The results could be unfortunate. For, what New Yorkers—all Americans, for that matter—are glad and willing to do in their private racial relationships as an act of free association, they will resist doing under the compulsion of legal force. This proposed law, we genuinely believe, will do more harm to racial relationships than anything else conceivably could.

The proposed law would cause many more families to leave the city. It would depress real-estate values. It would affect the basis of the city's taxation and its credit. It would undo much of the success we have had in amicable living.

If you oppose this bill—the Sharkey-Brown-Isaacs bill—write at once and tell Mayor Wagner that you do.

Pakistani Urges U. N. Police Force

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 30, 1957

Mr. SPARKMAN. Mr. President, in the New York Times of July 26, 1957, there was published a news article under the heading "Pakistani Urges U. N. Police Force." The article refers to a statement of the Prime Minister of Pakistan. There is pending on the Calendar in the Senate, a Senate resolution expressing the sense of the Senate in favor of a permanent U. N. police force. I believe the Prime Minister of Pakistan has rendered a fine statement in support of such a move, and I ask unanimous consent that the article to which I have referred be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PAKISTANI URGES U. N. POLICE FORCE—PERMANENT TROOP UNIT WOULD HELP SPEED DISARMAMENT, SUHRAWARDY SAYS HERE

UNITED NATIONS, N. Y., July 25.—Establishment of a permanent United Nations force for "preventive policing" would help expedite disarmament, Prime Minister Huseyn Shaheed Suhrawardy, of Pakistan, asserted today. He declared that the best guaranty of international peace lay in enhancing the prestige of the world organization.

Mr. Suhrawardy, in a radio broadcast from the United Nations headquarters, also expressed hope for the abandonment of nuclear weapons. He said he was confident that those who control the sources of nuclear energy would "make the right choice" in directing its potential toward constructive rather than destructive ends.

The United Nations entered its most effective phase in 1956, Mr. Suhrawardy stated, when it "decided to act swiftly and powerfully, and succeeded in preventing a conflagration in the Middle East." That one action alone has justified the organization's existence, he said.

Both in his formal address and in a press conference later, the Prime Minister voiced a conviction that the only element lacking for pacific settlement of many major world problems was good will.

SOLUTION FOR ISRAELI PROBLEMS

Even the problems between Israel and her Arab neighbors can be adjusted peacefully, he said, provided that one of the larger and more influential nations undertake to open negotiations between the two sides. In the process, Mr. Suhrawardy conceded, the intermediary "would certainly get his fingers burned."

His own Government, he told a questioner, has no intention of attempting such a role.

Pakistan has been charged with aggressive designs because of her membership in the Southeast Asia Treaty Organization and the Baghdad Pact, Mr. Suhrawardy said. He reiterated that Pakistan had entered into these alliances "with one intention alone, namely, to defend peace."

The Fight for Survival

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 30, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial entitled "The Fight for Survival," from the July 25, 1957, issue of the De Kalb New Era, of Decatur, Ga.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FIGHT FOR SURVIVAL

The efficient machinery of the United States Senate—the greatest deliberative body on earth—has come to a tortuous and creaking halt. The highest legislative chamber of our Government is paralyzed. Proposed legislation, much of it good, has been pigeonholed. All business has ceased, and two opposing forces are desperately marshaling ranks. The reason for this paralysis is the civil-rights bill.

Such a bill is no new proposal in this country. The introduction of a similar measure is annual affair. We have even experienced a civil-rights measure in action. This was immediately following the War Between the States.

Martial law was the order of the day. The writ of habeas corpus, an institution as old as Magna Carta, was suspended. Summary judgments and the suspension of all rules of evidence were commonplace experiences. The right of trial by jury was abolished. The Government became a Government by injunction and arbitrary power. These were the days of the carpetbaggers, the days of infamy, the days of incredible corruption and agonizing suffering. These were days which this country, the North and the South, look upon now with a feeling of shame. These were the days of civil-rights rule.

In considering this matter of civil-rights legislation, we are altogether too prone to restrict our view to one narrow interpretation, and usually that is of very inflammatory and controversial nature. But the issue goes far deeper than any one phase unless we consider the one great phase—the destruction of our Government as we know it and the abolition of our rights and freedoms. The really great question involved is States rights.

Our Constitution is very clear and simple on this matter. It clearly says that the Federal Government has no powers not delegated to it by the States. State sovereignty is the pillar of our Government.

In 1952, Gen. Dwight Eisenhower, when he was running for the Presidency, made the following fundamental statement:

"The Federal Government did not create the States of this Republic. The States created the Federal Government. The creation should not supersede the creator. For if the States lose their meaning, our entire system of government loses its meaning, and the next step is the rise of the centralized national state in which the seeds of autocracy can take root and grow."

Again in 1953 he spoke these words:

"I am here because of my indestructible conviction that unless we preserve in this country the place of State government with the power of authority, the responsibilities and the revenues necessary to discharge those responsibilities, then we are not going to have America as we have known it. We will have some other form of government."

These are truths which America has been taught since the travail of the Revolutionary War. They are facts that have been instilled into us by our statesmen since our beginnings to the present time. They are the cornerstones upon which has rested our way of life and our happiness for nearly two centuries. Our history has taught us the wisdom of their practice, and the one departure from these practices brought untold suffering to our people and shame upon our name as a Nation.

To forsake these truths now would be calamitous. To substitute for these facts social, political, and economical theories, prompted by the exigencical thinking of the time would be appalling. Life in these United States has been too sweet and precious for us now to throw it all away and follow after the will-o'-the-wisp of fancy, conjecture and meaningless bait thrown out by groups who, caring nothing for any save themselves, fill our ears with prattlings and appealing needs. Here, right here in this country, there is an abundant chance for all groups to make good if they are sincere. There is a Constitution that protects. There are principles that are right. That protection and those principles will not countenance any group's being downtrodden.

And so, what if the Senate has stalled? What if the work of that great legislative body is paralyzed?

It is with deep gratitude that we see the friends of constitutional government, led by Senator RICHARD B. RUSSELL, fight for what we all know is right and fair and just against those forces that in the name of civil rights seek to destroy us from within with no less diabolicalism than our enemies from without seek to destroy our Nation and our people's happiness. The issues are not attached to the North or the South or the East or the West. They are Americanwide and freedomwide. The cause for which these men fight is the survival of our way of life. May they know that our prayers and our hopes are with them constantly, and our faith in their ultimate victory is unwavering and steadfast.

A Subtle Lesson at Grand Canyon

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. BOW. Mr. Speaker, a fine tribute to the devoted men and women of the National Park Service as well as to the concept of preserving in national parks the scenic, natural, and historical sites of our Nation is found in the New Leader article entitled "A Subtle Lesson at Grand Canyon." It seems to me that Mr. William E. Bohn has done a splendid job of stating briefly the basic value of the park system:

A SUBTLE LESSON AT GRAND CANYON
(By William E. Bohn)

A million and thirty-six thousand visitors came to see the Grand Canyon last year. I asked Superintendent John S. McLaughlin and Assistant Superintendent Charles E. Shavlin why these people come and what they do when they get here. They agreed that a lot of visitors come to gawp and gape and then go home to boast to their friends that they have seen the Grand Canyon. But many, they said, gaze down the astonishing mile to the tossing waters of the Colorado River, stare across the 10 miles from rim to rim and find themselves shocked into awed attention. For the first time, it seemed, they realize what geology is. Before they turn back toward home, they may sit in on lectures very much like those usually given to college science classes. Oliver Goldsmith wrote about the visitors to the village church who came to scoff and remained to pray. Many of these lusty, car-driving Americans come to gaze and gawp and boast but remain to admire and understand.

A lot of thought has been given to this business of luring the public toward understanding. The park's museum is a low stone building set upon the very verge of the canyon. The wall toward the mighty gully is an unbroken sheet of glass. Along it there is a series of 15 binoculars, each one permanently set in such a way as to give a view of some important feature of the eighth wonder of the world.

We happened to stroll up to this place about half an hour before the lecture was to begin. The cars in the parking space were from most of the States of the Union and two or three Canadian provinces. There were a lot of trailers and a couple of buses. Inside there was the usual crowd—fathers and mothers with children of all ages, even babies, young married couples holding hands, and every other sort of vacationing group. But no matter how playful and jolly the vacationers might be, there was a constant line of quiet and intent people gazing through the glasses down into the depths of the great incision.

Presently Betty Bartlett, a perky young woman in a park ranger's uniform, stepped out against the shining wall of glass and began the lecture of the day. It was, of course, about the geological revelations visible in the canyon's great walls. She explained the five periods of geological time as brightly and pertinently as if she had been telling a fairy tale to a primary class. Then she went into the rather complicated process whereby the rocks of the area have been raised and the great cut for the passage of the water has been dredged out by the wild and irresistible Colorado River. And she did not neglect to tell her listeners that there are little grand canyons everywhere, that they can find the evidence of the geologic processes right around their own homes.

When the talk was ended, the listeners did not disperse as I expected. The exhibits in the cases and on the walls of the museum attracted troops of eager viewers. Men and women, young and old, gaze at the fossil remains and samples of all the different sorts of rock exhibits in the exposed strata of the great canyon. A lusty junior shouted across the halls: "Hey, Maw, look. Here's the track of a dinosaur—and its only got three toes." And a stiff-looking farmer pointed out to his plump and hearty-looking dame the different sorts of rock which were on display.

This was, of course, effective and widely aimed education. The curiosity and enthu-

siasm of boys and girls were being turned in the direction of science and productive thought. Old folks were being given an opportunity to fill in rifts in their education which had been left by the primitive facilities available during their youth.

The next day we had the pleasure of meeting Louis Schelback, the widely known and just naturally inspiring head of the Grand Canyon Scientific Staff. He was in a happy mood, for, as one of his assistants explained, his great dream had finally come true. There has just been completed a visitors' center which is really a dream, a place where pleasure and learning have been perfectly combined. I wish that all of the museum designers and directors in the country could see it. It is at once so beautiful, so informative and so alive. The man who planned all of this smiled a warm smile and said: "You see, we must not make it too obvious that we are teaching."

To all three of the men whom I met at Grand Canyon Park I put a question which has been taking form in my mind: "How does the Government manage to get for its Park Service so many able and devoted men, men who obviously could draw much bigger salaries in other occupations? My informants agreed upon three good answers. In the first place, the National Park Service was established by Steve Mather and a group of devoted men who surrounded him. Their spirit is still strong in the organization. In the second place, from the beginning, and to a certain extent now, the service has been manned by foresters—and foresters don't work for money, they know better.

Alabama's Oil Production Sets New Monthly Record

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. HUDDLESTON. Mr. Speaker, Alabama's oil production is steadily increasing month by month. In May, the last month for which figures are available, oil production totaled almost 600,000 barrels—the most every produced in a single month. Additional wells are being drilled, with three new ones just completed in the State's largest field, Citronelle.

With the demand for oil increasing almost daily, Alabama's role should become progressively more and more important in the months and years ahead. Under leave heretofore granted, I am happy to insert an editorial from the Birmingham News of July 22, 1957, which is entitled "Alabama's Oil Production Up":

ALABAMA'S OIL PRODUCTION UP

Alabama is a long way yet from being a major oil-producing State, but output is climbing as new wells are drilled and brought into production. Three new wells were being completed last week in the Citronelle field in north Mobile County. If all are brought in as commercial producers, they will raise the total number of wells in that 2-year-old field to 95.

The State's oil production in May, according to Dr. Walter B. Jones, State oil and gas supervisor, was 500,981 barrels, a new monthly record. The figure compared with 462,129 barrels in April and 230,880 barrels in May a year ago. Leading in May output was the Citronelle field with 387,223 barrels, followed by the Pollard field in Escambia County with 68,391 barrels, the Gilbertown field in Choctaw County with 36,540, and the Carlton field in Clarke County with 8,826.

Both United States and world demand for oil, of course, continues to grow each year. Domestic demand for crude petroleum, from which is derived some 2,000 other end products besides gasoline, is currently running between 8 and 9 million barrels a day. Chase Manhattan Bank economists, who keep a sharp eye on the industry, now estimate that by 1967 domestic consumption will have risen to more than 14¼ million barrels a day, while demand in the rest of the free world will be almost as high.

The bank's economists expect that domestic sources in 1967 will be supplying 11 million barrels daily and foreign sources 17 million a day. American oil companies, it is anticipated, will have to spend some $73.5 billion and foreign companies about $41.5 billion in finding and developing new sources over the next 10 years.

It will be hoped in Alabama that this State will be able to play an increasingly significant role in the expansion that lies ahead for the industry.

A Valorous Woman

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. CANFIELD. Mr. Speaker, a good and gentle woman from my home community has recently been called away. While for the most part her charitable endeavors benefited local people and institutions, her influence was also felt in the larger area of international philanthropies. She gave generously of her self, her strength, time and devotion. In the words of the following editorial, that appeared in the American Jewish Post, of Paterson, N. J., Mrs. Anna J. Maskowitz was "a valorous woman":

Jewish tradition has popularized the tribute "eshes chayil" to symbolize the loftiest embodiment of Jew womanhood. The translation "woman of valor" does not approximate all the overtones which are implicit in the expression of esteem and reverence to a woman who best exemplifies the qualities of heart and soul glorified in Holy Script by King Solomon, as recorded in the Book of Proverbs.

Anna Maskowitz, of sainted memory, was an "eshes chayil" in the fullest meaning of the term. She was a living definition of the exalted character of Jewish motherhood, which is equated with the highest ideals of love, self sacrifice, an all absorbing dedication to the promotion of health and the happiness of all of God's children, who were her children. In her heart there was room for all the distressed and the forlorn, of all peoples, and she was happiest only when she could bring them a full measure of happiness by laboring day and night for the upbuilding of the temples of mercy, the welfare institutions in our community.

Anna Maskowitz has left an indelible impress upon the annals of the city of Paterson. It is safe to say that all the worthy institutions with which she was identified would not have enjoyed such outstanding achievements without the dynamic, irresistibly impelling stimulation of a woman with a resolute will who would never take "No" for an answer whenever charity was involved.

Paterson has been blessed by her life in our midst and will forever be indebted to her for her signal benefactions.

Parochial Schools Save Boston $15 Million in Taxes Annually

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very factual and illuminating statement made by Mr. Emmett Kelly, an assistant assessor for the city of Boston, on the contribution made by the Catholic schools in the city of Boston, and the substantial savings of millions of dollars to the taxpayers yearly in the capital city of the Commonwealth of Massachusetts.

This article appeared in the Boston Pilot on July 27, 1957, and is as follows:

PAROCHIAL SCHOOLS SAVE BOSTON $15 MILLION IN TAXES ANNUALLY

(By Emmett Kelly)

(Editor's Note.—A resident of East Boston, Mr. Kelly is an assistant assessor for the city of Boston. The present article is presented as an interesting sidelight on the forthcoming announcement of Boston's new tax rate.)

Taxpayers sometimes forget to count their blessings. The miscalculation often occurs because the blessings are in disguise. Among these blessings are tax savings which are even less obvious than hidden taxes.

In the realm of real-estate taxation, Catholic schools operated at a great personal sacrifice by churchgoers must be calculated as a benefaction to the community.

In Boston, the hub of taxation, Catholic schools are a deterent to a higher tax rate by saving the taxpayers $15 million annually. In effect, it is a financial contribution to a better public-school system. The existence of Catholic schools alleviate an already tax-burdened community of a greater and perhaps financially crushing school problem.

The 1956 public-school budget was approximately $30 million, providing for 83,000 pupils, at per capita cost of $360. The parochial school pupils numbered 43,000, figured at the same per capita rate, would indicate a cost of $15 million if educated by the city. Since $1 million in the Boston budget equates to 66 cents in the tax rate, $15 million budget dollars is the proximate equivalent of $10 in the tax rate. This indicates that a home assessed for $7,000 has a tax saving of $70. A business property assessed for $1 million, has a tax saving of $10,000. This represents a substantial saving of 12 percent in taxes on every unit of taxable property, real and personal, in the city.

This taxsaving is the equivalent of an amount the city expected in revenue from Gov. Foster Furcolo's proposed sales tax.

The $15 million tax saving figure is three times greater than real estate taxation expected by the city from the Prudential development rightly acclaimed as an economic boom for Boston. The $100 million development with an assessed valuation of $65 mil-

lion at present rates would produce an approximated tax of $5,115,500.

What does $15 million represent in the tax structure of Boston? It is the proximate equivalent of the total real estate tax levy in the following areas:

Valuation—Ward 7, $26,500,000; ward 8, $28,100,000; ward 9, $24,500,000; ward 10, $18,600,000; ward 11, $24,100,000; ward 12, $30,000,000; and ward 13, $23,500,000.

In these areas there is a real estate taxable valuation of $174 million with a total tax bill of approximately $14 million.

The $15 million Catholic school cost is the proximate equivalent of the costs of running the following municipal departments and obligations:

Debt service, $6,900,000; pension system, $2,700,000; MTA deficit, $4,900,000.

This is the Boston picture. But what of the entire archdiocese? The archdiocesan system of schools is, the largest in New England, one and a half times as large in number of pupils as the largest municipal public school system in Massachusetts, and one of the largest school systems, public or parochial in the entire country.

Its expansion since 1944 is phenomenal due to the foresight and zeal of Archbishop Cushing and his plan that wherever possible Catholics would have the opportunity to attend their church schools. It is a significant plan in light of his archiepiscopal motto: "That they may know Thee."

SCHOOLS INCREASE

The total enrollment of archdiocesan schools in 1944 was 102,000. The enrollment in 1956 showed a 46 percent increase bringing the total to 149,000. In the same period the number of schools was increased by 21 percent from 280 to 338.

An excerpt from an article in the Pilot by Mary L. Sparks of the archdiocesan department of education, stated, "Based on the 1951–52 per capita costs of public elementary and high schools in each of the 67 cities and towns in the archdiocese which also contains one or more parochial schools, taxpayers in those cities and towns would have had to pay $30,637,000 to educate the children who are cared for in the parochial schools. * * * The per capita costs are only the operating costs and do not represent capital outlay and equipment."

This is a far cry from an article in the Pilot of November 1839, deploring the fact though the Catholic population had grown considerably, there was not a single male school attached to any church in Boston. This writer is happy to note, as an alumnus, that the first real expansion of a diocesan parochial school system began in the north end of Boston in January of 1849 when the Notre Dame Sisters staffed the St. Mary's school under the guidance of the Jesuits with Father John McElroy as pastor.

The Catholic almanac in 1866 reported that the Boston diocese had 3 academies, 9 schools for girls and 4 schools for boys with a pupil population of 4,491.

The glorious decade was 1944–54, when the seedlings, fallen upon barren ground in the 19th century came to full flower and fruition under the guidance of Archbishop Cushing.

The great strides taken in developing the archdiocesan department of education in the last decade is a credit to the archbishop and his highly qualified aids, Msgr. Cornelius T. H. Sherlock, former superintendent, and Msgr. Timothy F. O'Leary, present superintendent.

Is this continued development expensive over the years? Indeed. Worthwhile? Of course, and a clear indication that Catholic parents are determined that their children will be educated in the manner prescribed by the church.

Boston, tax burdened and tax conscious, like other cities and towns is looking to the statehouse for relief from the spiraling real-estate tax. The tax is burdensome to landlord and tenant alike and cripping to Boston's industrial potential.

The unanimity of opinion recognizing the peril is divided with respect to the method of correction. The public is confused by the variety of nostrums proposed and is apprehensive that the mountain's labor will prove abortive. But, however high the present tax rate, consider what it would be if the municipal budget had to provide for the education of the pupils presently in the parochial system.

Address by Hon. Earl Wilson Before the Convention of Indiana Veterans of World War I, Indianapolis, Ind., July 20, 1957

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. BRAY. Mr. Speaker, under leave to extend my remarks, I include the following text of a speech made by our colleague, Representative EARL WILSON, of the Ninth Indiana Congressional District, before the convention of Indiana Veterans of World War I in Indianapolis on July 20. Mr. WILSON quotes some statistical material relative to these veterans which I deem most worthy of note:

ADDRESS OF HON. EARL WILSON BEFORE VETERANS OF WORLD WAR I AT INDIANAPOLIS, IND., ON JULY 20, 1957

My friends, it is indeed a great honor to be invited to appear today before this gathering of Indiana veterans of our first great world war.

They called you doughboys back there in 1917 and 1918, when you were at the peak of your glory—in the very prime of vigorous young manhood. There were nearly 5 million of you in uniform.

When old Kaiser Wilhelm officially threw in the sponge on that memorable day of November 11, 1918, you fellows were heroes throughout the world. You came marching home—victorious, happy, and singing lusty French songs. You were paraded, wined, and dined in every city and town across the land. You marched behind thousand of bands playing grand old tunes like Beautiful Katie, Four Leaf Clover, Over There, How You Gonna Keep 'Em Down on the Farm—and the many other catchy and never-to-be-forgotten melodies of that wonderful period.

It brings a lump to the throat to think back over those good old days—the days when the world and our own beloved country seemed on the threshold of a bright new life. Those were the days before the H-bomb—and before planes and guided missiles which travel faster than sight or sound.

It was common, in those days, to speak of the world sitting on a powder keg when we referred to ticklish international situations which might lead to war. Today the world literally sits on the very brink of eternity, faced with forces of destruction which can—if loosened by irresponsible men or governments—wipe out all civilization, the world over, in a matter of hours or days. This is indeed a period of great anxiety.

However, I believe we can be certain of these comforting facts:

That all of our wars, all our scientific and other discoveries, all our participation in world affairs—are distinct parts of the great pattern of human progress.

Certainly you doughboys of World War I played important parts. You made everlasting contributions to the advancement of America and of the world. You saved the world for democracy. You gave this country the strength and the necessary breathing time to get set for later onslaughts by enemies of the free world.

I am absolutely certain—and I know this belief is shared by millions of other Americans—that ours might well be an enslaved or a second-rate nation today were it not for the victories you achieved nearly 40 years ago.

Forty years is not a long time, as history records the progress of nations and of civilizations.

Yet, it is a very long time when measured against the life expectancy of mortal man. The 3 score and 10 years as mentioned in the Bible still is accepted as the normal limit of human life. Beyond that, a man is considered to be living on borrowed time. Thanks to advances in science and medicine, however, more and more of our people are living—hale, hearty, and happy—long past their 70th birthdays.

There are very few doughboys who are not crowding 60 years. Some are a bit younger—but many more are older. In fact, the average age of World War I veterans on last December 31 was 62.8 years. That was 7 months ago, so we can assume that the average age right now is more than 63 years.

Before leaving Washington yesterday I did some researching at the Veterans' Administration. I found some very interesting material.

I found there were 4,744,000 men in uniform in World War I—Army, Navy, and Marines. On May 31, 1956, there were 3,090,000 of these men still living. On May 31, 1957, there were 2,980,000 still living. This means, then, that up to now nearly 2 million of your buddies of that war have gone on to the Great Beyond.

The rate of death of World War I veterans now is figured by the Veterans' Administration to be about 7,500 per month. For the next several years the deaths will average about 8,500 a month. After that, the average will be much higher.

In Indiana, we had 80,000 World War I veterans on September 30, 1956. Six months later, on March 31, 1957, the number had fallen to 79,000. This means that Hoosier veterans are dying at the rate of 2,000 a year.

In VA hospitals throughout America there are about 44,000 World War I veterans. They represent about 40 percent of all the VA hospital load. The other 60 percent represents veterans of later conflicts and of the Spanish-American War.

On May 31, 1957, there were 216,395 of your comrades drawing disability compensation, which means compensation for disabilities suffered while they were in uniform. Their average payments amount to $955.99 per year, or $79.67 a month.

On the same date there were 593,348 World War I veterans drawing disability pensions averaging $898 per year, or $74.84 a month. To draw this pension, a veterans must, among other things, suffer total disability from nonservice causes, and his income must be below $1,400 a year if he is unmarried, and $2,700 a year if he has dependents.

In Indiana we have about 6,000 buddies drawing disability compensations, and about 14,000 drawing disability pensions.

All these figures mean that we now have something more than 2 million World War I veterans—averaging over 63 years in age—who draw no compensation from their Government.

I have been an Indiana Congressman for 17 consecutive years. When Congress reassembles next January, I will be entering my 18th year.

I am the direct representative of many of you who are here tonight—you who are from any of the 14 counties comprising my congressional district. But I want to emphasize that I regard myself as the representative—as a champion in Congress—of all veterans of World War I, regardless of where they happen to live, what color they happen to be, or what religion they happen to profess.

I feel a similar obligation to veterans of all American wars.

My friends, I have been in Flanders field. I have looked upon the row on row of crosses marking the graves of doughboys, as far as the eye can see. I have been in Arlington National Cemetery. I have stood before vast fields of American soldier graves in other parts of the world.

Many of you here right now were actual witnesses to the deaths of your comrades. Perhaps you helped to carry their lifeless and torn bodies back from the front lines.

I say to you now that—but for the grace of God—any of you here tonight could be lying in those graves, under the little white crosses in Flanders field or in some other corner of the world.

You took the risk. You put up your lives, so that America might continue to be the land of the free, and the home of the brave. You demanded nothing from your Government when you were taking that supreme risk.

The fact that you survived—that you were not killed or maimed—does not lessen the gratitude and the obligation due to you from your country.

At the close of World War I you veterans formed some wonderful, effective and helpful organizations which represented you and fought for your rights in many places. These were organizations such as the American Legion, Disabled American Veterans, Veterans of Foreign Wars—and others.

As America went into World War II, the Korean war and lesser conflicts, the scope and membership of these organizations, which you had formed, expanded to take in the younger veterans. This is well and good, for these younger veterans certainly deserved recognition and help.

However, it is unfortunate that you heroes and veterans of World War I were edged into the background as these younger veterans of later wars came to the forefront.

Seeing these conditions developing, you older veterans felt the necessity of forming a new organization devoted entirely to your own particular problems. You organized as the Veterans of World War I, and that is why you are here tonight.

I am most happy to note that the Indiana department of your organization is one of the most active and effective in the setup. You are fortunate in having officials like Denton Opp, Cap Armstrong, Wilbur Cochran, and others. They are hard-hitters, always on the ball.

I regard your World War I organization is very definitely necessary. Your problems are unlike those of the younger veterans, and you must work to present your case before the Nation.

Your present objective of getting a charter, through an act of Congress, which would give your organization the same standing as that enjoyed by the three other major organizations, is a most worthy one. It is essential that you be duly recognized as a properly instituted body by the Veterans Administration.

Your other major objectives—a monthly pension of $100 for every honorably discharged World War I veteran with the required length of service—is one with which I am honored to be identified in the House.

As most of you know, my bill—known as H. R. 2201—would grant $100 per month as a pension to all qualified World War I veterans of 60 years or older, if they apply for it. This bill now is before the House Committee on Veterans Affairs.

An accomplishment such as is sought in my pension bill is indeed a difficult one—particularly during this period of pressure against Federal spending. I am sure, however, that I am making progress in getting new support from my colleagues in Congress. This will take time. Proposals involving new expenditures of Federal money always do.

I urge that you veterans do not become discouraged, and that you do your best to enlist new support for the pension measure.

Before closing, I would like to leave one more thought with you—and I regard it as being of life-and-death importance.

Your country today is face to face with the most deadly enemy in its history. The combined effort of all Americans—of all ages, races, and creeds—is necessary if America is to emerge victorious.

I refer, my friends, to the threat of Red Russian communism.

This is the kind of enemy we have never before faced. This enemy confidently expects to conquer America without firing a shot. We would gain victory by pitting class against class, race against race, by plunging un into bitter internal strife which he hopes would mean actual armed civil war and bloodshed of Americans on American soil. He would have us financially and morally bankrupt through oppressive taxation, an overload of spending, a steadily rising inflation, constantly plunging the value of American dollars to lower and lower levels. He would have as assume terrific obligations in all corners of the world, spreading our dollars, our resources, our manpower so thin as to leave no reserve for our national protection. He would encourage us into complacency, into a false feeling of security that would cause us to fall quickly before a sudden knockout punch which he could administer at his own will.

Millions of American patriots today are worried—greatly worried.

They fear that we, as a nation, are falling into the Kremlin trap—wasting our resources and loading intolerable burdens on our industries, our people and our future generations. Millions are horrified by our failure to reduce the great national debt in this era of unmatched production, income and employment. They are worried about our $37 billion defense budget, about the extent and the cost of our so-called foreign aid.

They are heartsick about many other things which, to them, do not indicate a healthy state of affairs for the Nation they are trying to build for their children.

I will not attempt here to discuss the state of our Federal finances, or our world policies. I will say, however, that I am worried.

This is a time for every American—regardless of age, color, sex, or religion—to take a long and thoughtful look at conditions. Then he should let his convictions be known—particularly to the people he has in public office.

I said it a minute ago—and I'd like to emphasize it now: We are in a new kind of war—in it up to our necks. The call to arms must be heard and answered by all our people, from one end of this great land to the other.

Research for Farmers

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 30, 1957

Mr. GATHINGS. Mr. Speaker, in a recent issue of the Memphis, Tenn., Commercial Appeal an editorial of great significance to farmers, and the farm economy generally, appeared. The Commercial Appeal is an outstanding newspaper of the South and one that devotes considerable attention to problems affecting agriculture.

This article called for greater utilization of farm commodities and the urgent need for agricultural research in this field. There is no question about the validity of this conclusion. More conusmpton of farm commodities would solve many of the pressing problems now confronting American agriculture.

On this same subject I placed in the CONGRESSIONAL RECORD under date of January 23, 1957, an address of Dr. Byron T. Shaw, Administrator of the Agricultural Research Service pointing up the work of the Department in seeking new uses for agricultural commodities.

There is still much more work that needs to be done.

This splendid article follows:

RESEARCH FOR FARMERS

Modern commercial farming is one of the great triumphs of science. Two blades of grass where one grew before is an old dream replaced by the present-day fact of 6 bales of cotton on ground that used to produce 1.

The private laboratory, the experiment station, and the State university staffs are wonder workers. And county agents have retailed these wonders to the food and fiber growers, in one of the most productive of all uses of tax money. Rural high schools train boys in the new methods, including thousands who will go to city jobs as soon as they have their diplomas.

It is reasonable to expect science to bring us still better seeds, machinery, and fertilizer, and it is in the public interest to use taxes for these purposes.

But we have attained farm production. It has reached such high levels where we hold it back artificially for protection of farmers using precommercial methods.

What is needed now is science on the consuming end of agriculture. We need more of remodeling of the turkey for apartment-size families and the redesigned hog with leaner bacon. We ought to be able to do something more about growing the cotton the mills buy instead of the kind that goes into the Government loan.

Deep freezing has lengthened the season for sale of many types of food. Whatever the laboratory men can do faster with more research money should be done.

There is another kind of study—less exact, less rapid and less understood because it involves human decisions—that is entitled to have its chance to modernize the consumption of farm products. There is the matter of finding what can be done to put steaks within the reach of the hamburger buyer and making milk available to every baby. We have in mind processes of preparing, storing,

and selling that will lower prices, rather than social reforms in wages and taxation.

Scientific, in contrast to political, attention ocean shipping and to the restriction of tariffs, quotas, and exchange also might better the consumption needed to balance our production.

This kind of research would take place far from the traditional sites of agricultural sciences, but it would be of benefit to farmers just the same.

United States Joins World Atomic Agency

EXTENSION OF REMARKS
OF
HON. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. COLE. Mr. Speaker, a historic event occurred yesterday at 2:30 p. m., when in the secluded loveliness of the rose garden at the White House, the President signed and thereby finalized the treaty which committed this Government to membership in the International Atomic Energy Agency.

There was no pomp or fanfare, but a few invited persons high in the atomic ranks of our Government were present, and the ceremony was brief. After affixing his signature to the document, the President addressed the group of guests, which is as follows:

REMARKS OF THE PRESIDENT AT THE CEREMONY IN CONNECTION WITH THE SIGNING OF THE INSTRUMENT OF RATIFICATION OF THE STATUTE OF THE INTERNATIONAL ATOMIC AGENCY, IN THE ROSE GARDEN, MONDAY, JULY 29, 1957

Secretary Herter, Admiral Strauss, distinguished guests, this document which I have just signed ratifies the participation of the United States in the International Atomic Energy Agency. In so doing it seems appropriate to remind ourselves that the word "atom" in ancient Greek meant "undivided."

This ceremony underlies the fact that in a literal sense the original meaning no longer applies. Out of the dividing of the indivisible has come the power and knowledge this newly created Agency now seeks to put to work.

But in a symbolic sense the original meaning can now have a far broader application. The known facts of atomic science remind us that the interests of the nations of this age are indivisible. Nations must unify their actions if this new-found power and knowledge are to create, not to destroy.

The high purpose of the International Atomic Energy Agency is to make atomic power for peaceful purposes available to all nations. The statute creating it has been negotiated and accepted by the governments of 80 nations. It is now in process of ratification by them. The instruments of ratification will be placed by these 80 nations with the United States Government as official depository.

This document, which the United States has approved, ratifies our own participation.

As we look backward at the efforts and the patience required to bring this Agency into being, we might be tempted to congratulate ourselves, but if we will look ahead, we see how much new ground we still must break. Many new fields must be pioneered before this Agency becomes a functioning reality. New international functions must be organized and made to work. Much development in atomic science itself will be required before the full possibilities of these discoveries are realized. Much remains to be accomplished in the fields of arms limitation and international cooperation. When we have advanced further in these directions, then we can have real hope for progress and peace.

I recall the day in 1953 when the creation of the International Atomic Energy Agency was first proposed. The plan was formally presented by the United States, but in fact we did no more than crystallize a hope that was developing in many minds in many places. At the United Nations, where the proposal was first made, spontaneous expression of support was received. This has been reflected since in the fact that all important United Nations actions on this subject have been taken by unanimous vote.

Now an idea, however, great its potential, is of no use unless somehow there is brought to it a spark of faith, a sense of urgency, and a spirit of cooperation.

This Agency is the creation of this spark, this sense, this spirit on the part of the nations of the world.

If we are to continue to live with the power we have released, new rules and patterns of international life are required.

Secretary Herter, the document which I now hand you makes the United States officially a member of this International Atomic Energy Agency. As the Secretary of State once expressed it, the splitting of the atom may lead to the unifying of the entire divided world.

We pray that it will. Let us hope that the atom will stand again for the true and all-pervasive meaning given it by the ancient Greeks—indivisible.

When the world is such, then peace will be ours forever.

Alabama's Industrial Expansion Aids Economic Stability

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. HUDDLESTON. Mr. Speaker, we in Alabama are very proud of our State's fast but healthy industrial growth. In the first 6 months of 1957 industrial expansion in our State amounted to more than $255 million, including the construction of 34 new plants and the expansion of 28 existing facilities.

Such industrial development materially boosts Alabama's entire economy. Industrial expansion, such as our State is now experiencing, means more employees and larger payrolls, thereby providing greater economic stability. Under leave heretofore granted, I am pleased to insert a Birmingham News editorial entitled "Industries Up $255,384,000," which appeared on July 23, 1957.

The editorial follows:

INDUSTRIES UP $255,384,000

Alabama's industrial development has continued at a good pace during the first 6 months of this year, though at a rate below that of last year's first half. The value of new plant construction and expansion of existing facilities announced for the State between January 1 and June 30 totaled $255,384,000, according to Roland L. Adams, president of the Alabama Chamber of Commerce.

Announced projects included 34 new plants valued at $154,375,000 and 28 expansion programs amounting to $101,009,000 at existing industries. Located in 38 different cities and towns in 30 counties, the new or expanding industries will provide 4,099 additional jobs for Alabamians.

Development projects announced during the first half of last year were valued at $362,991,000. Totals for this entire year, Mr. Adams believes, however, will compare favorably with those for 1956, which was the third best industrial growth year in the State's history.

Success of Sheldon Z. Kaplan

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a recent article from Roll Call regarding our valued friend, Sheldon Z. Kaplan, of our House Foreign Affairs Committee staff.

This article mentions Mr. Kaplan's proposed resignation from his committee post to take up the practice of law here in Washington. It also recites his success as a composer, which points up the talents and versatility of this able, popular young man who comes from my State and has relatives in my district.

Mr. Kaplan has rendered distinguished, outstanding service with our House Foreign Affairs Committee, for which we are all grateful. I know every Member of the House is sorry to see him leave our midst, and we wish for him continued, marked success with all his undertakings.

The article follows:

CAPITOL HILL TO TIN PAN ALLEY—FOREIGN AFFAIRS EXPERT WRITER OF NOVELTY TUNE

Sheldon Z. Kaplan, who has resigned his position as consultant to the House Foreign Affairs Committee to enter into private law practice in the District, is blossoming out as a first-rate composer.

Kaplan, to whom Tin Pan Alley is as familiar as Capitol Hill, has just penned a new ditty called Red Shutters, a catchy novelty number with words by his nephew Earl Schuman. The tune has been recorded by vocalist Tony Travis, backed up by Buddy Bregman's orchestra on a Verve label.

Already radio station WMCA, New York, has picked Shutters as the disk of the week July 2, and Kaplan reports sales are climbing steadily.

Sheldon, when asked the obvious question said that Red Shutters has nothing to do with the phenomenally popular Green Door which was all the rage last winter.

"Matter of fact, we wrote this one 2 years ago," he replied.

Sheldon was showing his nephew the sights of Washington one day. After seeing all the tourist attractions they took a ride out to Spring Valley. On a country road, Schuman, a New Yorker, expressed delight at a charming white house with red shutters.

"We started working on the words right then," Sheldon said. "When we got back home I started on the music."

Capitol Hillites can catch the song on Bob Pickett's Purple Tree broadcast over WMAL radio tonight.

Kaplan's last recording, Dominique, written to express his impressions of Paris last year, was performed by pianist Jan August and enjoyed considerable success.

Among Schuman's biggest hits were Seven Lonely Days, and the current Get Acquainted Waltz.

The Second of a Series of Editorial Letters by F. F. McNaughton

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. MICHEL. Mr. Speaker, yesterday I had the privilege of inserting the first of a series of editorial letters by F. F. McNaughton, publisher of the Pekin Daily Times, written during his recent trip to Russia. Today I should like to insert the second editorial letter of the series.

The letter follows:

[From the Pekin (Ill.) Daily Times of July 23, 1957]

THE EDITOR'S LETTER

(By McNaughton)

"Are they kind to tourists?"

Yesterday we promised to answer that question.

They are.

True, they collect for it in advance; but having done so, they give full measure of kindness, heaped up and flowing over.

"Intourist" is the agency that handles all touring in Russia. The cost for de luxe touring is $30 per day; thus $60 per couple. But if a group goes, it can travel lower class and more cheaply.

What do we get for $60?

1. Room in best hotel. Our suite might have been a grand duke's once. True, the hotels are pretty run down, but they give you the best they have.

2. Four meals a day, each. They are not stingy with food.

3. A limousine and chauffeur.

4. Free interpreter-guide.

5. Free admission to museums.

6. And a surprise. On the first morning when I went into the Intourist office to get acquainted, they handed me a number of freshly printed rubles (money) that on our former trip would have cost me $175. When I started to get out United States money to pay for the rubles, they said:

"No, this is your pin money."

It was free.

I may have had something to do with their decision to do that. On our former trip I got pretty mad because the Russians charged us an outrageous price for their rubles. Let me illustrate it. You know the United States and Canadian dollars swap about even. But suppose next time you went to Canada fishing, they charged you $5 for each Canadian dollar. That would mean that a $2 meal would cost you $10; and $8 motel room would cost you $40; a $1.50 haircut would cost you $7.50; a $3.50 roll of color film would cost you $17.50.

That made me mad on our former trip to Russia. I squawked hard. So they decided to give tourists some spending money.

But they did something else—just this spring.

They decided to quit charging an outrageous price for their rubles, and to sell them to tourists at about their world price of 10 to $1. So we on this trip were able to buy 500 rubles for a $50 travel check.

I should add that the $30 a day does not include long transportation, such as into Russia, or from city to city; but they took us on many short trips by limousine; never charged us a ruble; and were always quick to telephone for a limousine to satisfy any whim we had. And at our service every day all day was an interpreter-guide—a college girl who was "ours" during our entire stay.

Attacks on President Eisenhower—What Do They Want?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, it has become quite a pastime in some quarters to attack every move that President Eisenhower makes. He is condemned for not pushing the school bill. He is condemned for a wishy-washy attitude on the civil-rights bill and many other current problems. Apropos this situation, I am including as part of my remarks a recent editorial which appeared in the Monroe, Wis., Evening Times which correctly analyzes the situation. The editorial writer raises a pertinent question, "What do these critics want?"

WHAT DO THEY WANT?

The most popular sport in Washington these days is the stepped up sharpshooting by critics in both parties who contend President Eisenhower is allowing vital legislative proposals to be killed in Congress through his lack of dynamic leadership.

Time and again this past week, Republicans and Democrats in Congress have charged Mr. Eisenhower with failure to exert necessary pressures to win approval for such bills as the civil-rights measure and the Federal school-aid proposal. The trimming of foreign aid and defense outlays by both Houses also has been blamed on the White House.

We'll agree that the President has shown little inclination to rawhide Congress on any particular matters, even the ones for which he has indicated major priority status. There have been no Jovian blasts of thunder sent rolling down Pennsylvania Avenue to the Capitol.

Instead, there have been statements in times of dispute as appeals to reason and in reaffirmations of personal conviction that certain proposals are vital to the welfare of the people.

Nevertheless, we are at loss to understand just what the rampaging Congress critics expect of the President.

How do they believe a Chief Executive should function in a Republic? Do they feel every President should be the Nation's chief lobbyist, pulling political strings and manipulating personalities to gain personal objectives?

We suspect those same critics would howl doubly loud should the President undertake the role they claim he shuns. We can hear the cries of dictatorship and one-man rule that would echo across the country is Mr. Eisenhower began to wield the big stick to put over his legislation.

The master whipcracker, of course, was Franklin Roosevelt, who had a weird idea that his wishes and his aims were infallible. Possessed of overwhelming majorities in Congress, he had no compunction when it came to ramming through those bills which changed the course of this Nation for more than a decade.

We still can remember quite vividly how Mr. Roosevelt tried to intimidate the Supreme Court with the same tactics and how he was finally obliged to pack that Court with appointees to gain his objectives.

Harry Truman tried the same high, wide, and handsome tactics, but he never got away with it.

It would seem to us that Mr. Eisenhower was elected President in 1952 principally because a majority of Americans wanted an end to such White House autocracy.

It also would seem that Mr. Eisenhower had remembered most of the implied mandates of that election and the one in 1956 as he presented his legislative proposals.

There are many of us, of course, who do not agree at all times with the way in which the President has interpreted the people's mandates. We respect his judgment and sincerity, however, and we believe he has been more inclined to heed public reaction on various Congress proposals than did his predecessors.

We hope his critics remember that when they assail Mr. Eisenhower for not imitating Franklin Roosevelt or hapless Harry Truman, they are implying that Congress, as the elected representatives of the people, cannot function without being clubbed into submission by the Chief Executive.

Servants of the Public

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Jonesville Booster of July 26, 1957:

SERVANTS OF THE PUBLIC

The reluctance of these birds in Washington to give us back part of what they take away is amazing. The strange thing about it is that they are supposed to be servants of the people. Try ordering one of them to do something like you would any servant you hire and pay with your own money.

Can you visualize asking a maid to bring you a cup of coffee and have her make the following reply? "I'll be glad to, if you will fill out form 3567–A in quadruplicate and mail the pink part to Washington. Then, if it is approved, they'll send a representative down to see if you need the coffee. If you do, we'll allow you three cents on the cup of coffee you've already bought. You can add the rest." Impossible situation? Couldn't happen?

It has already happened in Catahoula Parish. You and I have bought millions of pounds of surplus livestock feed and stored it in our Government warehouses, much as you would store coffee in your pantry. Now we need the feed like you might need a cup of coffee. What sort of answer do we get when we ask our "public servants" for it? "The United States Department of Agriculture is not in the welfare business."

Who mentioned welfare? We're not asking for welfare. We're only asking the use of something we stored up. Yet, our "public servants" have forgotten their role of servant and assumed the role of master, denying us desperately needed access to our reserve stores.

There was a historic turning point in the history of our country, when pirates from abroad were attempting to extort huge sums of money from the United States. Robert Goodlowe Harper made his famous toast, "Millions for defense; but not 1 cent for tribute." Now, more insidious pirates from abroad are not only attempting, but succeeding in exacting billions of dollars of tribute from us. And the weak-kneed internationalists running our country today can't ship it to them fast enough—in the "name of peace."

The quotation of our great statesman might be changed to "Billions for tribute, but very few pennies for the assistance of American citizens."

If this is the "price of peace," then we say give us war with the full realization that we are draft age and expendable.

Paper Industry Booming in Alabama

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. HUDDLESTON. Mr. Speaker, one of the fastest growing and most promising businesses in the entire South is that of Alabama's paper industry. Rapid expansion has come in recent years, particularly since World War II. Alabama now counts 32 pulp and paper mills, with 3 more under construction.

Under leave therefore granted, I am pleased to insert an editorial entitled "The State's Paper Industry Grows," which appeared in the Birmingham News of July 22, 1957. This editorial graphically points up the prominence and importance of the paper industry in Alabama.

The editorial follows:

THE STATE'S PAPER INDUSTRY GROWS

Production of wood pulp, paper and paper products is increasing at a rapid pace in the South. Southern mills, it is estimated, already supply 40 percent of all the paper other than newsprint used in the country, and the number of such mills is growing.

Alabama is sharing in this growth, which is contributing materially to the diversity and strength of the State's industrial economy. According to the 1957 edition of Facts About the Nation's Pulp, Paper, and Paperboard Industry, published by the American Forest Products Industries, the State now has a total of 32 mills—including 12 pulp mills—engaged in manufacturing and processing paper. Presently operating pulp mills have a total daily capacity of 3,558 tons of pulp, and in 1955, the latest year for which accurate figures are available, turned out some 680,000 tons of paper and paperboard.

Three new pulp and paper mills are now under construction in the State, and several established plants are engaged in, or are planning, expansion programs.

The industry at present provides direct employment for 8,700 Alabamians, and the new facilities will substantially increase this figure. Value of the State's pulp and paper output last year, according to the Blue Book of Southern Progress, was $157 million.

John Raeburn, chairman of the Alabama Forest Industries Committee, notes that Alabama woodlands furnish nearly 2 million cords of wood a year for the paper industry, making the State third in the South in pulpwood production. The future growth of the paper and other wood-using industries, he points out, will be keyed to the management of our woodlands. With annual growth of timber exceeding removal by more than 28 percent, the 140,000 timber landowners in the State are doing a good job, but there is still room for improvement.

Increased Benefits for Retired Federal Employees

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. KING. Mr. Speaker, at the commencement of this 85th Congress I introduced H. R. 3058 providing for increased annuities for those receiving civil-service retirement benefits, and believe that time is of the essence in granting them an increase, so long overdue.

I feel so strongly in the matter that it is one of the first proposals I introduce upon the convening of recent Congresses, and I am greatly concerned that action has not as yet been taken during this session to alleviate the unfortunate situation in which our civil-service retirees and their survivors find themselves today.

Here we are again toward the closing weeks of the first session of this 85th Congress with the specter of the loyal retired employees of our Government still striving to manage a bare existence on an income that has, through no fault of their own, become woefully inadequate as a result of the inflated cost of living.

It is time the Congress realistically concerned itself with this worthy group of our Government's retired employees who rendered faithful service to our Government and, by their contributions over a period of years, helped to build the retirement fund.

With passage of the act in 1956 granting increased benefits for civil employees of the Federal Government who retired on and after October 1, 1956, the Congress recognized the need for retirees to have an increase, and the cost of living has continued steadily upward since the date of the passage of that act. By not including the overwhelming majority who had retired in the years before that date, discrimination has been added to neglect, and the present situation accents the fact that we must finish the job by passing legislation to compensate for the loss in purchasing power suffered by those who retired from the civil service on rates that were frozen many years ago. We can attract and hold the best qualified personnel as Federal employees only if we offer adequate pay and the security of eventual retirement at rates that will not fall behind the increasing cost of living.

Passage of legislation affording increased benefits without further delay will compensate in part for the loss they have suffered in recent years.

I am confident that Members are aware of the seriousness of the situation in which our civil service retirees and their survivors find themselves today. Because of the heavy toll inflation has taken on the dollar, particularly the dollar of the individual who has retired, and who is primarily dependent upon the fixed income of his annuity for a livelihood, it is obvious that the retired Federal employee is in very precarious financial circumstances. I know something of the personal problems of those who worked long and faithfully in the service of their Government, as 32,000 reside in California, and I know how hard pressed they are—particularly those of advanced years—to manage on the decreased purchasing power of the present dollar. The Federal Government has a direct responsibility to those former employees. It is obligated to see that their annuity bears a sound relationship to the cost of living. They contributed 100-cent dollars to the retirement fund and are now receiving in return dollars worth approximately one-half of that amount.

These deserving retired employees must depend upon Congress to sympathetically recognize their serious plight, and I believe we should do all in our power to expedite action to grant them the annuity increases to which they are so justly entitled, as provided by the proposals under consideration, and during this 1st session of the 85th Congress.

Not Half a Loaf

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include an editorial from the Hutchinson News of July 20, 1957, entitled "Not Half a Loaf." I believe that it expresses forcibly and succinctly the arguments for a free and uncensored press.

The editorial follows:

NOT HALF A LOAF

Secretary Dulles, who has forbidden American reporters to cover China, has been under enough pressure from the press to be having second thoughts. But the Secretary is still blind as a bat when it comes to seeing the principle involved in his censorship of the news.

This week he met with a group of editors in a rather limp attempt to soften the press criticism. He proposed that a "limited number" of reporters be allowed to go to China.

The editors refused such a compromise, and rightly so. Freedom of the press can't be measured in numbers. The press is either free or it isn't. Right now it isn't free to go in and try to ferret out for the American public the truth about the largest, most dynamically changing, most potentially dangerous group of people on earth. The American public learns about the Chinese only what Mr. Dulles wants it to learn, or what it can read in the foreign press.

In his China policy, Dulles has hold of a dead horse and one way to live with it is to prohibit discussion of it. If he gets away with this, every politician in a like situation will be wanting to muzzle the press.

Dulles' paternalistic murmurings about wanting to keep reporters out of trouble is a lot of hogwash. Reporters have always gone everywhere. They get punched in the nose, slapped in the face, and shot dead as many of them did in World War II and Korea. It's part of the job. It's something you're entitled to when you pay your nickel.

The editors are right to refuse Dulles' compromise. They are wrong if they don't open up even bigger guns on Dulles and his boss in this censorship fight.

An Appeal for Protection From Roadside Billboard Advertising on New Federal Interstate Highway System

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following newspaper column titled "Keenotes," which I released on yesterday, which contains an appeal for legislative action to protect us from unsighly roadside billboard advertising on the new Federal interstate highway system:

KEENOTES

(By Representative ELIZABETH KEE)

These are days when the family car ideally serves its most useful purpose as holiday-minded America takes to the road. Summertime and vacation time are nearly synonymous terms in this gorgeous land of ours and from now until late October a constant stream of traffic will pour over the Nation's highways and byways as the entire family—from junior, cutting his first tooth, to grandmother and grandfather, a little grayer than they were the year before—eagerly climb into the family car and set off for mountain or seashore, for lake and forest, and the carefree days of relaxation that spell good health and well-being for the whole Nation.

Among favored vacation spots, West Virginia's popularity has been growing by leaps and bounds in recent years and for good reason. It is no press agent's wishful dream that West Virginia has been titled the "Little Switzerland of America" and that tourism has become one of our State's most important industries. In scenic beauties, in historic significance, in recreational facilities—hunting and fishing, hiking, swimming, boating and all other outdoor sports and games—no State in the Union has more to offer the vacationing tourist than has West Virginia with her rolling hills, her fertile valleys, her winding rivers and friendly towns—and with 213 million green acres of her lush land set aside in national parks and forests and game areas for the public's pleasure.

White Surphur Springs, site of the famous Greenbrier Hotel, is, of course, world renowned, but for breathtaking loveliness and for ideal vacation spots, Bluestone Lake near Hinton in Summers County, Pinnacle Rock, near Bluefield, and the 98,843 acres of magnificent Monongahela National Forest which partly lies in Greenbrier County yield first place to none and are easy on the pocketbooks of budget-minded families.

Then, too, for the motoring public there is that beautiful drive down the National Pike, U. S. 40, West Virginia Route 2, U. S. 21, and U. S. 119, from Wheeling through Parkersburg, Charleston, and Williamson—that region between the Allegheny Mountains and the Ohio, the beautiful river, which is so rich in the historic lore of our land, and which, from the rich Ohio Valley to the southwestern coal fields of the State, has contributed so much to the industrial development of the Nation.

Wherever one travels by car, however, whether it be through scenic West Virginia or to any one of hundreds of delightful vacation areas throughout America, the clean sweep of the road ahead, the uncluttered highway through charming countryside and along handsomely landscaped boulevards, and immeasurably to the safety and enjoyment of one's journeyings.

It is for these all-important reasons that I deeply regret the lack of legislative action by either the 84th or the 85th Congresses which would protect the forthcoming 41,000 miles of the new Federal Interstate Highway System from the unsightly billboards and other garish symbols of the advertising profession's art that do such violence to the natural beauties of the landscape.

Federal funds—and this means taxpayers' money—will finance 90 percent of the cost of constructing the new highways. Yet, although under last year's bill the Federal Government was authorized to set all kinds of regulations and standards for this construction—such as for the width of highways, the curvatures of roads, the types of tunnels and bridges to be erected—nevertheless, a powerful billboard lobby successfully put forth the invasion of States' rights argument that blocked passage of any legislation which would restrict or bar billboards along the new interstate roads.

This year, Senator NEUBERGER, Democrat, of Oregon, introduced a bill to provide an additional three-fourths of 1 percent in Federal funds to those States agreeing to meet all Federal standards. But though this bill has been reported out by a Senate subcommittee, in somewhat watered-down form, I am sorry to say, the Senate Committee on Public Works has to date failed to act. Nor has any action in this direction been taken by the House in this session.

Now, I want to make it very clear that I have only the greatest of admiration and respect for the very genuine achievements of the advertising profession. Its techniques and skills have contributed immeasurably to our standard of living and our way of life by bringing us the news and teaching us the use of all the wonderful inventions and labor-saving devices designed and developed by our scientists and engineers and produced in quantity by business and industry.

And, like any other consumer, I read with avid interest almost every piece of advertising literature that comes by way and eagerly leaf through the advertising pages of newspapers and magazines for items to fit my purse and fill the needs of my family and myself. Indeed, I do a major portion of my shopping in this way, lacking leisure time for happy hunting expeditions through the stores so many of my friends enjoy.

I am, however, frank to say that when I take an automobile trip it is the view I wish to enjoy and I want to enjoy it unmarred and unobstructed by signs admonishing, cajoling, and coaxing me to buy this or avoid that.

Many ways, besides billboard advertising, are open to our merchants and manufacturers, to our purveyors of goods and services, to aquaint the public with the charms and virtues of their wares. They could, I feel, win much public goodwill by availing themselves of these other advertising mediums and hence, permit the landscape to go unblemished by those eyesores on the American scene, the unsightly roadside signs.

So far, the billboard lobby has been successful in averting every effort to pass legislation barring these displays on interstate highways. But as we have learned from the failure of the President's appeals to management and labor to hold down prices and prevent inflation—as we have learned from the failure of his appeals to the oil industry to restrict imports of crude and residual fuel oils—so we must finally come to realize that we cannot depend upon voluntary controls alone to safeguard the Nation's roads and highways from ugly miles of gaudy billboards and blinding neon signs.

To keep America beautiful Federal legislation should be enacted now.

In a democracy we must all be willing to sacrifice a little in order that, together, we may all benefit a great deal. It is my earnest hope that the American people will get solidly behind those of us in Congress who are trying to keep America beautiful.

Illinois Electric Cooperatives Commend REA Administrator Hamil for Good Job

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of my colleagues a resolution commending David A. Hamil, Administrator, Rural Electrification Administration, unanimously adopted by the Board of Directors of the Association of Illinois Electric Cooperatives, July 18, 1957.

The resolution follows:

RESOLUTION UNANIMOUSLY ADOPTED BY THE BOARD OF DIRECTORS OF THE ASSOCIATION OF ILLINOIS ELECTRIC COOPERATIVES, JULY 18, 1957

Whereas experience, sympathy, and familiarity with the objectives of the Rural Electrification program, as well as high level efficiency and fairness in administration, are unquestionably demanded for the solution of the many problems confronting the Rural Electrification Administration; and

Whereas it is also essential for the successful carrying on of the program that the Administrator of the REA be a man who enjoys the good will of those who have an interest in that program; and

Whereas in the State of Illinois there are today more than 135,000 REA members residing on electrified farms in the rural areas of the State who are vitally interested in the REA and who, through their respective cooperatives have indicated to this association their respect and esteem for David A. Hamil, the present administrator, and their confidence in his judgment, ability and fair play. Now, therefore, be it

Resolved, That the board of directors of the Association of Illinois Electric Cooperatives at its regular meeting held in Springfield, Ill., on July 18, 1957, hereby endorses the administration of David A. Hamil, and directs that by publication in the Illinois Rural Electric News, this endorsement be

made a matter of record, and further directs that a copy of this resolution be delivered to the Senators and Representatives of the State of Illinois in the Congress of the United States, to the Secretary of Agriculture, and to the President of the United States.

Stopping Communism in Latin America

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. PORTER. Mr. Speaker, our fight against international communism is going on everywhere in the world and is accomplished in many ways. In Latin America we must stop communism, and we can if we will act in relation to the facts. The book by Mr. Alexander sets forth these facts, and following is a review by Milton Bracker, of the New York Times, in the July 21, 1957, issue:

The devious contortions of the rumba in Havana and the samba in Rio de Janeiro are far better known in this country than the no less devious contortions of the Communist Parties in Cuba and Brazil. The 20 American Republics south of the border are still widely thought of in this country as offering glamorous tourist attractions plus (or minus) a penchant for revolutions—by which are meant anything from a few shots in the street to the bloody overthrow of a government.

The fact that these revolutions often combine the most cynical political maneuvering with the most sacrificial youthful idealism—the fact, indeed, that the blood that is shed is real blood and that its shedding leaves the same anguish that is felt in a bereaved home in, say, Lima, Ohio, or San Diego, Calif., is often ignored. And so—save when Washington chooses to focus attention on a specific Communist threat, as in Guatemala in 1954—is the fact that communism has a history of nearly four decades in every Latin American country.

This is the first book to present this history, both collectively and in terms of the individual nations. As such, it cannot fail to become a basic source book in the field of Western Hemisphere relations. Robert J. Alexander of the Rutgers University economics faculty has woven into his work enough names of men and groups to fill a 20 page, double-column index; and some of his text is virtually alphabetized with the popular abbreviations of parties and unions. Unfortunately, this is hard on a reader, even one aware of both the Latin tendency to use initials and the full organizational names for which many of them stand. Moreover, as in his earlier work, The Perón Era, there is little attempt to treat the material with style or a dramatic point of view. The new book provides far less enjoyment than information.

If the book is massive, it is no less sound. Mr. Alexander emphasizes that Latin-American Reds, as part of the international Communist movement, are blindly loyal to the Soviet Union. Repression is at best a stopgap measure, he adds, noting how in several countries (for example, Argentina) the strategy has been to use two Communist parties, of which one nominally supports the regime while the other opposes it. At least 10 times he makes a point that merits constant reiteration: the best deterrent to communism within a Latin land has been an indigenous social revolutionary movement or, as he puts it elsewhere, a "vigorous party of the democratic left."

Obvious examples are APRA (Alianza Popular Revolucionaria Americana) in Peru and Acción Democrática in Venezuela. Parties like these have often (in fact, almost always) clashed with military dictators. Acción Democrática, its own regime overthrown in Caracas in 1948, has been outlawed by the government of Col. Marcós Pérez Jiménez. But even in joint exile, Mr. Alexander notes, the Acción Democrática leadership has rejected Communist feelers as to combined action.

In his summary of the significance of the indigenous democratic movements, the author writes: "These are the groups * * * who are able to meet the Communists on their own ground, to promise and in a democratic way to deliver to the humble and ambitious people of the continent the fruits of the Latin-American social revolution. The United States must not allow them to turn away from this country in bitterness and frustration, or to be undermined by the Communists as a result of apparent United States support of dictatorship."

Apart from a wealth of first-hand documentation and interview, Mr. Alexander properly cites two recent works in English—ex-Communist Eudosio Ravines' fascinating, if in some respects suspiciously fictional, "The Yenan Way," about a master-plot to capture Latin America as a direct projection of highest Kremlin policy in 1934; and Daniel James' "Red Design for the Americas," the story of the rise and fall of the Communist-dominated regime in Guatemala. A small irony arises from the use on the dust-jacket of an unforgetable photo of the mob in Bogotá, Colombia, surrounding overturned streetcars on Friday, April 9, 1948. This was just after Jorge Eliécer Gaitán, leader of the Liberal Party, was assassinated, the event touching off a fearful upheaval that took more than 1,000 lives.

Mr. Alexander says that he believes the so-called Bogotazo was "in no way the work of the Communists." A reviewer who was in Bogotá at the time—and who has inclined to the view that although the Reds did not kill Gaitán, they certainly exploited the violent reaction to his death—is thus bound to call attention to the contradictory use of the Bogotá picture, captioned only by the title of the book: "Communism in Latin America."

The Honorable Nat Patton

SPEECH
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. GATHINGS. Mr. Speaker, it was with sorrow and regret that I learned of the passing of Hon. Nat Patton of Crockett, Tex. He was a close friend and a genial person whom I was privileged to know for many years.

When I came to the House of Representatives for the first time, Mr. Patton, whom we affectionately called "Cousin" Nat, had been here for some time. Like other fledgling Members he welcomed me here and acquainted me with the problems that face a new Member. It was my pleasure to have offices next to him and almost daily I shared in his good humor and friendliness. He and his charming wife, his 2 attractive daughters, and 2 sons made up a truly representative American family.

Nat Patton was devoted to his family, his constituents, his State, and to his country. No problem was too large or too small for him to devote his personal attention. The humble, the poor, those with few worldly goods, as well as the well-to-do, all were greeted warmly on visiting his office. He appreciated the views and the attitudes of people who had to work for a livelihood. He spoke for all his people regardless of rank or station. He was an effective legislator.

Nat Patton is no longer with us but his work, his memory, and the good he worked to accomplish are heritages to cherish and to keep.

We need more outstanding public servants like Nat Patton. I would like to convey condolences to the members of his family.

Back This Bill

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Camden, S. C., Chronicle of July 24, 1957:

BACK THIS BILL

Legislation control of the public purse is one of democracy's bulwarks. Restoring the control of Congress over the present high level of Federal spending is the goal of a bill, H. R. 8002, now before the House of Representatives. Similar legislation passed the Senate unanimously.

In nontechnical terms, this bill would limit budget appropriations to a single year, halting the present practice in Congress of handing out funds in a lump-sum for full payment of projects that may take years to complete. Under the present system, $70 billion—almost as much as the proposed record-high budget for fiscal 1958—has slipped beyond the effective reach of Congress. This vast sum represents "carry-over" funds unspent from past budgets when long-range projects were changed or canceled. Instead of returning this money to the Treasury, Federal agencies can spend it on new projects which Congress may know nothing about.

Advantages of the proposed system are clearcut. Former President Hoover estimates it will save $3 billion a year. Outstanding leaders in both parties endorse the plan, including President Eisenhower, Treasury Secretary Humphrey, Budget Director Brundage, Comptroller General Campbell, and all 96 Members of the Senate where it was championed by Senators KENNEDY, Democrat, of Massachusetts; BYRD, Democrat, of Virginia; PAYNE, Republican, of Maine; and 46 other senatorial cosponsors. The vast majority of the Nation's press has lined up behind the new plan, and thousands of alert Americans have written to Congress urging its enactment.

Yet, H. R. 8002 faces a bitter fight in the House, where advocates of the status quo are fiercely resisting this widely endorsed improvement. Their stand sharply contradicts the American taxpayer's economy man-

date so forcefully expressed in every part of the country this year.

What's needed now is a strong, immediate show of citizens support from coast to coast. If you haven't told your Congressman that you favor this bill, tell him now. With full weight of public opinion behind it, H. R. 8002 stands a good chance of adoption. Without your support, it's sure to fail. This is your chance to put a major economy measure over the top.

Supreme Court: Views on Selection of Justices

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 29, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, in connection with numerous recent public statements relative to the Supreme Court, attention is invited to an article by Francis J. Donovan, deputy county attorney of Nassau County in New York, published in the July 27, 1957, issue of the Tablet.

Under leave to extend my remarks, I am inserting the article at this point:

ATTORNEY PROBES HIGH COURT ISSUE—SUGGESTS APPOINTMENTS BE MADE BY JUDGES OF APPELLATE COURTS

(By Francis J. Donovan)

Our zigzagging, split-decision Supreme Court surpassed itself on June 17, 1957, when it handed down the decisions opening FBI files for the scrutiny of Communist operatives and granting immunity for Communist conspirators until the moment the revolution is upon us.

The practice of the court in determining cases on the basis of the individual social philosophy of the judges rather than an intelligent application of the doctrine of precedent had long before upset the traditional stability of the institution that the Founding Fathers had envisioned as the ultimate check in their system of checks and balances.

PHILOSOPHY USUALLY KNOWN

Constitutional lawyers had long since abandoned the centuries old practice of advising a client after research and analysis of prior decisions. For a generation the client has been advised after his lawyer has determined the social philosophy of each judge and on that basis computed the anticipated vote.

Occasionally, a change in personnel might put an element of risk in such an approach. But it never takes long for the new arrival to assert his philosophy. Quite often his philosophy is apparent before he mounts the bench.

This is hardly the court envisioned by the Founding Fathers and is most certainly not the court to be trusted with the interpretation of our Constitution in the most critical period in our history.

The days of the American Revolution and the fratricidal Civil War were fraught with peril, but defeat at either time would have left our people under civilized rule. The total war in which we are now engaged threatens a defeat which will bring our people under the barbarous rule of the Kremlin.

This does not cease to be the fact because a majority of the Supreme Court see no "clear and present danger." The President sees it; the Congress sees it; and the American people see it.

The Court has confounded the President; it has angered the Congress; and it has actually betrayed the American people by strengthening the hand of the enemy.

In so acting, the Court was not under any compulsion, either moral or juridical. This is evident from the dissenting opinions. Ample precedent, reason and justice was at hand to support opposite conclusions.

Righteous indignation has been vented across the Nation and a patriotic Congress is striving to shore up the breach in our defenses. Citizens are castigating the members of the Court and well they may. But the President and the Congress must speak more softly, for the present Court is the creature of Presidents of both major political parties, confirmed by the Senate.

PEOPLE HAVE NO CHOICE

These men were not chosen by the people.

This is the only branch of the Federal Government where the Founding Fathers gave the people no check. Inevitably, it proved to be the weak branch. The President and the Congress can blunder or misbehave for a time, but they always face a day of reckoning.

When their limited terms expire the people can cull out the bad ones. But not so with the nine sages. The people have no choice in their selection and, however incompetent or irresponsible, they preside till death do they depart.

To denounce the judges and beat our breasts with fury will accomplish naught unless our indignation is harnessed by reason and directed to constructive effort.

The basic premise of the Founding Fathers is still valid, namely, this is to be a Nation ruled, not by men, by by laws. We must rebuild on that premise and use the device fashioned by the Founding Fathers for such emergencies: Constitutional amendment. If our Congress moves quickly and intelligently, the people can yet save themselves. Piecemeal legislation, limiting or overruling individual decisions of the Court, will not supply the defect. These and other laws can always be invalidated; it takes only five votes. The defect is organic and the remedy must be organic.

Lawyers have spent much time seeking an amendment to accomplish the desired result without radical change in the Court and without departing from our basic constitutional structure. We must supply a reasonabel check for the Court.

The inadequacy of the present Court is a direct result of the method of selection and the lifetime tenure of the incumbents. They are politically selected but thereafter freed from political responsibility. The President can rarely, if ever, have sufficient knowledge of the man he appoints and his choice is invariably dictated by political necessities.

This method of selection should be changed. If we give the selection to the people or the Congress, we would do no better. In both cases we would have ignorance of the candidates and political necessities to hamper a proper selection.

SUGGEST NEW SYSTEM

Considerable criticism has been directed to the fact that some of the incumbents have not had adequate judicial experience. The suggestion has been made that substantial appellate court experience be a qualification. We should start here by providing that no person shall be eligible for elevation to the Supreme Court of the United States unless he shall have first served not less than 5 years as a judge in the highest appellate court of a State or a similar period in a Federal appellate court.

We might continue by dividing the United States into six regions and establish a judicial council in each region. This council would comprise the judges in the highest appellate State courts in the region.

The Federal appellate judges would constitute a seventh judicial council. The six regional councils would each select one of their members to be elevated to the Supreme Court. The seventh or Federal judicial council would select three judges from their number to give the Court adequate personnel, experienced in the determination of Federal matters.

The term of office should be 9 years and the original terms so adjusted that 1 term should expire each year.

If the experience of lawyers in the other States has been similar to my own, we can better entrust the selection to such appellate judges than to any other group.

As so many of my colleagues, I have enjoyed unanimous victories, been perplexed by split decisions, and chagrined by unanimous defeats, but I have, in my own cases, and in the thousands that I have studied, been convinced that our court of appeals in the State of New York has always been graced by men of integrity and exceptional competence.

Let such men select the best from their number for the highest court of the land and we will have a court worthy of our confidence.

Hoover Recommendations and Legislative Control of Funds

EXTENSION OF REMARKS

OF

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 30, 1957

Mr. MORANO. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial from the Bridgeport Post, dated July 29, 1957, which eloquently supports the purposes of H. R. 8002, providing for legislative control of public funds.

I commend this editorial to the attention of my colleagues, especially from Connecticut, for I believe that within the short space is contained a strong, forceful case for the adoption of this Hoover Commission recommendation.

Since my election to Congress I have been a stanch supporter and advocate of Hoover Commission recommendations. I am sorry that so much delay has enshrouded the enactment of the many worthwhile proposals to effect economy in Government.

In the matter of H. R. 8002, I petitioned the House Rules Committee to report a rule for its consideration, and I am very happy that they have done so. I have urged the House leadership to program this measure for House action, and I hope that this is done before the Congress adjourns.

The editorial follows:

MONEY-SAVING BILL FACES FIGHT

Representative ALBERT P. MORANO has been receiving, he has announced, "a steady flow" of mail from his Fairfield County constituents, urging him to support measures advocated by the Hoover Commission on Reorganization of the Executive Branch of the Government.

We hope the Connecticut Congressman will give support to these money-saving measures, particularly legislation to establish an-

nual accrued-expenditure budgeting, a major proposal of the Commission.

The legislation was reported out of the House Rules Committee on July 17, and it faces a bitter floor fight. The battle is expected this week. The bill, known as H. R. 8002, needs immediate support of all economy-minded and sound-money Members.

Opposition comes from a few members of the House Appropriations Committee who do not want any change, despite the fact that similar legislation has been approved by the Senate and has the endorsement of President Eisenhower, retiring Secretary Humphrey, the Director of the Budget, and the Comptroller General. The Senate version was passed by voice vote on June 5 and was sponsored by Senator KENNEDY, Massachusetts Democrat; Senator PAYNE, Maine Republican; and Senator BYRD, Virginia Democrat. There is nothing partisan about it.

Senator KENNEDY referred to the measure as "the most important fiscal proposal in the last 15 years." It has been endorsed by the American Institute of Accountants, the Controllers Institute, the majority of the Nation's newspapers, and many thousands of citizens.

At stake is legislative control of public funds, a fundamental concept of our form of government. Under the present system Congress yields control of spending by granting appropriations in a lump sum for projects that may take years to complete. If such projects should be canceled, or changed, Congress has great difficulty tracing the unspent funds and restoring them to effective legislative control.

It has been estimated by the Comptroller General and by Senator BYRD that the present total of unspent carryover funds is $70 billion, which is almost as much as the proposed record high budget for 1958.

Under the legislation proposed, Congress would grant contract authority for long-range projects, but would limit appropriations to cover only those expenses to be incurred in a single year.

Before new funds are released to continue a project, the spending agency must report to Congress on the project's progress and justify its request for additional funds.

The advantages of this system are so obvious, we cannot understand why any Congressman would oppose the measure. It is sound, systematic, intelligent, economical, and democratic. It is the right way of doing business and we hope Congressman MORANO and the State's entire delegation will fight hard for its adoption when the battle begins.

Sad News

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. PORTER. Mr. Speaker, earlier this week I expressed my longtime concern and that of my constituents for the need of legislation which would permit the entry of orphans and others into the United States. At this time I should like to call to the attention of this House two letters which need no interpretation:

EUGENE, OREG., *July 19, 1957.*

DEAR CONGRESSMAN PORTER: The enclosed clipping comes from the Hood River News, which I get regularly because I used to live there. I don't know how you feel about it, but for my part if you could have got legislation to get these kids into the country before one of them died I wouldn't have cared if the budget was 10 billion larger or 10 billion smaller. That one child was more important to me. I never heard of the Polsons before.

Sincerely,

WM. M. ALEXANDER.

The clipping reads as follows:

SAD NEWS

Word was received here of the death of little Sterling Keith Polson, 4 months old July 12. The baby passed away in Holt's orphanage in Korea.

Survivors are Mr. and Mrs. Vernon G. Polson, adopted parents, and Charles Vernon, adopted brother. A little sister, Dawn LaVern, also survives in Korea.

The children both took sick while waiting for Congress to pass a bill to admit them to this country after they had been adopted by Mr. and Mrs. Polson, of Odell.

MRS. VERN POLSON.

HOOD RIVER.

Irish Make Pilgrimage to St. Patrick's Peak

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. LANE. Mr. Speaker, the Irish have such veneration for thier patron saint that they honor him more than once a year—on St. Patrick's Day, which is celebrated in so many countries on March 17 of each year, and again on the last Sunday of each July.

This latter pilgrimage is not as well known, even though it has been observed for centuries.

In 441 A. D. St. Patrick spent the Lenten season on "the Reek," a 2,600-foot peak near Murrisk Abbey, on the shore of Clew Bay. Legend has it that St. Patrick drove the snakes out of Ireland, never to return, during his vigil on the Reek. To the faithful, however, the arduous climb to the peak is an act of penance, accompanied by fasting and prayer.

The tradition of "following in St. Patrick's footsteps" has a deep meaning for the Irish. There they pray for the good of Ireland and in thanksgiving to the faith that St. Patrick brought to them, the faith that they serve with such admirable devotion.

The modern pilgrim is well rewarded for making the difficult climb. After prayer and mediation and mass, he pauses to take in the breathtaking view. The rolling hills and ever-green meadows never fail to captivate those tourists who are not Irish themselves. But to the Irish this is a land that is loved, and this view of it is one that moves them to music and poetry.

I want you to come with me—in your imagination—on the annual pilgrimage to St. Patrick's peak.

In order to do so, I ask for consent to extend my remarks in the RECORD, and to enjoy the following account of this revered tradition that appeared on July 28, 1957, in the Boston Sunday Herald:

IRISH SCALE ST. PATRICK'S PEAK TODAY—PILGRIMS HONOR VIGIL IN 441 A. D. ATOP "THE REEK"

(By Peter Barnicle)

In a pilgrimage almost as old as Chistendom itself the Irish today pay homage to St. Patrick without any of the fanfare that marks the worldwide observance of the saint's feast on the 17th of March.

From all parts of Ireland, England and even as far away as the United States and Australia pilgrims gather on the last Sunday in July to climb "The Reek"—the 2,600-foot peak on the summit of which St. Patrick spent the Lenten season of 441 A. D.

"The Reek," more formally known to geographers as Cruach Phadruig, rises from the shores of Clew Bay on the Atlantic coast of County Mayo. Its inaccessibility attracted St. Patrick when he was seeking a place for the 40-day period of meditation during his conversion of the Irish people.

Since the saint's vigil on the mountain peak it has been a tradition among the people he converted to make a pilgrimage to the mountain once a year.

HOLY WELL

Buses and trains and scores of motor cars pour into Westport during the week before "Reek Sunday," bringing the pilgrims from all sections of the country. Many of these who arrive early take time to visit the ancient ruins of the Oughaval Church. Near the church, according to legend, is a holy well containing three trout. The trout are seen only by those who will be cured by the waters of the well.

Most people are content to wander along the tree-lined walks that follow the river winding through the town.

Some of the pilgrims begin the ascent on Saturday evening, starting from the base when the hundreds of islands dotting Clew Bay are aflame in the purple and gold of late twilight.

The climb usually begins near the ruins of the ancient abbey of Murrisk, a religious colony founded by the O'Mailles for the Hermits of St. Augustine in the seventh or eighth century.

Many of the hardier pilgrims make the climb in their bare feet, clambering among the loose rocks along the path that leads over the east col toward the summit. Others with heavy-soled boots experience nearly as much difficulty in battling up the paths that lead through squashy bog fields and then almose perpendicularly up the gray rock loosed by the steps of other pilgrims throughout the centuries.

At the first "station" near the 1,000-foot level the pilgrims stop to offer certain prescribed prayers before moving off on the longer more arduous part of the ascent.

BREATHTAKING CLIMB

From the first station the path leads through fields of heather and small yellow roses to the breathtaking rock climb that leads to the peak.

More often than not clouds heavy with rain sweep in from the Atlantic to impress on the pilgrim that the climb is an act of penance. Despite this traditional struggle against elements the long black line of moving forms can be seen on the slope of the mountain throughout the day until they disappear into gray fastness of fog and cloud on the upper slopes.

On the summit the pilgrims, many of whom fast from the time they leave their homes, make a series of circuits of the peak reciting prayers before attending mass in the tiny chapel. In sheltered spots one can notice some of the penitents whispering their confessions to priests who lean against the wind, their purple stoles whipping in the air.

The fortunate pilgrim is the one who reaches the summit after dawn on a day when the weather breaks and the green, gold, and rock gray of the 366 islands on the blue waters of Clew Bay lay glistening in the sunlit waters.

BEETLING CLIFFS

Off to the north beyond the tiny isles lies Achill Island, its beetling cliffs defying the constant charge of the waves that smash against the rocks and sweep high in fanlike jets of silver.

Also far off in the ocean is Clare Island, the stronghold of Graunille, the 16th century Sea Queen of Ireland who was once received by Queen Elizabeth as a sister queen.

As the eye moves inland to the east the massive form of Nephin More rises from the landscape and just below it can be seen the crystal waters of Fionnloch Ceara.

To the south lie the Twelve Bens of Connemara, the purple-heathered range of tumbled mountains down whose slopes flash swift silver streams, darting between fields of green and gold.

While the climb to the peak is an act of penance the view from the summit more than repays the pilgrim for the aching muscles. Unlike St. Patrick, the pilgrim stays only long enough to recite his prayers, hear mass and have a cup of tea, provided by neighboring residents with an eye to the practical, before starting the descent.

FORTY-DAY VIGIL

Patrick's vigil on the mountain lasted for 40 days during which he beseiged heaven with petitions for the future well being of the Irish people.

His vigil on the mountain is recorded in Tirechan's notes, a document which, according to historians, was transcribed before 650 A. D.

In the brief memoir Tirechan notes "And Patrick went to Mount Egli (Cruach Phadruig) to fast on it 40 days and nights, keeping the discipline of Moses and Elias and Christ."

The notes of Tirechan are contained in the Book of Armagh and are considered the most authentic documents relating to the life of St. Patrick now extant. The notes were taken down by Tirechan from the dictation of Bishop Ultan of Ardbraccan, his tutor, sometime prior to the middle of the 17th century.

There are various references to the mountain in the legendary history of Ireland prior to the coming of St. Patrick. The 19th century historian John O'Donovan, during his archeological research tours of the area discovered a pagan cemetery near the base of the mountain.

THIRTY KILLED BY BOLT

When the tradition of the pilgrimage to the summit began is unknown, but the medieval Annals of Loch he mentions the custom of spending a vigil on the summit. One of the entries in the Annals for 1121 A. D., makes mention of 30 persons being killed on the summit when stuck by a bolt of lightning during one of the pilgrimages.

It was during the saint's vigil on the mountain that, according to legend, he drove the snakes from the land. The seasoned climber can still point out the Log Nan Deamhan, or demon's hollow, into which the reptiles were driven.

The hollow, now a like that can be seen on the north base of the Cruach. It was into this hollow, and not the ocean, that the saint drove the snakes.

In the National Museum at Dublin St. Patrick's Bell is still preserved. Legend says St. Patrick hurled it at the snakes as they slithered down the mountainside to their doom.

In the early 19th century the bell was in the possession of a Hugh Geraghty of Ballinrobe, in Mayo, who claimed that the bell was originally white, but had turned black after being constantly thrown at the demons by St. Patrick.

The venerable relic was in the possession of the Mag Oireachtaigh family for many hundreds of years. It later came into the possession of Sir William Wilde who presented it to the National Museum.

Whether or not St. Patrick and his bell drove the snakes out of Ireland the fact remains—there are none there today.

Congress Should Proceed With a Government-Industry Partnership Program for the Development of Atomic Power

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 30, 1957

Mr. VAN ZANDT. Mr. Speaker, under unanimous consent I am including in the CONGRESSIONAL RECORD a copy of the article entitled "GOP on Defensive Over Atomic Power," by John W. Finney, as it appeared on pages 1 and 30 of yesterday's edition of the New York Times.

This is an excellent article and I believe that it should be drawn to the attention of all Members of Congress, as it well states the momentous issues which now confront the members of the Joint Committee on Atomic Energy, and, in a few days or weeks, will confront all Members of Congress when the AEC authorization bill is reported out by the Joint Committee.

I would have only one criticism of Mr. Finney's article and that is this:

It describes the differences as differences between Democrats and Republicans. I do not believe that political-party membership is, or should be, involved on this question.

I believe that the real issue is as follows:

Should we proceed with a Government-industry partnership program for the development of atomic power—or should we revert to a completely federally financed construction program, at greatly increased cost to the taxpayers?

I believe that industry is ready and willing to participate in this field if we will just give it a limited amount of assistance and encouragement.

There is little or no need to deny assistance to industry, and to provide for a 100 percent Federal program on reactor types which are perhaps less promising for future commercial application.

When this real issue is made clear to the people and to the Members of Congress, I believe there will be overwhelming support for the partnership program, from both Republicans and Democratic Members of Congress.

Also, Mr. Speaker, I represent a coal-producing district. In my opinion, we have adequate fuel resources, and we do not need a government crash program to promote atomic power. We should let civilian atomic power be developed primarily by private industry—not by the Government.

The article is as follows:

GOP ON DEFENSIVE OVER ATOMIC POWER

(By John Finney)

WASHINGTON, July 27.—A soundproof, burglarproof committee room in the Capitol will be the battleground next week for another partisan fight over whether the Government or private industry should build atomic power plants.

Republican Senators and Representatives will enter the closely guarded meeting room of the Joint Congressional Committee on Atomic Energy on the defensive. They are fearful that the Democratic majority is aiming a knockout punch at the administration's partnership program with private industry for development of atomic power.

Democrats on the committee disclaim any such intention. They insist they are only proposing a limited Government construction program to assure American technological supremacy in atomic power development.

The partisan arguments have been repeated with increasing vehemence in recent weeks. The committee has scheduled a meeting for Monday. It should prove to be this year's final round in the running fight.

Before the committee is legislation that would authorize $398 million for construction of atomic-weapons facilities and Government assistance for the peaceful development of atomic energy.

The battle is over the peaceful development, not the weapons. Democrats retriggered the battle by proposing to include in the legislation authorization for the Government to embark on a $58 million program of construction of reactors.

The Democratic proposal is a vastly modified compromise program in comparison to the party's past proposals for a huge Government crash program of construction of reactors.

For a while it appeared that the Democratic modifications could lead to an unusual peaceful accord within the committee. But the Republicans balked when they found that the Democratic program was more inflexible and uncompromising than they had first believed.

In brief, the Democratic program calls for the following: $40 million for construction of a gas-cooled natural uranium-fueled reactor with 40,000 kilowatts capacity, such as developed by the British; $15 million for a research facility to demonstrate the use of plutonium as a fuel in atomic reactors and $3 million for an engineering study on a dual-purpose reactor that would produce plutonium and usable heat. The program also calls for Government construction of five small atomic powerplants proposed by rural cooperatives and municipal public-power groups.

PARTNERSHIP FUND CUT

In addition, Democrats have proposed cutting off funds for the administration's most controversial partnership project, the construction at Lagoona Beach, Mich., of a fast breeder reactor by a group of private concerns headed by Detroit Edison Co.

The administration had requested $4,206,000 for the Lagoona Beach project under its policy of extending research and development assistance to private companies constructing atomic reactors. Democrats are proposing instead that only $1,500,000 be authorized for general research in the fast breeder reactor concept.

Republicans see in the Democratic program an indirect move to scuttle the administration's partnership program and promote public power development of atomic energy. They also object that the Democrats, by directing the construction of certain types of reactors, are assuming the administrative

and technological responsibilities of the Atomic Energy Commission.

To Republicans, the Democratic proposal to construct reactors for the five rural and municipal power groups represents an entering wedge to set public power groups up in a preferred position in the atomic energy program. The precedent would be set, they fear, whereby public power projects would be built by the Government, while private concerns could only expect much more limited research and development assistance.

Democrats insist that their proposal is designed to get the long-stalled rural and municipal reactor projects underway and contend that it would not cost the Government any more money than under the administration's proposed partnership method of construction. The Commission has taken the position that if there is no other alternative, it would agree to Government financing of the five particular reactors, but not to Government construction or operation of the plants.

GOP FEARS CITED

Republicans are fearful that the Democrats already have dealt a body blow to the future of the administration's partnership program by moving to cut off funds specifically for the Detroit Edison project. If Congress at any time can revoke funds that the Atomic Energy Commission has agreed to provide, the Republicans argue, then private companies will be unwilling to invest millions of dollars in an atomic powerplant in a partnership agreement with the Government.

Republicans also object that the Democrats are intruding upon the functions of the Commission in directing construction of the gas-cooled reactor and the plutonium research facility.

The Tax That Chokes the West

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, July 30, 1957

Mr. MAGNUSON. Mr. President, of all the many Federal excise taxes, the tax on transportation which still survives from World War II is unique in the manner in which it discriminates among different sections of the United States. By adding 3 percent to the cost of freight, and 10 percent to the cost of passenger travel, the transportation excise bears most heavily on the men and women who live in areas which require the most transportation for their participation in the Nation's economy.

By thus accentuating the costs of transportation which go into everything we produce and consume, this Federal excise discriminates against such areas as the Pacific Northwest and the Deep South and Southwest, which are farthest from the northeastern economic and population centers of our country.

The junior Senator from Oregon [Mr. NEUBERGER] has taken the lead in recent months in efforts to win repeal of this inequitable tax. He has set forth the case against the Federal transportation excise tax in a recent article in Railway Progress magazine for August 1957 called The Tax That Chokes the West, in which he itemizes the geographic discrimination against the Far West inherent in this tax, and also discusses certain other damaging consequences from it, which I have had occasion to point out in my own efforts to end this tax. On numerous occasions I have introduced proposed legislation to repeal or modify war excise taxes and have presented to the Senate Finance Committee what I consider to be overwhelming justification for such action.

Mr. President, I ask unanimous consent that the article by the junior Senator from Oregon, entitled "The Tax That Chokes the West," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE TAX THAT CHOKES THE WEST

(By RICHARD L. NEUBERGER)

Nearly all excise taxes are paid equally by people in every section of the Nation. Such levy-laden items as tobacco, lipstick, leather goods, and diamond brooches are generally purchased in about the same ratio in San Francisco as in New York. Luggage, after all, is indispensable whether one travels in the wide open spaces of the West or through the crowded metropolises of the East. And the females of my acquaintance seem to regard facial makeup as of equal necessity, though some of them may live on teeming Park Avenue and others along the lonely reaches of the Columbia River.

But there is one Federal excise tax in which every region does not share and share alike. That is the 3-percent levy on all freight shipments. This tax weighs down the economy of the area which I help to represent in the United States Senate, as the Old Man of the Sea crouched oppressively on the shoulders of Sindbad the Sailor. The Federal transportation tax is detrimental to all the States in general, but to the States in the West and Pacific Northwest in particular.

Why is this levy, in contrast to other excise taxes, worse for one part of the Nation than another?

The reason is not hard to find; it lies in the peculiar geographical distribution of the population of the United States. The 11 States of the Far West—those which sprawl from the Continental Divide to the shores of the Pacific Ocean—contain 36 percent of the land area of our country but only about 16 percent of the people. This means, of course, that products grown or manufactured in the Western States must be hauled 2,000 or 3,000 miles eastward in order to find major markets. All this pilgrimaging is subject to the 3-percent transportation tax. Ergo, the levy falls most heavily on the West and especially on the Pacific Northwest, because this region is farther than any other from the population centers of the East.

That is why the excise taxes on freight must be repealed if the West is to enjoy a fair and uninhibited opportunity for economic development. Many eminent Americans, such as Prof. Walter Prescott Webb and Senator PAUL H. DOUGLAS, have complained recently that the West has no destiny other than to be a dragging satellite of the populous States of the East. But can easterners complain of this in good faith, when they tolerate Federal taxing policies which doom the West to such a fate?

Look at the map of the United States on your library wall or in your schoolchild's atlas. Note how close Pittsburgh is located to the Atlantic seaboard. Within 500 miles of Pittsburgh are found more than 55 percent of the Nation's population and the overwhelmingly greater portion of its industrial and consumer markets. Portland, Oreg., where I was born and raised, is situated from 2,000 to 3,000 miles distant from points within this circle around Pittsburgh.

A carload of Oregon lumber, processed at sawmills relatively near Portland, will be assessed freight charges of $675 for shipment from Portland to Pittsburgh. Transportation charges for the same carload of pine lumber from the woods of Georgia are $410. The Federal excise tax on transportation collected from the Oregon lumberman is 40 percent larger than that paid by the Georgia lumber dealer. I do not object to the fact that Georgia's forests grow closer to the centers of American population than are the great timbered uplands of my own State. As a Senator, I can help enact laws but I cannot change geography. I realize it may be many decades before the population of the United States is distributed more equitably between East and West. But I do object, and strenuously, to a Federal tax which falls disproportionately heavier on my region than any other—simply because the Pacific Northwest is separated by nearly the breadth of a continent from its principal markets.

Agriculture in my State is burdened and hampered with similar unfairness by this tax. Oregon canners who process fruits, vegetables, and fish will pay freight tolls of $1,032 per carload to the Pittsburgh area, as compared with approximately $264 per carload by a midwestern processor of canned foods. The midwestern shipper will pay to the Treasury a transportation tax of $7.92 on his shipment, but the Federal Government will assess the Oregon canner a transportation tax of $30.96—almost four times greater.

I could cite this inequity wtih respect to innumerable commodities. The Federal excise tax on transportation of a carload of grain from Oregon's ranches will be over 3½ times the tax on grain from the central portions of the United States, that on Oregon livestock 3.8 times the tax by prairie-belt shippers—if these products are to be sold in the great consumer markets of the eastern population centers. The imbalance means that Federal taxing policy contributes to the competitive difficulties of Oregon timber and agricultural products in the principal markets of the Nation.

Nor is this inequality confined only to the producers and processors in my part of the country. Consumers in the West also are saddled unfairly by the transportation tax. Just as the East contains the Nation's dominant markets, so does it include most of the great factories which produce manufactured goods—automobiles and electrical appliances, to cite only a few. It costs $10 to ship an automatic washing machine from a typical eastern manufacturing center to Portland. This is about four times as much as it costs to ship the same appliance to Terre Haute, Ind. The Portland housewife is taxed four times as much by her Government as her sister housewife in Terre Haute, because the cost of transporting a washing machine to Terre Haute from Pittsburgh is only about $2.61.

Agriculture today is in crisis. Few economists dispute the fact that the prices received by farmers for their produce have been steadily declining, although the costs which they pay for equipment, labor, medical care, and clothing have been rising with equal inexorability. Such a squeeze cannot continue indefinitely without causing the disappearance of the family-sized farm operation. Yet the policy of levying a 3 percent excise tax on every freight shipment is bad for agriculture in general and for western farmers in particular. It is estimated that shippers of farm produce pay almost one-fourth of the annual $480 million yield from the transportation tax. I remember the turkey warehouse which closed down in an Oregon town because Oregon turkeys had to

compete at a 5-cent-per-pound disadvantage with those from West Virginia and Texas for sales in the strategic Chicago poultry market—and this situation was of course compounded by the Federal freight tax.

I can understand an excise levy which singles out such commodities as tobacco and liquor as special targets. After all, these are far from necessities, indeed, many regard them as deleterious to health. But freight is a basic essential. If goods cannot move, we do not have an integrated nation. We become, instead, a mosaic of Balkan principalities, each surrounded by insurmountable customs walls.

Our 3-percent tax not only discriminates against the West, but it also actually discriminates against the United States as a nation. Let me explain what I mean. We share the world's longest unfortified border with Canada. A comparative mashie shot north of this boundary stretch two vast and efficient railroad systems—Canadian Pacific and the Canadian National. Furthermore, the Canadian Government has had the wisdom to repeal its transportation excise taxes. This places a premium upon the use of Canadian railroads, rather than American railroads, for the long haul across the continent. Such a practice, of course, deprives American railroads of income and American railroad workers of jobs.

Canadian shippers can avoid the entire 3-percent tax by prepaying charges in Canada on international movements, while their American competitors—who ship to the same markets in the eastern part of the United States—must pay the full 3-percent tax. Many Canadian cargoes, such as British Columbia lumber or apples or fish, once were consigned to American markets through rail gateways on the border such as Blaine, Wash., or at Sumas in the same State. This meant that the freight was carried eastward across the United States by such American transcontinentals as the Great Northern, Northern Pacific, or Union Pacific. But the 3-percent American transportation tax has ruled out this policy for innumerable Canadian shippers.

These men have discovered that they can escape approximately 80 percent of the transportation tax by keeping inside the frontiers of Canada some 80 percent of the mileage on their shipment. Thus, their goods journey across the continent on the Canadian Pacific or the Canadian National, and do not enter the United States until they reach a portal in the region of the Great Lakes or New England. Three results are thus achieved: (1) The Canadian shipper avoids payment of most of the American freight tax, (2) the Canadian shipper secures a slight competitive advantage over his American rival who must pay the levy, and (3) the United States Treasury loses all the corporation taxes and personal income taxes which would be collected from the American railroads and the men on their payrolls, who might otherwise have been engaged in conducting this profitable transcontinental haul.

Still another inequitable aspect of the tax remains to be analyzed. Many legislators and economists are alarmed over a growing concentration of economic power in America. Yet the freight tax indubitably favors big shippers over small shippers. Senator WARREN G. MAGNUSON, chairman of the Senate Committee on Interstate and Foreign Commerce, has said, "This tax makes the big shipper bigger and the small shipper smaller."

A well-financed shipper of commodities generally has sufficient funds to go into private trucking and buy his own fleet of highway leviathans. Of course, he escapes the 3-percent tax, and this differential is often enough to finance his venture into trucking. But the smaller shipper, who must rely on common carriers, continues to pay the tax. And the levy applies not only to transportation as a whole, but to narrow refinements as well. A shipper who must ice his products to get them safely to market pays no tax if he supplies his own ice. But few small shippers own iceplants. They must purchase their ice for reefer shipments from the railroads or truck lines, and on this ice they have to pay the 3-percent tax.

The existing transportation tax has created what Senator MAGNUSON recently described as highly questionable practices. When a contract trucker leases his equipment to a shipper, it becomes private trucking and, as such, avoids the tax. During recent years there has been an epidemic of buy-and-sell arrangements, trip leases, and special boat charters. These have been designed to transform what would normally be common carriage into private carriage, for the express purpose of wriggling out of the 3-percent Federal freight tax. It is, as best, tax avoidance; it could be tax evasion. Even worse, it is weakening our system of common carrier transportation. Surely it does not stimulate respect for our tax structure as a whole. In addition, these tortured constructions and special situations are mainly available to well-financed shippers with a battery of legal talent and the resources to charter vessels and flotillas of trucks.

I still remember my conversation with the mayor of a small town in Oregon's lovely Wallowa Valley, a realm of granite peaks and pine timber. "Senator," said he, "why does Uncle Sam follow a policy that makes it tough for the little sawmill operators and easy on the big ones?" He then went on to explain to me that the large lumber mills own their own logging trucks. So, the large mills do not pay the 3-percent United States freight tax on the ponderosa-pine logs they are hauling out of the uplands or on the finished lumber they are transporting to the Union Pacific railhead at Enterprise or La Grande. But the little family-owned mills have no such equipment. They must hire contract haulers to transport their logs and lumber. In this way, they become subject to the 3-percent transportation tax, thus further increasing their disadvantage vis-a-vis their big competitors.

In March of this year I sponsored an amendment to a general tax revision bill which would have eliminated the Federal freight levy. My proposal was defeated when Senator HARRY F. BYRD, of Virginia, chairman of the Finance Committee, insisted that the particular bill at issue was not the proper vehicle for the amendment I was offering. Yet the effort was not wholly wasted. Some salutary results were forthcoming. Senator BYRD strolled back to my desk at the rear of the Senate Chamber and said, in substance:

"DICK, you have some real points on your side. I have a lot of sympathy with your case. I know something about the operation of this tax because I buy each year, for my Winchester apples, thousands of fruit crates from lumber mills in your State of Oregon. I am aware of how much 3 percent on such a freight bill can amount to. I can't accept your amendment here, but I promise you that it is going to receive serious consideration from me and my committee as a separate measure—entirely on its own merits."

There the matter stands, legislatively. Repeal proposals take several different forms. One is outright elimination of the whole transportation excise tax, as I have urged. Another is a slower method—to knock off 1 percent annually for 3 successive years, in order to ease the potential impact on the Treasury. The third is a more complicated suggestion made by Senator MAGNUSON. This would be to limit the tax to not more than 3 cents per 100 pounds of freight. The purpose of such a compromise would be to continue to collect the levy on hauls along short distances, but to lift the unfair burden off of long-haul shippers. Western shippers, for example, would receive no relief on a short freight haul between Portland and Seattle, but they would be greatly relieved with respect to the levy on the infinitely longer 2,200-mile hegira from Seattle to Chicago or St. Louis.

Senator MAGNUSON'S modified recommendation has much to commend it. Yet, I would prefer to see the tax totally repealed. It is not an excise which makes sense—nor does the 10-percent levy on passenger tickets sold for trains, airlines or over-the-highway buses. Since when has transportation of freight or people been regarded as a luxury, to be taxed punitively by the United States Government? During the debate over my amendment, Senator FRANK CHURCH of Idaho pointed out quite accurately that the 3-percent freight tax was enacted originally "to discourage the use of the rails at a time when war was being waged. * * * This justification for the tax has long since disappeared."

In my opinion, there is more wisdom in applying a 3-percent tax to a man's second suit of clothes or alternate automobile than to his transportation. Under duress, he can do with a single suit; there is only rare hardship in one car per family. But what family can survive without the freight haul which brings across mountains and prairie and valley its food supply, the materials built into its home or apartment, the seed and fertilizer for its garden, the fuel for its furnace, the appliances for its kitchen? And how many Americans can relinquish their own necessary journeys by rail, air or bus?

I feel strongly about this issue because I help to represent a region which is caught in a cruel economic vise through this levy applied from the Federal treasury. Some of us in the Senate have worked hard to expand the Bonneville Power system, which has been selling hydroelectricity to large industrial customers for only 2.2 mills a kilowatt-hour. This low rate helped to attract to the Northwest many of the world's leading manufacturers of light metals and chemicals. Today, however, the Olin-Mathieson Co. has discovered that it can produce electric power for 3.5 mills per kilowatt-hour, burning coal at the mine mouth in Ohio.

In an effort to learn how my State might attract new industrial payrolls, I talked with officials of the Olin corporation. They advised me that, in a choice between 2.2-mill energy in the Northwest and 3.5-mill energy in Ohio, there was a delicate point where the power rate and the freight rate intersected. By this, they meant that the aluminum products in Ohio would be produced within a fungo swat of millions of customers. By contrast, the ingots smeltered in the Northwest would require the long transcontinental trip to market. In such a finely balanced situation, the 3 percent Federal freight tax could well be the determining difference to prevent the legitimate industrial expansion of the Nation's vast Northwestern frontier.

Surely a tax which discriminates against a great region, against major segments of the transportation industry and—in certain instances—against the United States itself, can have little to commend it. "Nothing succeeds like success," wrote Dumas—yes, and nothing fails like failure. By all possible tests, including its effect on our total economy and on major areas of the United States, the 3 percent Federal excise tax on freight has been an abysmal failure. The time has come to repeal this unfair levy—now.

Important Disclosures To Be Considered

EXTENSION OF REMARKS
OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 30, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled, "From Dachau to Cairo," taken from the No. 50, summer issue, 1957, of Prevent World War III, published by Society for the Prevention of World War III, Inc., New York.

This article contains many bits of information which I believe will be of interest to the Members of the House, as it is a situation that would appear to require consideration.

FROM DACHAU TO CAIRO

(The Middle East crisis is an extremely complicated problem made all the more difficult by outside influences including the nefarious activities of Soviet agents. However, it is a fact that German influences have also been operating in this area with considerable effectiveness. Pan-Germans and former Nazis have gained important positions in a number of middle eastern states, particularly Egypt. Prevent World War III has published detailed accounts of this development in the Nos. 41 and 47 issues. Additional information on the role of former Nazis in the Nasser government is contained in an exclusive report published by the National Jewish Monthly (February 1957). These disclosures deserve to be pondered by all liberty-loving Americans and it is with this in mind that we have reprinted the report.)

The violent actions taken by Nasser's government against British, French and stateless Jews resident in Egypt, the confiscation of their property, and their deportation on from 9 to 72 hours' notice, have provided the press with a flood of news which overshadowed the ominous fate that looms over the native Egyptian Jewish community of more than 10,000 individuals.

This ancient Jewish community is being systematically pauperized, maltreated, and interned together with common criminals in unspeakable places of detention. Together with the remainder of Egyptian Jews, they are left at the mercy of the State Security Cadre (SSC), which seems to be as precise a copy of the German Nazi Sicherheitsdienst as Egyption inexactitude permits. This unit is the military junta's forecful arm which is responsible for Egypt's actions and policies to a far greater extent than is generally known.

The commander in chief of the SSC is Lt. Col. Al Nacher, formerly SS-Grossaktionsleiter Leopold Gleim, who was the commander in chief of the Nazi government's SD-Geheimgrade.

Addressing a luncheon in Cairo given in his honor by the representatives of the League for (East) German-Arab Brotherhood (Al-akhwah al-Almaniyah l'Arabiyah, i. e., Deutsch-Arabischer Bruderschaftsverband) on December 17, 1956—Gleim frankly pointed out the significance of the SSC as the backbone of Egypt's protective apparatus against the aggressive elements of Zionism and imperialism. He thanked the League for its vast help extended to this young state—a most significant contribution to the mutual efforts in the strengthening and stabilizing of Germano-Arabic friendship and relations.

Later on, during more intimate talks with members of the Bruderschaft—conducted in Hochdeutsch and made gemutlich by cigars, bourbon, and coffee—Gleim gave an outline of his unit's short history and structure. This outline, when pieced together with additional facts on hand and the already known procedures of the cadre's activities, sketches a tolerably clear picture of the Egyptian version of nazism, which found in Egypt ideal conditions for its recrudescence.

The plan for the SSC was drawn up by several technical advisers of German origin, approved by the Ministry of Interior. The cadre headquarters was set up in Cairo, and its administration handed over to the 6,249 arabized Nazis presently in Egypt (aided by perhaps 70,000 Egyptians). According to Gleim, the unit consists of the following departments:

A. THE PUBLIC RELATIONS DEPARTMENT (PR-DPT.)

The executive positions in this section are entirely manned by Germans who are holding Arab passports. The PR-Dpt. is headed by SS-Gruppenleiter Moser, a Sudeten German who has now assumed the name of Hussa Nalisman. His right-hand man is SA-Gruppenleiter Buble, now Arabized into 'Ammân.

The propaganda machine operates with German precision, according to the Goebbels-Stuermer pattern. Its main target for attacks is, of course, the Jews. Egyptian youth has been responding enthusiastically to this propaganda.

The PR-Dpt. has branches in Berlin (East and West), Vienna, Stockholm, Helsinki, Rome, Milan, and Bordeaux; it commands special squads of vans with loudspeakers, which cruise throughout Egypt constantly inciting against American, British, French, imperialistic or Zionist Jews—the adjective changing with the broadcaster's mood; and it also owns an independent broadcasting station which assiduously cultivates the entire Arab world.

A flood of anti-Semitic literature is being published and distributed in the Middle East and Europe. Egypt's recent best seller, however, was the new, popular edition of Kefahi, the Arabic translation of Hitler's Mein Kampf. This is an abridged, illustrated version which contains photo-reproductions beginning with Hitler's picture as a corporal in Hindenburg's army and up to his cock-posing as the fuehrer.

The complete and unabridged version of Mein Kampf was first translated into Arabic in 1951 by the Syrian journalist, author, and owner of the Beirut Printing & Publishing House, Louis al-Haj, formerly Luis Heiden, director of Die Reichsdeutsche Presseagentur, Berlin.

Vulgar, colorful posters featuring the Israeli soldier as a bearded villain who bayonets an Egyptian baby, are blooming in many Egyptian towns. These posters urge the people of Egypt to rise in Jihad—the Holy War—against the Zionist threat to Islam.

Egyptian youth is being assiduously educated for militarism. One of the outstanding examples of this campaign is the targettent pitched opposite the SSC-HQ in Cairo's Liberty Square, where schoolboys are given an interest in usage of arms.

The PR-Dpt. also has a very special branch: the Youth Club of the Deutsch-Arabischer Bruderschaftsverband. Twice weekly this club has a closed session, when many Egyptian youngsters are sworn in by the club's chairman, Hussa Nalisman. This requires only one more comment: Colonel Abdul Nasser is the honorary president of the club, and had been sworn in as member No. 3.

B. THE ECONOMIC DEPARTMENT (EC-DPT.)

The EC-Dpt., now so strongly associated with Jewish affairs, is a close enough translation of the SS-Wirtschaftsamt, and it operates on a similar basis. This department was founded on February 2, 1954; it controls the SSC treasury, which is independent of the government's exchequer. Apart from the annual allowance granted to the SSC from the general defense budget, this treasury absorbs a considerable income from products of prison workshops throughout Egypt.

The archives of the EC-Dpt. have a Jewish section with a register of all Jewish property in Egypt. It contains up-to-date information on this vital subject, which has now become a major source of revenue to the SSC treasury. Upon the expulsion of thousands of foreign and stateless Jews from Egypt, the EC-Dpt. cashed in 14 million Egyptian pounds in currency, policies, and securities, and 27 million pounds of real property and assets abandoned by the Jewish deportees. It is worth while noting that the majority of deported Jews had been very rich; this explains why there was no mass deportation of all foreign and stateless Jews, and why individual expulsion warrants were issued. The poorer stateless Jews have been left over "to be dealt with later on as Col. Abd-al-Qadir Hatem explained.

Colonel Hatem, of the EC-Dpt., declared that "not a single piaster or brick has been confiscated, as the Zionist lies alleged. We have documentary proof that property and currency abandoned by people who had to leave Egypt were voluntarily assigned to the administration of the EC-Dpt."

Another interesting branch of the EC-Dpt. is the public sales center in Cairo. Whatever remained in the residences which the Jewish deportees volutarily assigned to the administration of the EC-Dpt.—furniture, clothes, paintings, refrigerators, radios, entire libraries, etc.—is being auctioned off. It brings to the SS treasury weekly profits ranging from 500 to 3,000 Egyptian pounds.

C. SECRET STATE POLICE

That name rings a bell somewhere. If translated into German it would be Geheime Staats Polizei; and if abbreviated: Ge-Sta-Po. Its duties are now carried out by Army intelligence.

The major section of this department is the center of the Egyptian Intelligence Service. Next to it is a section headed by Lt. Col. Ben Salem, former SS-Bannfueher Bernard Bender, who owing to his knowledge of the Yiddish language, was during the war chief of the Gestapo special branch for detection of Jewish underground movements in Poland and Russia, and who is now playing an important role in Egypt's economic and political administration. He is also the liaison between the secret state police and the EC-Dpt.

Nevertheless, Lt. Col. Ben Salem is a very modest man, and while entertaining some of the young East German visitors he declared "I never wear a uniform because it makes one look more important than he really is." This is a moot matter, because in addition to all his known and unknown tasks, humble Ben Salem is also chief of the interrogation center of the SSC, better known to the Egyptians and to the Egyptian Jews in particular as "the floating hell."

The floating hell is an old, 12,000-ton cargo vessel, the former Italian *Marinajo Rosso*, which has been converted into a floating prison of 80 cells where, according to Ben Salem, "only cases of special interest" are being held. The sole "practical device for bringing out the truth" which he was prepared to exhibit, was the recording center in the vessel's former radio cabin, from which a network of hidden microphones reaches all the cells. Thus, every word uttered during the interrogations or at intervals, while prisoners are together, is recorded.

The recording center is operated by two men only: tight-lipped Sergei Klinikin from Odessa; and his subordinate, Alexei Morganoff, a true Muscovite with an enchanting smile, huge feet, and a Swiss watch. Both have served under Ben Salem ever since General Vlassoff changed flags. Only that was about all one could get out of them.

The Floating Hell performed a great service for Egypt by helping the famous Jewish

banker, Mr. Elie Politi, succumb there to the interrogation methods, and sign a document that he had voluntarily assigned 112,000 pounds—all he possessed. The Floating Hell was also where Lt. Col. Ben Salem had been "most delighted to be able personally to handle the affairs of an Egyptian publisher, a Jew named Mr. Salama."

(Late news dispatches indicated that their confiscated businesses had been restored to a small number of Jews in Egypt.—EDITOR.)

Early in November the first phase of Salem's "Solution of the Jewish-Zionist Problem" began to take shape.

Conducting 3,000 men of the SSC executive force (municipal police units, plainclothes men, and army squads), SS-Grossaktionsleiter Gleim personally supervised the combing of the Cairo and Alexandria rural districts, throughout the duration of the curfew. This action resulted in the seizure of 1,711 native Jews—men, women, and children—inclusive of the 6 Jewish fellahin families of Mit Ghammar, who are the last survivors of a Jewish community believed to have lived there since 90 B.C.E.

During this action, looting, rapine, and 8 killings were reported and confirmed. The officers in charge "regretted the incident which resulted due to the refusal of the subjects to follow instructions."

These captives have been classified as "Prisoners Category Alif (A)" and concentrated in the southern wing of the famous French-built prison, Des Barrages, in Cairo. No charges were made against them, but on the way to prison, all captives (exclusive of pregnant women and mothers of children below the age of 10) were handcuffed. The northern wing of Des Barrages is packed with "potential deportees," i. e., Jews who have no Egyptian nationality.

The sanitary conditions in which those prisoners are being held should be of special interest to those members of the U. N. and of the International Red Cross who, during interviews with foreign correspondents in Cairo, denied any knowledge of such conditions or of the above-mentioned arrests.

Cells intended for 10 persons presently shelter 30; and cell No. 73 is packed with 38 male Jewish prisoners "because they have their own watercloset," as explained by the chief warden, Hadji Mustaffa Ibn-Aziz, who is very friendly but responsive to bakshish only so far as matters of nonpolitical nature are concerned, because nowadays politics are dangerous.

The male prisoners are not allowed out of their cells. Their sole opportunity to breathe some fresh air is while they carry out the waterbuckets—a task eagerly done every morning in rotation by a couple of prisoners—and while fetching food and water.

The daily rations consist of 500 grams of Pittah-bread and 2 litres of soup per head. Water (2 litres per head) is being distributed only once daily, in the morning, and the male prisoners must drink it all at once, because they are not permitted to keep any containers in their cells.

WOMEN ARE TREATED BETTER

The female prisoners are granted 20 minutes a day to walk in the prison courtyard, and mothers may, in addition to that, spend half an hour daily with their children, who have been accommodated very comfortably in the former recreation hall for prison personnel. Mothers with babies up to the age of 3 are kept in the prison dispensary and have beds to sleep on. The babies are being provided with adequate and appropriate food and with daily rations of fresh milk.

The 18,000 Alexandria Jews (among them some 6,000 natives) classified as "Category Ba (B)" suffered an attack which completely crushed their economic life. Alexandria's military governor, Col. Husseini, imposed under Security Act penalties, a permanent curfew which lasts from 5 p. m. to 9 a. m., and from 11 a. m. to 3 p. m. The rest of the time is left for purchase of food which is usually bought with funds obtained through the sale of jewelry or other personal assets, because by order of the SSC. EC-Dpt., 93 percent of every Jewish bank account has been blocked until the position of category Ba is clarified.

Colonel Hatem elucidated this hazy statement as follows: "The Alexandria Jews are known to have strong connections with Israel; but since we cannot bring them to justice without concrete proof and simultaneously cannot let them endanger the state security by letting them carry on with their underground activities, we are forced to take some slight precautions.

These are the "slight" precautions:

All Arab enterprises have dismissed their Jewish employees without any compensation whatsoever—as per government orders.

Most Jewish enterprises, including the Cicurel Stores and down to small shops, were taken over and only those few Jews who have intermarried were permitted to continue, but they closed their shops "voluntarily" because they were picketed by the Moslem Brotherhood and their show windows were stoned. Any customers who attempted to enter Jewish shops were assaulted.

All Jewish professionals in Alexandria (with the exception of a few dentists) have been forbidden to practice. Seven hundred and ten prominent Jewish personalities, including a relative of Mrs. Mendes-France, Mr. Guy Circurel, former president of the Maccabi, and Mr. E. Levy, president of Egypt's stock exchange board, as well as most of the Jewish doctors, have been arrested. According to rumors, they will be tried on charges of treason in a closed session of the Supreme Military Court.

The Cairo Jewish community, however, is undergoing an even greater crisis:

All the Jewish schools have been closed, all communal activities paralyzed. The Jewish hospital has been taken over by Arab authorities and all Jewish personnel, and patients, regardless of their condition, were ejected on 1 hour's notice. Relatives of some of the more serious cases applied for their admission to Arab hospitals, but met with refusal.

Five hundred Cairo Jewish men have been indefinitely interned in the English grammar school, which was closed down and converted into a detention center with the outbreak of the Suez Canal crisis. Their wives and children, totaling 622, are held captive and 456 Jewish men, women, and children are confined in the Hadrah Prison; 830 Cairo Jews are being held in the ruins of Qalat al-Qahira, outside the city. Three of these prisoners were "shot while attempting to escape"—the old Nazi gimmick. It was, however, not explained how they happened to be shot inside the dead-end underground passage of the ruins where six mutilated bodies of Jewish girls were also found.

"THIS IS ONLY THE FIRST PHASE"

Being literally under house arrest, imposed on them by the curfew, the remaining Cairo Jews are subjected to frequent raids of the Moslem Brotherhood. And over all this looms Nasser's state security cadre with its iron grip. Its commander, SS-Grossaktionsleiter Gleim, smilingly declared in front of his young German visitors that "this is only the first phase."

It can therefore be easily guessed that the second phase will be the completion of Ben Salem's solution of the Jewish-Zionist problem within territories of sovereign Egypt—a work which is now being implemented through five newly-established concentration camps: the Heliopolis Fortress, destined to absorb 2,000 internees; the Gizeb Barracks, which served during World War II as a POW camp, able to shelter 10,000 prisoners; two former army training centers, the Mustaffa Hanun-Pasha Barrachs near Almaza City, originally built for 16,000 men, and the Borg al-Arab Barracks near Alexandria, which once sheltered two divisions of recruits.

A GRIM CONCENTRATION CAMP

The most threatening of all, however, is the fifth concentration camp: the Samarra Barracks in the Suheilla region of the desert, 200 miles west of Cairo. This camp, only recently vacated by the 3d Regiment of the Egyptian Liberation Army (the unit which, commanded by Col. Nasser in 1948, withstood the Israeli attacks on Faluja) is now being converted at a cost of 17,000 Egyptian pounds, and patterned on photo copies of the original plan of the infamous Nazi Medizinisches Versuchlager Mannerheime bei Dachau, otherwise known as block 10, where hundreds of Jewish girls were sterilized. The photo copies of the original plan of this camp were supplied to the SSC by Karl Clauberg's direct superior, SS-Hauptstabsarzt Heinrich Willermann, presently "arabized" into Lt. Col. Naam Fahum, who is now in charge of converting the Samarra Barracks.

The stateless and foreign Jews still in Egypt are hoping, probably against hope, that the U. N. will take them under its protective wings. Should, however, the U. N. decide otherwise, they will respond to Nasser's "encouragement" and leave Egypt impoverished, destitute, but alive.

But not the native Jews. They have tried to leave Egypt, but Nasser's government refused most of them exit visas, and most of the foreign consulates refused entrance visas as well as racial asylum—thus leaving this ancient and once flourishing community in the sinister grip of Nasser's legislative paradox.

Egyptian law imposes on them all its restrictions but deprives them of any rights or protection within sovereign Egypt—thus preventing any foreign intervention on their behalf, except for the U. N., maybe?

Maybe.

Because—in spite of the cadre's strict censorship on publication of all events in Egypt and on news leaving the country—the U. N. has ample evidence and information on what is going on there. Why, then, its reticence? Why the passive attitude toward Nasser's ruthless violation of human rights? The U. N. must release the facts and warn the world of what Nasser is up to, so that appropriate measures can be taken. Because—although economically ruined, interned, maltreated, and humiliated—it is not too late yet. Egyptian Jewry is still alive.

Mark Foote

SPEECH

OF

HON. VICTOR A. KNOX

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 29, 1957

Mr. KNOX. Mr. Speaker, it was my privilege to know Mark Foote, chief of the Washington bureau of Booth newspapers since I came to Congress in 1953. I always found him to be most helpful and a most considerate correspondent, and one who was admired by all who knew him. In reading Mr. Foote's last column, which he wrote several hours before his death, one cannot help but

agree that he reported the news in a punctilious manner and in fairness to all.

The fact that he was selected 4 times in the last 10 years by Newsweek magazine as "master of prophecy," an award for the most accurate predictions of presidential and congressional elections proved his outstanding ability.

Mark Foote's death is not only a great loss to the newspaper world, his home State of Michigan, but to all. His death ends a long and faithful public service to our Nation.

I extend my sympathy to his wife, daughters and grandchildren. May they be comforted by the knowledge that he lived a happy and very useful life.

Sheldon Freedman, of Chelsea, Mass., Star Sprinter in Spite of Handicap

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. LANE. Mr. Speaker, I want to bring you the story of a young man who is twice blessed with courage.

He not only has the will to excel, but that extra reserve that enables him to overcome a handicap.

Sheldon Freedman, of Chelsea, Mass., a city located in my district, cannot hear a word or a sound. The lack of this faculty was never regarded by him as a disability. It was a challenge, to which he has responded magnificently.

Since he was a youngster he has looked up to outstanding performers in the world of sports, and has been inspired by their accomplishments. He has trained hard to develop his own skills. What might have seemed a serious obstacle to others was, to him, a test of his determination.

Up through the years, with a sense of humor that was superior to discouragement and defeat, he schooled himself to become a star sprinter, and he succeeded.

The Chelsea Lodge of Elks, impressed by his ability, his great competitive spirit, and his likable personality, conducted a drive that raised the sum of nearly $1,800 that is necessary to send him to Italy, in order to compete in the 29-nation meet of deaf athletes. As a member of the United States team, he will seek international honors in the 100-yard dash, the 220, and the broad jump.

Sheldon is very grateful to the Chelsea Lodge of Elks for giving him this opportunity, but up Chelsea way everybody is happy about it. In their hearts they feel that they will be with him as he streaks down the cinder path and flies through the air in the broad jump at Milan, Italy, toward the end of August.

They are confident that he will win, but, win or lose, they know that they already have a champion.

Under leave to extend my remarks, I ask consent to print in the Appendix of the RECORD the following story of Sheldon Freedman that appeared in the July 28 edition of the Boston Sunday Herald:

ELKS HELP TO SEND SPRINTER TO ITALY—CHELSEA'S FREEDMAN SET FOR WORLD DEAF MEET

(By Jim Carfield)

Greater Boston sports fans may be hailing another native-born world champion sooner than they might expect.

Chelsea's Sheldon Freedman, the deaf track sprinter who must be labeled a truly courageous athlete, is the heretofore unheralded gold-medal hopeful.

AS MOMENTOUS AS OLYMPICS

The next Olympic games aren't due until 1960, of course, but Sheldon's moment of glory should come no later than next month—August 25 to 30, to be exact. He's 1 of 2 New Englanders selected on the United States team of deaf athletes invited to a 29-nation competition at Milan, Italy, next month.

Swimming, wrestling, and basketball are some of the other sports listed for competition.

To handicapped athletes like Sheldon, these international games for the deaf are as momentous an occasion as the Melbourne games last year were for homebreds like Hal Connolly, Charlie Jenkins, Phil Reavis, and Tenley Albright. Matter of fact, for the deaf folk, they're the equivalent to the Olympics.

Sheldon, 21-year-old former State schoolboy champion at Chelsea High, has been training rigorously for the games since early June at Chelsea Memorial Stadium under the supervision of his teacher father, Barney. The workouts have been held mostly at twilight since the younger Freedman keeps busy during the day as a foreman in a paint plant.

GOES TO WASHINGTON FOR TRAINING

This year, Sheldon's only competitive appearances have been in AAU meets and Ralph Colson's olympic development meets in South Boston.

As a star sprinter at Chelsea 4 years ago, however he won State titles in the 220 and broad jump outdoors and the indoor 300. He then attended Gallaudet College for the deaf in Washington, D. C., and was on the track team there.

He will leave Thursday for Washington with Worcester Swimmer George Trudeau on the first leg of his quest for international honors. He'll report to Tom Berg, Gallaudet's track coach, for 10 days of training with other members of the United States squad. Departure for Europe is due about August 11 with London the first stop. Warm-up meets there and in Holland will complete the squad's preparations for the big moment at Milan.

"My best times right now," says Sheldon, who also was a basketball regular at Chelsea High, "are 10.1 for the dash and 22.3 in the 220. As for broad jumping, I've been getting out over 22 feet. I certainly hope I'll be able to win one of these events in Italy."

An extremely popular lad in his home city, Sheldon lauded the Chelsea Lodge of Elks for its efforts in making his trip abroad possible.

"They originated and supervised a fund drive that raised nearly $1,800 to pay his expenses," explained Barney. "Everyone in the town is sure he'll come back to us a winner and will be rooting for him."

Barney then added he's still puzzled concerning one phase of his son's international venture.

SHOWS HE HAS SENSE OF HUMOR

"The other day I asked Sheldon how the track events will be started," he said. "After all, none of the contestants will be able to hear a starter's gun. So I wanted to know what they'd use—a flashing light, a dropped flag, or what?

"Well, I guess my son has a sense of humor because his answer was, 'Why, Dad, it's simple. They'll just talk to us in Italian.' "

Maybe the fun-loving Chelsea youth will have a more serious answer when he comes home as our newest world champion.

Compulsory Automobile Insurance

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following address which was delivered by the Honorable Joseph P. Kelly, New York State commissioner of motor vehicles, before the Eastern Conference of American Association of Motor Vehicle Administrators, at Atlantic City, N. J., on July 2, 1957:

New York State's new compulsory automobile liability insurance law is not an overnight phenomenon. Probably no law ever enacted in our State was preceded by so much study and investigation and restudy and hearings and legislative proposals over the years.

Curiously, there was never any serious question concerning the existence of a very real problem under our old safety-responsibility-type law. Differences arose only as to the proper solution. It remained for a New York State joint legislative committee to bring the problem into sharp focus during the course of hearings and studies in 1954 and 1955.

In its 1954 report, this committee said there was ample and pathetic evidence of the innocent victims of financially irresponsible motorists. No one argued that point—or that action was needed without further delay. Yet, there was widespread difference of opinion as to method.

Finally, however, the seemingly endless rounds of study and debate reached a point of climax when the legislature in its 1956 session enacted our motor vehicle financial security act—compulsory insurance. It became law April 16, 1956, when the bill was signed by Governor Harriman. Generally speaking, its provisions were scheduled to become effective February 1, 1957—the beginning of our current motor vehicle registration year.

I shall not take the time to recite all of the detailed provisions of the new law because I think most of you are somewhat acquainted with them and, in any event, we have made available to you two publications—the basic informational leaflet issued by the bureau to explain the law and a question-and-answer booklet covering procedures.

The basic requirement is that every motor vehicle registered in New York State—and we have about 5 million of them—must be covered continuously with liability insurance of at least "10-20-and-5." The insurance must be carried with a company authorized to do business in New York State.

Three alternate methods of furnishing acceptable financial security are provided for by the law: A $25,000 financial security or real estate bond; a deposit of $25,000 in cash or securities, or self-insurance in the case of qualified owners of more than 25 motor vehicles registered in New York.

As a practical matter, most motor vehicle owners have complied with the new law by

taking out an owner's policy of liability insurance in at least the minimum amounts. To date, 39 fleet owners have qualified as self-insurers; we have had only 2 deposits of $25,000 in negotiable securities in lieu of liability insurance; we have had 60 financial security bonds and only 1 real estate bond. All the rest qualified by liability insurance policies.

Evidence of liability insurance coverage or an equivalent of financial security had to be presented at the time of applying for 1957 registrations. Without this proof—the certificate of insurance or other evidence of financial security meeting requirements of the law—no one is now able to procure registration plates in New York—except in the case of an exempt vehicle for which an exemption certificate is filed.

Under our law, there can be no interruption, whatsoever, in this coverage. If there is a lapse of coverage for even a single day as a result of termination of financial security for any reason, the motor vehicle commissioner is required to revoke the registration certificate and number plates—unless the certificate and plates are surrendered to the commissioner prior to the time that insurance terminates.

Please take note of the fact that revocation of the registration is required. The drafters of this law had no part of the word "suspension." This means, of course, that once a registration has been revoked—for even the slightest interruption in insurance coverage—the owner of the vehicle must again make application for registration, again furnish evidence of insurance or other security, and again pay the registration fee.

Application for new registration cannot be made until at least 30 days have elapsed. And if there is evidence that the vehicle was operated without insurance or other security on the public highways of New York or any other State, application for new plates cannot be made until at least 1 year has elapsed, and the license of the driver must also be revoked for 1 year.

And if that doesn't sound tough enough, we have some criminal penalties too—some of them even classified as misdemeanors.

One of the misdemeanors is failure of an owner or driver to deliver to the motor vehicle commissioner registration plates or driver license immediately following revocation. The penalty for this one is a fine of up to $100 or up to 30 days in jail or both for a first offense.

Driving an uninsured motor vehicle registered in New York State without insurance is another misdemeanor—and this one calls for a fine of not less than $100 or more than $1,000, or up to 1 year in jail, or both. You can see that our New York legislators really meant business.

The law imposes a great deal of responsibility on the insurance industry as well as the Motor Vehicle Bureau. The insurance company must give its policyholders 10 days' advance notice of termination of a policy if the company cancels or refuses to renew. And the insurance company must notify the motor vehicle commissioner in every case where a liability insurance policy is terminated for any reason whatsoever. These two requirements are fundamental to the operation of the entire law. In fact, the notices of termination which we receive from the insurance companies constitute the foundation for all of our enforcement action.

So much for the basic provisions of the law. You may be interested in some of our advance preparations for administering it.

When we were handed this law only a little more than a year ago, we knew that we had our work cut out for us. We got the law in mid-April of 1956; general issuance of 1957 registration plates was to begin December 1—and our special low number registrations are issued even a month or so in advance of general issuance. Thus, we actually had only about 6 months in which to get ready—preparations including many legal opinions and interpretations; the establishment and training of administrative organization—including 58 county clerks who serve as issuing agents of the commissioner; development of operating procedures and forms and regulations; educating the insurance men as to their functions, and, finally, the staggering job of public education and information to pave the way for what was expected to be a hectic registration period.

To begin the monumental task of preparation, an internal steering committee was established. It comprised officials of the motor vehicle bureau, as well as the law bureau and planning section of the department of taxation and finance of which our bureau is a part.

At the same time, we initiated a close working relationship with practically every branch of the insurance industry, and coordinated our activities with those of the New York State Department of Insurance whose responsibility it was to establish the type of insurance policy meeting terms of the law.

The insurance industry was asked to assign a number of methods and procedures men from representative insurance companies to work with our steering committee and planning section. Thus, the industry was consulted at every stage of the development of forms and procedures and we were able to work together without risk of undue confusion or conflict.

Representatives of the Department next held a series of 19 regional meetings throughout the State with agents and brokers to acquaint them with their role under the financial security act, as well as our forms and procedures. Following these conferences, and based on the materials covered in them, we prepared a question and answer booklet for the special guidance of all insurance companies, bureaus, agents and brokers—as well as for the instruction of our own personnel and that of our more than 60 issuing offices throughout the State.

A series of conferences was also held with the State and county employees in these various issuing offices to rehearse them for their own important participation in the program.

I am not going to burden you with a long recital covering all of these preparatory activities. I am sure that all of you have been associated with the establishment of a major new administrative program and are aware of the labor pains that are synonomous with such a development. We had a definite timetable to meet and while, at times, it appeared that schedules could not possibly be met, we somehow managed to meet them.

While the legal and planning and operating organization was moving along in high gear with preparations for the internal administration, our departmental public relations office was developing and executing a broad, intensive program of public education and information. An 8-page leaflet was prepared and more than 10,000,000 copies of it distributed during the weeks prior to the beginning of 1957 registration. In much of this mass distribution of the basic informational piece, we had excellent cooperation of the entire insurance industry—nearly every company doing business in New York arranging for large-volume mailings to clients or potential clients. There was also distribution through a great many other agencies, including our own offices, automobile clubs, the 21,000 retail gas stations throughout the State, numerous large industrial companies, chambers of commerce, and so on.

A continuing stream of press releases was issued, including a seven-part series of authoritative articles which were printed by practically every newspaper in the State.

At the same time, bureau and department personnel in all offices undertook literally hundreds of speaking engagements before service clubs and similar organizations throughout the State to spread the word. Our public-relations office made the fullest use of television and radio facilities with both live and recorded programs and spot announcements. A series of film strips for use in television-station breaks and a series of recorded spot announcements for radio use had the widest possible usage in the more than 100 radio and 22 television stations in the State.

We even engaged in a rather intensive foreign-language informational effort, especially in New York City, when it became evident that the new insurance and inspection programs were not understood by the large number of Spanish-speaking peoples. To acquaint them with the story of the new laws, which were to start simultaneously we developed literature in Spanish and made use of the foreign-language press as well as radio and television programs. We had the cooperation of numerous leading Puerto Rican groups in the metropolitan New York area.

All of this vast amount of planning and preparation and publicity finally paid off handsomely during our 1957 registration period. Although we had tried to anticipate every possible problem, we felt that there would be bound to be considerable confusion and that the registration operation would undoubtedly be attended by difficulties, not only for us but for the motorist public.

We were most agreeably surprised. Actually, we found that vehicle owners were informed concerning the new law and the insurance requirements far beyond our best hopes. In fact, for the most part, the registration was one of the most orderly in our experience because the vast majority of car owners came in early with the proof of insurance, apparently so as to be sure of not encountering any last-minute obstacles to registration. This earlier-than-usual surge of registration almost entirely eliminated the usual deadline rush and, for the most part, registration was accomplished easily and smoothly.

There was only one complication and it proved not to be too formidable. As proof of insurance we had adopted a form entitled "Certificate of Insurance" and identified by us as form FS–1. Before an issuing officer could register a vehicle, it was required that information on the FS–1 form, which the vehicle owner got from his insurance company, be checked against the corresponding data on the registration application, and that the two had to tally before the registration could be issued. That applied especially to such items as name, address, description of vehicle, engine number, etc.

We found that our offices had to turn away a fairly substantial number of applicants because of discrepancies between the two items. Invariably, the applicant was able to straighten out the matter readily by going back to his insurance agent and having the record corrected to obtain a new insurance certificate matching the registration application. This actually may have been a blessing in disguise because it prompted the correction of countless longstanding errors both in insurance-company and bureau records.

All in all, so smoothly did the entire operation develop that the New York Times took special note of it editorially.

Speaking of the beginning of both compulsory insurance and inspection programs, the Times commented: "It was a tremendous job to educate the public as well as the State personnel, insurance and garage employees. Errors made by some insurance companies or agencies in filling out certificates to qualify for plates caused some in-

convenience; this, it may be noted, was not the fault of the State. We congratulate the department of taxation and finance and its bureau of motor vehicles for a job well done. There is much hard work ahead, but the success thus far is encouraging."

That was the appraisal of the New York Times and, of course, it was a very welcome recognition of the effort that had gone into our planning and preparation.

Now, I know you are all interested in what has happened since—what has developed since we passed the first major hurdle of the 1957 registration renewal period.

Our first task was the establishment of our central master file of the certificates of insurance. I do not need to tell you what a tremendous task it was to recheck, sort out, screen, and alphabetize more than 5 million separate pieces which go to make up our newly established security file. Not only does it contain all of the individual FS–1 certificates, but it also contains various other forms covering a variety of other vehicles and situations—fleet insurance certificates; forms for vehicles exempt from filing evidence of insurance because of coverage under other provisions of the law (vehicles under Public Service Commission or Interstate Commerce Commission), Government vehicles and certain farm vehicles, as well as forms showing required coverage for automobile dealers plates and transporter plates.

It took weeks of overtime work, but we now have a file of over 5 million certificates of one kind or another, representing evidence of insurance or other proof of financial security, or exemption, for every vehicle registered in New York State. This is a permanent file. The law does not require a new certificate on registration renewal.

In the first 4 months of our operations under the new law, through May 31, we processed 4,694,996 registrations with attached insurance certificates. In addition, we have during the same 4 months received 465,733 superseding insurance certificates—new insurance certificates resulting mainly from the switching by a motorist from one carrier to another. As of May 13, the file—including cross-references—numbered 5,278,-972 insurance certificates.

Even before the law went into effect last February 1, we started getting from insurance companies notices of termination of insurance—the form we call FS–4. Through May 31, we received 313,534 notices of termination—an average just over 3,000 per working day. New certificates of insurance, showing superseding coverage, cancel out most of these termination notices, the operation indicating only that coverage has been switched by the motorist from one company to another.

However, when there is no new evidence of insurance at hand to show continuing coverage, we move immediately to issue a revocation order affecting that registration. Through May 31, we issued 56,849 such revocation orders. But not all of these revocations were necessary, as it turned out. We have already rescinded 13,472 of them—nearly one-fourth of the original revocations—because it later developed that the individuals actually had insurance or that the canceled insurance certificate was not even used for registration purposes. Many of these unnecessary revocations, later rescinded, occurred because the new certificates of insurance on a switch from one company to another were not received by the bureau in time to cancel out action resulting from a termination notice.

Except for eight cases, all of the revocations thus far issued were for only the 30-day period. In eight cases, one-year revocations of both registrations and driver licenses occurred as a result of accidents involving New York State registered vehicles on which there was no insurance coverage. Actually, this number has now been reduced to 7 because in 1 case the insurance carrier decided to maintain responsibility for coverage because its advance warning notice of termination to the vehicle owner was defective.

Quite a number of the revocations represent only temporary lapses in insurance coverage—cases where only a few days or even a single day of lapse was involved. But the affected motorists had overlooked—or forgotten—the fact that coverage must be without any interruption whatsoever.

Motorists may avoid revocation, where insurance is permitted to lapse or is about to be terminated, by surrendering registration certificates and plates to the motor vehicle bureau in any of its central or district offices prior to the date of termination. A motorist who surrenders registration and plates in advance of termination may redeem the plates and certificate without additional fee when he submits new evidence of insurance—thus avoiding the necessity of a revocation and the requirement of paying the registration fee a second time. During the first 4 months of operation under the new law, the number of voluntary surrenders of plates prior to termination of coverage was 26,090.

Perhaps it is a bit too early in our experience under this law to evaluate fully the current experience, but we feel that, generally speaking, the administration of the law is progressing very satisfactorily. There are, of course, problems as in any far-reaching program which has such broad implications, involves such an enormous volume of transactions, and so closely affects so many people. But we are overcoming these problems and difficulties, as they develop, and the insurance industry, likewise, is becoming more proficient in the discharge of its duties under this law, as it gains in experience and knowledge.

The large number of switches by motorists from one insurance carrier to another is one of the most troublesome problems in administration. Another concerns the necessity of having a continuing education program so that the motorist will know he cannot let his insurance lapse for even 1 day. Many motorists are now learning this the hard way by revocation and loss of the use of their vehicles for 30 days—plus the necessity to pay the registration fee again upon getting new plates.

We realize, of course, that we are currently making many revocations which should not have to be made because superseding certificates of insurance are not sent to us in time—arriving after a termination notice has already been processed against the master file. This delay in sending the bureau notices of the new coverage creates difficulties for the bureau, for insurance companies, and of course, for the motorist. We have only recently conferred again with representatives of insurance companies doing business in New York State in an effort to resolve some of these questions. We are confident that the operation—and the cooperation of both insurance companies and motorists—will continue to improve and that many of the current problems are of a transient nature which might be expected to attend the development of any radically new program.

On another point, I think it might be well to nail down loose talk from some quarters that many fraudulent certificates of insurance were filed with registration applications during the past registration period. The rumors that counterfeit certificates were available at a modest fee were widespread in New York during the registration period. We have recently run a check to determine whether there was, in fact, extensive counterfeiting of insurance certificates.

We took a random sample of 24,000 insurance certificates, made facsimile copies of them and sent them to the named insurance companies for verification. We have already received verification of 20,000 of these certificates and not one single certificate was found to be fraudulent. Some 4,000 certificates of 10 insurance companies have not yet been reported on.

While we are planning to take another similar sampling in the near future, there is presently every indication that there was little or no fraud in the filing of insurance certificates, all gossip to the contrary.

Now, as to the question of whether the financial security law—compulsory insurance—is serving its purpose in New York, I think it is perfectly obvious that the answer is an emphatic yes.

When Governor Harriman signed the new law, he said, "It marks a great step forward toward securing just treatment and assuring a greater measure of safety for the citizens of our State."

The legislature made its own declaration of purpose, stating that "It is a matter of grave concern that motorists shall be financially able to respond in damages for their negligent acts so that innocent victims of motor vehicle accidents may be recompensed for the injury and financial loss inflicted upon them."

We think these purposes are being served and well served.

When the motor vehicle bureau made a study of insurance coverage, in a 1955 survey, under our old law, it was determined that some 700,000 uninsured vehicles were using our public highways with New York registration plates that year.

It is true that, where plates are not surrendered in advance there is a lapse of time now between the date when insurance on a New York registered vehicle is terminated and when that vehicle is actually removed from the highways, its registration plates revoked. But, while more than 14 percent of our vehicles were known to be uninsured in 1955, it is safe to assume that, under this law, only a fraction of 1 percent of the vehicles are operating at any given time without insurance.

As further proof of this—and perhaps the most impressive commentary on the operation of the new law to date—we have had only seven uninsured accidents involving New York registered vehicles in the first 4 months under compulsory insurance.

In the very same 4 months of 1956—February 1 through May 31—under our old safety-responsibility law, we had around 25,000 such uninsured accidents.

That alone—a drop from 25,000 to 7 uninsured accidents—must be regarded as a major achievement for compulsory insurance and seems proof enough that the new law is, in fact, providing all of the major benefits which it was counted upon to provide.

We are striving constantly to improve our administration of the law and I think we are making orderly progress. But the law itself, still has loopholes which Governor Harriman has cited repeatedly and which he has strongly urged the legislature to correct. The remaining loopholes are those involving out-of-State, unauthorized, and hit-run drivers.

The legislature this year postponed action to bridge these remaining gaps on the ground that at least 1 year of experience under the new compulsory-insurance law was necessary before final conclusions could be reached on protection in these uncovered situations. Governor Harriman has already indicated that he would once again call for the supplementary action at next year's legislative session.

Unnecessary Traffic Fatalities

EXTENSION OF REMARKS
OF
HON. VINCENT J. DELLAY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. DELLAY. Mr. Speaker, I think we all agree that unnecessary traffic fatalities is one of our Nation's greatest problems, and I would like to call to the attention of my colleagues a letter written to the editor of the New York Times expressing the grave concern of my very good friend, Samuel Nashel, counselor at law of West New York, N. J., on this subject.

The letter follows:

WEST NEW YORK, N. J., *July 26, 1957.*
EDITOR OF THE NEW YORK TIMES,
Times Square, New York, N. Y.

DEAR SIR: I submit for your urgent consideration, the advocacy of legislation for the formation by Congress of a national organization, to take all necessary measures to effectively wipe out the tragic slaughter and mayhem by automobile, occurring daily on our highways.

This frightful, shameful, and catastrophic condition should forthwith be proclaimed a national disaster. The measures taken to deal with the catastrophe, should, in their comprehensiveness and forcefulness, be equivalent to those taken in time of war to defeat an enemy of the people.

Until and unless the problem is actually dealt with as something akin to a war against the safety and peace of our country, and steps are taken with the force and vigor employed in time of war, no genuine progress will be made. Deaths by automobile each and every year continue to exceed the total loss of life by our Armed Forces in the Korean war.

The organization should, if deemed advisable, be affiliated with a governmental agency formed to protect the lives and property of our people.

It is abundantly clear that the States separately are not equipped to cope adequately with the problem, and that their activities should be supplemented by those of the Federal Government.

Notwithstanding the education of motorists and pedestrians, the safety programs by States, municipalities, automobile clubs, associations, and many other organizations, the traffic accident toll continues unabated.

In an analysis of the most recent traffic accident data, as compiled by the New York Times, it was reported on Sunday, July 14, 1957, that speed and related evils practiced by drivers in a hurry, or "careless behavior" as the experts call it, are the principal causes of highway accidents. Human beings experience difficulty in being alert and in exercising care at all times. Some motivation and inspiration is necessary as a constant and continual reminder. I submit that membership in such a national organization under the direct leadership of the President of the United States may be the solution.

This new national organization should call for the voluntary enlistment of the 80 million licensed drivers throughout the country, in a "crusade" to defeat the "enemies" of safety on our highways, to instill a genuine desire, consciousness, and compulsion to drive safely at all times by active and personal participation in such an organization. If voluntary enlistment does not succeed, then compulsory enlistment should be required.

If it be said that such action is radical, drastic, and revolutionary, is it not clear at this late date, when not a single day passes without loss of life and serious injuries in the slaughter by automobile, that nothing less will suffice? It is manifest that bold ideas are necessary to meet the challenge posed by this problem.

It is inconceivable that Congress and the President do not possess the constitutional powers to act in this emergency. The Federal Government, through its legislative and executive branches, must do everything possible within its legal powers. The people should be fully apprised by daily reports of the conditions as they improve or worsen daily.

Can we continue to afford to view complacently and callously this national catastrophe, where, with the regularity that day follows night, 40,000 people are killed each year and over 1 million injured or maimed, and not be alarmed? Should more lives be sacrificed first?

The Labor Day automobile slaughter will soon be upon us. Can we delay any longer? Is the situation absolutely hopeless and a necessary evil of our times?

When will we be moved to action? Eventually? Why not now?

Sincerely yours,

SAMUEL NASHEL.

Charles R. Reese, of Wilkes-Barre, Veteran Post Office Department Official

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Times Leader-Evening News of Wilkes-Barre commenting on the passing of Mr. Charles R. Reese, who served in the Post Office Department for 54 years:

CHARLES R. REESE

The death of Charles R. Reese, of Kingston, recalls a colorful career in the Post Office Department, spanning more than 5 decades—54 years, to be exact.

Mr. Reese entered Government service in his native Berwick as a special-delivery messenger. Within 6 years he was assistant postmaster. In 1917, he had advanced to post office inspector, in which capacity he saw a great deal of the world, although he made his headquarters in Wilkes-Barre most of the time.

An attaché with a reputation for ability and resourcefulness, Mr. Reese allowed no obstacle to stand in the way of duty. While in the Pacific and Far East, he had occasion to check the post office at the leper colony in Kaluapapa. One of five outsiders to go there, he took the assignment in stride. When the job was done, his clothes were burned and for 7 years he underwent an examination to make certain he had not been infected with the dreaded disease.

Wilkes-Barre remembers him for his contribution to the solution of the Good Friday bombing case in 1936.

Not all of his work was as exciting as these episodes, but whether it was a major challenge or the drudgery of routine he gave his best which invariably was adequate, earning for him the confidence of associates and the respect of the public.

Men of the caliber of Charles Reese constitute the backbone of Government service. He left an impressive record and a stimulating example.

Senator Gore Comments on Current Inflation and Government Action Combating It

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. PATMAN. Mr. Speaker, the Honorable ALBERT GORE issued a very interesting and thought-provoking statement the other day in connection with the public hearings of the Senate Committee on Finance, which has been interrogating the Secretary of the Treasury about fiscal policies of the Government.

I believe the Senator's statements are so important that they deserve special attention by Members of the House, and I am inserting them herewith in the RECORD.

STATEMENT OF SENATOR ALBERT GORE AT PUBLIC HEARINGS OF THE COMMITTEE OF FINANCE UNITED STATES SENATE, JULY 11, 1957

Mr. Chairman, in an effort to avoid repetition of the many questions which have been submitted to the distinguished Secretary of the Treasury, I have chosen to make a brief summary statement, covering certain aspects of the problem, upon which, after I have made it, I will invite Secretary Humphrey to comment as he may wish.

My first fundamental point of difference with the position of Secretary Humphrey, as taken before this committee, concerns the nature of the inflationary threat with which our country is confronted. There is no disagreement between us as to the consequences of inflation. Perhaps some of my colleagues may recall the role I played in combating inflation both before Pearl Harbor and after. The term "inflationist", by which in his opening statement Secretary Humphrey described all those who disagree with his policy, may fit some, but does not fit me. Even so, there are some who unfortunately and unwisely consider it an utter impossibility to be inopposition both to inflation and to current governmental policies which allegedly are for the purpose of combating inflation but which have notably failed in this regard.

We have true inflation, according to the weight of accepted authority, when an increase in the quantity of demand produces no further increase in output and therefore spends itself entirely in price increases.

I do not believe we are in such a period or such an economic state. On the other hand, it seems fair to conclude that Secretary Humphrey does think we have just such a classical inflationary condition. Indeed, he said to this committee that further "expansion of bank credit would merely have enabled more would-be buyers to bid up the price of the limited supply of goods and services." As a further explanation of his understanding of the current situation, Secretary Humphrey stated that, "The reason that these inflationary pressures are on us now is because of the great prosperity which the country is enjoying at the present time. It is the demand for building, it is the demand

for goods, it is the demand for all sorts of things that are exceeding the supply." The Secretary also agreed with the thumbnail summary of his views that this inflation was cuased by a bigger demand than productive capacity could supply.

Now, as the facts have been developed, no significant scarcity in goods and commodities has been revealed except in a very limited number of specialty items such as large structural steel shapes. To the contrary, surpluses of goods or of productive capacity to turn out more goods are in evidence almost everywhere we look.

The limited supplies, as we have seen, are not goods but rather in money and credit. The excessive supplies, on the other hand, as we have seen, are not in money and credit but rather in goods and commodities. Thus, Mr. Chairman, we have found our economic situation to be in sharp variance with the classical type of inflation which Secretary Humphrey has assessed and assumed the situation to be.

Then, I completely reject the position which Secretary Humphrey has repeatedly stated to this committee that the United States Government is, and should be, as helpless in marketing its securities and in managing the public debt as a local merchant trying to sell a fur-lined overcoat in August. Many of the hurtful consequences of such a concept and of such abandonment of responsibility have been developed during this hearing and are plain for all to see.

Now, starting with these basic disagreements as to the nature of our problem and as to the capacity of the Government to serve its fiscal necessities or to protect its fiscal integrity, disagreement on policy to cope adequately with the situation as it is, in contrast with what it has been assumed to be, is an entirely logical, if not unavoidable, consequence.

Even if we were, contrary to fact, in a period characterized by short supplies of goods, commodities and services and by excess supplies of money and credit, the economic policies now being pursued by this administration, admittedly of some value in such a situation, should only be used with restraint and discretion. This would be true because of disturbing trends, both long term and short term, in our economy and our society which pose a basic threat to true free enterprise and reasonable equality of economic opportunity, to which I will later refer; and, also, because such policies, if badly organized or indiscriminately applied, tend to disarrange and often worsen desirable distribution of goods and fair distribution of income.

But when such policies are applied to the conditions as they are today, in sharp contrast to what they have been assumed to be, these policies are disclosed to be fallacious and hurtful because they create imbalance, not balance; instability, not stability; poorer, not better distribution; inadequate, not adequate economic growth and progress. All this is true because these policies encourage rather than discourage the peculiar kind of selective price and income inflation combined with selective price and income deflation which continue to threaten our economy.

What we have, as I see it, is a highly selective, nonuniform price and income inflation. I know of no better example—though there are others—than the current inflation in the price of steel. This, as the Secretary has acknowledged, will stimulate inflation of prices over a wide area of our economy. A hardware merchant has told me that, immediately after the recent price increase of steel was announced, his wholesale supplier notified him that fencing wire would be increased $1 per bale. This means higher prices for nails, hammers, saws, refrigerators, air conditioners, television sets, automobiles, plumbing fixtures, and down to such little things as metal compacts, lipstick containers, locks and keys, and to such big things as structural steel for buildings and highway and bridge construction. Indeed, Mr. Chairman, our whole industrial economy has a strong metallic base. Our not exist without a constant supply of basic highly industrialized economy of today can-metals like iron, steel, copper, and aluminum. The whole Nation is dependent for steel upon a very few tightly controlled large corporations.

This steel price increase has not been dictated by a depleted profit position in the steel industry. On the contrary, profits have been, and are, enormous. This inflationary increase in the price of steel has not been dictated by the classical inflationary condition of demand exceeding current productive capacity. The steel mills are currently operating at only about 80 to 90 percent of capacity, as we have seen. This price increase can hardly be blamed on competition.

What, then, is the reason for inflating the price of steel? Well, there is no mystery surrounding the reason for the increase in the price of steel. The chairman of the board of United States Steel advised the stockholders at the annual meeting on May 7, 1956, that a projection of the financial needs of the company showed that they would need an additional $140 million. He then proposed to the stockholders that the method to use to get expansion capital is by raising prices from time to time—as circumstances require and permit.

Similarly, the minutes of the Standard Oil Company of New Jersey for the meeting of the board of directors on December 13, 1956, showed that for the first time in many years the company was faced with the probability that they would have to use something more than internal financing to cover replacements, modernization, and expansion. However, this company was able to increase its prices to the extent that it was unnecessary for the company to resort to external financing.

This type of price inflation primarily to finance expansion, is actually encouraged, not discouraged, by current Government policies. High interest rates and diminished possibility of competition, both created by current policies, encourage and invite big-business concerns to finance their capital expansion and improvement in large part from inflated prices and consequent swollen profits. In this way, Mr. Chairman, the public is unfairly forced to pay for the further concentration of the Nation's economic strength and wealth in big corporations, thus intensifying the growing threat to competition and equality of enterprise. Thus you see, like most other elements of inflation, it feeds upon itself.

The social injustice of this practice can be seen in the fact that the mass of our people are forced unfairly to pay higher prices for the products of big business, thus forced themselves to contribute to the further disparity of wealth and income between themselves and a comparative few who have large holdings in such corporate enterprise. Because consumers are being made to pay unfairly for added plants and profits, through unfairly inflated prices and because of various tax concessions, these stockholders collect larger and larger dividends, and in addition can daily watch the rapid appreciation of their fortunes.

Steel is by no means the only example of such unfair gouging of the public by the big, the powerful, and the rich. Indeed, this is characteristic of our current economy and is encouraged and abetted by governmental policy. According to the statistics from the Securities and Exchange Commission, corporations spent $35.1 billion in 1956 for expansion. Of this amount, only approximately $10 billion came from long-term borrowings or new stock issues. The overwhelming proportion came from internal financing—inflated prices and swollen profits. Though expansion financed in part by profits may be sound practice, this extreme profiteering appears unconscionable.

This disturbing development is not only abetted by monetary policy, but possibly even more by tax policy, by appointments to and policies of regulatory agencies favorable not to the public interest but to the very interests which such agencies are supposed to regulate, and by other actions and policies of the administration which create what Secretary Humphrey described to us as "an improved climate for enterprise."

I find myself in agreement with both Secretary Humphrey and the new Secretary-designate, Mr. Anderson, that higher interest rates are both inflationary and deflationary. It so happens, though, that the deflationary effect of higher interest rates is most effective in that portion of our economy in which we have the least amount of price and income inflation (or even deflation), and is most ineffective in that portion of our economy in which we have administered price inflation.

Though higher interest rates, as Secretary Humphrey has said, help one group of our people a great deal, they hurt most people severely.

Secretary Humphrey has repeatedly referred to action by the Government to hold interest rates down as "artificial," but has referred to action to increase interest rates as "natural." The fact is that one is as "artificial" as the other, both being the result of positive action by the Government.

Though we have heard much about the sale of Government securities "on the nose" at what the market will take, actually Government bonds have been deliberately sold at interest rates higher than necessary, thus placing an unnecessarily heavy burden on taxpayers for many years to come.

On yesterday, in fact, Secretary Humphrey, with characteristic candor, expressed the opinion that we might be better off if he had led the market "a little more than we did."

On yesterday, too, Secretary Humphrey jocularly remarked that we often try to go in two directions at once. In all seriousness, that is exactly how governmental policies have been applied in some instances. For instance, in 1953 the Government raised rediscount rates in the Federal Reserve System, thus increasing interest rates throughout the Nation's banking system and, in the same year, not only lowered reserve requirements, thus expanding credit, but also lowered by 33⅓ percent margin requirements, thus stimulating speculation in corporate securities. In fact, both reserve requirements and margin requirements are lower even today than in January 1953, even though from March 1955 to now, the rediscount rate has been increased successively 11 times, thus giving a boost in interest rates to the Nation's banking system, on installment credit and in the market place.

Thus, Mr. Chairman, it will be seen that interest rates have been increased primarily for the purpose of increasing income from interest.

The greatest artificiality of our age is the corporation. It is a fictitious person, but nevertheless a legal entity. I accept the necessity of a corporate entity. It has been very valuable in our economic development. I do question, however, the unreasonable and unjustifiable favoritism toward income from corporate investment and other policies which, in general, encourage the creation of corporations and unduly encourage investment and speculation in corporate stock.

The monetary and economic policies of the Eisenhower administration, labeled anti-inflationary, seem to me to miss the mark. They severely hurt, as already demonstrated,

large segments of our population and economy, particularly those segments of our economy that are characterized by competition and multiplicity of small business concerns and those people who must borrow money or buy goods, homes and automobiles on time. Major sources of inflationary pressures in our economy, on the other hand, are augmented by, instead of repressed by, these policies.

The result is to make the big bigger, the rich richer, and to threaten the existence of a climate truly favorable to individual enterprise and equality of opportunity. These trends have produced conditions in our country and attitudes on the part of Government officials, as well as on the part of many private citizens, which are unhealthy. We have found it possible, for instance, to repeal the excess profits tax, but we have not found it possible to increase tax exemptions for a child or an aged dependent. We have not found it possible to return to the prewar policy of giving some preference in income taxation to income actually earned by human efforts, but instead we have gone so far in the opposite direction as to give a tax preference to unearned income from dividends. We have given vast benefits through rapid tax writeoffs to bring about construction of more factories, even though existing productive capacity was by no means fully utilized, but we have not found it possible to pass a school construction bill. We have given vast interest-free loans to big business to build plants, but programs to help people become homeowners falter and fail because of deliberate Government policy of forcing higher and higher interest rates on home mortgages.

In these ways, and in many others, Mr. Chairman, our Government is favoring material values over human values. This I challenge. I challenge it in whole and in part.

The resolution adopted by this committee is a broad one. It encompasses the whole economy, and is not limited, as some may have concluded, to monetary and fiscal policy.

I hope this investigation will be a searching inquiry into not only current monetary and fiscal policies, which are an important part, but only a part, of policies or lack of policies, action or lack of action, creating the conditions which I have briefly described and which I view with alarm, but also tax structure, economic concentration, maladjustments of distribution, threats and impediments to free enterprise, and the whole economic fabric of our society.

Opposition to H. R. 7244

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 30, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include copies of two telegrams I received in opposition to H. R. 7244, from the commissioner of agriculture for Massachusetts, Mr. Charles H. McNamara, and from Mr. John McMaster, commodity director, Massachusets Farm Bureau Federation.

The telegrams follow:

BOSTON, MASS., *July 29, 1957.*
Congressman THOMAS L. LANE,
Washington, D. C.:

Personally oppose H. R. 7244. Believe most Massachusetts dairy farmers agree with me. Appreciate your efforts toward this end.

CHARLES H. MCNAMARA,
Massachusetts Commissioner of Agriculture.

WALTHAM, MASS., *July 26, 1957.*
Representative THOMAS J. LANE,
House of Representatives,
Washington, D. C.:

Urgently and respectfully request your opposition to H. R. 7244 next week. Bill sets up mandatory checkoff on all livestock marketed at proposed rate of 10 cents per head. Brighton stockyards alone handle 215,000 cull dairy cows, calves, and hogs annually. Cost to farmers of this area marketing at Brighton under program set up by H. R. 7244 would be $21,500. Bill does not leave producer free to avoid payment by asking in advance but forces him to request refund program. Would seriously hamper current excellent activities of national livestock and meat board which is financed on a voluntary basis.

Sincerely,

JOHN MCMASTER,
Commodity Director, Massachusetts Farm Bureau Federation.

Inflationary Pay Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 30, 1957

Mr. AYRES. Mr. Speaker, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial which appeared in the Washington Post and Times Herald on Monday, July 29, 1957, which concerns legislation with respect to pay increases for postal employees.

It is generally known the editorial policies of the Washington Post and Times Herald are favorable to Federal employees. I call attention to the fact that this editorial supports the statement made in the House of Representatives by the gentleman from Kansas, Representative EDWARD H. REES, minority ranking member of the House Post Office and Civil Service Committee.

The editorial also approves his amendment providing for a 5-percent across-the-board pay increase for all postal employees, together with authority for the Postmaster General to raise entrance salaries amounting to an average of 2½ percent additional for 320,000 clerks and carriers, all of which would offset the increased cost of living since the last pay increase in 1955.

The Washington Post and Times Herald editorial is realistic and approaches this problem objectively and it is in my opinion a thoughtful discussion of this matter.

The editorial follows:

INFLATIONARY PAY BILL

The House lost its sense of proportion last week when it plumped by a vote of 379 to 38 for a $546 pay increase for each of the more than half a million postal employees. This proposed boost amounting to 12½ percent for the average postal worker runs directly counter to the efforts of the House to trim the President's budget and to fight the fires of inflation. It would cost taxpayers an estimated $317 million annually, and probably would encourage higher wage demands in private industry, which, in turn, would stimulate the upward trend of prices and thus lessen the value of the dollar.

This newspaper has favored moderate pay adjustments for Federal workers to bring their remuneration into line with higher living costs. Unfortunately, the House rejected Representative REES' proposal for a 5 percent cost-of-living postal pay raise, which the President was apparently ready to accept. Unless the House bill can be drastically trimmed before reaching the White House, it will doubtless be vetoed with the result that postal workers may get no increase.

In one other respect we think the bill is unsound. The flat $546 increase would go to all postal workers regardless of present salaries. This would mean a further upsetting of wage scales that are designed to reflect differences in skill, experience, and responsibility. Inequities between the various grades are accentuated rather than minimized by pay increases of this kind.

By comparison with the House bill, the measure awaiting action in the Senate (it would increase postal salaries by 7½ percent plus cost-of-living adjustments) is certainly preferable. If it could be more closely tied to changes in the cost of living since the last increase and accompanied by the bill to increase postal rates, it would be in line with sound economic policy.

Jeeps That Will Fly

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 30, 1957

Mr. SIEMINSKI. Mr. Speaker, in today's issue of the New York Times an article on Army jeeps appears that should be of interest to the House. It follows:

AERIAL JEEPS SOUGHT—ARMY WILL SPEND $1,702,000 TO FIND IF THEY ARE FEASIBLE

WASHINGTON, July 29.—The Army announced today that it would spend $1,702,000 to learn how to make jeeps fly.

The service announced that it had placed the following contracts for design, construction and testing of aerial jeeps:

Aerophysics Development Corp., Santa Barbara, Calif., $388,000; Chrysler Corp., Detroit, $661,000, and Piasecki Aircraft Corp., Philadelphia, $653,000.

The Army said it wanted a vehicle that would hover or move through the air at 50 miles an hour with a 1,000-pound load of weapons or equipment.

The contracts call for research vehicles that use the "ducted propeller" means of locomotion. The ducted propeller looks like a fan in a washtub. It has been used on test vehicles to push them into the air.

Mr. Speaker, one wonders if the 4 wheels on the jeep could not be converted to propellers which, with properly angled spokes and a proper tilt to the wheels, would make the jeep take off sidewards and up, a hydraulic lift working downward from the body, would raise the jeep off the ground high enough for the wheels to be angled and spun for the takeoff.

I wish the Army success in its venture.

It is interesting to note that wheels on airplanes have been angled and made retractable. And tires have been inflated and deflated on evhicles as they moved in and out of water by push button devices.

Success in the Army's venture for a jeep that will fly might conceivably revolutionize our automotive industry and it might possibly alter some features of our highway construction programs with considerable saving to taxpayers.

It was the Defense Department that launched atomic energy with Manhattan project. Perhaps the Army will yet pioneer the air-auto.

Egg Prices Hit a Low of 19 Cents for Grade A in New York Mills, Minn., This Spring

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mrs. KNUTSON. Mr. Speaker, a constituent of New York Mills, Minn., Mr. Leo A. Klinnert, has written to me regarding the price of eggs in his locality and the dairy situation. I request permission to insert his very forthright letter under leave to extend my remarks.

The letter follows:

NEW YORK MILLS, MINN.,
July 19, 1957.

DEAR MRS. KNUTSON: The price of grade A eggs here at New York Mills slipped to a low of 19 cents a dozen this spring. And as any one knows no poultryman can stay in business at that rate.

Another thing I would like to talk to you about and that is the dairy situation. There have been some evasions of quotas of butter that is being imported into this country. A mixture of 76 percent milk fat, sugar, vanillin, and water, have been imported and sold to ice-cream manufacturers. There was a hearing on this but I never heard the outcome.

I believe a law providing that any imported commodity must sell for at least the support price should be passed.

Three shiploads containing 9 million pounds of butter recently came into New York and sold for 42 to 43 cents a pound.

I understand this also went to ice-cream manufacturers.

It is no wonder we have a surplus of commodities in this country

Hoping to hear from you favorably on this, I remain,

Yours truly,

LEO A. KLINNERT.

The Assassination of President Castillo Armas, of Guatemala

SPEECH
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. LONG. Mr. Speaker, 3 years ago all decent, Christian and freedom loving Americans were congratulating their fellow Americans of the Republic of Guatemala for being the first in all the world to throw out an established Communist-atheistic regime. Those of us in the Congress who were familiar with the deadliness of the Communist conspiracy and the deadly danger in which communism in any of the Americas placed our own country, were, at that time, prayerfully thankful to Col. Carlos Castillo Armas, the anti-Communist patriot who, in the best and most heroic American tradition had just delivered his nation from the enslavement of the hated Communist regime of puppet President Jacobo Arbenz Guzman.

Today, Mr. Speaker, that same great Guatemalan hero, Col. Carlos Castillo Armas, the American who became the first Christian in all the world to bring about the overthrow of an atheistic and communistic government, lies dead at Guatemala City, the victim of a viscious retaliatory assassination by international communism. The very impudence of these insolent and immoral Communists, these lackeys of Moscow, in daring to come into our great Christian America, there to wreak vengeance upon a hero of the Western Hemisphere, is, of itself, indicative of the monstrous nature of this international conspiracy and its complete indifference as to the tenets of Christian morality or the opinions of decent men and women.

Mr. Speaker, I am sure that every one of my colleagues join in my righteous indignation about this despicable and defiant act of our Communist enemies in instituting a reign of terror in our hemisphere. Moscow is, in effect, telling everyone in our Hemisphere that interference with communism is fatal. Everyone of us who had any part in lending aid and assistance to the martyred President of Guatemala when he ousted the Communists in his native land 3 years ago, may look forward to the same treatment. Ambassador John Puerifoy, who played such a decisive part in the ousting of the Communist regime in Guatemala, met a violent death shortly thereafter in a traffic "accident," in the far reaches of Asia. Neither his transfer out of this Hemisphere nor the "accident" in which he died, have ever been satisfactorily explained.

In connection with the death by communistic assassination of the President of Guatemala, Mr. Speaker, I hope that the lesson which it demonstrates so well will not be lost upon those to whom it should be most important. That lesson is simply this: The encouragement of political murder is not only immoral and offensive to decency, but it may also be contagious.

The record of this House, as well as the history of our time, will demonstrate only too well the activities of a small group of irresponsible, if not sinister, individuals, who, acting in the name of "liberalism," have traveled about our hemisphere, lending aid and comfort to the Communists, exiles and dissidents of the various nations of the Americas.

These misguided malcontents profess themselves to be against all dictators and particularly the dictators of the Americas with whom we maintain friendly relations. The definition which this group gives to the word "dictator" is such that it never applies to any government which is tolerant of atheistic communism. It seems, however, that all governments of our hemisphere, which are determinedly anti-Communist, are headed by dictators. Thus it has been that this small group of dupes have, in alliance with their Caribbean counterparts of like mind, brought about or, at least, loaned aid and comfort to those who have been responsible for the death, by assassination, of the late anti-Communist President of Nicaragua, Anastacio Somoza; plotted the assassination of anti-Communist President, Perez Jiménez, of Venezuela; brought about the overthrow of the anti-Communist Rojas regime in Colombia; brought about a state of near-political anarchy in Honduras—where General Rodrigues, one of the members of the ruling junta, was sent into exile only last week in the classical manner of junta rule—encouraged the complete collapse of the Government of Haiti, and assiduously backed the current Communist attempt to overthrow the Batista government in Cuba.

This group of irresponsible agitators, Mr. Speaker, have never found anything wrong with the government of the free and associated Commonwealth of Puerto Rico, from whence came the political assassins who attempted to execute the Members of this House on March 1, 1954; nor, have they ever found cause for criticism in the Government of Costa Rica, where the regime of the liberal José Figueres is no more than a puppet regime of the Communists of the Caribbean. Fortunately this determined band of irresponsibles have failed completely in their most determined assault on American freedom. That is their continuing attack upon the Government and the political leader, who has always been the most anti-Communist in our hemisphere, the Government of the Dominican Republic. That great nation, the most important bulwark guarding our southeastern sea frontier, has stood firm against their every attack, and in doing so has justly earned the gratitude of every decent Christian of all the Americas. This has been said before, by such outstanding Americans as our own majority floor leader, the gentleman from Massachusetts, JOHN MCCORMACK; but I reiterate it again. I am proud to

acknowledge the debt we all owe to Generalissimo Trujillo.

Mr. Speaker, as monstrous as is the crime of the Communist assassination of Carlos Castillo Armas, and as great as has been the sacrifices of this great American anti-Communist of the Republic of Guatemala, perhaps his death and martyrdom will serve a useful purpose. Perhaps, even in death, Carlos Castillo Armas, who certainly will rank in history alongside the great American patriots such as George Washington, Bolivar, San Martin, Benito Juarez, and our other American patriots and martyrs of sacred memory, perhaps, even in death, this great but humble and unassuming American will render but one more service to his fellow Americans in all the nations of our hemisphere. Perhaps his death by assassination will serve to shake our people out of their deadly complacency. Perhaps his death will serve to bring home to our people the horrible and continuing danger which atheistic communism presents to our traditional American freedoms, our American way of life, and our Christian religion. Perhaps his death will serve to bring together the peoples of all of the Americas, and to inculcate in them and strengthen their Christian determination that atheistic communism shall be eradicated from our hemisphere. Perhaps his death may even serve to bring about a realization of the evilness of their activities by that little group of irresponsible men who, wittingly or unwittingly, serve the cause of atheistic communism in our hemisphere, that little group who, however innocent may be their motives, do, by their actions, encourage political murder at the behest of Moscow. If so, Carlos Castillo Armas will not have died in vain. If so, the man who has already given so much for the peoples of the Americas, will have rendered one more service, perhaps his most vital service, to the people of the Americas, Carlos Castillo Armas, the big man from a small American nation, the man who defied all the might of international communism, the man who demonstrated to the world that communism is not invincible, would want it that way.

Mr. Speaker, the American Communist Party, the hemispherewide Americans for Democratic Action, the Luce publications—Time and Life—that radio and television network which has become so expert in bringing Communists and fellow travelers, such an Nikita Khrushchev, of Soviet Russia, and Fidel Castro, of Moscow and Cuba, into the homes of America, have concentrated their vicious attacks upon such American patriots as Gen. Rafael Trujillo, of the Dominican Republic. Fortunately, the murdered President of Guatemala escaped their slander and villification. Certainly Carlos Castillo Armas and his government have been great friends of our own Government. And yet the great anti-Communist President of Guatemala has died a martyr's death, the victim of that same atheistic communism which, in the eyes and minds of those who profess to so hate the American patriots whom they have termed, with reckless abandon, "dictators," can do no wrong. This small group of American malcontents have sown the wind, and all Christian America is now reaping the whirlwind. Truly, Mr. Speaker, political murder is contagious. Beyond doubt, it has been demonstrated to our small group of American liberals that it is quite beyond their power to control or restrict the murderous activities of those Communists and radicals to whom they have so irresponsibly rendered aid and comfort. These American and Caribbean liberals who, by visiting and consorting with Caribbeans of their own ilk in such Latin American nations as Puerto Rico, Costa Rica, and Colombia, while avoiding assiduously visiting and making inquiry in the American nations which they have termed, with such reckless abandon, as being ruled by "dictators"—the term "dictator" in their jargon, being, in most cases, just another way of saying anti-Communist Christian—have rendered to themselves, their fellow Americans, their country, their posterity, and their God a distinct disservice. We can only pray to God that the brutal Communist assassination at Guatemala City will cause them to rid themselves of their reckless irresponsibility, and to turn again to decency and honor, to the end that they may once again hold high their heads as proud and patriotic Americans, and that they may once again enjoy the trust and confidence of their fellow Americans, their fellow Americans who are overwhelmingly united in their determination that their Christian civilization and individual freedom and liberty under God shall not perish from the earth.

Prices Continue Upward

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein the following editorial from the New York Times, New York, N. Y., on Sunday, July 30, 1957:

PRICES CONTINUE UPWARD

Consumer prices rose between mid-May and mid-June for the 10th month in a row, the latest advance carrying the index of the Bureau of Labor Statistics 6 points (or 0.5 percent) higher, to 120.2 percent of the 1947-49 base period. The 120.2 figure represents an increase of 3.4 percent over June a year ago and 4 percent over April 1956, when the present upsurge got underway.

The newest advance represents the combined effects of (a) a resumption of rising prices for consumer nondurable goods, (b) a big jump in food prices and (c) a continuation of the upward trend in consumer services that has been in effect, except for occasional minor interruptions, now for roughly 10 years.

A month ago, in discussing the more or less nominal April-May rise in the index of 0.3 percent, Commissioner Ewan Clague was emboldened to predict that with the end of summer we might see a downturn of prices, momentarily at least. Though the June spurt of 0.5 percent has turned out to be one of the more substantial ones of recent months, it has not, apparently, altered the Bureau's position on that point. It is still the latter's guess that (barring the possibility of serious drought conditions) the index could still flatten out or temporarily reverse its course by August or September.

There is no necessary inconsistency between this view and the May-June rise in the index. The reason for this is that the predominating factor, by far, in the June advance was a seasonal rise in food prices. The market basket of items on which the index is based is so weighted that food represents about one-third of the budget. This means that a rise of 1 percent in food prices alone would raise the whole index by one-third of 1 percent. Actually, the food group rose by 1.4 percent between mid-May and mid-June. While other commodities (specifically nondurable consumer goods) and services advanced, the increase in both cases was almost negligible compared with that in the food group. In both cases the change amounted to but 0.2 percent.

Discrimination in Housing

EXTENSION OF REMARKS
OF
HON. LUDWIG TELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. TELLER. Mr. Speaker, one of our important national purposes is to guarantee free access to economic and social opportunities, free of discrimination based upon race or creed or color or national origin. In line with this important national purpose, legislation is now being considered in New York City to prohibit discrimination in private housing. A statement in support of such legislation was offered by way of testimony by James H. Scheuer at a public hearing before the general welfare committee of the New York City Council, at City Hall, on June 7, 1957, in support of the Sharkey-Brown-Isaacs bill to prohibit discrimination in private housing.

Mr. Scheuer, a prominent citizen of New York City, is actively connected with the ownership and management of residential properties in New York City. At the same time he is prominently identified with associations and movements designed to eradicate discrimination in housing. In my view, Mr. Scheuer's statement has great current significance in its careful analysis of the economics underlying the difficult problem of reconciling antidiscrimination laws with the fears of real estate groups. Mr. Scheuer's testimony follows:

My name is James H. Scheuer. I am associated with several real estate organizations which own and manage substantial residential properties in New York City. Among these apartment projects are over 2,000 units of middle-income housing which have received Government assistance and are therefore covered by the present law prohibiting discrimination and which are successfully integrated. I am active in residential real estate development and am a member of the Real Estate Board of New York.

As a businessman and as a member of the real estate profession, I support the proposed Sharkey-Brown-Isaacs bill which would outlaw discrimination in private housing. I suggest that, over a period of years, the measure will stimulate constructive changes in our pattern of living, and that this will take place smoothly for the greater good of our community and with no adverse effects on the real estate industry. I believe that in the long run it will in fact prove to be a constructive and stabilizing influence on the real estate industry, by encouraging a peaceful adjustment to present long-term population trends in New York City. You are hearing today of the benefits which this bill can produce for our city, and also from the opponents of the bill, whose views are on record. I believe that those opposing the measure are mistaken and that time will prove that their fears are unjustified.

It is fitting that this law—the first of its kind in the Nation—should be debated and passed in the City of New York. In the field of intergroup living and working our city has provided an ethical and moral standard which has set an example for the Nation.

New York's position of national and international leadership has been achieved through the contributions of a great amalgam of people of different races and creeds living together. From our differences we have drawn creativity and strength. There is no reason why, in this same spirit, our citizens cannot meet the moral challenge of living side by side in amity in private housing.

Private-enterprise sponsors of the much-discussed title I redevelopment housing are investing millions of dollars with the confidence that this housing, which by law must be integrated, will be successful. In various parts of the city middle-income housing projects enjoying Government assistance have adopted the nondiscriminatory rental policies required by present law, with evident success. Where an open occupancy rental policy has been tried, it has been successful, even in those projects whose sponsors openly rejected the possibility of successful integration only a few years ago. I might add that in many private apartment houses and in many neighborhoods, Negro and white families have been living side by side for decades.

Curiously enough, as we have faced each new challenge, we have shown a remarkable capacity for underestimating our ability to get along with one another. Too often civic and business spokesmen seem to grow faint and fearful at the prospect of change, no matter how well we have comported ourselves in the face of past challenges. I am convinced, for example, that the fears you have heard concerning this housing legislation are just as unreal and ephemeral as the fears which were expressed 12 years ago in regard to the proposed New York State fair employment practices legislation. When that law was being debated in Albany in 1945, many of New York's recognized business and professional leaders predicted that this legislation, if passed, would incite bitter group hatred and antagonism. Some businessmen went so far as to declare that the legislation would drive business out of the State.

One representative of 12 leading business organizations in New York State, including the Real Estate Board of New York, criticized the entire concept of fair employment legislation, saying:

"This emphasis will pit race against race, color against color and creed against creed. It will become the incubator of hatreds and conflicts never before witnessed in this State. If Satan himself tried to think of a way that promised the great disservice to the public, to the cause of tolerance and to business of this State in the future, I am sure he would have hit upon this very proposal. It is bound to introduce agitation and misunderstanding and will tend to cause some business to leave this State rather than face these additional hazards."

At the same public hearing a distinguished American lawyer, representing the New York State Bar Association, said:

"The elaborate administrative procedures, with penal sanctions, contained in this bill are bound to create prejudice where it does not exist, increase it where it does exist, and, generally, aggravate and exaggerate religious and racial differences."

An executive of the Associated Industries of New York said:

"This proposed law is a punch below the belt for which New York State business has no guard and no redress, which is certainly undeserved, and which puts just one more nail in the coffin of New York business as it continues the losing competitive struggle with other States. Such restrictions will eventually lose for New York State a very substantial portion of the five to six million jobs now available and a very substantial portion of the eight to ten billion dollars annual payroll that goes with these jobs. Certainly, it will prevent any expansion in New York State of existing business that can be moved elsewhere."

And a distinguished public official—a man who has dedicated his entire professional life to serving our city and State in many capacities, and whose many contributions to the welfare of our city have won him wide respect—was so impressed by the fears of those who opposed the bill that he submitted the following written testimony:

"The passage of this bill will set the clock back. It will do irreparable harm to the very people it is meant to benefit. It will make the life of every employer miserable. It will encourage every kind of blackmail and skulduggery—business will be driven out of the State because employers will be at the mercy of every agitator, every tricky lawyer, every person who thinks he is aggrieved.

"The law establishes a monstrous Gestapo to harass and threaten every employer, to invite informers, stimulate grievances, hire investigators, detectives, and agents provocateurs, clog up the courts, and intensify every racial, religious, and minority issue."

Clearly, none of these dire predictions has come to pass. The New York State fair employment practices law has been met in the past 12 years by a significant degree of voluntary compliance. There has been no criticism, since passage of the law, that it has been arbitrary, unfair, or that it has interfered in any way with the businesslike and profitable operation of commerce and industry in New York State. Today, members of industry throughout the State are the first to express their admiration for the manner in which the law has become increasingly effective but, even more importantly, for the healthy effects that it has had upon the total economy of the State. The law has not pitted race against race or creed against creed. On the contrary, it has helped to create a healthy atmosphere in which people of all races and creeds work together. It has been a constructive catalytic agent in encouraging companies to broaden their employment policies to include all New Yorkers. A vast reservoir of labor has been made available to New York commerce and industry, which has proved indispensable to our postwar economy. Rather than move out of New York as was predicted, our industry and commerce have burgeoned and prospered beyond all expectation, one of the primary reasons being the excellent supply of skilled labor. Industry in the State of New York has not been frightened at the prospect of admission of minority groups, but is now concerned that it will not get the requisite labor supply. This is a sharp and healthy contrast to the situation prevailing 10 or even 5 years ago.

Indeed, the conclusion is inescapable that the many distinguished civic spokesmen who opposed the law in 1945 vastly underestimated the capacity of New York's business and community leaders to rise to the moral challenge presented by this issue, as well as the capacity of the ordinary citizen of our community to work amicably side by side with his neighbor, regardless of that neighbor's race, creed, or color. By the same token, the examples during the past decade of successfully integrated housing demonstrate that here, also, we tend to underestimate our ability to live with one another.

About 15 years ago, when the Metropolitan Life Insurance Co. was building Stuyvesant Town, the chairman of the board said, "* * * Negroes and whites don't mix—100 years from now maybe they will." Twelve years ago, when Stuyvesant Town first opened its doors, there were no Negro families admitted. Today, however, 20 to 30 Negro families are living in that project side by side with white families, and Negro and white children play together in the Stuyvesant Town playgrounds.

Levittown, in Long Island, one of the largest single-family home tract projects in the world, was for many years engaged in bitter controversy over the refusal of its builders to make initial sales to Negro families. In the last few years some of these homes have been resold by their original purchasers to members of minority groups. This fact is widely known on Long Island, yet sales of Levittown homes continue unabated, at steadily rising prices. This simply proves that Levittown was, and continues to be, an attractive community in which to live, and that the small number of Negro families known to be residing there have had no adverse affect whatsoever upon the basic desirability of Levittown living.

It is a measure of the progress which we have made that these two communities, once notorious symbols of racial exclusion, have undergone such significant change. Other large projects in this city, in which Negro and white families are living side by side, such as Corlears Hook, Queens View, and Kings View, are further examples which prove that integrated housing can be successful.

My own real-estate experience substantiates these facts. A company with which I am associated owns and operates two moderate income New York State limited-dividend projects—Hillside Homes, in the Bronx, and Boulevard Gardens, in Queens. At the time we took over the management of these properties some years ago, it was quite clear that they had not previously been operated on a nondiscriminatory basis. We put into effect nondiscriminatory rental policies.

Today, there are dozens of minority families living in the projects. They have become active in, and elected leaders of, the project tenant organizations. They have been fully accepted into the social and community life of the projects. The integration program has been carried out in these projects, totaling about 2,400 units, entirely without incident. In short, the program has worked.

In 1951, when this legislative body—the New York City Council— was considering the Brown-Isaacs bill to prevent racial or religious discrimination in private housing projects enjoying financial aid from the city, a New York City newspaper said in its editorial column:

"Net results of such shennanigans, it is generally agreed, would be to end forever the city's chances of interesting private investors in slum-clearance projects."

The paper was wrong. The Brown-Isaacs bill was passed. Investment of private capital in slum clearance has been steadily increasing. The New York Times of Sunday,

May 26, 1957, printed a lead article in its real-estate section with the following headline:

"City leads Nation in slum clearance—new developments are planned and others are being built—$881 million investment involved in all."

Some very hardheaded and practical New York City businessmen are investing millions of dollars of cash equities in these projects which they know must be integrated, upon what I believe is their correct assumption that such projects, built to high design standards, will rent well and will be profitable.

Four main arguments have been presented against this bill:

First, that Negroes moving into a new area will depress property values.

Second, that passage of the bill will produce mass inundation of Negroes into previously all-white areas.

Third, that this bill unfairly limits the right of an individual to use his private property as he chooses.

Fourth, that it is impossible to require a citizen by legislation to love his neighbor or to change ancient patterns of prejudice.

Let us examine each in turn.

First, race is not a factor in lowering or raising property values. The many studies on this subject indicate that it is a combination of factors wholly apart from race or color which determine what will happen to a neighborhood.

If an area contains large numbers of citizens, members of minority groups or otherwise, who are forced by their own economic limitations or by prevailing restrictive rental practices, or both, to overcrowd into dismally undermaintained quarters, the area is destined to be a slum. If, in addition, the locality is neglected by the city, and is served with inadequate police, fire, health, sanitation, and recreational facilities, the trend will be vastly accelerated. This is true, of course, no matter what the racial components of the inhabitants.

If, however, the area is not overcrowded, and if residents, both new and old, have the means to maintain their dwellings, and if the city services are adequate, then the area will remain stable and attractive. Newcomers, of whatever race or creed, will pay prevailing rents and meet prevailing occupancy and maintenance standards. The neighborhood will continue to prosper.

Both general experience and technical studies of area case histories indicate that the triple blights of overcrowding, poor maintenance and inadequate city services breed slums. When the question of race or color is isolated from all other factors, analysis has shown that it has no effect whatsoever, for better or for worse, on property values. Indeed, studies show that the introduction of new white families can cause the panic-selling and general neighborhood deterioration which is often attributed to Negroes. In a southern Ohio city, when Kentucky mountaineers, of pure Anglo-Saxon origin, began moving into a new neighborhood, panic moving out resulted and the stereotyped reaction usually associated with racial prejudice developed. On the other hand, Teaneck, N. J., areas of suburban Philadelphia, and other cities including metropolitan New York, contain neighborhoods where the introduction of Negro families has resulted in stable neighborhoods and gradually rising values.

Second, the fears of inundation likewise do not withstand realistic analysis. In the first place, income is still the prime determinant of where a family lives. The income structure of our city is still such that the great majority of Negro families cannot afford the rents being asked by Manhattan's East Side or in many other residential areas of the city.

Inundation by any group results as a by-product only when most of the available housing is closed to the members of the group. If this bill proposed to open to Negro families only a very limited area of the city, those few blocks would undoubtedly become inundated. But, if all the housing facilities of the city are open equally to all its inhabitants, there need be no fear of any one group overwhelming any particular section. The modest volume of movement which this bill might be expected to facilitate over a period of several years will be characterized by dispersion of those seeking better quarters over the entire metropolitan area of New York City.
